### 11.3.249 ETH_TYPE2_COMPARE_0_WORD_0

**Description:** 'Compare A, B and C fields of the screener type 2 match register are pointers to a pool of up to 32 compare registers. If enabled the compare is true if the data at the OFFSET into the frame, ANDed with the MASK Value if the mask is enabled, is equal to the COMPARE Value. Either a 16 bit comparison or a 32 bit comparison is done. This selection is made via the associated compare word1 register bit 9. If a 16 bit comparison is selected, then a 16 bit mask is also available to the user to select which bits should be compared. If the 32 bit compare option is selected, then no mask is available. The byte at the OFFSET number of bytes from the index start is compared thru bits 7 to 0 of the configured VALUE. The byte at the OFFSET number of bytes + 1 from the index start is compared thru bits 15 to 8 of the configured VALUE and so on. The OFFSET can be configured to be from 0 to 127 bytes from either the start of the frame, the byte following the therType field (last EtherType in the header if the frame is VLAN tagged), the byte following the IP header (IPv4 or IPv6) or from the byte following the start of the TCP/UDP header. The required number of Type 2 screening registers up to a maximum of 32 is configurable in the gem defines file and have been allocated APB address space between 0x700 and 0x7fc. Note. when using RX Partial Store and Forward mode and priority queues, the frame offset must be less than the Partial Store and Forward watermark. If the offset is higher than the watermark value it's not possible to identify the priority queue before the frame is sent to the AMBA interface, and an incorrect priority queue may be used. '

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | COMP0_OUT | R | W | 0 | Active comparator 'comp0_out[]' outputs. |

### 12.17.3 EVTGEN_COMP1_STATUS

**Description:** Comparator structures comparator 1 status
**Address:** 0x403F0008
**Offset:** 0x8
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | COMP1_OUT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | COMP1_OUT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | COMP1_OUT | R | W | 0 | DeepSleep comparator 'comp1_out_lf[]' outputs (synchronized from clk_lf to the IP clock). |

### 12.17.4 EVTGEN_COUNTER_STATUS

**Description:** Counter status
**Address:** 0x403F0010
**Offset:** 0x10
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | INT32 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | INT32 | R | W | Undefined | Active counter 'counter_int[31:0]' on clk_ref_div. |

### 12.17.6 EVTGEN_RATIO_CTL

**Description:** Ratio control
**Address:** 0x403F0020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:19] | | | | | DYNAMIC_MODE [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | DYNAMIC [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:18 | DYNAMIC_MODE | RW | R | 0 | Weighted average calculation (only used when DYNAMIC is '1'):<br>'0': new RATIO value = (RATIO + measurement + 1) / 2.<br>'1': new RATIO value = (3*RATIO + measurement + 2) / 4.<br>'2': new RATIO value = (7*RATIO + measurement + 4) / 8.<br>'3': new RATIO value = (15*RATIO + measurement + 8) / 16.<br>'4': new RATIO value = (31*RATIO + measurement + 16) / 32.<br>'5': new RATIO value = (63*RATIO + measurement + 32) / 64.<br>'6': new RATIO value = (127*RATIO + measurement + 64) / 128.<br>'7': new RATIO value = (255*RATIO + measurement + 128) / 256.<br><br>Note: 'measurement' (integer component only) is defined as: 256 * 'number of measured clk_ref_div cycles per clk_lf cycle'. The RATIO value (integer and fractional component) is defined as: 256*RATIO.INT16 + RATIO.FRAC8 (RATIO.INT16 = RATIO >> 8 and RATIO.FRAC8 = RATIO percent 256). |
| 30 | DYNAMIC | RW | R | 0 | Specifies if RATIO_CTL.VALID and RATIO are under SW or HW control:<br>'0': SW control.<br>'1: HW control. Auto calibration is used to derive the RATIO value. HW measures the number of clk_ref_div cycles per clk_lf cycle. This measurement is combined with the current ratio value to calculate a new ratio value. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | VALID | RW | RW1S | 0 | Ratio value valid:<br>'0': Invalid.<br>'1': Valid.<br><br>The RATIO register fields INT16 and FRAC8 are only valid when VALID is '1'. |

### 12.17.7 EVTGEN_RATIO

**Description:** Ratio
**Address:** 0x403F0024
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register contains a ratio value expressing the relative frequency of the DeepSleep clock clk_lf wrt. the Active clock clk_ref_div. Specifically, this registers contains the average number of clk_ref_div cycles per clk_lf cycle.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | COMP0 | RW1C | RW1S | 0 | This interrupt cause field is activated (HW sets the field to '1') when a comparator 0 event is generated (Active counter 'counter_int[31:0]' becomes greater or equal to COMP0.INT[31:0]). |

### 12.17.10 EVTGEN_INTR_SET

**Description:** Interrupt set
**Address:** 0x403F0704
**Offset:** 0x704
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects the INTR register. For debug purposes, SW can write a '1' to activate a specific interrupt cause (this allows for debug of the SW ISR, without relying on HW to activate the interrupt cause).

The interrupt causes are deactivated when the IP is disabled (CTL.ENABLED is '0').
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

| FAULT_STRUCT2_INTR_SET | 0x402102C4 | FULL | Interrupt set |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| FAULT_STRUCT2_INTR_MASK | 0x402102C8 | FULL | Interrupt mask |
| FAULT_STRUCT2_INTR_MASKED | 0x402102CC | FULL | Interrupt masked |

## 13.4 STRUCT 3

| Register Name | Address | Permission | Description |
|---|---|---|---|
| FAULT_STRUCT3_CTL | 0x40210300 | FULL | Fault control |
| FAULT_STRUCT3_STATUS | 0x4021030C | FULL | Fault status |
| FAULT_STRUCT3_DATA0 | 0x40210310 | FULL | Fault data |
| FAULT_STRUCT3_DATA1 | 0x40210314 | FULL | Fault data |
| FAULT_STRUCT3_DATA2 | 0x40210318 | FULL | Fault data |
| FAULT_STRUCT3_DATA3 | 0x4021031C | FULL | Fault data |
| FAULT_STRUCT3_PENDING0 | 0x40210340 | FULL | Fault pending 0 |
| FAULT_STRUCT3_PENDING1 | 0x40210344 | FULL | Fault pending 1 |
| FAULT_STRUCT3_PENDING2 | 0x40210348 | FULL | Fault pending 2 |
| FAULT_STRUCT3_MASK0 | 0x40210350 | FULL | Fault mask 0 |
| FAULT_STRUCT3_MASK1 | 0x40210354 | FULL | Fault mask 1 |
| FAULT_STRUCT3_MASK2 | 0x40210358 | FULL | Fault mask 2 |
| FAULT_STRUCT3_INTR | 0x402103C0 | FULL | Interrupt |
| FAULT_STRUCT3_INTR_SET | 0x402103C4 | FULL | Interrupt set |
| FAULT_STRUCT3_INTR_MASK | 0x402103C8 | FULL | Interrupt mask |
| FAULT_STRUCT3_INTR_MASKED | 0x402103CC | FULL | Interrupt masked |

## 13.5 Register Details

### 13.5.1 STRUCT

#### 13.5.1.1 FAULT_STRUCT_CTL

**Description:** Fault control
**Address:** 0x40210000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register uses DeepSleep reset. Therefore, a DeepSleep reset (possibly as a result of CTL.RESET_EN) resets this register (including setting CTL.RESET_EN to '0').
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | RESET_REQ_EN [2:2] | OUT_EN [1:1] | TR_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TR_EN | RW | R | 0 | Trigger output enable:<br>'0': Disabled. The trigger output 'tr_fault' is '0'.<br>'1': Enabled. The trigger output 'tr_fault' reflects STATUS.VALID. The trigger can be used to initiate a Datawire transfer of the FAULT data (FAULT_DATA0 through FAULT_DATA3). |
| 1 | OUT_EN | RW | R | 0 | IO output signal enable:<br>'0': Disabled. The IO output signal 'fault_out' is '0'. The IO output enable signal 'fault_out_en' is '0'.<br>'1': Enabled. The IO output signal 'fault_out' reflects STATUS.VALID. The IO output enable signal 'fault_out_en' is '1'. |
| 2 | RESET_REQ_EN | RW | R | 0 | Reset request enable:<br>'0': Disabled.<br>'1': Enabled. The output reset request signal 'fault_reset_req' reflects STATUS.VALID. This reset causes a warm/soft/core reset. This warm/soft/core reset does not affect the fault logic STATUS, DATA0, ..., DATA3 registers (allowing for post soft reset failure analysis).<br><br>The 'fault_reset_req' signals of the individual fault report structures are combined (logically OR'd) into a single SRSS 'fault_reset_req' signal. |

### 13.5.1.2 FAULT_STRUCT_STATUS

**Description:** Fault status
**Address:** 0x4021000C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register uses cold reset (and is NOT affected by Active or DeepSleep reset). This allows for failure analysis after a warm reset (DeepSleep reset).
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | IDX [6:0] | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:6 | IDX | RW | W | Undefined | The fault source index for which fault information is captured in DATA0 through DATA3. The fault information is fault source specific and described below.<br><br>Note: this register field (and associated fault source data in DATA0 through DATA3) should only be considered valid, when VALID is '1'. |
| | MPU_0 | | | 0 | Bus master 0 MPU/SMPU.<br>DATA0[31:0]: Violating address.<br>DATA1[0]: User read.<br>DATA1[1]: User write.<br>DATA1[2]: User execute.<br>DATA1[3]: Privileged read.<br>DATA1[4]: Privileged write.<br>DATA1[5]: Privileged execute.<br>DATA1[6]: Non-secure.<br>DATA1[11:8]: Master identifier.<br>DATA1[15:12]: Protection context identifier.<br>DATA1[31]: '0' MPU violation; '1': SMPU violation. |
| | MPU_1 | | | 1 | Bus master 1 MPU. See MPU_0 description. |
| | MPU_2 | | | 2 | Bus master 2 MPU. See MPU_0 description. |
| | MPU_3 | | | 3 | Bus master 3 MPU. See MPU_0 description. |
| | MPU_4 | | | 4 | Bus master 4 MPU. See MPU_0 description. |
| | MPU_5 | | | 5 | Bus master 5 MPU. See MPU_0 description. |
| | MPU_6 | | | 6 | Bus master 6 MPU. See MPU_0 description. |
| | MPU_7 | | | 7 | Bus master 7 MPU. See MPU_0 description. |
| | MPU_8 | | | 8 | Bus master 8 MPU. See MPU_0 description. |
| | MPU_9 | | | 9 | Bus master 9 MPU. See MPU_0 description. |
| | MPU_10 | | | 10 | Bus master 10 MPU. See MPU_0 description. |
| | MPU_11 | | | 11 | Bus master 11 MPU. See MPU_0 description. |
| | MPU_12 | | | 12 | Bus master 12 MPU. See MPU_0 description. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | MPU_13 | | | 13 | Bus master 13 MPU. See MPU_0 description. |
| | MPU_14 | | | 14 | Bus master 14 MPU. See MPU_0 description. |
| | MPU_15 | | | 15 | Bus master 15 MPU. See MPU_0 description. |
| | CM7_1_TCM_C_ECC | | | 16 | Correctable ECC error in CM7_1 TCM memory. See CM7_0_TCM_C_ECC description. |
| | CM7_1_TCM_NC_ECC | | | 17 | Non Correctable ECC error in CM7_1 TCM memory. See CM7_0_TCM_C_ECC description. |
| | CM7_0_CACHE_C_ECC | | | 18 | Correctable ECC error in CM7_0 Cache memories<br>DATA0[16:2]: location information: Tag/Data SRAM, Way, Index and line Offset, see CM7 UGRM IEBR0/DEBR0 description for details.<br>DATA0[31]: 0=Instruction cache, 1= Data cache |
| | CM7_0_CACHE_NC_ECC | | | 19 | Non Correctable ECC error in CM7_0 Cache memories. See CM7_0_CACHE_C_ECC description |
| | CM7_1_CACHE_C_ECC | | | 20 | Correctable ECC error in CM7_1 Cache memories. See CM7_0_CACHE_C_ECC description. |
| | CM7_1_CACHE_NC_ECC | | | 21 | Non Correctable ECC error in CM7_1 Cache memories. See CM7_0_CACHE_C_ECC description. |
| | MS_PPU_4 | | | 25 | Peripheral interconnect, master interface 4 PPU. See MS_PPU_0 description. |
| | PERI_ECC | | | 26 | Peripheral interconnect, protection structures SRAM, correctable ECC error:<br>DATA0[10:0]: Violating address.<br>DATA1[7:0]: Syndrome of SRAM word. |
| | PERI_NC_ECC | | | 27 | Peripheral interconnect, protection structures SRAM, non-correctable ECC error. |
| | MS_PPU_0 | | | 28 | Peripheral interconnect, master interface 0 PPU.<br>DATA0[31:0]: Violating address.<br>DATA1[0]: User read.<br>DATA1[1]: User write.<br>DATA1[2]: User execute.<br>DATA1[3]: Privileged read.<br>DATA1[4]: Privileged write.<br>DATA1[5]: Privileged execute.<br>DATA1[6]: Non-secure.<br>DATA1[11:8]: Master identifier.<br>DATA1[15:12]: Protection context identifier.<br>DATA1[31:28]: '0': master interface, PPU violation, '1': timeout detected, '2': bus error, other: undefined. |
| | MS_PPU_1 | | | 29 | Peripheral interconnect, master interface 1 PPU. See MS_PPU_0 description. |
| | MS_PPU_2 | | | 30 | Peripheral interconnect, master interface 2 PPU. See MS_PPU_0 description. |
| | MS_PPU_3 | | | 31 | Peripheral interconnect, master interface 3 PPU. See MS_PPU_0 description. |
| | GROUP_FAULT_0 | | | 32 | Peripheral group 0 fault detection.<br>DATA0[31:0]: Violating address.<br>DATA1[0]: User read.<br>DATA1[1]: User write.<br>DATA1[2]: User execute.<br>DATA1[3]: Privileged read.<br>DATA1[4]: Privileged write.<br>DATA1[5]: Privileged execute.<br>DATA1[6]: Non-secure.<br>DATA1[11:8]: Master identifier.<br>DATA1[15:12]: Protection context identifier.<br>DATA1[31:28]: '0': decoder or peripheral bus error, other: undefined. |
| | GROUP_FAULT_1 | | | 33 | Peripheral group 1 fault detection. See GROUP_FAULT_0 description. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | GROUP_FAULT_2 | | | 34 | Peripheral group 2 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_3 | | | 35 | Peripheral group 3 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_4 | | | 36 | Peripheral group 4 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_5 | | | 37 | Peripheral group 5 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_6 | | | 38 | Peripheral group 6 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_7 | | | 39 | Peripheral group 7 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_8 | | | 40 | Peripheral group 8 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_9 | | | 41 | Peripheral group 9 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_10 | | | 42 | Peripheral group 10 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_11 | | | 43 | Peripheral group 11 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_12 | | | 44 | Peripheral group 12 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_13 | | | 45 | Peripheral group 13 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_14 | | | 46 | Peripheral group 14 fault detection. See GROUP_FAULT_0 description. |
| | GROUP_FAULT_15 | | | 47 | Peripheral group 15 fault detection. See GROUP_FAULT_0 description. |
| | FLASHC_MAIN_BUS_ERROR | | | 48 | Flash controller, main interface, bus error:<br>FAULT_DATA0[26:0]: Violating address. Append 5'b00010 as most significant bits to derive 32-bit system address.<br>FAULT_DATA1[11:8]: Master identifier. |
| | FLASHC_MAIN_C_ECC | | | 49 | Flash controller, main interface, correctable ECC error:<br>DATA[26:0]: Violating address. Append 5'b00010 as most significant bits to derive 32-bit system address.<br>DATA1[7:0]: Syndrome of 64-bit word (at address offset 0x00).<br>DATA1[15:8]: Syndrome of 64-bit word (at address offset 0x08).<br>DATA1[23:16]: Syndrome of 64-bit word (at address offset 0x10).<br>DATA1[31:24]: Syndrome of 64-bit word (at address offset 0x18). |
| | FLASHC_MAIN_NC_ECC | | | 50 | Flash controller, main interface, non-correctable ECC error. See FLASHC_MAIN_C_ECC description. |
| | FLASHC_WORK_BUS_ERROR | | | 51 | Flash controller, work interface, bus error. See FLASHC_MAIN_BUS_ERROR description. |
| | FLASHC_WORK_C_ECC | | | 52 | Flash controller, work interface, correctable ECC error:<br>DATA0[26:0]: Violating address. Append 5'b00010 as most significant bits to derive 32-bit system address.<br>DATA1[6:0]: Syndrome of 32-bit word. |
| | FLASHC_WORK_NC_ECC | | | 53 | Flash controller, work interface, non-correctable ECC error. See FLASHC_WORK_C_ECC description. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | FLASHC_CM0_CA_C_ECC | | | 54 | Flash controller, CM0+ cache, correctable ECC error:<br>DATA0[26:0]: Violating address.<br>DATA1[6:0]: Syndrome of 32-bit SRAM word (at address offset 0x0).<br>DATA1[14:8]: Syndrome of 32-bit SRAM word (at address offset 0x4).<br>DATA1[22:16]: Syndrome of 32-bit SRAM word (at address offset 0x8).<br>DATA1[30:24]: Syndrome of 32-bit SRAM word (at address offset 0xc). |
| | FLASHC_CM0_CA_NC_ECC | | | 55 | Flash controller, CM0+ cache, non-correctable ECC error. See FLASHC_CM0_CA_C_ECC description. |
| | CM7_0_TCM_C_ECC | | | 56 | Correctable ECC error in CM7_0 TCM memory<br>DATA0[23:2]: Violating address.<br>DATA1[7:0]: Syndrome of code word (at address offset 0x0).<br>DATA1[31:30]: 0= ITCM, 2=D0TCM, 3=D1TCM |
| | CM7_0_TCM_NC_ECC | | | 57 | Non Correctable ECC error in CM7_0 TCM memory. See CM7_0_TCM_C_ECC description. |
| | RAMC0_C_ECC | | | 58 | System SRAM 0 correctable ECC error:<br>DATA0[31:0]: Violating address.<br>DATA1[6:0]: Syndrome of 32-bit SRAM code word. |
| | RAMC0_NC_ECC | | | 59 | System SRAM 0 non-correctable ECC error. See RAMC0_C_ECC description. |
| | RAMC1_C_ECC | | | 60 | System SRAM 1 correctable ECC error. See RAMC0_C_ECC description. |
| | RAMC1_NC_ECC | | | 61 | System SRAM 1 non-correctable ECC error. See RAMC0_C_ECC description. |
| | RAMC2_C_ECC | | | 62 | System SRAM 2 correctable ECC error. See RAMC0_C_ECC description. |
| | RAMC2_NC_ECC | | | 63 | System SRAM 2 non-correctable ECC error. See RAMC0_C_ECC description. |
| | CRYPTO_C_ECC | | | 64 | Cryptography SRAM correctable ECC error.<br>DATA0[31:0]: Violating address.<br>DATA1[6:0]: Syndrome of Least Significant 32-bit SRAM.<br>DATA1[14:8]: Syndrome of Most Significant 32-bit SRAM. |
| | CRYPTO_NC_ECC | | | 65 | Cryptography SRAM non-correctable ECC error. See CRYPTO_C_ECC description. |
| | DW0_C_ECC | | | 70 | DataWire 0 SRAM 1 correctable ECC error:<br>DATA0[11:0]: Violating DW SRAM address (word address, assuming byte addressable).<br>DATA1[6:0]: Syndrome of 32-bit SRAM code word. |
| | DW0_NC_ECC | | | 71 | DataWire 0 SRAM 1 non-correctable ECC error. See DW0_C_ECC description. |
| | DW1_C_ECC | | | 72 | DataWire 1 SRAM 1 correctable ECC error. See DW0_C_ECC description. |
| | DW1_NC_ECC | | | 73 | DataWire 1 SRAM 1 non-correctable ECC error. See DW0_C_ECC description. |
| | FM_SRAM_C_ECC | | | 74 | eCT Flash SRAM (for embedded operations) correctable ECC error:<br>DATA0[15:0]: Address location in the eCT Flash SRAM.<br>DATA1[6:0]: Syndrome of 32-bit SRAM word. |
| | FM_SRAM_NC_ECC | | | 75 | eCT Flash SRAM non-correctable ECC error: See FM_SRAM_C_ECC description. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | CAN0_C_ECC | | | 80 | CAN controller 0 MRAM correctable ECC error:<br>DATA0[15:0]: Violating address.<br>DATA0[22:16]: ECC violating data[38:32] from MRAM.<br>DATA0[27:24]: Master ID: 0-7 = CAN channel ID within mxttcanfd cluster, 8 = AHB I/F<br>DATA1[31:0]: ECC violating data[31:0] from MRAM. |
| | CAN0_NC_ECC | | | 81 | CAN controller 0 MRAM non-correctable ECC error:<br>DATA0[15:0]: Violating address.<br>DATA0[22:16]: ECC violating data[38:32] from MRAM (not for Address Error).<br>DATA0[27:24]: Master ID: 0-7 = CAN channel ID within mxttcanfd cluster, 8 = AHB I/F<br>DATA0[30]: Write access, only possible for Address Error<br>DATA0[31]: Address Error: a CAN channel did an MRAM access above MRAM_SIZE<br>DATA1[31:0]: ECC violating data[31:0] from MRAM (not for Address Error). |
| | CAN1_C_ECC | | | 82 | CAN controller 1 MRAM correctable ECC error. See CAN0_C_ECC description. |
| | CAN1_NC_ECC | | | 83 | CAN controller 1 MRAM non-correctable ECC error. See CAN0_NC_ECC description. |
| | VIDEOSS_VRPU0 | | | 84 | Video Ram Protection Unit 0 fault detection.<br>DATA0[31:0]: Violating address.<br>DATA1[0]: User read.<br>DATA1[1]: User write.<br>DATA1[2]: User execute.<br>DATA1[3]: Privileged read.<br>DATA1[4]: Privileged write.<br>DATA1[5]: Privileged execute.<br>DATA1[6]: Non-secure.<br>DATA1[11:8]: Master identifier.<br>DATA1[15:12]: Protection context identifier.<br>DATA1[31:28]: '0': decoder or peripheral bus error, other: undefined. |
| | VIDEOSS_VRPU1 | | | 85 | Video Ram Protection Unit 1 fault detection. See VIDEOSS_VRPU0 description. |
| | VIDEOSS_VRPU2 | | | 86 | Video Ram Protection Unit 2 fault detection. See VIDEOSS_VRPU0 description. |
| | VIDEOSS_VRPU3 | | | 87 | Video Ram Protection Unit 3 fault detection. See VIDEOSS_VRPU0 description. |
| | VIDEOSS_VRPU4 | | | 88 | Video Ram Protection Unit 4 fault detection. See VIDEOSS_VRPU0 description. |
| | VIDEOSS_VRPU5 | | | 89 | Video Ram Protection Unit 5 fault detection. See VIDEOSS_VRPU0 description. |
| | SRSS_CSV | | | 90 | SRSS Clock SuperVisor (CSV) violation detected. Multiple CSV can detect a violation at the same time.<br>DATA0[15:0]: clk_hf* root CSV violation flag, each bit representing a clk_hf, say bit 0 for clk_hf0, bit 1 for clk_hf1, etc.<br>DATA0[24]: clk_ref CSV violation flag (reference clock for clk_hf CSVs)<br>DATA0[25]: clk_lf CSV violation flag<br>DATA0[26]: clk_hvilo CSV violation flag |
| | SRSS_SSV | | | 91 | SRSS Clock SuperVisor (CSV) violation detected. Multiple CSV can detect a violation at the same time.<br>DATA0[0]: BOD on VDDA<br>DATA[1]: OVD on VDDA<br>DATA[16]: LVD/HVD #1<br>DATA0[17]: LVD/HVD #2 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | SRSS_MCWDT0 | | | 92 | SRSS Multi-Counter Watch Dog Timer (MCWDT) #0 violation detected. Multiple counters can detect a violation at the same time.<br>DATA0[0]: MCWDT subcounter 0 LOWER_LIMIT<br>DATA0[1]: MCWDT subcounter 0 UPPER_LIMIT<br>DATA0[2]: MCWDT subcounter 1 LOWER_LIMIT<br>DATA0[3]: MCWDT subcounter 1 UPPER_LIMIT |
| | SRSS_MCWDT1 | | | 93 | SRSS Multi-Counter Watch Dog Timer (MCWDT) #1 violation detected. See SRSS_MCWDT0 description. |
| | SRSS_MCWDT2 | | | 94 | SRSS Multi-Counter Watch Dog Timer (MCWDT) #2 violation detected. See SRSS_MCWDT0 description. |
| | SRSS_MCWDT3 | | | 95 | SRSS Multi-Counter Watch Dog Timer (MCWDT) #3 violation detected. See SRSS_MCWDT0 description. |
| 31 | VALID | RW | RW1S | 0 | Valid indication:<br>'0': Invalid.<br>'1': Valid. STATUS.IDX, DATA0, ..., DATA3 specify the fault.<br><br>Note: Typically, HW sets this field to '1' (on an activated HW fault source that is 'enabled' by the MASK registers) and SW clears this field to '0' (typically by boot code SW (after a warm system reset, when the fault is handled). In this typical use case scenario, the HW source fault data is simultaneously captured into DATA0, ..., DATA3 when the VALID field is set to '1'.<br><br>An exceptional SW use case scenario is identified as well. In this scenario, SW sets this field to '1' with a fault source index different to one of the defined HW fault sources. SW update is not restricted by the MASK registers). In both use case scenarios, the following holds:<br>- STATUS.IDX, DATA0, ..., DATA3 can only be written when STATUS.VALID is '0'; the fault structure is not in use yet. Writing STATUS.VALID to '1' effectively locks the fault structure (until SW clears STATUS.VALID to '0'). This restriction requires a SW update to sequentially update the DATA registers followed by an update of the STATUS register.<br><br>Note: For the exceptional SW use case, sequential updates to the DATA and STATUS registers may be 'interrupted' by a HW fault capture. In this case, the SW DATA register updates are overwritten by the HW update (and the STATUS.IDX field will reflect the HW capture) |

### 13.5.1.3 FAULT_STRUCT_DATA

**Description:** Fault data
**Address:** 0x40210010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The DATA registers capture fault information.

These register use cold reset (and are NOT affected by Active or DeepSleep reset). This allows for failure analysis after a warm reset (DeepSleep reset).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | RW | W | Undefined | Captured fault source data.<br><br>Note: the DATA registers can only be written when STATUS.VALID is '0'.<br><br>Note: the fault source index STATUS.IDX specifies the format of the DATA registers. |

### 13.5.1.4 FAULT_STRUCT_PENDING0

**Description:** Fault pending 0
**Address:** 0x40210040
**Offset:** 0x40
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The PENDING0, PENDING1, PENDING2 registers specify pending (not captured) fault sources. The fault source for which data is captured in DATA0 through DATA3 and which is validated by STATUS.VALID and identified by STATUS.IDX is NOT included in this list of pending fault sources. When a fault source is captured, its corresponding bit field in PENDING0/1/2 is set to '0'.

Note that the pending fault sources are the same for ALL fault structures; i.e. these registers are NOT qualified by the fault structure specific MASK0, MASK1 and MASK2 registers.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SOURCE [7:0] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | SOURCE | R | W | Undefined | This field specifies the following sources:<br>Bit 0 - 31: See STATUS register. |

### 13.5.1.7 FAULT_STRUCT_MASK0

**Description:** Fault mask 0
**Address:** 0x40210050
**Offset:** 0x50
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The MASK0, MASK1, MASK2 registers specify 'enables' for fault sources. Only 'enabled' fault sources will be captured by this fault structure (and result in STATUS.VALID and INTR.FAULT being set to '1'). When a fault source is captured, its corresponding bit field in PENDING0/1/2 is set to '0'.

When multiple fault structures are present and the mask fields of the fault structures overlap (the same source is 'enabled' for multiple fault structures), an overlapping enabled pending fault source is captured by a single fault structure that has not captured a fault (the fault structure with the lowest index has precedence).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SOURCE [7:0] | | | | | | | |

### 13.5.1.10 FAULT_STRUCT_INTR

**Description:** Interrupt
**Address:** 0x402100C0
**Offset:** 0xC0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | FAULT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | FAULT | RW1C | RW1S | 0 | This interrupt cause field is activated (HW sets the field to '1') when an enabled (MASK0/MASK1/MASK2) pending fault source is captured:<br>- STATUS.VALID is set to '1'.<br>- STATUS.IDX specifies the fault source index.<br>- DATA0 through DATA3 captures the fault source data.<br><br>SW writes a '1' to this field to clear the interrupt cause to '0'. SW clear STATUS.VALID to '0' to enable capture of the next fault. Note that when there is an enabled pending fault source, the pending fault source is captured immediately and INTR.FAULT is immediately activated (set to '1'). |

### 13.5.1.11 FAULT_STRUCT_INTR_SET

**Description:** Interrupt set
**Address:** 0x402100C4
**Offset:** 0xC4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects the INTR register. For debug purposes, SW can write a '1' to activate a specific interrupt cause (this allows for debug of the SW ISR, without relying on HW to activate the interrupt cause).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | FAULT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | FAULT | RW1S | A | 0 | SW writes a '1' to this field to set the corresponding field in the INTR register. |

### 13.5.1.12 FAULT_STRUCT_INTR_MASK

**Description:** Interrupt mask
**Address:** 0x402100C8
**Offset:** 0xC8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | FAULT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | FAULT | RW | R | 0 | Mask bit for corresponding field in the INTR register. |

### 13.5.1.13 FAULT_STRUCT_INTR_MASKED

**Description:** Interrupt masked
**Address:** 0x402100CC
**Offset:** 0xCC
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects 'a bitwise AND' between the INTR and INTR_MASK registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | FAULT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:25] | | | | | | | WORK_SEQ_RD_EN [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | WS | RW | R | 0 | FLASH macro wait states (same for main and work interfaces):<br>'0': 0 wait states.<br>...<br>'15': 15 wait states |
| 8 | MAIN_MAP | RW | R | 0 | Specifies mapping of FLASH macro main array.<br>0: Mapping A.<br>1: Mapping B.<br><br>This field is only used when MAIN_BANK_MODE is '1' (dual bank mode). |
| 9 | WORK_MAP | RW | R | 0 | Specifies mapping of FLASH macro work array.<br>0: Mapping A.<br>1: Mapping B.<br><br>This field is only used when WORK_BANK_MODE is '1' (dual bank mode). |
| 12 | MAIN_BANK_MODE | RW | R | 0 | Specifies bank mode of FLASH macro main array.<br>0: Single bank mode.<br>1: Dual bank mode. |
| 13 | WORK_BANK_MODE | RW | R | 0 | Specifies bank mode of FLASH macro work array.<br>0: Single bank mode.<br>1: Dual bank mode. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16 | MAIN_ECC_EN | RW | R | 0 | Enable ECC checking for FLASH main interface:<br>0: Disabled. ECC checking/reporting on FLASH main interface is disabled. No correctable or non-correctable faults are reported.<br>1: Enabled. |
| 17 | MAIN_ECC_INJ_EN | RW | R | 0 | Enable error injection for FLASH main interface. When'1', the parity (ECC_CTL.PARITY[7:0]) is used for a load from the ECC_CTL.WORD_ADDR[23:0] word address. |
| 18 | MAIN_ERR_SILENT | RW | R | 0 | Specifies bus transfer behavior for a non-recoverable error on the FLASH macro main interface (either a non-correctable ECC error or a FLASH macro main interface internal error):<br>0: Bus transfer has a bus error.<br>1: Bus transfer does NOT have a bus error; i.e. the error is 'silent'<br>In either case, the erroneous FLASH macro data is returned by the bus master interface. The erroneous data is NOT placed in a bus master interface's cache and/or buffer.<br><br>This field is ONLY used by CPU (or debug i.e. SYS_AP/CM0_AP/CM7_0/1_AP) bus transfers. Non-CPU bus transfers always have a bus transfer with a bus error, in case of a non-recoverable error.<br><br>Note: All CPU bus masters have dedicated status registers (CM0_STATUS, CM7_0_STATUS and CM7_1_STATUS) to register the occurrence of FLASH macro main interface internal errors (non-correctable ECC errors are NOT registered).<br><br>Note: fault reporting can be used to identify the error that occurred:<br>- FLASH macro main interface internal error.<br>- FLASH macro main interface non-recoverable ECC error.<br>- FLASH macro main interface recoverable ECC error. |
| 20 | WORK_ECC_EN | RW | R | 0 | N/A |
| 21 | WORK_ECC_INJ_EN | RW | R | 0 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 22 | WORK_ERR_SILENT | RW | R | 0 | Specifies bus transfer behavior for a non-recoverable error on the FLASH macro work interface (either a non-correctable ECC error or a FLASH macro work interface internal error):<br>0: Bus transfer has a bus error.<br>1: Bus transfer does NOT have a bus error; i.e. the error is 'silent'<br>In either case, the erroneous FLASH macro data is returned by the bus master interface. The erroneous data is NOT placed in a bus master interface's cache and/or buffer.<br><br>This field is ONLY used by CPU (or debug i.e. SYS_AP/CM0_AP/CM7_0/1_AP) bus transfers. Non-CPU bus transfers always have a bus transfer with a bus error, in case of a non-recoverable error.<br><br>Note: All CPU bus masters have dedicated status registers (CM0_STATUS, CM7_0_STATUS and CM7_1_STATUS) to register the occurrence of FLASH macro work interface internal errors (non-correctable ECC errors are NOT registered).<br><br>Note: fault reporting can be used to identify the error that occurred:<br>- FLASH macro work interface internal error.<br>- FLASH macro work interface non-recoverable ECC error.<br>- FLASH macro work interface recoverable ECC error. |
| 24 | WORK_SEQ_RD_EN | RW | R | 1 | Enable sequential read mode for Work Flash for read accesses on the AXI port.<br>0: Sequential read mode for Work Flash is disabled.<br>1: Sequential read mode for Work Flash is enabled. This speeds up subsequent AXI read accesses to the same page (64 bytes) of the Work Flash.<br><br>Setting this field to '1' has a side effect on the round-robin arbitration of the Work Flash macro between the different ports. When this field is set to '1', then as soon as the arbitration of the Work Flash is given to the AXI port, it is not released before the current AXI read burst either has been completed or leaves the current Work Flash page (64 bytes). This means that AHB masters accessing the Work Flash that have the same priority as the AXI port will not get their fair share of the Work Flash bandwidth. While an AHB master can perform one Work Flash access per round-robin cycle (4 bytes), an AXI master can read a whole AXI burst, or up to the next Work Flash page boundary. So if this field is set to '1', and an AHB master requires a high Work Flash bandwidth, then it should have a higher priority than the AXI masters accessing the Work Flash. |

### 14.2.2 FLASHC_FLASH_PWR_CTL

**Description:** Flash power control
**Address:** 0x40240004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls Flash memory power control input pins 'enable' and 'enable_hv'. Flash memory can turned OFF through SW in LPACTIVE power mode by making ENABLE=0 and ENABLE_HV=0. The wakeup time of the Flash memory is 10us (Twake1). So, SW has to wait for 10us to read from Flash after turning the Flash memory ON though this register.
**Default:** 0x3

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | ENABLE_HV [1:1] | ENABLE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | INV | RW1S | RW1C | 0 | Invalidation of ALL caches (for CM0+) and ALL buffers. SW writes a '1' to clear the caches. HW sets this field to '0' when the operation is completed. The operation takes a maximum of three clock cycles on the slowest of the clk_slow and clk_fast clocks. The caches LRU structures are also reset to their default state. |
| 1 | BUFF_INV | RW1S | RW1C | 0 | Invalidation of ALL buffers (does not invalidate the caches). SW writes a '1' to clear the buffers. HW sets this field to '0' when the operation is completed. The operation takes a maximum of three clock cycles on the slowest of the clk_slow and clk_fast clocks.<br><br>Note: the caches only capture FLASH macro main array data. Therefore, invalidating just the buffers (BUFF_INV) does not invalidate captures main array data in the caches. |

### 14.2.4 FLASHC_ECC_CTL

**Description:** ECC control

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ECC_ENABLE | RW | R | 1 | ECC generation/check enable for eCT Flash SRAM memory. |
| 4 | ECC_INJ_EN | RW | RW1C | 0 | eCT Flash SRAM ECC error injection test enable.<br>Follow the steps below for ECC logic test:<br>1. Write corrupted or uncorrupted 39-bit data to FM_SRAM_ECC_CTL0/1 registers.<br>2. Set the ECC_INJ_EN bit to '1'.<br>3. Confirm that the bit ECC_TEST_FAIL is '0'. If this is not the case, start over at item 1 because the eCT Flash was not idle.<br>4. Check the corrected data in FM_SRAM_ECC_CTL2.<br>5. Confirm that fault was reported to fault structure, and check syndrome (only applicable if corrupted data was written in step 1).<br>6. If not finished, start over at 1 with different data. |
| 8 | ECC_TEST_FAIL | R | W | 0 | Status of ECC test.<br>1: ECC test failed because eCT Flash macro is busy and using the SRAM.<br>0: ECC was performed. |

### 14.2.9 FLASHC_CM0_CA_CTL0

**Description:** CM0+ cache control
**Address:** 0x40240400
**Offset:** 0x400
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0xC0000001

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | RAM_ECC_INJ_EN [1:1] | RAM_ECC_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | WAY [17:16] | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | CA_EN [31:31] | PREF_EN [30:30] | None [29:27] | | | SET_ADDR [26:24] | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | RAM_ECC_EN | RW | R | 1 | Enable ECC checking for cache accesses:<br>0: Disabled.<br>1: Enabled. |
| 1 | RAM_ECC_INJ_EN | RW | R | 0 | Enable error injection for cache.<br>When '1', the parity (ECC_CTL.PARITY[6:0]) is used when a refill is done from the FLASH macro to the ECC_CTL.WORD_ADDR[24:0] word address. |
| 16:17 | WAY | RW | R | 0 | Specifies the cache way for which cache information is provided in CM0_CA_STATUS0/1/2. |
| 24:26 | SET_ADDR | RW | R | 0 | Specifies the cache set for which cache information is provided in CM0_CA_STATUS0/1/2. |
| 30 | PREF_EN | RW | R | 1 | Prefetch enable:<br>0: Disabled.<br>1: Enabled.<br><br>Prefetching requires the cache to be enabled; i.e. ENABLED is '1'. |
| 31 | CA_EN | RW | R | 1 | Cache enable:<br>0: Disabled. The cache tag valid bits are reset to '0's and the cache LRU information is set to '1's (making way 0 the LRU way and way 3 the MRU way).<br>1: Enabled.G269 |

### 14.2.10 FLASHC_CM0_CA_CTL1

**Description:** CM0+ cache control
**Address:** 0x40240404
**Offset:** 0x404
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls the CM0 Cache SRAM power states. CM0 Cache SRAM consists of a single power partition.
**Default:** 0xFA050003

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | PWR_MODE [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | VECTKEYSTAT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VECTKEYSTAT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | PWR_MODE | RW | R | 3 | Specifies power mode for CM0 cache.<br>The following sequnece should be followed for truning OFF/ON the cache SRAM.<br>Turn OFF sequence:<br>a) Write CM0_CA_CTL0 to disable cache.<br>b) Write CM0_CA_CTL1 to turn OFF cache SRAM.<br>Turn ON sequence:<br>a) Write CM0_CA_CTL1 to turn ON cache SRAM.<br>b) Delay to allow power up of cache SRAM. Delay should be at a minimum of CM0_CA_CTL2.PWRUP_DELAY CLK_SLOW clock cycles.<br>c) Write CM0_CA_CTL0 to enable cache. |
| | OFF | | | 0 | Power OFF the CM0 cache SRAM. |
| | RESERVED | | | 1 | Undefined |
| | RETAINED | | | 2 | Put CM0 cache SRAM in retained mode. |
| | ENABLED | | | 3 | Enable/Turn ON the CM0 cache SRAM. |
| 16:31 | VECTKEYSTAT | R | | 64005 | Register key (to prevent accidental writes).<br>- Should be written with a 0x05fa key value for the write to take effect.<br>- Always reads as 0xfa05.<br>Note: Although the SW attribute for this field says "R', SW need to write the key 0x05fa in this field for this register write to happen. This is a built in protection provided to prevent accidental writes from SW. |

| 31 | EMB_START | RW | R | 0 | '0': not active<br>'1': starts the actual embedded operation |

### 14.2.23.2 FLASHC_FM_CODE_MARGIN

**Description:** Flash Macro Margin Mode on Code Flash
**Address:** 0x4024F004
**Offset:** 0x4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register shell be used when Margin read is applied to the s40ect Flash IP. One should set the DCS trim that serves as the reference current to the area between 4-8uA (around the 6uA normal static ref current) and set the enable. After that one should wait ~10uSec before starting to read any data in the Code Flash. Once Finished the MARGIN_MODE_EN should be reset. Again, user should wait ~10uSec before continue to work with the Flash normally.
**Default:** 0x3943

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MARGIN_DCS_TRIM [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | MARGIN_RDREG_TRIM [15:10] | | | | | | MARGIN_DCS_TRIM_EN [9:9] | MARGIN_DCS_TRIM [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | MARGIN_MODE_EN [31:31] | MARGIN_MODE_RDREG_CHNG_EN [30:30] | MARGIN_PGM_ERS_B [29:29] | None [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:8 | MARGIN_DCS_TRIM | RW | R | 323 | see above table to set the DCS reference current value to be used during Margin mode. (default set to 5uS = 0x143) which gives a Margin to the Erase side. 7uA would probably be used for Margin to the PGM side |
| 9 | MARGIN_DCS_TRIM_EN | RW | R | 0 | 0: internal device defaults used from Margin reads reference current<br>1: MARGIN_DCS_TRIM configuration is used during Margin read |
| 10:15 | MARGIN_RDREG_TRIM | RW | R | 14 | rdreg_c trim to be used in Margin mode if enabled by MARGIN_MODE_RDREG_CHNG_EN |
| 29 | MARGIN_PGM_ERS_B | RW | R | 0 | 0: ERS Margin is checked<br>1: PGM Margin is checked |
| 30 | MARGIN_MODE_RDREG_CHNG_EN | RW | R | 0 | when set will also use the MARGIN_RDREG_TRIM from above. Default is not to use |
| 31 | MARGIN_MODE_EN | RW | R | 0 | when set puts the s40ect Flash IP In Margin mode |

### 14.2.23.3 FLASHC_FM_ADDR

**Description:** Flash Macro Address
**Address:** 0x4024F008
**Offset:** 0x8
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register specifies the flash memory address till the byte resolution. This register defines the address space for both Code and Work Flash and it works according to the address scheme tables defined below (also used as the address definition for R-bus ( code_r_addr and work_r_addr)
This FM_ADDR should be used whenever a user mode embedded operation is done on the Flash i.e. PGM/ERS
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FM_ADDR [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | FM_ADDR [15:8] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | INTR_MASK | RW | R | 0 | Mask for corresponding field in the INTR register |

### 14.2.23.7 FLASHC_INTR_MASKED

**Description:** Interrupt Masked
**Address:** 0x4024F02C
**Offset:** 0x2C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | INTR_MASKED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | INTR_MASKED | R | W | 0 | Logical and of corresponding request and mask fields. |

### 14.2.23.8 FLASHC_ECC_OVERRIDE

**Description:** ECC Data In override information and control bits
**Address:** 0x4024F030
**Offset:** 0x30
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The replacement can be either to the Code syndrome or the work flash syndrome. It knows to replace only 8 bits (per 64) in code flash OR 7 bits (per 32) in work flash, therefore this option is valid only for pgm64 command (Code) or pgm32 command (Work)
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ECC_OVERRIDE_SYNDROME [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ECC_OVERRIDE_CODE [31:31] | ECC_OVERRIDE_WORK [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | ECC_OVERRIDE_SYNDROME | W | R | 0 | The override syndrome itself to be used in case one of the enables are set. It will take [7:0] in the case of Code flash and [6:0] in the case of work flash, to bypass the internal generated syndrome |
| 30 | ECC_OVERRIDE_WORK | W | R | 0 | 0: no override. Using internal ECC engine to calculate the ECC of the Work Flash |
| 31 | ECC_OVERRIDE_CODE | W | R | 0 | 0: no override. Using internal ECC engine to calculate the ECC of the Code Flash |

### 14.2.23.9 FLASHC_FM_DATA

**Description:** Flash macro data_in[31 to 0] both Code and Work Flash
**Address:** 0x4024F040
**Offset:** 0x40
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** These registers support aligned 32-bit accesses. The usage of this register should follow the PGM sequence defined (and implemented by API). It has restrictions on the FM_ADDR and # of writes that can be done per pgm command (64,256,page for Code or 32 to work flash) and therefore the sequence must be correct. These register are related to C interface functionality.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FM_DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | FM_DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | FM_DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | FM_DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | FM_DATA | W | RW | 0 | Pgm command data in going to the internal write buffer (WBUF). |

### 14.2.23.10 FLASHC_BOOKMARK

**Description:** Bookmark register - keeps the current FW HV seq
**Address:** 0x4024F064
**Offset:** 0x64
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

|---|---|---|---|---|---|
| 0 | MAINFLASH WRITEENABLE | RW | R | 0 | '0': Main Flash embedded operations are blocked<br>'1': Main Flash embedded operations are enabled |

### 14.2.23.12 FLASHC_STATUS

**Description:** Status read from Flash Macro
**Address:** 0x4024F404
**Offset:** 0x404
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Read out by the CPUSS to understand the Flash Macro status
**Default:** 0x80000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | BLANK _CHCEK _PASS [6:6] | BLANK _CHECK _WORK [5:5] | ERS _SUSPEND [4:4] | ERASE _WORK [3:3] | ERASE _CODE [2:2] | PGM _WORK [1:1] | PGM _CODE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

|---|---|---|---|---|---|---|---|---|
| Name | BUSY [31:31] | HANG [30:30] | NATIVE _POR [29:29] | POR_2B _ECC _ERROR [28:28] | POR_1B _ECC _CORRECTE D [27:27] | None [26:24] | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | PGM_CODE | R | W | 0 | Indicates if active PGM operation to the Code flash is taking place<br>0: not running<br>1: running |
| 1 | PGM_WORK | R | W | 0 | Indicates if active PGM operation to the Work flash is taking place<br>0: not running<br>1: running |
| 2 | ERASE_CODE | R | W | 0 | Indicates if active Erase operation to the Code flash is taking place<br>0: not running<br>1: running |
| 3 | ERASE_WORK | R | W | 0 | Indicates if active Erase operation to the Work flash is taking place<br>0: not running<br>1: running |
| 4 | ERS_SUSPEND | R | W | 0 | Indicates if Erase operation (Code/Work) is currently being suspended<br>0: not suspended<br>1: suspended |
| 5 | BLANK_CHECK_WORK | R | W | 0 | Indicates if Blank Check mode is currently running on the work flash<br>0: not running<br>1: running |
| 6 | BLANK_CHCEK_PASS | R | W | 0 | Indicates the Blank check command result is PASS (Blank)<br>0: Not Blank<br>1: Blank (PASS) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 27 | POR_1B_ECC _CORRECTED | R | W | 0 | Indicates internal ECC found 1b error while downloading info in POR from NVM to VM and fixed it. Valid after 2nd, 3rd and 4th POR phases (FUR, IREM & MMR, SW DOWNLOAD). If Set it is not cleaned till additional POR (rst_hf_ac_t)<br>0: No error<br>1: 1b ECC Error corrected in POR |
| 28 | POR_2B_ECC_ERROR | R | W | 0 | Indicates an internal ECC error of 2b while downloading info in POR from NVM to VM.<br>Valid after 2nd, 3rd and 4th POR phases (FUR, IREM & MMR, SW DOWNLOAD). If Set it is not cleaned till additional POR (rst_hf_ac_t)<br>0: No error<br>1: ECC 2b Error in POR |
| 29 | NATIVE_POR | R | W | 0 | Indicates a Native Flash state (UV) or sorted one. Valid only after 2nd phase of POR (FUR DOWNLOAD).<br>Comment: not a retained flop, therefore reset (rst_hf_act_n) puts it back to 0. If Set it is not cleaned till additional POR (rst_hf_ac_t)<br>0: SORTED DEVICE (Non - Native)<br>1: NATIVE |
| 30 | HANG | R | W | 0 | After embedded operation (pgm/erase) this flag will tell if it was successful or failed<br>0: PASS<br>1: FAIL |
| 31 | BUSY | R | W | 1 | Whenever the device is in embedded mode the RDY goes low. Should be the same as c_interrupt pin of the IP (but inverted)<br>1: busy in embedded<br>0: rdy (high also in erase suspend) |

### 14.2.23.13 FLASHC_WORK_FLASH_SAFETY

**Description:** Work Flash Security enable
**Address:** 0x4024F500
**Offset:** 0x500
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

## 15.1 Register Details

### 15.1.1 FLEXRAY_CTL

**Description:** Control Register
**Address:** 0x40560000
**Offset:** 0x0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** IP enable
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|

| Name | CERB [31:28] | | | | CERA [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WRTEN | RW | R | 0 | Write Test Register Enable<br>Enables write access to the test registers. To set the bit from '0' to '1' the test mode key has to be written as defined in [01]Section 4.3.3 Lock Register (LCK). The unlock sequence is not required when WRTEN is kept at '1' while other bits of the register are changed. The bit can be reset to '0' at any time.<br>1 = Write access to test registers enabled<br>0 = Write access to test registers disabled |
| | TEST_REG_WR_DISABLED | | | 0 | N/A |
| | TEST_REG_WR_ENABLED | | | 1 | N/A |
| 1 | ELBE | RW | R | 0 | External Loop Back Enable<br>There are two possibilities to perform a Loop Back test. External Loop Back via physical layer or internal Loop Back for in-system self-test (default). In case of an internal Loop Back pins eray_txen1,2_n are in their inactive state, pins eray_txd1,2 are set to HIGH, pins eray_rxd1,2 are not evaluated. Bit ELBE is evaluated only when POC is in Loop Back Mode and test multiplexer control is in non-multiplexing mode TMC[1:0] = '00'.<br>1 = External Loop Back<br>0 = Internal Loop Back (default) |
| | INTERNAL_LOOP_BACK | | | 0 | N/A |
| | EXTERNAL_LOOP_BACK | | | 1 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4:5 | TMC | RW | R | 0 | Test Multiplexer Control<br>00, 11= Normal signal path (default)<br>01 = RAM Test Mode - Internal busses are multiplexed to make all RAM blocks of the ERay module directly accessible by the Host. This mode is intended to enable testing of the embedded RAM blocks during production testing.<br>10 = I/O Test Mode - Output pins eray_txd1, eray_txd2, eray_txen1_n, eray_txen2_n, are driven to the values defined by bits TXA, TXB, TXENA, TXENB. The values applied to the input pins eray_rxd1, eray_rxd2 can be read from register bits RXA, RXB. |
| | NORMAL_SIGNAL_PATH | | | 0 | N/A |
| | NORMAL_SIGNAL_PATH_MIRROR | | | 3 | N/A |
| | RAM_TEST_MODE | | | 1 | N/A |
| | IO_TEST_MODE | | | 2 | N/A |
| 8 | AOA | R | RW | 1 | Activity on A<br>AOA is set when there is activity on channel A. It is reset when 11 consecutive '1' bits are detected or if the POC state is DEFAULT_CONFIG or CONFIG. During STARTUP, NORMAL_ACTIVE, or NORMAL_PASSIVE the function of AOA is the inverse of zChannelIdle as specified in the FlexRay protocol spec v2.1, chapter 3, BITSTRB process. AOA should be ignored in all other POC states.<br>1 = Activity detected, channel A not idle<br>0 = No activity detected, channel A idle |
| | NOACT_DETECT_CH_A_IDLE | | | 0 | N/A |
| | ACT_DETECT_CH_A_NOT_IDLE | | | 1 | N/A |
| 9 | AOB | R | RW | 1 | Activity on B<br>AOB is set when there is activity on channel B. It is reset when 11 consecutive '1' bits are detected or if the POC state is DEFAULT_CONFIG or CONFIG. During STARTUP, NORMAL_ACTIVE, or NORMAL_PASSIVE the function of AOB is the inverse of zChannel-Idle as specified in the FlexRay protocol spec v2.1, chapter 3, BITSTRB process. AOB should be ignored in all other POC states.<br>1 = Activity detected, channel B not idle<br>0 = No activity detected, channel B idle |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WST | RW1C | RW | 0 | Wakeup Status<br>This flag is set when CCSV.WSV[2:0] changes to a value other than UNDEFINED.<br>1 = Wakeup status changed<br>0 = Wakeup status unchanged |
| | WAKEUP_STATUS_UNCHANGED | | | 0 | N/A |
| | WAKEUP_STATUS_CHANGED | | | 1 | N/A |
| 1 | CAS | RW1C | RW | 0 | Collision Avoidance Symbol<br>This flag is set by the CC during STARTUP state when a CAS or a potential CAS was received.<br>1 = Bit pattern matching the CAS symbol received<br>0 = No bit pattern matching the CAS symbol received |
| | NO_CAS_BIT_PATTERN_MATCH | | | 0 | N/A |
| | CAS_BIT_PATTERN_MATCH | | | 1 | N/A |
| 2 | CYCS | RW1C | RW | 0 | Cycle Start Interrupt<br>This flag is set by the CC when a communication cycle starts.<br>1 = Communication cycle started<br>0 = No communication cycle started |
| | NO_COMM_CYCLE_STARTED | | | 0 | N/A |
| | COMM_CYCLE_STARTED | | | 1 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | TXI | RW1C | RW | 0 | Transmit Interrupt<br>This flag is set by the CC at the end of frame transmission if bit MBI in the respective message buffer is set to '1' (see Table 17).<br>1 = At least one frame was transmitted from a transmit buffer with MBI = '1'<br>0 = No frame transmitted from a transmit buffer with MBI = '1' |
| | NO_FRAME_TXED_FROM_TX_MBI_BUFF | | | 0 | N/A |
| | FRAME_TXED_FROM_TX_MBI_BUFF | | | 1 | N/A |
| 4 | RXI | RW1C | RW | 0 | Receive Interrupt<br>This flag is set by the CC whenever the set condition of a message buffers ND flag is fulfilled<br>see 4.8.6 New Data 1/2/3/4 (NDAT1/2/3/4)), and if bit MBI of that message buffer is set to '1'<br>see Table 17).<br>1 = At least one ND flag of a receive buffer with MBI = '1' has been set to '1'<br>0 = No ND flag of a receive buffer with MBI = '1' has been set to '1' |
| | NO_ND_FLAG_OF_RX_MBI_BUFF_SET | | | 0 | N/A |
| | ND_FLAG_OF_RX_MBI_BUFF_SET | | | 1 | N/A |
| 5 | RFNE | RW1C | RW | 0 | Receive FIFO Not Empty<br>This flag is set by the CC when a received valid frame was stored into the empty receive FIFO.<br>The actual state of the receive FIFO is monitored in register FSR.<br>1 = Receive FIFO is not empty<br>0 = Receive FIFO is empty |
| | RX_FIFO_EMPTY | | | 0 | N/A |
| | RX_FIFO_NOT_EMPTY | | | 1 | N/A |
| 6 | RFCL | RW1C | RW | 0 | Receive FIFO Critical Level<br>This flag is set when the receive FIFO fill level FSR.RFFL[7:0] is equal or greater than the critical level as configured by FCL.CL[7:0].<br>1 = Receive FIFO critical level reached<br>0 = Receive FIFO below critical level |
| | RX_FIFO_BELOW_CRITICAL_LEVEL | | | 0 | N/A |
| | RX_FIFO_NOT_BELOW_CRITICAL_LEVEL | | | 1 | N/A |
| 7 | NMVC | RW1C | RW | 0 | Network Management Vector Changed<br>This interrupt flag signals a change in the Network Management Vector visible to the Host.<br>1 = Network management vector changed<br>0 = No change in the network management vector |
| | NTWK_MGMT_VECTOR_UNCHANGED | | | 0 | N/A |
| | NTWK_MGMT_VECTOR_CHANGED | | | 1 | N/A |
| 8 | TI0 | RW1C | RW | 0 | Timer Interrupt 0<br>This flag is set whenever timer 0 matches the conditions configured in register T0C. A Timer Interrupt 0 is also signalled on pin eray_tint0.<br>1 = Timer Interrupt 0 occurred<br>0 = No Timer Interrupt 0 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | NO_TIMER_INTERRUPT_0 | | | 0 | N/A |
| | TIMER_INTERRUPT_0_OCCURED | | | 1 | N/A |
| 9 | TI1 | RW1C | RW | 0 | Timer Interrupt 1<br>This flag is set whenever timer 1 matches the conditions configured in register T1C. A Timer Interrupt 1 is also signalled on pin eray_tint1.<br>1 = Timer Interrupt 1 occurred<br>0 = No Timer Interrupt 1 |
| | NO_TIMER_INTERRUPT_1 | | | 0 | N/A |
| | TIMER_INTERRUPT_1_OCCURED | | | 1 | N/A |
| 10 | TIBC | RW1C | RW | 0 | Transfer Input Buffer Completed<br>This flag is set whenever a transfer from Input Buffer to the Message RAM has completed and IBCR.IBSYS has been reset by the Message Handler.<br>1 = Transfer between Input Buffer and Message RAM completed<br>0 = No transfer completed |
| | NO_TRANSFER_COMPLETED | | | 0 | N/A |
| | IBF_TO_MSGRAM_TRANSFER_COMPLETED | | | 1 | N/A |
| 11 | TOBC | RW1C | RW | 0 | Transfer Output Buffer Completed<br>This flag is set whenever a transfer from the Message RAM to the Output Buffer has completed and OBCR.OBSYS has been reset by the Message Handler.<br>1 = Transfer between Message RAM and Output Buffer completed<br>0 = No transfer completed |
| | NO_TRANSFER_COMPLETED | | | 0 | N/A |
| | MSGRAM_TO_OBF_TRANSFER_COMPLETED | | | 1 | N/A |
| 12 | SWE | RW1C | RW | 0 | Stop Watch Event<br>This flag is set after a stop watch activation when the actual cycle counter and macrotick value are stored in the Stop Watch register (see [01]Section 4.4.10 Stop Watch Register 1 (STPW1)).<br>1 = Stop Watch Event occurred<br>0 = No Stop Watch Event |
| | NO_STOP_WATCH_EVENT | | | 0 | N/A |
| | STOP_WATCH_EVENT_OCCURRED | | | 1 | N/A |
| 13 | SUCS | RW1C | RW | 0 | Startup Completed Successfully<br>This flag is set whenever a startup completed successfully and the CC entered NORMAL_ACTIVE state.<br>1 = Startup completed successfully<br>0 = No startup completed successfully |
| | NO_STARTUP_COMPLETED | | | 0 | N/A |
| | STARTUP_COMPLETED | | | 1 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 14 | MBSI | RW1C | RW | 0 | Message Buffer Status Interrupt<br>This flag is set by the CC when the message buffer status MBS has changed and if bit MBI of that message buffer is set (see Table 17).<br>1 = Message buffer status of at least one message buffer with MBI = '1' has changed<br>0 = No message buffer status change of message buffer with MBI = '1' |
| | NO_MSG_BUFF_STATUS_CHANGED | | | 0 | N/A |
| | MSG_BUFF_STATUS_CHANGED | | | 1 | N/A |
| 15 | SDS | RW1C | RW | 0 | Start of Dynamic Segment<br>This flag is set by the CC when the dynamic segment starts.<br>1 = Dynamic segment started<br>0 = Dynamic segment not yet started |
| | DYNAMIC_SEGMENT_NOT_STARTED | | | 0 | N/A |
| | DYNAMIC_SEGMENT_STARTED | | | 1 | N/A |
| 16 | WUPA | RW1C | RW | 0 | Wakeup Pattern Channel A<br>This flag is set by the CC when a wakeup pattern was received on channel A. Only set when the CC is in WAKEUP, READY, or STARTUP state, or when in Monitor mode.<br>1 = Wakeup pattern received on channel A<br>0 = No wakeup pattern received on channel A |
| | NO_WAKEUP_PATTERN_RXD_ON_CH_A | | | 0 | N/A |
| | WAKEUP_PATTERN_RXD_ON_CH_A | | | 1 | N/A |
| 17 | MTSA | RW1C | RW | 0 | MTS Received on Channel A (vSS!ValidMTSA)<br>Media Access Test symbol received on channel A during the preceding symbol window.<br>Updated by the CC for each channel at the end of the symbol window.<br>1 = MTS symbol received on channel A<br>0 = No MTS symbol received on channel A |
| | NO_MTS_SYMBOL_RXD_ON_CH_A | | | 0 | N/A |
| | MTS_SYMBOL_RXD_ON_CH_A | | | 1 | N/A |
| 24 | WUPB | RW1C | RW | 0 | Wakeup Pattern Channel B<br>This flag is set by the CC when a wakeup pattern was received on channel B. Only set when the CC is in WAKEUP, READY, or STARTUP state, or when in Monitor mode.<br>1 = Wakeup pattern received on channel B<br>0 = No wakeup pattern received on channel B |
| | NO_WAKEUP_PATTERN_RXD_ON_CH_B | | | 0 | N/A |
| | WAKEUP_PATTERN_RXD_ON_CH_B | | | 1 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 25 | MTSB | RW1C | RW | 0 | MTS Received on Channel B (vSS!ValidMTSB)<br>Media Access Test symbol received on channel B during the preceding symbol window.<br>Updated by the CC for each channel at the end of the symbol window.<br>1 = MTS symbol received on channel B<br>0 = No MTS symbol received on channel B |
| | NO_MTS_SYMBOL_RXD_ON_CH_B | | | 0 | N/A |
| | MTS_SYMBOL_RXD_ON_CH_B | | | 1 | N/A |

### 15.1.8 FLEXRAY_EILS

**Description:** Error Interrupt Line Select
**Address:** 0x40560028
**Offset:** 0x28
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The Error Interrupt Line Select register assigns an interrupt generated by a specific error interrupt flag
from register EIR to one of the two module interrupt lines:
1 = Interrupt assigned to interrupt line eray_int1
0 = Interrupt assigned to interrupt line eray_int0
**Default:** 0x0

**Bit-field Table**

| | SYNC_FRAME_TXMN | | | 1 | N/A |
| 11:15 | CSA | RW | R | 2 | Cold Start Attempts (gColdStartAttempts)<br>Configures the maximum number of attempts that a cold starting node is permitted to try to start up the network without receiving any valid response from another node. It can be modified in DEFAULT_CONFIG or CONFIG state only. Must be identical in all nodes of a cluster. Valid values are 2 to 31. |
| | MIN | | | 2 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:20 | PTA | RW | R | 0 | Passive to Active (pAllowPassiveToActive)<br>Defines the number of consecutive even / odd cycle pairs that must have valid clock correction terms before the CC is allowed to transit from NORMAL_PASSIVE to NORMAL_ACTIVE state. If set to '00000' the CC is not allowed to transit from NORMAL_PASSIVE to NORMAL_ACTIVE state. It can be modified in DEFAULT_CONFIG or CONFIG state only.<br>Valid values are 0 to 31 even / odd cycle pairs. |
| 21 | WUCS | RW | R | 0 | Wakeup Channel Select (pWakeupChannel)<br>With this bit the Host selects the channel on which the CC sends the Wakeup pattern. The CC ignores any attempt to change the status of this bit when not in DEFAULT_CONFIG or CONFIG state.<br>1 = Send wakeup pattern on channel B<br>0 = Send wakeup pattern on channel A |
| | SEND_WKUP_PATTERN_ON_CH_A | | | 0 | N/A |
| | SEND_WKUP_PATTERN_ON_CH_B | | | 1 | N/A |
| 22 | TSM | RW | R | 1 | Transmission Slot Mode (pSingleSlotEnabled)<br>Selects the initial transmission slot mode. In SINGLE slot mode the CC may only transmit in the preconfigured key slot. The key slot ID is configured in the header section of message buffer 0 respectively message buffers 0 and 1 depending on bit MRC.SPLM. In case TSM = '1', message buffer 0 respectively message buffers 0,1 can be (re)configured in DEFAULT_CONFIG or CONFIG state only. In ALL slot mode the CC may transmit in all slots. TSM is a configuration bit which can only be set / reset by the Host. The bit can be written in DEFAULT_CONFIG or CONFIG state only. The CC changes to ALL slot mode when the Host successfully applied the ALL_SLOTS command by writing CMD[3:0] = '0101' in POC states NORMAL_ACTIVE or NORMAL_PASSIVE. The actual slot mode is monitored by CCSV.SLM[1:0].<br>1 = SINGLE Slot Mode (default after hard reset)<br>0 = ALL Slot Mode |
| | ALL_SLOT_MODE | | | 0 | N/A |
| | SINGLE_SLOT_MODE | | | 1 | N/A |
| 23 | HCSE | RW | R | 0 | Halt due to Clock Sync Error (pAllowHaltDueToClock)<br>Controls the transition to HALT state due to a clock synchronization error. The bit can be modified in DEFAULT_CONFIG or CONFIG state only.<br>1 = CC will enter HALT state<br>0 = CC will enter / remain in NORMAL_PASSIVE |
| | CC_TO_ENTER_NORMAL_PASSIVE | | | 0 | N/A |
| | CC_TO_ENTER_HALT | | | 1 | N/A |
| 24 | MTSA_ | RW | R | 0 | Select Channel A for MTS Transmission<br>The bit selects channel A for MTS symbol transmission. The flag is reset by default and may be modified only in DEFAULT_CONFIG or CONFIG state.<br>1 = Channel A selected for MTS transmission<br>0 = Channel A disabled for MTS transmission |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | CH_A_DISABLED_FOR_MTS_TXMN | | | 0 | N/A |
| | CH_A_SELECTED_FOR_MTS_TXMN | | | 1 | N/A |
| 25 | MTSB_ | RW | R | 0 | Select Channel B for MTS Transmission<br>The bit selects channel B for MTS symbol transmission. The flag is reset by default and may be modified only in DEFAULT_CONFIG or CONFIG state.<br>1 = Channel B selected for MTS transmission<br>0 = Channel B disabled for MTS transmission |
| | CH_B_DISABLED_FOR_MTS_TXMN | | | 0 | N/A |
| | CH_B_SELECTED_FOR_MTS_TXMN | | | 1 | N/A |
| 26 | CCHA | RW | R | 1 | Connected to Channel A (pChannels)<br>Configures whether the node is connected to channel A.<br>1 = Node connected to channel A (default after hard reset)<br>0 = Not connected to channel A |
| | CH_A_NOT_CONNECTED | | | 0 | N/A |
| | CH_A_CONNECTED | | | 1 | N/A |
| 27 | CCHB | RW | R | 1 | Connected to Channel B (pChannels)<br>Configures whether the node is connected to channel B.<br>1 = Node connected to channel B (default after hard reset)<br>0 = Not connected to channel B |
| | CH_B_NOT_CONNECTED | | | 0 | N/A |
| | CH_B_CONNECTED | | | 1 | N/A |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DCA | RW | R | 0 | Delay Compensation Channel A (pDelayCompensation[A]) Used to compensate for reception delays on the indicated channel. This covers assumed propagation delay up to cPropagationDelayMax for microticks in the range of 0.0125 to 0.05us. In practice, the minimum of the propagation delays of all sync nodes should be applied. Valid values are 0 to 200 uT. |
| | MAX | | | 200 | N/A |
| 8:15 | DCB | RW | R | 0 | Delay Compensation Channel B (pDelayCompensation[B]) Used to compensate for reception delays on the indicated channel. This covers assumed propagation delay up to cPropagationDelayMax for microticks in the range of 0.0125 to 0.05us. In practice, the minimum of the propagation delays of all sync nodes should be applied. Valid values are 0 to 200 uT. |
| | MAX | | | 200 | N/A |
| 16:20 | CDD | RW | R | 0 | Cluster Drift Damping (pClusterDriftDamping) Configures the cluster drift damping value used in clock synchronization to minimize accumulation of rounding errors. Valid values are 0 to 20 uT. |
| | MAX | | | 20 | N/A |
| 24:31 | DEC | RW | R | 14 | Decoding Correction (pDecodingCorrection) Configures the decoding correction value used to determine the primary time reference point. Valid values are 14 to 143 uT. |
| | MIN | | | 14 | N/A |
| | MAX | | | 143 | N/A |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | RFNE_ | R | RW | 0 | Receive FIFO Not Empty<br>This flag is set by the CC when a received valid frame (data or null frame depending on rejection mask) was stored in the FIFO. In addition, interrupt flag SIR.RFNE is set. The bit is reset after the Host has read all message from the FIFO.<br>1 = Receive FIFO is not empty<br>0 = Receive FIFO is empty |
| | RX_FIFO_EMPTY | | | 0 | N/A |
| | RX_FIFO_NOT_EMPTY | | | 1 | N/A |
| 1 | RFCL_ | R | RW | 0 | Receive FIFO Critical Level<br>This flag is set when the receive FIFO fill level RFFL[7:0] is equal or greater than the critical level as configured by FCL.CL[7:0]. The flag is cleared by the CC as soon as RFFL[7:0] drops below FCL.CL[7:0]. When RFCL changes from '0' to '1' bit SIR.RFCL is set to '1', and if enabled, an interrupt is generated.<br>1 = Receive FIFO critical level reached<br>0 = Receive FIFO below critical level |
| | RX_FIFO_LT_CRITICAL_LEVEL | | | 0 | N/A |
| | RX_FIFO_CRITICAL_LEVEL | | | 1 | N/A |
| 2 | RFO_ | R | RW | 0 | Receive FIFO Overrun<br>The flag is set by the CC when a receive FIFO overrun is detected. When a receive FIFO overrun occurs, the oldest message is overwritten with the actual received message. In addition, interrupt flag EIR.RFO is set.The flag is cleared by the next FIFO read access issued by the Host.<br>1 = A receive FIFO overrun has been detected<br>0 = No receive FIFO overrun detected |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | RX_FIFO_NO _OVERRUN | | | 0 | N/A |
| | RX_FIFO_OVERRUN | | | 1 | N/A |
| 8:15 | RFFL | R | RW | 0 | Receive FIFO Fill Level<br>Number of FIFO buffers filled with new data not yet read by the Host. Maximum value is 128. |
| | MAX | | | 128 | N/A |

## 16.36 Register Details

### 16.36.1 GPIO_INTR_CAUSE0

**Description:** Interrupt port cause register 0
**Address:** 0x40314000
**Offset:** 0x4000
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register provides interrupt status corresponding to ports 0 to 31
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PORT_INT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | PORT_INT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | PORT_INT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | PORT_INT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | PORT_INT | R | W | 0 | Each IO port has an associated bit field in this register. The bit field reflects the IO port's interrupt line (bit field i reflects 'gpio_interrupts[i]' for IO port i). The register is used when the system uses a combined interrupt line 'gpio_interrupt'. The software ISR reads the register to determine which IO port(s) is responsible for the combined interrupt line. Once, the IO port(s) is determined, the IO port's GPIO_PRT_INTR register is read to determine the IO pin(s) in the IO port that caused the interrupt.<br>'0': Port has no pending interrupt<br>'1': Port has pending interrupt |

### 16.36.2 GPIO_INTR_CAUSE1

**Description:** Interrupt port cause register 1
**Address:** 0x40314004
**Offset:** 0x4004
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register provides interrupt status corresponding to ports 32 to 63
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | PORT_INT [2:0] | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | PORT_INT | R | W | 0 | Each IO port has an associated bit field in this register. The bit field reflects the IO port's interrupt line (bit field i reflects 'gpio_interrupts[i]' for IO port i). The register is used when the system uses a combined interrupt line 'gpio_interrupt'. The software ISR reads the register to determine which IO port(s) is responsible for the combined interrupt line. Once, the IO port(s) is determined, the IO port's GPIO_PORT_INTR register is read to determine the IO pin(s) in the IO port that caused the interrupt.<br>'0': Port has no pending interrupt<br>'1': Port has pending interrupt |

### 16.36.3 GPIO_VDD_ACTIVE

**Description:** Extern power supply detection register
**Address:** 0x40314010
**Offset:** 0x4010
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register provides external power supply status
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | VDDIO_ACTIVE [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VDDD _ACTIVE [31:31] | VDDA _ACTIVE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | VDDIO_ACTIVE | R | W | 0 | Indicates presence or absence of VDDIO supplies (i.e. other than VDDD, VDDA) on the device (supplies are numbered 0..n-1). Note that VDDIO supplies have basic (crude) supply detectors only. If separate, robust, brown-out detection is desired on IO supplies, on-chip or off-chip analog resources need to provide it. For these bits to work reliable, the supply must be within valid spec range (per datasheet) or held at ground. Any in-between voltage has an undefined result.<br>'0': Supply is not present<br>'1': Supply is present<br><br>When multiple VDDIO supplies are present, they will be assigned in alphanumeric ascending order to these bits during implementation.<br>For example 'vddusb, vddio_0, vddio_a, vbackup, vddio_r, vddio_1' are present then they will be assigned to these bits as below:<br>0: vbackup,<br>1: vddio_0,<br>2: vddio_1,<br>3: vddio_a,<br>4: vddio_r,<br>5: vddusb' |
| 30 | VDDA_ACTIVE | R | W | 0 | Same as VDDIO_ACTIVE for the analog supply VDDA. |
| 31 | VDDD_ACTIVE | R | W | 0 | This bit indicates presence of the VDDD supply. This bit will always read-back 1. The VDDD supply has robust brown-out protection monitoring and it is not possible to read back this register without a valid supply. (This bit is used in certain test-modes to observe the brown-out detector status.) |

### 16.36.4 GPIO_VDD_INTR

**Description:** Supply detection interrupt register
**Address:** 0x40314014
**Offset:** 0x4014
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** An interrupt cause is cleared (set to '0') by writing a '1' to the corresponding bit field. It is not recommended to write 0xFF to clear all interrupt causes, as a new interrupt cause may have occurred between reading the register and clearing. Note that the interrupt cause fields and the associated interrupt provide DeepSleep functionality (interrupt causes can be set to '1' and cause the system to wake up from DeepSleep power mode). This register is set whenever a supply ramp up or ramp down is detected. Some bits may be set after system power-up, depending on power supply sequencing.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | VDDIO_ACTIVE [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VDDD_ACTIVE [31:31] | VDDA_ACTIVE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | VDDIO_ACTIVE | RW1C | A | 0 | Supply state change detected.<br>'0': No change to supply detected<br>'1': Change to supply detected |
| 30 | VDDA_ACTIVE | RW1C | A | 0 | Same as VDDIO_ACTIVE for the analog supply VDDA. |
| 31 | VDDD_ACTIVE | RW1C | A | 0 | The VDDD supply is always present during operation so a supply transition can not occur. This bit will always read back '1'. |

### 16.36.5 GPIO_VDD_INTR_MASK

**Description:** Supply detection interrupt mask register
**Address:** 0x40314018
**Offset:** 0x4018
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register configures the supply detection interrupts for all supplies. This register only masks the forwarding of interrupts to the CPU(s), it does not enable/disable the logging of interrupts into the VDD_INTR register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | VDDIO_ACTIVE [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VDDD _ACTIVE [31:31] | VDDA _ACTIVE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | VDDIO_ACTIVE | RW | R | 0 | Masks supply interrupt on VDDIO.<br>'0': VDDIO interrupt forwarding disabled<br>'1': VDDIO interrupt forwarding enabled |
| 30 | VDDA_ACTIVE | RW | R | 0 | Same as VDDIO_ACTIVE for the analog supply VDDA. |
| 31 | VDDD_ACTIVE | RW | R | 0 | Same as VDDIO_ACTIVE for the digital supply VDDD. |

### 16.36.6 GPIO_VDD_INTR_MASKED

**Description:** Supply detection interrupt masked register
**Address:** 0x4031401C
**Offset:** 0x401C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register contains the AND-ed values of VDD_INTR and VDD_INTR_MASK registers
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | VDDIO_ACTIVE [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VDDD_ACTIVE [31:31] | VDDA_ACTIVE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | VDDIO_ACTIVE | R | W | 0 | Supply transition detected AND masked<br>'0': Interrupt was not forwarded to CPU<br>'1': Interrupt occurred and was forwarded to CPU |
| 30 | VDDA_ACTIVE | R | W | 0 | Same as VDDIO_ACTIVE for the analog supply VDDA. |
| 31 | VDDD_ACTIVE | R | W | 0 | Same as VDDIO_ACTIVE for the digital supply VDDD. |

### 16.36.7 GPIO_VDD_INTR_SET

**Description:** Supply detection interrupt set register
**Address:** 0x40314020
**Offset:** 0x4020
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Allows firmware or debugger to set interrupt bits in the VDD_INTR register by writing a '1' to the corresponding bit field. When read, returns the same value as the VDD_INTR register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | VDDIO_ACTIVE [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VDDD _ACTIVE [31:31] | VDDA _ACTIVE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | VDDIO_ACTIVE | RW1S | A | 0 | Sets supply interrupt.<br>'0': Interrupt state not affected<br>'1': Interrupt set |
| 30 | VDDA_ACTIVE | RW1S | A | 0 | Same as VDDIO_ACTIVE for the analog supply VDDA. |
| 31 | VDDD_ACTIVE | RW1S | A | 0 | Same as VDDIO_ACTIVE for the digital supply VDDD. |

## 16.36.8 PRT

### 16.36.8.1 GPIO_PRT_OUT

**Description:** Port output data register
**Address:** 0x40310000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to read and write the output data for the IO pins in the port. A register write changes the output data to the written value. A register read reflects the output data (and not the current state of the input data for the IO pins). Using this register, Read-Modify-Write sequences are safely performed on a port with some IO pins configured as inputs.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | OUT7 [7:7] | OUT6 [6:6] | OUT5 [5:5] | OUT4 [4:4] | OUT3 [3:3] | OUT2 [2:2] | OUT1 [1:1] | OUT0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | OUT0 | RW | RW | 0 | IO output data for pin 0<br>'0': Output state set to '0'<br>'1': Output state set to '1' |
| 1 | OUT1 | RW | RW | 0 | IO output data for pin 1 |
| 2 | OUT2 | RW | RW | 0 | IO output data for pin 2 |
| 3 | OUT3 | RW | RW | 0 | IO output data for pin 3 |
| 4 | OUT4 | RW | RW | 0 | IO output data for pin 4 |
| 5 | OUT5 | RW | RW | 0 | IO output data for pin 5 |
| 6 | OUT6 | RW | RW | 0 | IO output data for pin 6 |
| 7 | OUT7 | RW | RW | 0 | IO output data for pin 7 |

### 16.36.8.2 GPIO_PRT_OUT_CLR

**Description:** Port output data clear register
**Address:** 0x40310004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to clear output data of specific IO pins in the corresponding port to '0', without affecting the output data of the other IO pads in the port. A register read returns the same value as an OUT register read.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | OUT7 [7:7] | OUT6 [6:6] | OUT5 [5:5] | OUT4 [4:4] | OUT3 [3:3] | OUT2 [2:2] | OUT1 [1:1] | OUT0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | OUT0 | RW | A | 0 | IO clear output for pin 0:<br>'0': Output state not affected.<br>'1': Output state set to '0'. |
| 1 | OUT1 | RW | A | 0 | IO clear output for pin 1 |
| 2 | OUT2 | RW | A | 0 | IO clear output for pin 2 |
| 3 | OUT3 | RW | A | 0 | IO clear output for pin 3 |
| 4 | OUT4 | RW | A | 0 | IO clear output for pin 4 |
| 5 | OUT5 | RW | A | 0 | IO clear output for pin 5 |
| 6 | OUT6 | RW | A | 0 | IO clear output for pin 6 |
| 7 | OUT7 | RW | A | 0 | IO clear output for pin 7 |

### 16.36.8.3 GPIO_PRT_OUT_SET

**Description:** Port output data set register
**Address:** 0x40310008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to set output data of specific IO pins in the corresponding port to '1', without affecting the output data of the other IO pads in the port. A register read returns the same value as an OUT register read.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | OUT7 [7:7] | OUT6 [6:6] | OUT5 [5:5] | OUT4 [4:4] | OUT3 [3:3] | OUT2 [2:2] | OUT1 [1:1] | OUT0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | OUT0 | RW | A | 0 | IO set output for pin 0:<br>'0': Output state not affected.<br>'1': Output state set to '1'. |
| 1 | OUT1 | RW | A | 0 | IO set output for pin 1 |
| 2 | OUT2 | RW | A | 0 | IO set output for pin 2 |
| 3 | OUT3 | RW | A | 0 | IO set output for pin 3 |
| 4 | OUT4 | RW | A | 0 | IO set output for pin 4 |
| 5 | OUT5 | RW | A | 0 | IO set output for pin 5 |
| 6 | OUT6 | RW | A | 0 | IO set output for pin 6 |
| 7 | OUT7 | RW | A | 0 | IO set output for pin 7 |

### 16.36.8.4 GPIO_PRT_OUT_INV

**Description:** Port output data invert register
**Address:** 0x4031000C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to invert output data of specific IO pins in the corresponding port, without affecting the output data of the other IO pads in the port. A register read returns the same value as an OUT register read.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | OUT7 [7:7] | OUT6 [6:6] | OUT5 [5:5] | OUT4 [4:4] | OUT3 [3:3] | OUT2 [2:2] | OUT1 [1:1] | OUT0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | OUT0 | RW | A | 0 | IO invert output for pin 0:<br>'0': Output state not affected.<br>'1': Output state inverted ('0' => '1', '1' => '0'). |
| 1 | OUT1 | RW | A | 0 | IO invert output for pin 1 |
| 2 | OUT2 | RW | A | 0 | IO invert output for pin 2 |
| 3 | OUT3 | RW | A | 0 | IO invert output for pin 3 |
| 4 | OUT4 | RW | A | 0 | IO invert output for pin 4 |
| 5 | OUT5 | RW | A | 0 | IO invert output for pin 5 |
| 6 | OUT6 | RW | A | 0 | IO invert output for pin 6 |
| 7 | OUT7 | RW | A | 0 | IO invert output for pin 7 |

### 16.36.8.5 GPIO_PRT_IN

**Description:** Port input state register
**Address:** 0x40310010
**Offset:** 0x10
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Used to read current pin status for IO pins that have their input buffer enabled (see CFG_IN).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | IN0 | R | W | 0 | IO pin state for pin 0<br>'0': Low logic level present on pin.<br>'1': High logic level present on pin.<br>On reset assertion , IN register will get reset. The Pad value takes 2 clock cycles to be reflected into IN Register. It's value then depends on the external pin value. |
| 1 | IN1 | R | W | 0 | IO pin state for pin 1 |
| 2 | IN2 | R | W | 0 | IO pin state for pin 2 |
| 3 | IN3 | R | W | 0 | IO pin state for pin 3 |
| 4 | IN4 | R | W | 0 | IO pin state for pin 4 |
| 5 | IN5 | R | W | 0 | IO pin state for pin 5 |
| 6 | IN6 | R | W | 0 | IO pin state for pin 6 |
| 7 | IN7 | R | W | 0 | IO pin state for pin 7 |
| 8 | FLT_IN | R | W | 0 | Reads of this register return the logical state of the filtered pin as selected in the INTR_CFG.FLT_SEL register. |

### 16.36.8.6 GPIO_PRT_INTR

**Description:** Port interrupt status register
**Address:** 0x40310014
**Offset:** 0x14
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** An interrupt cause is cleared (set to '0') by writing a '1' to the corresponding bit field. It is not recommended to write 0xFF to clear all interrupt causes, as a new interrupt cause may have occurred between reading the register and clearing. Note that the pin interrupt provide DeepSleep functionality (interrupt causes can be set to '1' and cause the system to wake up from DeepSleep power mode). The IN.IN fields reflect the logical IO pin states at the time of reading this register (same as the IN register).
**Default:** 0x0

### 16.36.8.7 GPIO_PRT_INTR_MASK

**Description:** Port interrupt mask register
**Address:** 0x40310018
**Offset:** 0x18
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register configures the edge detection interrupts for all pins in a port. This register only masks the forwarding of interrupts to the CPU(s) interrupt controller, it does not enable/disable the logging of interrupts into the INTR register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | EDGE7 [7:7] | EDGE6 [6:6] | EDGE5 [5:5] | EDGE4 [4:4] | EDGE3 [3:3] | EDGE2 [2:2] | EDGE1 [1:1] | EDGE0 [0:0] |

| 8 | FLT_EDGE | RW | R | 0 | Masks edge interrupt on filtered pin selected by INTR_CFG.FLT_SEL |

### 16.36.8.8 GPIO_PRT_INTR_MASKED

**Description:** Port interrupt masked status register
**Address:** 0x4031001C
**Offset:** 0x1C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register contains the AND-ed values of INTR and INTR_MASK registers forwarded to the CPU interrupt controller.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | EDGE7 [7:7] | EDGE6 [6:6] | EDGE5 [5:5] | EDGE4 [4:4] | EDGE3 [3:3] | EDGE2 [2:2] | EDGE1 [1:1] | EDGE0 [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EDGE0 | R | W | 0 | Edge detected AND masked on IO pin 0<br>'0': Interrupt was not forwarded to CPU<br>'1': Interrupt occurred and was forwarded to CPU |
| 1 | EDGE1 | R | W | 0 | Edge detected and masked on IO pin 1 |
| 2 | EDGE2 | R | W | 0 | Edge detected and masked on IO pin 2 |
| 3 | EDGE3 | R | W | 0 | Edge detected and masked on IO pin 3 |
| 4 | EDGE4 | R | W | 0 | Edge detected and masked on IO pin 4 |
| 5 | EDGE5 | R | W | 0 | Edge detected and masked on IO pin 5 |
| 6 | EDGE6 | R | W | 0 | Edge detected and masked on IO pin 6 |
| 7 | EDGE7 | R | W | 0 | Edge detected and masked on IO pin 7 |
| 8 | FLT_EDGE | R | W | 0 | Edge detected and masked on filtered pin selected by INTR_CFG.FLT_SEL |

### 16.36.8.9 GPIO_PRT_INTR_SET

**Description:** Port interrupt set register
**Address:** 0x40310020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Allows firmware or debugger to set interrupt bits in the INTR register by writing a '1' to the corresponding bit field. When read, returns the same value as the INTR register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | EDGE7 [7:7] | EDGE6 [6:6] | EDGE5 [5:5] | EDGE4 [4:4] | EDGE3 [3:3] | EDGE2 [2:2] | EDGE1 [1:1] | EDGE0 [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EDGE0 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 0<br>'0': Interrupt state not affected<br>'1': Interrupt set |
| 1 | EDGE1 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 1 |
| 2 | EDGE2 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 2 |
| 3 | EDGE3 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 3 |
| 4 | EDGE4 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 4 |
| 5 | EDGE5 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 5 |
| 6 | EDGE6 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 6 |
| 7 | EDGE7 | RW1S | A | 0 | Sets edge detect interrupt for IO pin 7 |
| 8 | FLT_EDGE | RW1S | A | 0 | Sets edge detect interrupt for filtered pin selected by INTR_CFG.FLT_SEL |

### 16.36.8.10 GPIO_PRT_INTR_CFG

**Description:** Port interrupt configuration register
**Address:** 0x40310040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register selects the edge detection type for each pin interrupt.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | EDGE3_SEL [7:6] | | EDGE2_SEL [5:4] | | EDGE1_SEL [3:2] | | EDGE0_SEL [1:0] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | EDGE0_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 0 |
| | DISABLE | | | 0 | Disabled |
| | RISING | | | 1 | Rising edge |
| | FALLING | | | 2 | Falling edge |
| | BOTH | | | 3 | Both rising and falling edges |
| 2:3 | EDGE1_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 1 |
| 4:5 | EDGE2_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 2 |
| 6:7 | EDGE3_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 3 |
| 8:9 | EDGE4_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 4 |
| 10:11 | EDGE5_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 5 |
| 12:13 | EDGE6_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 6 |
| 14:15 | EDGE7_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for IO pin 7 |
| 16:17 | FLT_EDGE_SEL | RW | R | 0 | Sets which edge will trigger an IRQ for the glitch filtered pin (selected by INTR_CFG.FLT_SEL |
| | DISABLE | | | 0 | Disabled |
| | RISING | | | 1 | Rising edge |
| | FALLING | | | 2 | Falling edge |
| | BOTH | | | 3 | Both rising and falling edges |
| 18:20 | FLT_SEL | RW | R | 0 | Selects which pin is routed through the 50ns glitch filter to provide a glitch-safe interrupt. |

### 16.36.8.11 GPIO_PRT_CFG

**Description:** Port configuration register
**Address:** 0x40310044
**Offset:** 0x44
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Configuration of drive mode and input buffer enable for each pin.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

| 31 | IN_EN7 | RW | R | 0 | Enables the input buffer for IO pin 7 |

### 16.36.8.12 GPIO_PRT_CFG_IN

**Description:** Port input buffer configuration register
**Address:** 0x40310048
**Offset:** 0x48
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Configures the input buffer for each pin and this register is common for PSoC6: & Traveo II: GPIO pins. For Traveo II: GPIO pin, this register control the lower bit i.e. VTRIP_SEL[0].
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

| 1 | VTRIP_SEL1_0 | RW | R | 0 | Configures the pin 1 input buffer mode (trip points and hysteresis) |
| 2 | VTRIP_SEL2_0 | RW | R | 0 | Configures the pin 2 input buffer mode (trip points and hysteresis) |
| 3 | VTRIP_SEL3_0 | RW | R | 0 | Configures the pin 3 input buffer mode (trip points and hysteresis) |
| 4 | VTRIP_SEL4_0 | RW | R | 0 | Configures the pin 4 input buffer mode (trip points and hysteresis) |
| 5 | VTRIP_SEL5_0 | RW | R | 0 | Configures the pin 5 input buffer mode (trip points and hysteresis) |
| 6 | VTRIP_SEL6_0 | RW | R | 0 | Configures the pin 6 input buffer mode (trip points and hysteresis) |
| 7 | VTRIP_SEL7_0 | RW | R | 0 | Configures the pin 7 input buffer mode (trip points and hysteresis) |

### 16.36.8.13 GPIO_PRT_CFG_OUT

**Description:** Port output buffer configuration register
**Address:** 0x4031004C
**Offset:** 0x4C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Configures the output driver for each pin.
Note: when initializing IO's that are connected to a live bus (such as I2C), make sure the peripheral and HSIOM (HSIOM_PRT_SELx) is properly configured before setting the IO drive mode to avoid producing glitches on the bus.
**Default:** 0x0

**Bit-field Table**

| HSIOM_PRT34_PORT_SEL0 | 0x40300220 | FULL | Port selection 0 |
| HSIOM_PRT34_PORT_SEL1 | 0x40300224 | FULL | Port selection 1 |

## 17.36 Register Details

### 17.36.1 HSIOM_AMUX_SPLIT_CTL

**Description:** AMUX splitter cell control
**Address:** 0x40302000
**Offset:** 0x2000
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls the breaking of AMUX buses A and B into multiple segments. It allows for grounding, disconnecting and feeding through. Feeding through is be done straight (from Left segment AMUXBUSA/AMUXBUSB to Right segment AMUXBUSA/AMUXBUSB).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | SWITCH_BB_S0 [6:6] | SWITCH_BB_SR [5:5] | SWITCH_BB_SL [4:4] | None [3:3] | SWITCH_AA_S0 [2:2] | SWITCH_AA_SR [1:1] | SWITCH_AA_SL [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | SWITCH_AA_SL | RW | R | 0 | T-switch control for Left AMUXBUSA switch:<br>'0': switch open.<br>'1': switch closed. |
| 1 | SWITCH_AA_SR | RW | R | 0 | T-switch control for Right AMUXBUSA switch:<br>'0': switch open.<br>'1': switch closed. |
| 2 | SWITCH_AA_S0 | RW | R | 0 | T-switch control for AMUXBUSA vssa/ground switch:<br>'0': switch open.<br>'1': switch closed. |
| 4 | SWITCH_BB_SL | RW | R | 0 | T-switch control for Left AMUXBUSB switch. |
| 5 | SWITCH_BB_SR | RW | R | 0 | T-switch control for Right AMUXBUSB switch. |
| 6 | SWITCH_BB_S0 | RW | R | 0 | T-switch control for AMUXBUSB vssa/ground switch. |

### 17.36.2 HSIOM_MONITOR_CTL_0

**Description:** Power/Ground Monitor cell control 0
**Address:** 0x40302200
**Offset:** 0x2200
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls the connectivity of PWR/GND monitor cells to either AMUX bus A or B respectively.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MONITOR_EN [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | MONITOR_EN [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | MONITOR_EN [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | MONITOR_EN [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:25 | MONITOR_EN | RW | R | 0 | control for switch, which connects the power/ground supply to AMUXBUS_A/B respectively when switch is closed:<br>'0': switch open.<br>'1': switch closed. |

### 17.36.3 HSIOM_ALT_JTAG_EN

**Description:** Alternate JTAG IF selection register
**Address:** 0x40302240
**Offset:** 0x2240
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register provides the alternate JTAG interface selection
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | ENABLE | RW | R | 0 | Provides the selection for alternate JTAG IF connectivity.<br>0: Primary JTAG interface is selected<br>1: Secondary (alternate) JTAG interface is selected.<br><br>This connectivity works ONLY in ACTIVE mode. |

## 17.36.4 PRT

### 17.36.4.1 HSIOM_PRT_PORT_SEL0

**Description:** Port selection 0
**Address:** 0x40300000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The High Speed IO Mux (HSIOM) selects the hardware peripheral connection to an IO pin. The default setting of 'GPIO' leaves the pin under CPU control through firmware. Pin specific connections for the 'DS_x' and 'ACT_x' settings are listed in the pinout section of the device datasheet.
Note: when initializing IO's that are connected to a live bus (such as I2C), make sure the peripheral and HSIOM is properly configured (HSIOM_PRT_SELx) before turning the IO on (GPIO_PRT_CFG.DRIVE_MODEx) to avoid producing glitches on the bus.
Note: peripherals other than GPIO & UDB/DSI directly control both the output and output-enable of the output buffer (peripherals can drive strong 0 or strong 1 in any mode except OFF='0').
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | IO0_SEL [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | IO1_SEL [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | IO2_SEL [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | IO3_SEL [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | IO0_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 0. Note that available connectivity options vary depending on the device, port and the pin. See the device Datasheet for a list of peripheral connections available at each pin. |
| | GPIO | | | 0 | GPIO controls 'out' |
| | GPIO_DSI | | | 1 | GPIO controls 'out', DSI controls 'output enable' |
| | DSI_DSI | | | 2 | DSI controls 'out' and 'output enable' |
| | DSI_GPIO | | | 3 | DSI controls 'out', GPIO controls 'output enable' |
| | AMUXA | | | 4 | AMUXBUS A |
| | AMUXB | | | 5 | AMUXBUS B |
| | AMUXA_DSI | | | 6 | Analog mux bus A, DSI control |
| | AMUXB_DSI | | | 7 | Analog mux bus B, DSI control |
| | ACT_0 | | | 8 | Active peripheral 0 |
| | ACT_1 | | | 9 | Active peripheral 1 |
| | ACT_2 | | | 10 | Active peripheral 2 |
| | ACT_3 | | | 11 | Active peripheral 3 |
| | DS_0 | | | 12 | Deep Sleep peripheral 0 |
| | DS_1 | | | 13 | Deep Sleep peripheral 1 |
| | DS_2 | | | 14 | Deep Sleep peripheral 2 |
| | DS_3 | | | 15 | Deep Sleep peripheral 3 |
| | ACT_4 | | | 16 | Active peripheral 4 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | ACT_5 | | | 17 | Active peripheral 5 |
| | ACT_6 | | | 18 | Active peripheral 6 |
| | ACT_7 | | | 19 | Active peripheral 7 |
| | ACT_8 | | | 20 | Active peripheral 8 |
| | ACT_9 | | | 21 | Active peripheral 9 |
| | ACT_10 | | | 22 | Active peripheral 10 |
| | ACT_11 | | | 23 | Active peripheral 11 |
| | ACT_12 | | | 24 | Active peripheral 12 |
| | ACT_13 | | | 25 | Active peripheral 13 |
| | ACT_14 | | | 26 | Active peripheral 14 |
| | ACT_15 | | | 27 | Active peripheral 15 |
| | DS_4 | | | 28 | Deep Sleep peripheral 4 |
| | DS_5 | | | 29 | Deep Sleep peripheral 5 |
| | DS_6 | | | 30 | Deep Sleep peripheral 6 |
| | DS_7 | | | 31 | Deep Sleep peripheral 7 |
| 8:12 | IO1_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 1. |
| 16:20 | IO2_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 2. |
| 24:28 | IO3_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 3. |

### 17.36.4.2 HSIOM_PRT_PORT_SEL1

**Description:** Port selection 1
**Address:** 0x40300004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** See PORT_SEL0 for details
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | IO4_SEL [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | IO5_SEL [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | IO6_SEL [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | IO7_SEL [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | IO4_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 4. See PORT_SEL0 for connection details. |
| 8:12 | IO5_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 4. |
| 16:20 | IO6_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 5. |
| 24:28 | IO7_SEL | RW | RW | 0 | Selects the peripheral connections of Pin 6. |

# 18 I2S

## 18.1 I2S 0

**Description** I2S registers
**Base Address** 0x40800000
**Size** 0x1000
**Slave Num** MMIO8 - 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| I2S0_CTL | 0x40800000 | FULL | Control |
| I2S0_CLOCK_CTL | 0x40800010 | FULL | Clock control |
| I2S0_CLOCK_STAT | 0x40800014 | FULL | Clock Status |
| I2S0_CMD | 0x40800020 | FULL | Command |
| I2S0_TR_CTL | 0x40800040 | FULL | Trigger control |
| I2S0_TX_CTL | 0x40800080 | FULL | Transmitter control |
| I2S0_TX_WATCHDOG | 0x40800084 | FULL | Transmitter watchdog |
| I2S0_RX_CTL | 0x408000A0 | FULL | Receiver control |
| I2S0_RX_WATCHDOG | 0x408000A4 | FULL | Receiver watchdog |
| I2S0_TX_FIFO_CTL | 0x40800200 | FULL | TX FIFO control |
| I2S0_TX_FIFO_STATUS | 0x40800204 | FULL | TX FIFO status |
| I2S0_TX_FIFO_WR | 0x40800208 | FULL | TX FIFO write |
| I2S0_RX_FIFO_CTL | 0x40800300 | FULL | RX FIFO control |
| I2S0_RX_FIFO_STATUS | 0x40800304 | FULL | RX FIFO status |
| I2S0_RX_FIFO_RD | 0x40800308 | FULL | RX FIFO read |
| I2S0_RX_FIFO_RD_SILENT | 0x4080030C | FULL | RX FIFO silent read |
| I2S0_INTR | 0x40800F00 | FULL | Interrupt register |
| I2S0_INTR_SET | 0x40800F04 | FULL | Interrupt set register |
| I2S0_INTR_MASK | 0x40800F08 | FULL | Interrupt mask register |
| I2S0_INTR_MASKED | 0x40800F0C | FULL | Interrupt masked register |

## 18.2 I2S 1

**Description** I2S registers
**Base Address** 0x40801000
**Size** 0x1000
**Slave Num** MMIO8 - 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| I2S1_CTL | 0x40801000 | FULL | Control |
| I2S1_CLOCK_CTL | 0x40801010 | FULL | Clock control |
| I2S1_CLOCK_STAT | 0x40801014 | FULL | Clock Status |
| I2S1_CMD | 0x40801020 | FULL | Command |
| I2S1_TR_CTL | 0x40801040 | FULL | Trigger control |
| I2S1_TX_CTL | 0x40801080 | FULL | Transmitter control |
| I2S1_TX_WATCHDOG | 0x40801084 | FULL | Transmitter watchdog |
| I2S1_RX_CTL | 0x408010A0 | FULL | Receiver control |
| I2S1_RX_WATCHDOG | 0x408010A4 | FULL | Receiver watchdog |
| I2S1_TX_FIFO_CTL | 0x40801200 | FULL | TX FIFO control |
| I2S1_TX_FIFO_STATUS | 0x40801204 | FULL | TX FIFO status |
| I2S1_TX_FIFO_WR | 0x40801208 | FULL | TX FIFO write |
| I2S1_RX_FIFO_CTL | 0x40801300 | FULL | RX FIFO control |
| I2S1_RX_FIFO_STATUS | 0x40801304 | FULL | RX FIFO status |
| I2S1_RX_FIFO_RD | 0x40801308 | FULL | RX FIFO read |
| I2S1_RX_FIFO_RD_SILENT | 0x4080130C | FULL | RX FIFO silent read |
| I2S1_INTR | 0x40801F00 | FULL | Interrupt register |
| I2S1_INTR_SET | 0x40801F04 | FULL | Interrupt set register |
| I2S1_INTR_MASK | 0x40801F08 | FULL | Interrupt mask register |
| I2S1_INTR_MASKED | 0x40801F0C | FULL | Interrupt masked register |

## 18.3 I2S 2

**Description** I2S registers
**Base Address** 0x40802000

**Size** 0x1000
**Slave Num** MMIO8 - 2

| Register Name | Address | Permission | Description |
|---|---|---|---|
| I2S2_CTL | 0x40802000 | FULL | Control |
| I2S2_CLOCK_CTL | 0x40802010 | FULL | Clock control |
| I2S2_CLOCK_STAT | 0x40802014 | FULL | Clock Status |
| I2S2_CMD | 0x40802020 | FULL | Command |
| I2S2_TR_CTL | 0x40802040 | FULL | Trigger control |
| I2S2_TX_CTL | 0x40802080 | FULL | Transmitter control |
| I2S2_TX_WATCHDOG | 0x40802084 | FULL | Transmitter watchdog |
| I2S2_RX_CTL | 0x408020A0 | FULL | Receiver control |
| I2S2_RX_WATCHDOG | 0x408020A4 | FULL | Receiver watchdog |
| I2S2_TX_FIFO_CTL | 0x40802200 | FULL | TX FIFO control |
| I2S2_TX_FIFO_STATUS | 0x40802204 | FULL | TX FIFO status |
| I2S2_TX_FIFO_WR | 0x40802208 | FULL | TX FIFO write |
| I2S2_RX_FIFO_CTL | 0x40802300 | FULL | RX FIFO control |
| I2S2_RX_FIFO_STATUS | 0x40802304 | FULL | RX FIFO status |
| I2S2_RX_FIFO_RD | 0x40802308 | FULL | RX FIFO read |
| I2S2_RX_FIFO_RD_SILENT | 0x4080230C | FULL | RX FIFO silent read |
| I2S2_INTR | 0x40802F00 | FULL | Interrupt register |
| I2S2_INTR_SET | 0x40802F04 | FULL | Interrupt set register |
| I2S2_INTR_MASK | 0x40802F08 | FULL | Interrupt mask register |
| I2S2_INTR_MASKED | 0x40802F0C | FULL | Interrupt masked register |

## 18.4 Register Details

### 18.4.1 I2S_CTL

**Description:** Control
**Address:** 0x40800000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control I2S block.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RX_ENABLED [31:31] | TX_ENABLED [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30 | TX_ENABLED | RW | R | 0 | Enables the I2S TX component:<br>'0': Disabled.<br>'1': Enabled. |
| 31 | RX_ENABLED | RW | R | 0 | Enables the I2S RX component:<br>'0': Disabled.<br>'1': Enabled. |

### 18.4.2 I2S_CLOCK_CTL

**Description:** Clock control
**Address:** 0x40800010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register can configure frequencies for I2S block and master clock. This register should NOT be changed during communication.
**Default:** 0x3000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | CLOCK_DIV [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | MCLK_DIV [13:12] | | None [11:9] | | | CLOCK _SEL [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | MCLK_EN [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:5 | CLOCK_DIV | RW | R | 0 | Frequency divisor for generating I2S clock frequency. The selected clock with CLOCK_SEL is divided by this.<br>'0': Bypass<br>'1': 2 x<br>'2': 3 x<br>'3': 4 x<br>...<br>'62': 63 x<br>'63': 64 x |
| 8 | CLOCK_SEL | RW | R | 0 | Selects clock to be used by I2S:<br>'0': Internal clock ('clk_audio_i2s')<br>'1': External clock ('clk_i2s_if') |
| 12:13 | MCLK_DIV | RW | R | 3 | Selects clock divider for MCLK_OUT. CTL.TX_ENABLED=1 or CTL.RX_ENABLED=1 and and CLOCK_CTL.CLOCK_SEL=0 to enable the clock. |
| | DIV1 | | | 0 | Divide clk_audio_i2s by 1 (Bypass) |
| | DIV2 | | | 1 | Divide clk_audio_i2s by 2 |
| | DIV4 | | | 2 | Divide clk_audio_i2s by 4 |
| | DIV8 | | | 3 | Divide clk-audio_i2s by 8 |
| 16 | MCLK_EN | RW | R | 0 | Enable MCLK - enables MCLK divider operation Upon assertion allows MCLK Divider to begin operation.<br>Upon de-assertion, i.e. 1-0 transition, allows MCLK divider to reach the all 0s state (reset state) then freezes the divider. This permits a controlled power-on/power-off sequence that may be used prior to going to DeepSleep/IP Disable and avoids glitching the MCLK. |

### 18.4.3 I2S_CLOCK_STAT

**Description:** Clock Status
**Address:** 0x40800014
**Offset:** 0x14
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register indicates the status of the MCLK Divider and is used to allow a controlled shutdown of the clock.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | MCLK_DIV_OFF [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | MCLK_DIV_OFF | R | RW | 0 | MCLK Divider OFF<br>0: Indicates MCLK Divider not a reset state<br>1: Indicates MCLK Divider at reset state. This is ONLY set when IP is enabled (CTL.RX_ENABLED=1 or CTL.TX_ENABLED=1), CLOCK_CTL.MCLK_EN=0, and MCLK_DIV reaches it's reset state.<br><br>The intent is that this bit indicates successful shutdown of the MCLK_DIVIDER after CLOCK_CTL.MCLK_EN transitions from 1 to 0. |

### 18.4.4 I2S_CMD

**Description:** Command
**Address:** 0x40800020
**Offset:** 0x20
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register can control I2S functions.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | TX_START [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | TX_PAUSE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | RX_START [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_START | RW | R | 0 | Transmitter enable:<br>'0': Disabled.<br>'1': Enabled. |
| 8 | TX_PAUSE | RW | R | 0 | Pause enable:<br>'0': Disabled (TX FIFO data is sent over I2S).<br>'1': Enabled ('0' data is sent over I2S, instead of TX FIFO data). |
| 16 | RX_START | RW | R | 0 | Receiver enable:<br>'0': Disabled.<br>'1': Enabled. |

### 18.4.5 I2S_TR_CTL

**Description:** Trigger control
**Address:** 0x40800040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register can enable DMA for I2S. This register should NOT be changed during communication.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | TX_REQ_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | RX_REQ_EN [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_REQ_EN | RW | R | 0 | Trigger output ('tr_i2s_tx_req') enable for requests of DMA transfer in transmission<br>'0': Disabled.<br>'1': Enabled. |
| 16 | RX_REQ_EN | RW | R | 0 | Trigger output ('tr_i2s_rx_req') enable for requests of DMA transfer in reception<br>'0': Disabled.<br>'1': Enabled. |

### 18.4.6 I2S_TX_CTL

**Description:** Transmitter control
**Address:** 0x40800080
**Offset:** 0x80
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register can configure transmitter for I2S functions. This register should NOT be changed during communication.
**Default:** 0x440510

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MS [7:7] | CH_NR [6:4] | | | B_CLOCK_INV [3:3] | None [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | WD_EN [13:13] | OVHDATA [12:12] | None [11:11] | WS_PULSE [10:10] | I2S_MODE [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:23] | WORD_LEN [22:20] | | | None [19:19] | CH_LEN [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | SCKI_POL [25:25] | SCKO_POL [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | B_CLOCK_INV | RW | R | 0 | Serial data transmission is advanced by 0.5 SCK cycles. This bit is valid only in TX slave mode. When set to '1', the serial data will be transmitted 0.5 SCK cycles earlier than when set to '0'.<br><br>1) TX_CTL.SCKI_POL=0 and TX_CTL.B_CLOCK_INV=0: Serial data will be transmitted off the SCK falling edge<br>2) TX_CTL.SCKI_POL=0 and TX_CTL.B_CLOCK_INV=1: Serial data will be transmitted off the SCK rising edge that is 0.5 SCK cycles before the SCK falling edge in 1)<br>3) TX_CTL.SCKI_POL=1 and TX_CTL.B_CLOCK_INV=0: Serial data will be transmitted off the SCK rising edge<br>4) TX_CTL.SCKI_POL=1 and TX_CTL.B_CLOCK_INV=1: Serial data will be transmitted off the SCK falling edge that is 0.5 SCK cycles before the SCK rising edge in 3)<br><br>(Note that this is only the appearance w.r.t. SCK edge, the actual timing is generated by an internal clock that runs 8x the SCK frequency). The word sync (TX_WS) signal is not affected by this bit setting.<br>Note: When Master mode, must be '0'. |
| | FALLING_EDGE_TX | | | 0 | SDO transmitted at SCK falling edge when TX_CTL.SCKI_POL=0 |
| | RISING_EDGE_TX | | | 1 | SDO transmitted at SCK rising edge when TX_CTL.SCKI_POL=0 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4:6 | CH_NR | RW | R | 1 | Specifies number of channels per frame:<br><br>Note: only '2channels' is supported during Left Justfied or I2S mode. Hence software must set '1' to this field in the modes. |
| | CH_NUM1 | | | 0 | 1 channel |
| | CH_NUM2 | | | 1 | 2 channels |
| | CH_NUM3 | | | 2 | 3 channels |
| | CH_NUM4 | | | 3 | 4 channels |
| | CH_NUM5 | | | 4 | 5 channels |
| | CH_NUM6 | | | 5 | 6 channels |
| | CH_NUM7 | | | 6 | 7 channels |
| | CH_NUM8 | | | 7 | 8 channels |
| 7 | MS | RW | R | 0 | Set interface in master or slave mode: |
| | SLAVE | | | 0 | Slave |
| | MASTER | | | 1 | Master |
| 8:9 | I2S_MODE | RW | R | 1 | Select I2S, left-justified or TDM: |
| | LEFT_JUSTIFIED | | | 0 | Left Justified |
| | I2S | | | 1 | I2S mode |
| | TDM_A | | | 2 | TDM mode A, the 1st Channel align to WSO Rising Edge |
| | TDM_B | | | 3 | TDM mode B, the 1st Channel align to WSO Rising edge with1 SCK Delay |
| 10 | WS_PULSE | RW | R | 1 | Set WS pulse width in TDM mode:<br><br>Note: When not TDM mode, must be '1'. |
| | SCK_PERIOD | | | 0 | Pulse width is 1 SCK period |
| | CH_LENGTH | | | 1 | Pulse width is 1 channel length |
| 12 | OVHDATA | RW | R | 0 | Set overhead value:<br>'0': Set to '0'<br>'1': Set to '1' |
| 13 | WD_EN | RW | R | 0 | Set watchdog for 'tx_ws_in':<br>'0': Disabled.<br>'1': Enabled. |
| 16:18 | CH_LEN | RW | R | 4 | Channel length in number of bits:<br><br>Note:<br>- When this field is configured to '6' or '7', the length is set to 32-bit (same as '5').<br>- When TDM mode, must be 32-bit length to this field. |
| | BIT_LEN8 | | | 0 | 8-bit |
| | BIT_LEN16 | | | 1 | 16-bit |
| | BIT_LEN18 | | | 2 | 18-bit |
| | BIT_LEN20 | | | 3 | 20-bit |
| | BIT_LEN24 | | | 4 | 24-bit |
| | BIT_LEN32 | | | 5 | 32-bit |
| 20:22 | WORD_LEN | RW | R | 4 | Word length in number of bits:<br><br>Note:<br>- When this field is configured to '6' or '7', the length is set to 32-bit (same as '5').<br>- Don't configure this field as beyond Channel length. |
| | BIT_LEN8 | | | 0 | 8-bit |
| | BIT_LEN16 | | | 1 | 16-bit |
| | BIT_LEN18 | | | 2 | 18-bit |
| | BIT_LEN20 | | | 3 | 20-bit |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | BIT_LEN24 | | | 4 | 24-bit |
| | BIT_LEN32 | | | 5 | 32-bit |
| 24 | SCKO_POL | RW | R | 0 | TX master bit clock polarity.<br>When this bit is 1, the outgoing tx_sck signal is inverted after it has been transmitted from the I2S transceiver core. This bit does not affect the internal serial data transmission timing. The word sync (TX_WS) signal is not affected by this bit setting.<br>'0': When transmitter is in master mode, serial data is transmitted from the falling bit clock edge<br>'1': When transmitter is in master mode, serial data is transmitted from the rising bit clock edge |
| 25 | SCKI_POL | RW | R | 0 | TX slave bit clock polarity.<br>When this bit is 1, the incoming tx_sck signal is inverted before it is received by the I2S transceiver core. This bit does not affect the internal serial data transmission timing. The word sync (TX_WS) signal is not affected by this bit setting. See TX_CTL.B_CLOCK_INV for more details. |

### 18.4.7 I2S_TX_WATCHDOG

**Description:** Transmitter watchdog
**Address:** 0x40800084
**Offset:** 0x84
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register can configure counter value for the Tx watchdog. This register should NOT be changed during the operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | WD_COUNTER | RW | R | 0 | Start value of the TX watchdog. With the reset value of 0x0000:0000 the counter is disabled. This is clocked by the AHB-Lite system clock 'clk_sys'. |

### 18.4.8 I2S_RX_CTL

**Description:** Receiver control
**Address:** 0x408000A0
**Offset:** 0xA0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register should NOT be changed during communication.
**Default:** 0x440510

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MS [7:7] | CH_NR [6:4] | | | B_CLOCK_INV [3:3] | None [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | WD_EN [13:13] | None [12:11] | | WS_PULSE [10:10] | I2S_MODE [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | BIT_EXTENSION [23:23] | WORD_LEN [22:20] | | | None [19:19] | CH_LEN [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | SCKI_POL [25:25] | SCKO_POL [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | B_CLOCK_INV | RW | R | 0 | Serial data capture is delayed by 0.5 SCK cycles. This bit is valid only in RX master mode.<br>When set to '1', the serial data will be captured 0.5 SCK cycles later than when set to '0'.<br><br>1) RX_CTL.SCKO_POL=0 and RX_CTL.B_CLOCK_INV=0: Serial data will be captured by the SCK rising edge<br>2) RX_CTL.SCKO_POL=0 and RX_CTL.B_CLOCK_INV=1: Serial data will be captured by the SCK falling edge that is 0.5 SCK cycles after the SCK rising edge in 1)<br>3) RX_CTL.SCKO_POL=1 and RX_CTL.B_CLOCK_INV=0: Serial data will be captured by the SCK falling edge<br>4) RX_CTL.SCKO_POL=1 and RX_CTL.B_CLOCK_INV=1: Serial data will be captured by the SCK rising edge that is 0.5 SCK cycles after the SCK falling edge in 3)<br><br>(Note that this is only the appearance w.r.t. SCK edge, the actual capture timing is derived from an internal clock that runs 8x the SCK frequency). The word sync (RX_WS) signal is not affected by this bit setting.<br>Note: When Slave mode, must be '0'. |
| | RISING_EDGE_RX | | | 0 | SDI received at SCK rising edge when RX_CTL.SCKO_POL=0 |
| | FALLING_EDGE_RX | | | 1 | SDI received at SCK falling edge when RX_CTL.SCKO_POL=0 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4:6 | CH_NR | RW | R | 1 | Specifies number of channels per frame:<br><br>Note: only '2channels' is supported during Left Justfied or I2S mode. Hence software must set '1' to this field in the modes. |
| | CH_NUM1 | | | 0 | 1 channel |
| | CH_NUM2 | | | 1 | 2 channels |
| | CH_NUM3 | | | 2 | 3 channels |
| | CH_NUM4 | | | 3 | 4 channels |

| | BIT_LEN32 | | | 5 | 32-bit |
| 20:22 | WORD_LEN | RW | R | 4 | Word length in number of bits:<br><br>Note:<br>- When this field is configured to '6' or '7', the length is set to 32-bit (same as '5').<br>- Don't configure this field as beyond Channel length. |
| | BIT_LEN8 | | | 0 | 8-bit |
| | BIT_LEN16 | | | 1 | 16-bit |
| | BIT_LEN18 | | | 2 | 18-bit |
| | BIT_LEN20 | | | 3 | 20-bit |
| | BIT_LEN24 | | | 4 | 24-bit |
| | BIT_LEN32 | | | 5 | 32-bit |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 23 | BIT_EXTENSION | RW | R | 0 | When reception word length is shorter than the word length of RX_FIFO_RD, extension mode of upper bit should be set.<br>'0': Extended by '0'<br>'1': Extended by sign bit (if MSB word is '1', then it is extended by '1', if MSB is '0' then it is extended by '0') |
| 24 | SCKO_POL | RW | R | 0 | RX master bit clock polarity.<br>When this bit is 1, the outgoing rx_sck signal is inverted after it has been transmitted from the I2S receiver core. This bit does not affect the internal serial data capture timing. The word sync (RX_WS) signal is not affected by this bit setting.See RX_CTL.B_CLOCK_INV for more details. |
| 25 | SCKI_POL | RW | R | 0 | RX slave bit clock polarity.<br>When this bit is 1, the incoming rx_sck signal is inverted before it is received by the I2S receiver core. This bit does not affect the internal serial data capture timing. The word sync (RX_WS) signal is not affected by this bit setting.<br>'0': When receiver is in slave mode, serial data is sampled on the rising bit clock edge<br>'1': When receiver is in slave mode, serial data is sampled on the falling bit clock edge |

### 18.4.9 I2S_RX_WATCHDOG

**Description:** Receiver watchdog
**Address:** 0x408000A4
**Offset:** 0xA4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register should NOT be changed during the operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | WD_COUNTER [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | WD_COUNTER | RW | R | 0 | Start value of the RX watchdog. With the reset value of 0x0000:0000 the counter is disabled. This is clocked by the AHB-Lite system clock 'clk_sys'. |

### 18.4.10 I2S_TX_FIFO_CTL

**Description:** TX FIFO control
**Address:** 0x40800200
**Offset:** 0x200
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register can configure FIFO for I2S .
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TRIGGER_LEVEL [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | FREEZE [17:17] | CLEAR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | TRIGGER_LEVEL | RW | R | 0 | Trigger level. When the TX FIFO has less entries than the number of this field, a transmitter trigger event is generated. |
| 16 | CLEAR | RW | R | 0 | When '1', the TX FIFO and TX_BUF are cleared/invalidated. Invalidation will last for as long as this field is '1'. If a quick clear/invalidation is required, the field should be set to '1' and be followed by a set to '0'. If a clear/invalidation is required for an extended time period, the field should be set to '1' during the complete time period. |
| 17 | FREEZE | RW | R | 0 | When '1', hardware reads from the TX FIFO do not remove FIFO entries. Freeze will not advance the TX FIFO read pointer. This field is used only for debugging purposes. |

### 18.4.11 I2S_TX_FIFO_STATUS

**Description:** TX FIFO status
**Address:** 0x40800204
**Offset:** 0x204
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register displays the statuses of FIFO for I2S.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | USED [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | USED [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RD_PTR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | WR_PTR [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:8 | USED | R | W | 0 | Number of entries in the TX FIFO. The field value is in the range [0, 256]. |
| 16:23 | RD_PTR | R | W | 0 | TX FIFO read pointer: FIFO location from which a data frame is read by the hardware.This field is used only for debugging purposes. |
| 24:31 | WR_PTR | R | W | 0 | TX FIFO write pointer: FIFO location at which a new data frame is written by the host. This field is used only for debugging purposes. |

### 18.4.12 I2S_TX_FIFO_WR

**Description:** TX FIFO write
**Address:** 0x40800208
**Offset:** 0x208
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register stores transmission data for I2S transfer.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | W | R | 0 | Data written into the TX FIFO. Behavior is similar to that of a PUSH operation.<br>Note: Don't access to this register while TX_FIFO_CTL.CLEAR is '1'. |

### 18.4.13 I2S_RX_FIFO_CTL

**Description:** RX FIFO control
**Address:** 0x40800300
**Offset:** 0x300
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TRIGGER_LEVEL [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | FREEZE [17:17] | CLEAR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | TRIGGER_LEVEL | RW | R | 0 | Trigger level. When the RX FIFO has more entries than the number of this field, a receiver trigger event is generated.<br>Note: software can configure up to 253 in I2S mode or Left Justified (RX_CTL.I2S_MODE = '0' or '1'). In TDM mode (RX_CTL.I2S_MODE = '2' or '3'), it can configure up to [256 - (RX_CTL.CH_NR+2)]. |
| 16 | CLEAR | RW | R | 0 | When '1', the RX FIFO and RX_BUF are cleared/invalidated. Invalidation will last for as long as this field is '1'. If a quick clear/invalidation is required, the field should be set to '1' and be followed by a set to '0'. If a clear/invalidation is required for an extended time period, the field should be set to '1' during the complete time period. |
| 17 | FREEZE | RW | R | 0 | When '1', hardware writes to the RX FIFO have no effect. Freeze will not advance the RX FIFO write pointer. This field is used only for debugging purposee. |

### 18.4.14 I2S_RX_FIFO_STATUS

**Description:** RX FIFO status
**Address:** 0x40800304
**Offset:** 0x304
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | USED [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | USED [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RD_PTR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | WR_PTR [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:8 | USED | R | W | 0 | Number of entries in the RX FIFO. The field value is in the range [0, 256]. |
| 16:23 | RD_PTR | R | W | 0 | RX FIFO read pointer: FIFO location from which a data frame is read by the host. This field is used only for debugging purposes. |
| 24:31 | WR_PTR | R | W | 0 | RX FIFO write pointer: FIFO location at which a new data frame is written by the hardware. This field is used only for debugging purposes. |

### 18.4.15 I2S_RX_FIFO_RD

**Description:** RX FIFO read
**Address:** 0x40800308
**Offset:** 0x308
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When the IP is disabled (CTRL.RX_ENABLED is '0'), a read from this register returns 0xffff:ffff.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | R | W | 0 | Data read from the RX FIFO. Reading a data frame will remove the data frame from the RX FIFO; i.e. behavior is similar to that of a POP operation.<br>Notes:<br>- Don't access to this register while RX_FIFO_CTL.CLEAR is '1'.<br>- Two stored data may be not valid after CMD.RX_START is set '1'. Therefore we recommend software discard those data. |

### 18.4.16 I2S_RX_FIFO_RD_SILENT

**Description:** RX FIFO silent read
**Address:** 0x4080030C
**Offset:** 0x30C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register stores received data for I2S transfer. When the IP is disabled (CTRL.RX_ENABLED is '0'), a read from this register returns 0xffff:ffff.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | R | W | 0 | Data read from the RX FIFO. Reading a data frame will NOT remove the data frame from the RX FIFO; i.e. behavior is similar to that of a PEEK operation. This field is used only for debugging purposes.<br>Notes:<br>- Don't access to this register while RX_FIFO_CTL.CLEAR is '1'.<br>- Two stored data may be not valid after CMD.RX_START is set '1'. Therefore we recommend software discard those data. |

### 18.4.17 I2S_INTR

**Description:** Interrupt register
**Address:** 0x40800F00
**Offset:** 0xF00
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register displays the interrupt status.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TX_UNDERFLOW [6:6] | TX_OVERFLOW [5:5] | TX_EMPTY [4:4] | None [3:2] | | TX_NOT_FULL [1:1] | TX_TRIGGER [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | TX_WD [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:23] | RX_UNDERFLOW [22:22] | RX_OVERFLOW [21:21] | None [20:20] | RX_FULL [19:19] | RX_NOT_EMPTY [18:18] | None [17:17] | RX_TRIGGER [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:25] | | | | | | | RX_WD [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_TRIGGER | RW1C | RW1S | 0 | Less entries in the TX FIFO than the value specified by TRIGGER_LEVEL in TX_FIFO_CTRL. |
| 1 | TX_NOT_FULL | RW1C | RW1S | 0 | TX FIFO is not full. |
| 4 | TX_EMPTY | RW1C | RW1S | 0 | TX FIFO is empty; i.e. it has 0 entries. |
| 5 | TX_OVERFLOW | RW1C | RW1S | 0 | Attempt to write to a full TX FIFO. |
| 6 | TX_UNDERFLOW | RW1C | RW1S | 0 | Attempt to read from an empty TX FIFO. This happens when the IP is ready to transfer data and TX_EMPTY is '1'. |
| 8 | TX_WD | RW1C | RW1S | 0 | Triggers (sets to '1') when the Tx watchdog event occurs. |
| 16 | RX_TRIGGER | RW1C | RW1S | 0 | More entries in the RX FIFO than the value specified by TRIGGER_LEVEL in RX_FIFO_CTRL. |
| 18 | RX_NOT_EMPTY | RW1C | RW1S | 0 | RX FIFO is not empty. |
| 19 | RX_FULL | RW1C | RW1S | 0 | RX FIFO is full. |
| 21 | RX_OVERFLOW | RW1C | RW1S | 0 | Attempt to write to a full RX FIFO. |
| 22 | RX_UNDERFLOW | RW1C | RW1S | 0 | Attempt to read from an empty RX FIFO. |
| 24 | RX_WD | RW1C | RW1S | 0 | Triggers (sets to '1') when the Rx watchdog event occurs. |

### 18.4.18 I2S_INTR_SET

**Description:** Interrupt set register
**Address:** 0x40800F04
**Offset:** 0xF04
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TX_UNDERFLOW [6:6] | TX_OVERFLOW [5:5] | TX_EMPTY [4:4] | None [3:2] | | TX_NOT_FULL [1:1] | TX_TRIGGER [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | TX_WD [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:23] | RX_UNDERFLOW [22:22] | RX_OVERFLOW [21:21] | None [20:20] | RX_FULL [19:19] | RX_NOT_EMPTY [18:18] | None [17:17] | RX_TRIGGER [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:25] | | | | | | | RX_WD [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_TRIGGER | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 1 | TX_NOT_FULL | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 4 | TX_EMPTY | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 5 | TX_OVERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 6 | TX_UNDERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 8 | TX_WD | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 16 | RX_TRIGGER | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 18 | RX_NOT_EMPTY | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 19 | RX_FULL | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 21 | RX_OVERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 22 | RX_UNDERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 24 | RX_WD | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |

### 18.4.19 I2S_INTR_MASK

**Description:** Interrupt mask register
**Address:** 0x40800F08
**Offset:** 0xF08
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TX_UNDERFLOW [6:6] | TX_OVERFLOW [5:5] | TX_EMPTY [4:4] | None [3:2] | | TX_NOT_FULL [1:1] | TX_TRIGGER [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | TX_WD [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:23] | RX_UNDERFLOW [22:22] | RX_OVERFLOW [21:21] | None [20:20] | RX_FULL [19:19] | RX_NOT_EMPTY [18:18] | None [17:17] | RX_TRIGGER [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:25] | | | | | | | RX_WD [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_TRIGGER | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 1 | TX_NOT_FULL | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 4 | TX_EMPTY | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 5 | TX_OVERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 6 | TX_UNDERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 8 | TX_WD | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 16 | RX_TRIGGER | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 18 | RX_NOT_EMPTY | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 19 | RX_FULL | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 21 | RX_OVERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 22 | RX_UNDERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 24 | RX_WD | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

### 18.4.20 I2S_INTR_MASKED

**Description:** Interrupt masked register
**Address:** 0x40800F0C
**Offset:** 0xF0C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TX_UNDERFLOW [6:6] | TX_OVERFLOW [5:5] | TX_EMPTY [4:4] | None [3:2] | | TX_NOT_FULL [1:1] | TX_TRIGGER [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

| IPC_INTR_STRUCT4_INTR_MASKED | 0x4022108C | FULL | Interrupt masked |

## 19.14 INTR_STRUCT 5

| Register Name | Address | Permission | Description |
|---|---|---|---|
| IPC_INTR_STRUCT5_INTR | 0x402210A0 | FULL | Interrupt |
| IPC_INTR_STRUCT5_INTR_SET | 0x402210A4 | FULL | Interrupt set |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| IPC_INTR_STRUCT5_INTR_MASK | 0x402210A8 | FULL | Interrupt mask |
| IPC_INTR_STRUCT5_INTR_MASKED | 0x402210AC | FULL | Interrupt masked |

## 19.15 INTR_STRUCT 6

| Register Name | Address | Permission | Description |
|---|---|---|---|
| IPC_INTR_STRUCT6_INTR | 0x402210C0 | FULL | Interrupt |
| IPC_INTR_STRUCT6_INTR_SET | 0x402210C4 | FULL | Interrupt set |
| IPC_INTR_STRUCT6_INTR_MASK | 0x402210C8 | FULL | Interrupt mask |
| IPC_INTR_STRUCT6_INTR_MASKED | 0x402210CC | FULL | Interrupt masked |

## 19.16 INTR_STRUCT 7

| Register Name | Address | Permission | Description |
|---|---|---|---|
| IPC_INTR_STRUCT7_INTR | 0x402210E0 | FULL | Interrupt |
| IPC_INTR_STRUCT7_INTR_SET | 0x402210E4 | FULL | Interrupt set |
| IPC_INTR_STRUCT7_INTR_MASK | 0x402210E8 | FULL | Interrupt mask |
| IPC_INTR_STRUCT7_INTR_MASKED | 0x402210EC | FULL | Interrupt masked |

## 19.17 Register Details

### 19.17.1 STRUCT

#### 19.17.1.1 IPC_STRUCT_ACQUIRE

**Description:** IPC acquire
**Address:** 0x40220000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to acquire a lock.

A non test controller (the master identifer of the access is NOT '15') read access attempts to acquire a lock. This read access will return the result of the attempt as well as parameters of the master which successfully acquired the lock.
A test controller (the master identifer of the access is '15') read access returns value of LOCK_STATUS. A test controller write access attempts to acquire a lock (the write data value is ignored and does not matter). A separate LOCK_STATUS read access is required to return the result of the attempt.

**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PC [7:4] | | | | None [3:2] | | NS [1:1] | P [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | MS [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | SUCCESS [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | P | R | W | Undefined | User/privileged access control:<br>'0': user mode.<br>'1': privileged mode.<br><br>This field is set with the user/privileged access control of the access that successfully acquired the lock. |
| 1 | NS | R | W | Undefined | Secure/non-secure access control:<br>'0': secure.<br>'1': non-secure.<br><br>This field is set with the secure/non-secure access control of the access that successfully acquired the lock. |
| 4:7 | PC | R | W | Undefined | This field specifies the protection context that successfully acquired the lock. |
| 8:11 | MS | R | W | Undefined | This field specifies the bus master identifier that successfully acquired the lock. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | SUCCESS | R | RW | 0 | Specifies if the lock is successfully acquired or not (reading the ACQUIRE register can have affect on SUCCESS and LOCK_STATUS.ACQUIRED):<br>'0': Not successfully acquired; i.e. the lock was already acquired by another read transaction and not released. The P, NS, PC and MS fields reflect the access attributes of the transaction that previously successfully acuired the lock; the fields are NOT affected by the current access.<br>'1': Successfully acquired. The P, NS, PC and MS fields reflect the access attributes of the current access.<br><br>Note that this field is NOT SW writable. A lock is released by writing to the associated RELEASE register (irrespective of the write value). |

### 19.17.1.2 IPC_STRUCT_RELEASE

**Description:** IPC release
**Address:** 0x40220004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to release a lock.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | INTR_RELEASE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | INTR_RELEASE | W | | 0 | Writing this field releases a lock and allows for the generation of release events to the IPC interrupt structures, but only when the lock is acquired (LOCK_STATUS.ACQUIRED is '1'). The IPC release cause fields associated with this IPC structure are set to '1', but only for those IPC interrupt structures for which the corresponding bit field in INTR_RELEASE[] is set to '1'.<br><br>SW writes a '1' to the bit fields to generate a release event. Due to the transient nature of this event, SW always reads a '0' from this field. |

### 19.17.1.3 IPC_STRUCT_NOTIFY

**Description:** IPC notification
**Address:** 0x40220008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | INTR_NOTIFY [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | INTR_NOTIFY | W | | 0 | This field allows for the generation of notification events to the IPC interrupt structures. The IPC notification cause fields associated with this IPC structure are set to '1', but only for those IPC interrupt structures for which the corresponding bit field in INTR_NOTIFY[] is set to '1'.<br><br>SW writes a '1' to the bit fields to generate a notify event. Due to the transient nature of this event, SW always reads a '0' from this field. |

### 19.17.1.4 IPC_STRUCT_DATA0

**Description:** IPC data 0
**Address:** 0x4022000C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | RW | | Undefined | This field holds a 32-bit data element that is associated with the IPC structure. |

### 19.17.1.5 IPC_STRUCT_DATA1

**Description:** IPC data 1
**Address:** 0x40220010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | RW | | Undefined | This field holds a 32-bit data element that is associated with the IPC structure. |

### 19.17.1.6 IPC_STRUCT_LOCK_STATUS

**Description:** IPC lock status
**Address:** 0x4022001C
**Offset:** 0x1C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PC [7:4] | | | | None [3:2] | | NS [1:1] | P [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | MS [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ACQUIRED [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | P | R | W | Undefined | This field specifies the user/privileged access control:<br>'0': user mode.<br>'1': privileged mode. |
| 1 | NS | R | W | Undefined | This field specifies the secure/non-secure access control:<br>'0': secure.<br>'1': non-secure. |
| 4:7 | PC | R | W | Undefined | This field specifies the protection context that successfully acquired the lock. |
| 8:11 | MS | R | W | Undefined | This field specifies the bus master identifier that successfully acquired the lock. |
| 31 | ACQUIRED | R | R | 0 | Specifies if the lock is acquired. This field is set to '1', if a ACQUIRE read transfer successfully acquires the lock (the ACQUIRE read transfer returns ACQUIRE.SUCCESS as '1'). If zero, P, NS, PC, and MS are not valid. |

### 19.17.2 INTR_STRUCT

#### 19.17.2.1 IPC_INTR_STRUCT_INTR

**Description:** Interrupt
**Address:** 0x40221000
**Offset:** 0x0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RELEASE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | NOTIFY [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | RELEASE | RW1C | RW1S | 0 | These interrupt cause fields are activated (HW sets the field to '1') when a IPC release event is detected. One bit field for each master. SW writes a '1' to these field to clear the interrupt cause. |
| 16:23 | NOTIFY | RW1C | RW1S | 0 | These interrupt cause fields are activated (HW sets the field to '1') when a IPC notification event is detected. One bit field for each master. SW writes a '1' to these field to clear the interrupt cause. |

### 19.17.2.2 IPC_INTR_STRUCT_INTR_SET

**Description:** Interrupt set
**Address:** 0x40221004
**Offset:** 0x4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects the INTR register. For debug purposes, SW can write a '1' to activate a specific interrupt cause (this allows for debug of the SW ISR, without relying on HW to activate the interrupt cause).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RELEASE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | NOTIFY [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | RELEASE | RW1S | A | 0 | SW writes a '1' to this field to set the corresponding field in the INTR register. |
| 16:23 | NOTIFY | RW1S | A | 0 | SW writes a '1' to this field to set the corresponding field in the INTR register. |

### 19.17.2.3 IPC_INTR_STRUCT_INTR_MASK

**Description:** Interrupt mask
**Address:** 0x40221008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RELEASE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | NOTIFY [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | RELEASE | RW | R | 0 | Mask bit for corresponding field in the INTR register. |
| 16:23 | NOTIFY | RW | R | 0 | Mask bit for corresponding field in the INTR register. |

### 19.17.2.4 IPC_INTR_STRUCT_INTR_MASKED

**Description:** Interrupt masked
**Address:** 0x4022100C
**Offset:** 0xC
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects 'a bitwise AND' between the INTR and INTR_MASK registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RELEASE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | NOTIFY [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | RELEASE | R | W | 0 | Logical and of corresponding request and mask bits. |
| 16:23 | NOTIFY | R | W | 0 | Logical and of corresponding INTR and INTR_MASK fields. |

# 20 LIN

**Description** LIN
**Base Address** 0x40500000
**Size** 0x10000
**Slave Num** MMIO5 - 0

## 20.21 Register Details

### 20.21.1 LIN_ERROR_CTL

**Description:** Error control
**Address:** 0x40500000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register supports error functionality: it enables HW injected channel transmitter errors. The receiver should detect these errors and report these errors through activation of corresponding interrupt causes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | CH_IDX [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | TX_CHECKSUM_STOP_ERROR [23:23] | TX_CHECKSUM_ERROR [22:22] | TX_DATA_STOP_ERROR [21:21] | None [20:20] | TX_PID_STOP_ERROR [19:19] | TX_PARITY_ERROR [18:18] | TX_SYNC_STOP_ERROR [17:17] | TX_SYNC_ERROR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | CH_IDX | RW | R | 0 | Specifies the channel index of the channel to which HW injected channel transmitter errors applies. |
| 16 | TX_SYNC_ERROR | RW | R | 0 | The synchronization field is changed from 0x55 to 0x00.<br><br>At the receiver, this should result in INTR.RX_HEADER_SYNC_ERROR activation. |
| 17 | TX_SYNC_STOP_ERROR | RW | R | 0 | The synchronization field STOP bits are inverted to '0'.<br><br>At the receiver, this should result in INTR.RX_HEADER_SYNC_ERROR or INTR.RX_HEADER_FRAME_ERROR activation. |
| 18 | TX_PARITY_ERROR | RW | R | 0 | In LIN mode, the PID parity bit P[1] is inverted from !(ID[5] ^ ID[4] ^ ID[3] ^ ID[1]) to (ID[5] ^ ID[4] ^ ID[3] ^ ID[1]).<br><br>At the receiver, this should result in INTR.RX_HEADER_PARITY_ERROR activation.<br><br>In UART mode, a data field's parity bit is inverted. |
| 19 | TX_PID_STOP_ERROR | RW | R | 0 | The PID field STOP bits are inverted to '0'.<br><br>At the receiver, this should result in INTR.RX_HEADER_FRAME_ERROR activation. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 21 | TX_DATA_STOP _ERROR | RW | R | 0 | The data field STOP bits are inverted to '0'.<br><br>At the receiver, this should result in INTR.RX_RESPONSE_FRAME_ERROR activation.<br><br>Note: Used in UART mode. |
| 22 | TX_CHECKSUM_ERROR | RW | R | 0 | The checksum field is inverted.<br><br>At the receiver, this should result in INTR.RX_RESPONSE_CHECKSUM_ERROR activation. |
| 23 | TX_CHECKSUM_STOP _ERROR | RW | R | 0 | The checksum field STOP bits are inverted to '0'.<br><br>At the receiver, this should result in INTR.RX_RESPONSE_FRAME_ERROR activation. |
| 31 | ENABLED | RW | R | 0 | Error injection enable:<br>'0': Disabled.<br>'1': Enabled. |

### 20.21.2 LIN_TEST_CTL

**Description:** Test control
**Address:** 0x40500004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register support test functionality.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | CH_IDX [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | MODE [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | CH_IDX | RW | R | 0 | Specifies the channel index of the channel to which test applies. The channel IO signals of channel indices CH_IDX and CH_NR-1 are connected as specified by MODE. CH_IDX should be in the range [0, CH_NR-2], as channel index CH_NR-1 is always involved in test and cannot be connected to itself. The test mode allows BOTH of the two connected channels to be tested.<br><br>Note: this testing functionality simplifies SW development, but may also be used in the field to verify correct channel functionality. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16 | MODE | RW | R | 0 | Test mode:<br>'0': Partial disconnect from IOSS. This mode's isolation allows for device test without relying on an external LIN transceiver. The IOSS 'tx' IO cell can be used to observe messages outside of the device.<br>- tx_in[CH_IDX] = IOSS lin_tx_in[CH_IDX].<br>- tx_in[CH_NR-1] = IOSS lin_tx_in[CH_IDX].<br>- rx_in[CH_IDX] = IOSS lin_tx_in[CH_IDX].<br>- rx_in[CH_NR-1] = IOSS lin_tx_in[CH_IDX].<br>- lin_tx_out[CH_IDX] = tx_out[CH_IDX] & tx_out[CH_NR-1].<br>- lin_tx_out[CH_NR-1] = tx_out[CH_IDX] & tx_out[CH_NR-1].<br><br>'1': Full disconnect from IOSS (the IOSS/HSIOM should disconnect 'tx_out' from the 'tx' IO cell). This mode's isolation allows for device test without effecting an operational LIN cluster.<br>- tx_in[CH_IDX] = lin_tx_out[CH_IDX].<br>- tx_in[CH_NR-1] = lin_tx_out[CH_IDX].<br>- rx_in[CH_IDX] = lin_tx_out[CH_IDX].<br>- rx_in[CH_NR-1] = lin_tx_out[CH_IDX].<br>- lin_tx_out[CH_IDX] = tx_out[CH_IDX] & tx_out[CH_NR-1].<br>- lin_tx_out[CH_NR-1] = tx_out[CH_IDX] & tx_out[CH_NR-1]. |
| 31 | ENABLED | RW | R | 0 | Test enable:<br>'0': Disabled. Functional mode.<br>- tx_in[CH_IDX] = IOSS lin_tx_in[CH_IDX].<br>- tx_in[CH_NR-1] = IOSS lin_tx_in[CH_NR-1].<br>- rx_in[CH_IDX] = IOSS lin_rx_in[CH_IDX].<br>- rx_in[CH_NR-1] = IOSS lin_rx_in[CH_NR-1].<br>- lin_tx_out[CH_IDX] = tx_out[CH_IDX].<br>- lin_tx_out[CH_NR-1] = tx_out[CH_NR-1].<br>'1': Enabled. Test mode, specific test mode is specified by MODE. |

### 20.21.3 CH

#### 20.21.3.1 LIN_CH_CTL0

**Description:** Control 0
**Address:** 0x40508000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x400C0101

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | STOP_BITS | RW | R | 1 | STOP bit periods:<br>'0': 1/2 bit period.<br>'1': 1 bit period.<br>'2': 1 1/2 bit period.<br>'3': 2 bit periods.<br><br>In LIN mode, this field should be set to '1' (the default value) .<br><br>In UART mode, this field can be programmed as desired.<br><br>Note: receiver STOP bit frame errors can only be detected if the number of STOP bit periods is 1 or more bit period. |
| 4 | AUTO_EN | RW | R | 0 | LIN transceiver auto enable:<br>'0': Disabled.<br>'1': Enabled. The TX_RX_STATUS.EN_OUT field is controlled by HW. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:9 | BREAK_DELIMITER_LENGTH | RW | R | 1 | In LIN mode, this field specifies the break delimiter length:<br>(used in header transmission, not used in header reception).<br>'0': 1 bit period.<br>'1': 2 bit periods (default value).<br>'2': 3 bit periods.<br>'3': 4 bit periods.<br><br>In UART mode, this field specifies the data field size:<br>'0': 5 bit data field.<br>'1': 6 bit data field.<br>'2': 7 bit data field.<br>'3': 8 bit data field.<br>When the data field size is less than 8 bits, the most significant (unused) bits of the DATAx.DATAy[7:0] fields should be set to '0' for the transmitter. |
| 16:20 | BREAK_WAKEUP_LENGTH | RW | R | 12 | Break/wakeup length (minus 1) in bit periods:<br>'0': 1 bit period.<br>...<br>'10': 11 bit periods (break length for slave nodes)<br>...<br>'12': 13 bit periods (break length for master nodes)<br>...<br>'30': 31 bit periods.<br>'31': Illegal (should NOT be used!!!)<br><br>This field is used for transmission/reception of BOTH break and wakeup signals. Note that these functions are mutually exclusive:<br>- When CMD.TX_HEADER is '1', the field specifies the transmitted break field.<br>- When CMD.TX_WAKEUP is '1', the field specifies the transmitted wakeup field.<br>- When CMD.RX_HEADER is '1', the field specifies the to be received break field.<br>- Otherwise, the field specifies the to be received wakeup field.<br><br>Per the standard, the master wakeup duration is between 250 us and 5 ms. To support uncalibrated slaves, a slave has a detection threshold of 150 us (3 bit periods at 20 kbps). After transmission of a break or wakeup signal, the INTR.TX_BREAK_WAKEUP_DONE interrupt cause is activated. After reception of a wakeup signal, the INTR.RX_BREAK_WAKEUP_DONE interrupt cause is activated.<br><br>To specify longer wakeup signals in terms of absolute time (us/ms rather than bit periods), the associated PERI clock divider value can be (temporarily) increased to make the LIN bit period longer.<br><br>Note: entering bus sleep mode is achieved with the 'go-to-sleep' command. |
| 24 | MODE | RW | R | 0 | Mode of operation:<br>'0': LIN mode.<br>'1': UART mode. |
| | LIN | | | 0 | LIN mode. |
| | UART | | | 1 | UART mode. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 27 | BIT_ERROR_IGNORE | RW | R | 0 | Specifies behavior on a detected bit error during header or response transmission:<br>'0': Message transfer is aborted.<br>'1': Message transfer is NOT aborted.<br><br>Note: this field does NOT effect the reporting of the bit error through INTR/STATUS.TX_HEADER/RESPONSE_BIT_ERROR; i.e. bit errors are always reported. |
| 28 | PARITY | RW | R | 0 | Parity mode:<br>'0': Even parity: even number of '1' bits (including parity).<br>'1': Odd parity.<br><br>Note: Used in UART mode only. |
| 29 | PARITY_EN | RW | R | 0 | Parity generation enable:<br>'0': Disabled. No parity bit is transferred.<br>'1': Enabled. The parity bit is transferred after the last (most significant) data field bit.<br><br>Note: Used in UART mode only. |
| 30 | FILTER_EN | RW | R | 1 | RX filter (for 'lin_rx_in'):<br>'0': No filter.<br>'1': Median 3 (default value) operates on the last three 'lin_rx_in' values. The sequences '000', '001', '010' and '100' result in a filtered value '0'. The sequences '111', '110', '101' and '011' result in a filtered value '1'. |
| 31 | ENABLED | RW | R | 0 | Channel enable:<br>'0': Disabled. If a channel is disabled, all non-retained MMIO registers (e.g. the TX_RX_STATUS, and INTR registers) have their fields reset to their default value.<br>'1': Enabled. |

### 20.21.3.2 LIN_CH_CTL1

**Description:** Control 1
**Address:** 0x40508004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** A master node is aware of a message's checksum mode and number of data fields. Therefore, a master node can set the CHECKSUM_ENHANCED and DATA_NR fields accordingly, BEFORE the message header transmission.

A slave node needs to derive a message's checksum mode and number of data fields from the received PID field, AFTER the message header reception. The INTR.RX_HEADER_DONE interrupt cause indicates that the message header is received and PID_CHECKSUM.PID contains the received PID field. Slave node SW can use this PID field information to set CHECKSUM_ENHANCED and DATA_NR fields accordingly. A minimum message response consists of at least 1 data field, and the CHECKSUM_ENHANCED and DATA_NR fields need to be set BEFORE the receipt of the STOP bit(s) of the first data field; i.e. SW effectively has a data field transfer duration to set the fields.

**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | DATA_NR [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | CHECKSUM_ENHANCED [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAME_TIMEOUT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | FRAME_TIMEOUT_SEL [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | DATA_NR | RW | R | Undefined | Number of data fields (minus 1) in the response (not including the checksum):<br>'0': 1 data field.<br>'1': 2 data fields.<br>...<br>'7': 8 data fields.<br><br>Note: master and slave nodes need to agree upon the number of data fields before message transfer.<br>In RX_RESPONSE case, When PID (header) is received, firmware has the time of one response data byte, to modify CTL1.DATA_NR. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8 | CHECKSUM_ ENHANCED | RW | R | Undefined | Checksum mode:<br>'0': Classic mode. PID field is NOT included in the checksum calculation.<br>'1': Enhanced mode. PID field is included in the checksum calculation. This mode requires special attention when the master node transmits the header and a (different) slave node transmits the response: the slave node will use the calculated partial checksum over the received PID field as a starting point for the calculation over the to be transmitted data fields.<br><br>Note: If the frame identifier ID[5:0] is 0x3c or 0x3d, the classic mode will ALWAYS be used for transmission and assumed for reception, independent of the CHECKSUM_ENHANCED value. |
| 16:23 | FRAME_TIMEOUT | RW | R | Undefined | Specifies the maximum allowed length (timeout value) for a frame, frame header or frame response in bit periods. The LIN specification prescribes to set the maximum length to 1.4x the nominal length (Theader_max = 1.4 x Theader_nom and Tresponse_max = 1.4 x Tresponse_nom). The nominal header length Theader_nom is 34 bit periods and the nominal response length Tresponse_nom is 10 * (data_nr + 1) bit periods (data_nr is the number of data fields)<br><br>Note: the LIN specification specifies the following: 'Tools and tests shall check the Tframe_max (= Theader_max + Tresponse_max). Nodes shall not check this time. The receiving node of the frame shall accept the frame up to the next frame slot (i.e. next break field), even if it is longer then Tframe_max).' |
| 24:25 | FRAME_TIMEOUT_SEL | RW | R | 0 | Specifies the frame timeout mode:<br>'0': No timeout functionality (default value).<br>'1': Frame mode: detects timeout from the start of break field to checksum field STOP bits (inclusive). The minimum FRAME_TIMEOUT value is 34+20 bit periods (header and a response with 1 data field).<br>'2': Frame header mode: detects timeout from the start of break field to PID field STOP bits (inclusive). The minimum FRAME_TIMEOUT value is 34 bit periods (header).<br>'3': Frame response mode: detects timeout from the PID field STOP bits (exclusive) to checksum field STOP bits (the response space is included in the frame response). The minimum FRAME_TIMEOUT value is 20 bit periods (response with 1 data field). |

### 20.21.3.3 LIN_CH_STATUS

**Description:** Status
**Address:** 0x40508008
**Offset:** 0x8
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The register fields are not retained. This is to ensure that they come up as '0' after coming out of DeepSleep system power mode.

This is a non-retained register; setting CTL.ENABLED to '0' clears all status fields to '0'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | RX_DATA0_FRAME_ERROR [5:5] | HEADER_RESPONSE [4:4] | DATA_IDX [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | RX_DONE [13:13] | TX_DONE [12:12] | None [11:10] | | RX_BUSY [9:9] | TX_BUSY [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | TX_RESPONSE_BIT_ERROR [17:17] | TX_HEADER_BIT_ERROR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | RX_RESPONSE_CHECKSUM_ERROR [28:28] | RX_RESPONSE_FRAME_ERROR [27:27] | RX_HEADER_PARITY_ERROR [26:26] | RX_HEADER_SYNC_ERROR [25:25] | RX_HEADER_FRAME_ERROR [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | DATA_IDX | R | W | 0 | Number of transferred data and checksum fields in the response (also acts as an index/address into response data field and checksum field registers (DATA0, DATA1, PID_CHECKSUM)) :<br>'0': No data fields transferred.<br>'1': Data field 1 transferred.<br>...<br>'7': Data fields 1, 2, 3, ... and 7 transferred.<br>'8': Data fields 1, 2, 3, ... and 8 transferred.<br>'9': Data fields 1, 2, 3, ..., 8 and checksum field transferred.<br>'10'-'15': Unused.<br><br>Set to '0' on the start of a TX_HEADER or RX_HEADER command. |
| 4 | HEADER_RESPONSE | R | W | 0 | Frame header / response identifier (only valid when TX_BUSY or RX_BUSY is '1'):<br>'0': Frame header being transferred.<br>'1': Frame response being transferred. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 5 | RX_DATA0_FRAME_ERROR | R | W | 0 | Frame response, first data field frame error. HW sets this field to '1' when the received STOP bits of the first response data field have an unexpected value (only after a RX_HEADER command), and this data byte is 0x00. HW clears this field to '0' at the falling edge of SYNC start bit (after INTR.RX_HEADER_BREAK_WAKEUP_DONE). This field is used together with INTR.RX_RESPONSE_FRAME_ERROR to distinguish 'no response', 'error response' and 'correct response' scenarios.<br><br>Note: The ongoing message transfer is NOT aborted. |
| 8 | TX_BUSY | R | W | 0 | Transmitter busy.<br>- Set to '1' on the start of the following commands: TX_HEADER, TX_RESPONSE, TX_WAKEUP.<br>- Set to '0' on successful completion of previous commands or when an error is detected. In the successful completion case, TX_BUSY is updated one cycle after TX_DONE.<br>In 'TX_HEADER, RX_RESPONSE' case, set to '0' at the start bit falling edge in the first response data byte, after header transmission |
| 9 | RX_BUSY | R | W | 0 | Receiver busy.<br>- Set to '1' on the start of the following commands: RX_HEADER, RX_RESPONSE.<br>in RX_HEADER case, set at Break filed rising edge.<br>in RX_RESPONSE case, set at the start bit falling edge in the first response data byte.<br><br>- Set to '0' on successful completion of previous commands or when an error is detected. In the successful completion case, RX_BUSY is updated one cycle after RX_DONE. |
| 12 | TX_DONE | R | W | 0 | Transmitter done:<br>- Set to '0' on the start of a new command.<br>- Set to '1' on successful completion of the following command sequences (if CTL.AUTO_EN is '1', this includes the 4-bit period external transceiver disable post-amble):<br>- TX_HEADER.<br>- TX_HEADER, TX_RESPONSE.<br>- RX_HEADER, TX_RESPONSE.<br>- TX_WAKEUP. |
| 13 | RX_DONE | R | W | 0 | Receiver done:<br>- Set to '0' on the start of a new command.<br>- Set to '1' on successful completion of the following command sequences (if CTL.AUTO_EN is '1', this includes the 4-bit period external transceiver disable post-amble):<br>- RX_HEADER, RX_RESPONSE.<br>- TX_HEADER, RX_RESPONSE. |
| 16 | TX_HEADER_BIT_ERROR | R | W | 0 | Copy of INTR.TX_HEADER_BIT_ERROR. |
| 17 | TX_RESPONSE_BIT_ERROR | R | W | 0 | Copy of INTR.TX_RESPONSE_BIT_ERROR. |
| 24 | RX_HEADER_FRAME_ERROR | R | W | 0 | Copy of INTR.RX_HEADER_FRAME_ERROR. |
| 25 | RX_HEADER_SYNC_ERROR | R | W | 0 | Copy of INTR.RX_HEADER_SYNC_ERROR. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 26 | RX_HEADER_PARITY_ERROR | R | W | 0 | Copy of INTR.RX_HEADER_PARITY_ERROR. |
| 27 | RX_RESPONSE_FRAME_ERROR | R | W | 0 | Copy of INTR.RX_RESPONSE_FRAME_ERROR. |
| 28 | RX_RESPONSE_CHECKSUM_ERROR | R | W | 0 | Copy of INTR.RX_RESPONSE_CHECKSUM_ERROR. |

### 20.21.3.4 LIN_CH_CMD

**Description:** Command
**Address:** 0x40508010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The register fields are retained. When a LIN channel is disabled (CTL.ENABLED is set to '0'), HW sets all the register fields to '0'.

The following restrictions apply when programming the commands:
- TX_HEADER and RX_HEADER are mutually exclusive; i.e. cannot both be set to '1'.
- TX_WAKEUP is mutually exclusive with all other commands.
- TX_RESPONSE and RX_RESPONSE are NOT mutually exclusive, but are evaluated in the following order (of decreasing priority): TX_RESPONSE, RX_RESPONSE.

The CMD.TX_HEADER register field description provides all legal command sequences. The break or wakeup detection is always enabled, regardless of CMD register setting.

Note: LIN mode supports all commands, UART mode supports the TX_HEADER and RX_HEADER commands only.

**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | TX_WAKEUP [2:2] | TX_RESPONSE [1:1] | TX_HEADER [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | RX_RESPONSE [9:9] | RX_HEADER [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_HEADER | RW1S | RW | 0 | SW sets this field to '1' to transmit a header. HW sets this field to '0' on successful completion of ANY of the following legal command sequences (also set to '0' when an error is detected):<br>- TX_HEADER<br>- TX_HEADER, TX_RESPONSE.<br>- TX_HEADER, RX_RESPONSE.<br>- RX_HEADER, TX_RESPONSE.<br>- RX_HEADER, RX_RESPONSE.<br>- TX_WAKEUP.<br><br>The header is transmitted when the PID field STOP bits are transmitted (INTR.TX_HEADER_DONE).<br><br>HW sets this field to '1', when the 'tr_cmd_tx_header' input trigger is activated. This allows for time triggered LIN message transfer. HW driven time triggered transfer eliminates the jitter that is typically associated with SW driven transfer.<br><br>In UART mode, a single data field (DATA0.DATA1) is transmitted. |
| 1 | TX_RESPONSE | RW1S | RW1C | 0 | SW sets this field to '1' to transmit a response. HW sets this field to '0' on successful completion of ANY of the legal command sequences (also set to '0' when an error is detected).<br><br>The response is transmitted when the checksum field STOP bits are transmitted (INTR.TX_RESPONSE_DONE). |
| 2 | TX_WAKEUP | RW1S | RW1C | 0 | SW sets this field to '1' to transmit a wakeup signal. HW sets this field to '0' on successful completion of ANY of the legal command sequences (also set to '0' when an error is detected).<br><br>The command generates CTL.BREAK_WAKEUP_LENGTH bit periods in the dominant state (low/'0') and transitions to the recessive state (high/'1') (INTR.TX_WAKEUP_DONE). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8 | RX_HEADER | RW1S | RW1C | 0 | SW sets this field to '1' to receive a header. HW sets this field to '0' on successful completion of the ANY of the legal command sequences (NOT set to '0' when an error is detected in LIN mode).<br><br>The header is received when the PID field STOP bits are received (INTR.RX_HEADER_DONE).<br><br>Typically, a slave node SW sets both RX_HEADER and RX_RESPONSE to '1', anticipating a transfer of a response from the master node to this slave node. After receipt of the header PID field (INTR.RX_HEADER_PID_DONE is activated), the slave node may decide to set TX_RESPONSE to '1' (which has a higher priority than RX_RESPONSE) to transmit a response.<br><br>the Break detection is performed regardless of CMD.RX_HEADER.<br>INTR.RX_BREAK_WAKEUP_DONE will trigger at LIN_RX rising edge, when the low pulse meet CTL0.BREAK_WAKEUP_LENGTH. when Break is detected, HW check CMD.RX_HEADER before entering SYNC byte processing state. when RX_HEADER is cleared, SW has at least 11 bit times to set RX_HEADER again, before next Break is detected (RX_BREAK_WAKEUP_DONE). in this case, there is no gap, Break will never be missed.<br><br>In UART mode, a single data field in received (in DATA0.DATA1). HW set this field to '0' when the data field is received, or when an error is detected. |
| 9 | RX_RESPONSE | RW1S | RW1C | 0 | SW sets this field to '1' to receive a response. HW sets this field to '0' on successful completion of ANY of the legal command sequences (NOT set to '0' when an error is detected).<br><br>The response is received when the checksum field STOP bits are received (INTR.RX_RESPONSE_DONE). |

### 20.21.3.5 LIN_CH_TX_RX_STATUS

**Description:** TX/RX status
**Address:** 0x40508060
**Offset:** 0x60
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SYNC_COUNTER [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | RX_IN [17:17] | TX_IN [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:27] | | | | | EN_OUT [26:26] | None [25:25] | TX_OUT [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SYNC_COUNTER | R | W | Undefined | Synchronization counter in LIN channel clock periods. After the receipt of a synchronization field, this fields reflects the duration of the synchronization field. Ideally, SYNC_COUNTER = 8*16 = 128 (the synchronization fields consists of eight bit period of 16 LIN channel clock periods each).<br>- If SYNC_COUNTER is less than 128, the LIN channel clock is too slow and the PERI/PCLK divider value should be decreased.<br>- If SYNC_COUNTER is greater than 128, the LIN channel clock is too fast and the PERI/PCLK divider value should be increased.<br><br>The biggest master-slave clock discrepancy occurs when the master is slow and the slave is fast or vice versa. At a 0.5 percent master inaccuracy and a 14 percent slave inaccuracy, this results in the extreme synchronization values of (.86 * 128) / 1.005 = 109.5 and (1.14 *128) / 0.995 = 146.6. We add a little margin for a valid range of [106, 152].<br><br>Note: Only slave nodes with imprecise clocks require clock resynchronization. Master and slave nodes with precise clocks do NOT require clock resynchronization. |
| 16 | TX_IN | R | W | Undefined | LIN transmitter input ('tx_in', 'lin_tx_in' in functional mode). TX_IN and RX_IN can be used to determine a wakeup source. Note that wakeup source detection relies on the external transceiver functionality. |
| 17 | RX_IN | R | W | Undefined | LIN receiver input ('rx_in', 'lin_rx_in' in functional mode). |
| 24 | TX_OUT | R | W | 1 | LIN transmitter output ('tx_out', 'lin_tx_out'). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 26 | EN_OUT | RW | RW | 1 | LIN transceiver enable ('en_out', 'lin_en_out'). This field controls the enable (or low active sleep enable) of the external transceiver:<br>'0': Disabled.<br>'1': Enabled.<br><br>If CTL.AUTO_EN is '0', SW controls this field to enable the external transceiver. If CTL.AUTO_EN is '1', HW controls this field to enable the external transceiver:<br>- Before a legal command sequence, HW sets this field to '1', if it is '0'. The start of the command sequence is effectively postponed by a 4-bit period preamble.<br>- After a legal command sequence, HW clears this field to '0'. The end of the command sequence is effectively postponed by a 4-bit period postamble.<br><br>Note: external transceivers require a 'power up' or 'power down' period of 1 or 2 bit periods, so a 4-bit period suffices for all known transceivers. |

### 20.21.3.6 LIN_CH_PID_CHECKSUM

**Description:** PID and checksum
**Address:** 0x40508080
**Offset:** 0x80
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register supports 8-bit, 16-bit and 32-bit accesses.

A LIN header has a single PID field. This field is SW accessible through this register. The field is used in BOTH transmit and receive modes.

A LIN response has a single checksum field. This field is SW accessible through this register. The field is used in BOTH transmit and receive modes.

**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PID [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CHECKSUM [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | PID | RW | RW | Undefined | Header protected identifier (PID).<br>- Bits 5 down to 0: frame identifier ID[5:0].<br>Frame identifier 0x3c is for a 'master request' frame, 0x3d is for a 'slave response' frame, 0x3e and 0x3f are for future LIN enhancements. Frame identifier ID[5:4] is optionally used for length control; i.e. specifies the number of response data fields.<br>- Bits 1 down to 0: parity bits P[1] and P[0].<br>- P[1] = ! (ID[5] ^ ID[4] ^ ID[3] ^ ID[1])<br>- P[0] = (ID[4] ^ ID[2] ^ ID[1] ^ ID[0])<br><br>Transmission: To be transmitted PID field. SW needs to calculate the PID field parity bits P[1] and P[0].<br><br>Reception: Received PID field. Slave node SW uses the PID field to determine how to handle the response for a received frame header: TX_RESPONSE or RX_RESPONSE. |
| 8:15 | CHECKSUM | R | RW | Undefined | Checksum.<br><br>Transmission: HW calculated checksum (SW does not need to calculate the checksum) over the transmitted PID field (optional per CTL.CHECKSUM_ENHANCED) and data fields.<br><br>Reception: Received checksum. Note that in case of a RX_CHECKSUM_ERROR, SW can use the received PID field and the received data fields to calculate the correct checksum value. |

### 20.21.3.7 LIN_CH_DATA0

**Description:** Response data 0
**Address:** 0x40508084
**Offset:** 0x84
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register supports 8-bit, 16-bit and 32-bit accesses. This allows for a single 32-bit access to write or read four data fields.

A LIN response has a maximum of eight data fields. These data fields are SW accessible through the DATA0 and DATA1 registers. These register are used in BOTH transmit and receive modes. If the LIN response is both transmitted and received, the to be transmitted data fields (provided by SW) in this register are overwritten by the received data fields (provided by HW).

Data field DATA1 is the first response data field (first to be transmitted/received). The number of transmitted/received data fields is specified by CTL.DATA_NR.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA1 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA2 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA3 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA4 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA1 | RW | RW | Undefined | Data field 1.<br><br>Transmission: To be transmitted data field. SW provides data field.<br><br>Reception: Received data field. SW uses the data field. |
| 8:15 | DATA2 | RW | RW | Undefined | Data field 2. |
| 16:23 | DATA3 | RW | RW | Undefined | Data field 3. |
| 24:31 | DATA4 | RW | RW | Undefined | Data field 4. |

### 20.21.3.8 LIN_CH_DATA1

**Description:** Response data 1
**Address:** 0x40508088
**Offset:** 0x88
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register supports 8-bit, 16-bit and 32-bit accesses. This allows for a single 32-bit access to write or read four data fields.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA5 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA6 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA7 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA8 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA5 | RW | RW | Undefined | Data field 5. |
| 8:15 | DATA6 | RW | RW | Undefined | Data field 6. |
| 16:23 | DATA7 | RW | RW | Undefined | Data field 7. |
| 24:31 | DATA8 | RW | RW | Undefined | Data field 8. |

### 20.21.3.9 LIN_CH_INTR

**Description:** Interrupt
**Address:** 0x405080C0
**Offset:** 0xC0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The register fields are not retained. This is to ensure that they come up as '0' after coming out of DeepSleep system power mode.

This is a non-retained register; setting CTL.ENABLED to '0' clears all command fields to '0'.

An activated error interrupt cause aborts an ongoing frame transfer (except for bit errors when CTL.BIT_ERROR_IGNORE is '1').

Note: LIN mode supports all interrupt causes. UART mode supports the RX_NOISE_DETECT, TX_HEADER_BIT_ERROR, RX_HEADER_FRAME_ERROR and RX_HEADER_PARITY_ERROR interrupt causes only.

**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | TX_WAKEUP_DONE [2:2] | TX_RESPONSE_DONE [1:1] | TX_HEADER_DONE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | TIMEOUT [14:14] | RX_NOISE_DETECT [13:13] | None [12:12] | RX_HEADER_SYNC_DONE [11:11] | RX_BREAK_WAKEUP_DONE [10:10] | RX_RESPONSE_DONE [9:9] | RX_HEADER_DONE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | TX_RESPONSE_BIT_ERROR [17:17] | TX_HEADER_BIT_ERROR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | RX_RESPONSE_CHECKSUM_ERROR [28:28] | RX_RESPONSE_FRAME_ERROR [27:27] | RX_HEADER_PARITY_ERROR [26:26] | RX_HEADER_SYNC_ERROR [25:25] | RX_HEADER_FRAME_ERROR [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_HEADER_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a frame header (break field, synchronization field and PID field) is transmitted (the CMD.TX_HEADER is completed). Specifically:<br>- When followed by CMD.TX_RESPONSE or CMD.RX_RESPONSE, this field is set to '1' after completion of the frame header transfer.<br>- When not followed by a response command, this field is set to '1' after completion of the frame header transfer. If CTL.AUTO_EN is '1', this includes the 4-bit period external transceiver disable post-amble.<br><br>Note: used in UART mode. |
| 1 | TX_RESPONSE_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a frame response (data fields and checksum field) is transmitted (the CMD.TX_RESPONSE is completed). If CTL.AUTO_EN is '1', this includes the 4-bit period external transceiver disable post-amble. |
| 2 | TX_WAKEUP_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a wakeup signal is transmitted (per CTL.BREAK_WAKEUP_LENGTH). This cause is activated on a transition from dominant/'0' state to recessive/'1' state; i.e. at the end of the wakeup signal. |
| 8 | RX_HEADER_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a frame header (break field, synchronization field and PID field) is received (the CMD.RX_HEADER is completed). Specifically:<br>- When followed by CMD.TX_RESPONSE or CMD.RX_RESPONSE, this field is set to '1' after completion of the frame header transfer.<br>- When not followed by a response command, this field is set to '1' after completion of the frame header transfer. If CTL.AUTO_EN is '1', this includes the 4-bit period external transceiver disable post-amble.<br><br>Note: used in UART mode. |
| 9 | RX_RESPONSE_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a frame response (data fields and checksum field) is received (the CMD.RX_RESPONSE is completed). If CTL.AUTO_EN is '1', this includes the 4-bit period external transceiver disable post-amble.<br><br>Note: activation implies that RX_RESPONSE_FRAME_ERROR and RX_RESPONSE_CHECKSUM_ERROR are not activated during response reception |
| 10 | RX_BREAK_WAKEUP_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a break or wakeup signal is received (per CTL.BREAK_WAKEUP_LENGTH). This cause is activated on a transition from dominant/'0' state to recessive/'1' state; i.e. at the end of the wakeup signal.<br><br>The break or wakeup detection is always enabled, regardless of CMD register setting. |
| 11 | RX_HEADER_SYNC_DONE | RW1C | RW1S | 0 | HW sets this field to '1', when a synchronization field is received (including trailing STOP bits). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 13 | RX_NOISE_DETECT | RW1C | RW1S | 0 | HW sets this field to '1', when isolated '0' or '1' 'in_rx_in' values are observed or when during sampling the last three 'lin_rx_in' values do NOT all have the same value. This mismatch is an indication of noise on the LIN line.<br><br>Note: The ongoing frame transfer is NOT aborted.<br><br>Note: Used in UART mode. |
| 14 | TIMEOUT | RW1C | RW1S | 0 | HW sets this field to '1', when a frame, frame header or frame response timeout is detected (per CTL.FRAME_TIMEOUT_SEL).<br><br>Note: The ongoing frame transfer is NOT aborted. |
| 16 | TX_HEADER_BIT _ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when a transmitted 'lin_tx_out' value does NOT match a received 'lin_rx_in' value (during header transmission). This specific test allows for delay through the external transceiver. This mismatch is an indication of bus collisions on the LIN line.<br><br>The match is performed for the Wakeup, Break, SYNC and the PID fields (for the START bit, data Byte and STOP bit).<br><br>Note: When CTL.BIT_ERROR_IGNORE is '0', the ongoing message transfer is aborted (INTR.TX_HEADER_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'.<br><br>Note: Used in UART mode. |
| 17 | TX_RESPONSE_BIT _ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when a transmitted 'lin_tx_out' value does NOT match a received 'lin_rx_in' value (during response transmission).<br><br>The match is performed for the data fields and the checksum field (for the START bit, data Byte and STOP bit).<br><br>Note: When CTL.BIT_ERROR_IGNORE is '0', the ongoing message transfer is aborted (INTR.TX_RESPONSE_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'. |
| 24 | RX_HEADER_FRAME _ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when the received START or STOP bits have an unexpected value (during header reception).<br><br>Note: The ongoing message transfer is aborted (INTR.RX_HEADER_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'.<br><br>Note: Used in UART mode. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 25 | RX_HEADER_SYNC _ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when the received synchronization field is not received within the synchronization counter range [106, 152] (see TX_RX_STATUS.SYNC_COUNTER).<br><br>Note: The ongoing message transfer is aborted (INTR.RX_HEADER_SYNC_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'. |
| 26 | RX_HEADER_PARITY _ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when the received PID field has a parity error.<br><br>Note: The ongoing message transfer is aborted (INTR.RX_PID_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'.<br><br>+G119 HW sets this field to '1', when the received data field has a parity error (when CTL0.PARITY_EN is '1'). |
| 27 | RX_RESPONSE_FRAME _ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when the received START or STOP bits have an unexpected value (during response reception). HW does NOT use this field for the STOP bits of the first data field after a RX_HEADER command, if the received data byte is 0x00. (STATUS.RX_DATA0_FRAME_ERROR is used instead).<br><br>Note: The ongoing message transfer is aborted (INTR.RX_RESPONSE_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'. |
| 28 | RX_RESPONSE _CHECKSUM_ERROR | RW1C | RW1S | 0 | HW sets this field to '1', when the calculated checksum over the received PID and data fields is not the same as the received checksum.<br><br>Note: The ongoing message transfer is aborted (INTR.RX_RESPONSE_DONE is NOT activated) and the TX_HEADER, TX_RESPONSE and TX_WAKEUP commands are set to '0'. |

### 20.21.3.10 LIN_CH_INTR_SET

**Description:** Interrupt set
**Address:** 0x405080C4
**Offset:** 0xC4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects the INTR register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | TX_WAKEUP_DONE [2:2] | TX_RESPONSE_DONE [1:1] | TX_HEADER_DONE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | TIMEOUT [14:14] | RX_NOISE_DETECT [13:13] | None [12:12] | RX_HEADER_SYNC_DONE [11:11] | RX_BREAK_WAKEUP_DONE [10:10] | RX_RESPONSE_DONE [9:9] | RX_HEADER_DONE [8:8] |

|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | TX_RESPONSE_BIT_ERROR [17:17] | TX_HEADER_BIT_ERROR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | RX_RESPONSE_CHECKSUM_ERROR [28:28] | RX_RESPONSE_FRAME_ERROR [27:27] | RX_HEADER_PARITY_ERROR [26:26] | RX_HEADER_SYNC_ERROR [25:25] | RX_HEADER_FRAME_ERROR [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_HEADER_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 1 | TX_RESPONSE_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 2 | TX_WAKEUP_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 8 | RX_HEADER_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 9 | RX_RESPONSE_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 10 | RX_BREAK_WAKEUP_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 11 | RX_HEADER_SYNC_DONE | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 13 | RX_NOISE_DETECT | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 14 | TIMEOUT | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16 | TX_HEADER_BIT _ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 17 | TX_RESPONSE_BIT _ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 24 | RX_HEADER_FRAME _ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 25 | RX_HEADER_SYNC _ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 26 | RX_HEADER_PARITY _ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 27 | RX_RESPONSE_FRAME _ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |
| 28 | RX_RESPONSE _CHECKSUM_ERROR | RW1S | A | 0 | Write INTR_SET field with '1' to set corresponding INTR field (a write of '0' has no effect). |

### 20.21.3.11 LIN_CH_INTR_MASK

**Description:** Interrupt mask
**Address:** 0x405080C8
**Offset:** 0xC8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | TX_WAKEUP_DONE [2:2] | TX_RESPONSE_DONE [1:1] | TX_HEADER_DONE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | TIMEOUT [14:14] | RX_NOISE_DETECT [13:13] | None [12:12] | RX_HEADER_SYNC_DONE [11:11] | RX_BREAK_WAKEUP_DONE [10:10] | RX_RESPONSE_DONE [9:9] | RX_HEADER_DONE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_HEADER_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 1 | TX_RESPONSE_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 2 | TX_WAKEUP_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 8 | RX_HEADER_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 9 | RX_RESPONSE_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 10 | RX_BREAK_WAKEUP_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 11 | RX_HEADER_SYNC_DONE | RW | R | 0 | Mask for corresponding field in INTR register. |
| 13 | RX_NOISE_DETECT | RW | R | 0 | Mask for corresponding field in INTR register. |
| 14 | TIMEOUT | RW | R | 0 | Mask for corresponding field in INTR register. |
| 16 | TX_HEADER_BIT_ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |
| 17 | TX_RESPONSE_BIT_ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |
| 24 | RX_HEADER_FRAME_ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 25 | RX_HEADER_SYNC _ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |
| 26 | RX_HEADER_PARITY _ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |
| 27 | RX_RESPONSE_FRAME _ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |
| 28 | RX_RESPONSE _CHECKSUM_ERROR | RW | R | 0 | Mask for corresponding field in INTR register. |

### 20.21.3.12 LIN_CH_INTR_MASKED

**Description:** Interrupt masked
**Address:** 0x405080CC
**Offset:** 0xCC
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects a bitwise AND between the INTR and INTR_MASK registers. This register allows SW to read the status of all mask enabled interrupt causes with a single load operation, rather than two load operations: one for INTR and one for INTR_MASK. This simplifies Firmware development. The associated interrupt is active ('1'), when INTR_MASKED != 0.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | TX_WAKEUP_DONE [2:2] | TX_RESPONSE_DONE [1:1] | TX_HEADER_DONE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | TIMEOUT [14:14] | RX_NOISE_DETECT [13:13] | None [12:12] | RX_HEADER_SYNC_DONE [11:11] | RX_BREAK_WAKEUP_DONE [10:10] | RX_RESPONSE_DONE [9:9] | RX_HEADER_DONE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | TX_RESPONSE_BIT_ERROR [17:17] | TX_HEADER_BIT_ERROR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | RX_RESPONSE_CHECKSUM_ERROR [28:28] | RX_RESPONSE_FRAME_ERROR [27:27] | RX_HEADER_PARITY_ERROR [26:26] | RX_HEADER_SYNC_ERROR [25:25] | RX_HEADER_FRAME_ERROR [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TX_HEADER_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 1 | TX_RESPONSE_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 2 | TX_WAKEUP_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 8 | RX_HEADER_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 9 | RX_RESPONSE_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 10 | RX_BREAK_WAKEUP_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 11 | RX_HEADER_SYNC_DONE | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 13 | RX_NOISE_DETECT | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 14 | TIMEOUT | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 16 | TX_HEADER_BIT _ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 17 | TX_RESPONSE_BIT _ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 24 | RX_HEADER_FRAME _ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 25 | RX_HEADER_SYNC _ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 26 | RX_HEADER_PARITY _ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 27 | RX_RESPONSE_FRAME _ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |
| 28 | RX_RESPONSE _CHECKSUM_ERROR | R | W | 0 | Logical AND of corresponding INTR and INTR_MASK fields. |

# 21 PASS

**Description** Programmable Analog Subsystem for S40E
**Base Address** 0x40900000
**Size** 0x100000
**Slave Num** MMIO9 - 0

## 21.1 SAR 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CTL | 0x40900000 | FULL | Analog control register. |
| PASS0_SAR0_DIAG_CTL | 0x40900004 | FULL | Diagnostic Reference control register. |
| PASS0_SAR0_PRECOND_CTL | 0x40900010 | FULL | Preconditioning control register. |
| PASS0_SAR0_ANA_CAL | 0x40900080 | FULL | Current analog calibration values |
| PASS0_SAR0_DIG_CAL | 0x40900084 | FULL | Current digital calibration values |
| PASS0_SAR0_ANA_CAL_ALT | 0x40900090 | FULL | Alternate analog calibration values |
| PASS0_SAR0_DIG_CAL_ALT | 0x40900094 | FULL | Alternate digital calibration values |
| PASS0_SAR0_CAL_UPD_CMD | 0x40900098 | FULL | Calibration update command |
| PASS0_SAR0_TR_PEND | 0x40900100 | FULL | Trigger pending status |
| PASS0_SAR0_WORK_VALID | 0x40900180 | FULL | Channel working data register 'valid' bits |
| PASS0_SAR0_WORK_RANGE | 0x40900184 | FULL | Range detected |
| PASS0_SAR0_WORK_RANGE_HI | 0x40900188 | FULL | Range detect above Hi flag |
| PASS0_SAR0_WORK_PULSE | 0x4090018C | FULL | Pulse detected |
| PASS0_SAR0_RESULT_VALID | 0x409001A0 | FULL | Channel result data register 'valid' bits |
| PASS0_SAR0_RESULT_RANGE_HI | 0x409001A4 | FULL | Channel Range above Hi flags |
| PASS0_SAR0_STATUS | 0x40900200 | FULL | Current status of internal SAR registers (mostly for debug) |
| PASS0_SAR0_AVG_STAT | 0x40900204 | FULL | Current averaging status (for debug) |

### 21.1.1 CH 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH0_TR_CTL | 0x40900800 | FULL | Trigger control. |
| PASS0_SAR0_CH0_SAMPLE_CTL | 0x40900804 | FULL | Sample control. |
| PASS0_SAR0_CH0_POST_CTL | 0x40900808 | FULL | Post processing control |
| PASS0_SAR0_CH0_RANGE_CTL | 0x4090080C | FULL | Range thresholds |
| PASS0_SAR0_CH0_INTR | 0x40900810 | FULL | Interrupt request register. |
| PASS0_SAR0_CH0_INTR_SET | 0x40900814 | FULL | Interrupt set request register |
| PASS0_SAR0_CH0_INTR_MASK | 0x40900818 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH0_INTR_MASKED | 0x4090081C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH0_WORK | 0x40900820 | FULL | Working data register |
| PASS0_SAR0_CH0_RESULT | 0x40900824 | FULL | Result data register |
| PASS0_SAR0_CH0_GRP_STAT | 0x40900828 | FULL | Group status register |
| PASS0_SAR0_CH0_ENABLE | 0x40900838 | FULL | Enable register |
| PASS0_SAR0_CH0_TR_CMD | 0x4090083C | FULL | Software triggers |

### 21.1.2 CH 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH1_TR_CTL | 0x40900840 | FULL | Trigger control. |
| PASS0_SAR0_CH1_SAMPLE_CTL | 0x40900844 | FULL | Sample control. |
| PASS0_SAR0_CH1_POST_CTL | 0x40900848 | FULL | Post processing control |
| PASS0_SAR0_CH1_RANGE_CTL | 0x4090084C | FULL | Range thresholds |
| PASS0_SAR0_CH1_INTR | 0x40900850 | FULL | Interrupt request register. |
| PASS0_SAR0_CH1_INTR_SET | 0x40900854 | FULL | Interrupt set request register |
| PASS0_SAR0_CH1_INTR_MASK | 0x40900858 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH1_INTR_MASKED | 0x4090085C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH1_WORK | 0x40900860 | FULL | Working data register |
| PASS0_SAR0_CH1_RESULT | 0x40900864 | FULL | Result data register |
| PASS0_SAR0_CH1_GRP_STAT | 0x40900868 | FULL | Group status register |
| PASS0_SAR0_CH1_ENABLE | 0x40900878 | FULL | Enable register |
| PASS0_SAR0_CH1_TR_CMD | 0x4090087C | FULL | Software triggers |

### 21.1.3 CH 2

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH2_TR_CTL | 0x40900880 | FULL | Trigger control. |
| PASS0_SAR0_CH2_SAMPLE_CTL | 0x40900884 | FULL | Sample control. |
| PASS0_SAR0_CH2_POST_CTL | 0x40900888 | FULL | Post processing control |
| PASS0_SAR0_CH2_RANGE_CTL | 0x4090088C | FULL | Range thresholds |
| PASS0_SAR0_CH2_INTR | 0x40900890 | FULL | Interrupt request register. |
| PASS0_SAR0_CH2_INTR_SET | 0x40900894 | FULL | Interrupt set request register |
| PASS0_SAR0_CH2_INTR_MASK | 0x40900898 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH2_INTR_MASKED | 0x4090089C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH2_WORK | 0x409008A0 | FULL | Working data register |
| PASS0_SAR0_CH2_RESULT | 0x409008A4 | FULL | Result data register |
| PASS0_SAR0_CH2_GRP_STAT | 0x409008A8 | FULL | Group status register |
| PASS0_SAR0_CH2_ENABLE | 0x409008B8 | FULL | Enable register |
| PASS0_SAR0_CH2_TR_CMD | 0x409008BC | FULL | Software triggers |

### 21.1.4 CH 3

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH3_TR_CTL | 0x409008C0 | FULL | Trigger control. |
| PASS0_SAR0_CH3_SAMPLE_CTL | 0x409008C4 | FULL | Sample control. |
| PASS0_SAR0_CH3_POST_CTL | 0x409008C8 | FULL | Post processing control |
| PASS0_SAR0_CH3_RANGE_CTL | 0x409008CC | FULL | Range thresholds |
| PASS0_SAR0_CH3_INTR | 0x409008D0 | FULL | Interrupt request register. |
| PASS0_SAR0_CH3_INTR_SET | 0x409008D4 | FULL | Interrupt set request register |
| PASS0_SAR0_CH3_INTR_MASK | 0x409008D8 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH3_INTR_MASKED | 0x409008DC | FULL | Interrupt masked request register |
| PASS0_SAR0_CH3_WORK | 0x409008E0 | FULL | Working data register |
| PASS0_SAR0_CH3_RESULT | 0x409008E4 | FULL | Result data register |
| PASS0_SAR0_CH3_GRP_STAT | 0x409008E8 | FULL | Group status register |
| PASS0_SAR0_CH3_ENABLE | 0x409008F8 | FULL | Enable register |
| PASS0_SAR0_CH3_TR_CMD | 0x409008FC | FULL | Software triggers |

### 21.1.5 CH 4

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH4_TR_CTL | 0x40900900 | FULL | Trigger control. |
| PASS0_SAR0_CH4_SAMPLE_CTL | 0x40900904 | FULL | Sample control. |
| PASS0_SAR0_CH4_POST_CTL | 0x40900908 | FULL | Post processing control |
| PASS0_SAR0_CH4_RANGE_CTL | 0x4090090C | FULL | Range thresholds |
| PASS0_SAR0_CH4_INTR | 0x40900910 | FULL | Interrupt request register. |
| PASS0_SAR0_CH4_INTR_SET | 0x40900914 | FULL | Interrupt set request register |
| PASS0_SAR0_CH4_INTR_MASK | 0x40900918 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH4_INTR_MASKED | 0x4090091C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH4_WORK | 0x40900920 | FULL | Working data register |
| PASS0_SAR0_CH4_RESULT | 0x40900924 | FULL | Result data register |
| PASS0_SAR0_CH4_GRP_STAT | 0x40900928 | FULL | Group status register |
| PASS0_SAR0_CH4_ENABLE | 0x40900938 | FULL | Enable register |
| PASS0_SAR0_CH4_TR_CMD | 0x4090093C | FULL | Software triggers |

### 21.1.6 CH 5

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH5_TR_CTL | 0x40900940 | FULL | Trigger control. |
| PASS0_SAR0_CH5_SAMPLE_CTL | 0x40900944 | FULL | Sample control. |
| PASS0_SAR0_CH5_POST_CTL | 0x40900948 | FULL | Post processing control |
| PASS0_SAR0_CH5_RANGE_CTL | 0x4090094C | FULL | Range thresholds |
| PASS0_SAR0_CH5_INTR | 0x40900950 | FULL | Interrupt request register. |
| PASS0_SAR0_CH5_INTR_SET | 0x40900954 | FULL | Interrupt set request register |
| PASS0_SAR0_CH5_INTR_MASK | 0x40900958 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH5_INTR_MASKED | 0x4090095C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH5_WORK | 0x40900960 | FULL | Working data register |
| PASS0_SAR0_CH5_RESULT | 0x40900964 | FULL | Result data register |
| PASS0_SAR0_CH5_GRP_STAT | 0x40900968 | FULL | Group status register |
| PASS0_SAR0_CH5_ENABLE | 0x40900978 | FULL | Enable register |
| PASS0_SAR0_CH5_TR_CMD | 0x4090097C | FULL | Software triggers |

### 21.1.7 CH 6

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH6_TR_CTL | 0x40900980 | FULL | Trigger control. |
| PASS0_SAR0_CH6_SAMPLE_CTL | 0x40900984 | FULL | Sample control. |
| PASS0_SAR0_CH6_POST_CTL | 0x40900988 | FULL | Post processing control |
| PASS0_SAR0_CH6_RANGE_CTL | 0x4090098C | FULL | Range thresholds |
| PASS0_SAR0_CH6_INTR | 0x40900990 | FULL | Interrupt request register. |
| PASS0_SAR0_CH6_INTR_SET | 0x40900994 | FULL | Interrupt set request register |
| PASS0_SAR0_CH6_INTR_MASK | 0x40900998 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH6_INTR_MASKED | 0x4090099C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH6_WORK | 0x409009A0 | FULL | Working data register |
| PASS0_SAR0_CH6_RESULT | 0x409009A4 | FULL | Result data register |
| PASS0_SAR0_CH6_GRP_STAT | 0x409009A8 | FULL | Group status register |
| PASS0_SAR0_CH6_ENABLE | 0x409009B8 | FULL | Enable register |
| PASS0_SAR0_CH6_TR_CMD | 0x409009BC | FULL | Software triggers |

### 21.1.8 CH 7

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH7_TR_CTL | 0x409009C0 | FULL | Trigger control. |
| PASS0_SAR0_CH7_SAMPLE_CTL | 0x409009C4 | FULL | Sample control. |
| PASS0_SAR0_CH7_POST_CTL | 0x409009C8 | FULL | Post processing control |
| PASS0_SAR0_CH7_RANGE_CTL | 0x409009CC | FULL | Range thresholds |
| PASS0_SAR0_CH7_INTR | 0x409009D0 | FULL | Interrupt request register. |
| PASS0_SAR0_CH7_INTR_SET | 0x409009D4 | FULL | Interrupt set request register |
| PASS0_SAR0_CH7_INTR_MASK | 0x409009D8 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH7_INTR_MASKED | 0x409009DC | FULL | Interrupt masked request register |
| PASS0_SAR0_CH7_WORK | 0x409009E0 | FULL | Working data register |
| PASS0_SAR0_CH7_RESULT | 0x409009E4 | FULL | Result data register |
| PASS0_SAR0_CH7_GRP_STAT | 0x409009E8 | FULL | Group status register |
| PASS0_SAR0_CH7_ENABLE | 0x409009F8 | FULL | Enable register |
| PASS0_SAR0_CH7_TR_CMD | 0x409009FC | FULL | Software triggers |

### 21.1.9 CH 8

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH8_TR_CTL | 0x40900A00 | FULL | Trigger control. |
| PASS0_SAR0_CH8_SAMPLE_CTL | 0x40900A04 | FULL | Sample control. |
| PASS0_SAR0_CH8_POST_CTL | 0x40900A08 | FULL | Post processing control |
| PASS0_SAR0_CH8_RANGE_CTL | 0x40900A0C | FULL | Range thresholds |
| PASS0_SAR0_CH8_INTR | 0x40900A10 | FULL | Interrupt request register. |
| PASS0_SAR0_CH8_INTR_SET | 0x40900A14 | FULL | Interrupt set request register |
| PASS0_SAR0_CH8_INTR_MASK | 0x40900A18 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH8_INTR_MASKED | 0x40900A1C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH8_WORK | 0x40900A20 | FULL | Working data register |
| PASS0_SAR0_CH8_RESULT | 0x40900A24 | FULL | Result data register |
| PASS0_SAR0_CH8_GRP_STAT | 0x40900A28 | FULL | Group status register |
| PASS0_SAR0_CH8_ENABLE | 0x40900A38 | FULL | Enable register |
| PASS0_SAR0_CH8_TR_CMD | 0x40900A3C | FULL | Software triggers |

### 21.1.10 CH 9

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH9_TR_CTL | 0x40900A40 | FULL | Trigger control. |
| PASS0_SAR0_CH9_SAMPLE_CTL | 0x40900A44 | FULL | Sample control. |
| PASS0_SAR0_CH9_POST_CTL | 0x40900A48 | FULL | Post processing control |
| PASS0_SAR0_CH9_RANGE_CTL | 0x40900A4C | FULL | Range thresholds |
| PASS0_SAR0_CH9_INTR | 0x40900A50 | FULL | Interrupt request register. |
| PASS0_SAR0_CH9_INTR_SET | 0x40900A54 | FULL | Interrupt set request register |
| PASS0_SAR0_CH9_INTR_MASK | 0x40900A58 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH9_INTR_MASKED | 0x40900A5C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH9_WORK | 0x40900A60 | FULL | Working data register |
| PASS0_SAR0_CH9_RESULT | 0x40900A64 | FULL | Result data register |
| PASS0_SAR0_CH9_GRP_STAT | 0x40900A68 | FULL | Group status register |
| PASS0_SAR0_CH9_ENABLE | 0x40900A78 | FULL | Enable register |
| PASS0_SAR0_CH9_TR_CMD | 0x40900A7C | FULL | Software triggers |

### 21.1.11 CH 10

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH10_TR_CTL | 0x40900A80 | FULL | Trigger control. |
| PASS0_SAR0_CH10_SAMPLE_CTL | 0x40900A84 | FULL | Sample control. |
| PASS0_SAR0_CH10_POST_CTL | 0x40900A88 | FULL | Post processing control |
| PASS0_SAR0_CH10_RANGE_CTL | 0x40900A8C | FULL | Range thresholds |
| PASS0_SAR0_CH10_INTR | 0x40900A90 | FULL | Interrupt request register. |
| PASS0_SAR0_CH10_INTR_SET | 0x40900A94 | FULL | Interrupt set request register |
| PASS0_SAR0_CH10_INTR_MASK | 0x40900A98 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH10_INTR_MASKED | 0x40900A9C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH10_WORK | 0x40900AA0 | FULL | Working data register |
| PASS0_SAR0_CH10_RESULT | 0x40900AA4 | FULL | Result data register |
| PASS0_SAR0_CH10_GRP_STAT | 0x40900AA8 | FULL | Group status register |
| PASS0_SAR0_CH10_ENABLE | 0x40900AB8 | FULL | Enable register |
| PASS0_SAR0_CH10_TR_CMD | 0x40900ABC | FULL | Software triggers |

### 21.1.12 CH 11

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH11_TR_CTL | 0x40900AC0 | FULL | Trigger control. |
| PASS0_SAR0_CH11_SAMPLE_CTL | 0x40900AC4 | FULL | Sample control. |
| PASS0_SAR0_CH11_POST_CTL | 0x40900AC8 | FULL | Post processing control |
| PASS0_SAR0_CH11_RANGE_CTL | 0x40900ACC | FULL | Range thresholds |
| PASS0_SAR0_CH11_INTR | 0x40900AD0 | FULL | Interrupt request register. |
| PASS0_SAR0_CH11_INTR_SET | 0x40900AD4 | FULL | Interrupt set request register |
| PASS0_SAR0_CH11_INTR_MASK | 0x40900AD8 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH11_INTR_MASKED | 0x40900ADC | FULL | Interrupt masked request register |
| PASS0_SAR0_CH11_WORK | 0x40900AE0 | FULL | Working data register |
| PASS0_SAR0_CH11_RESULT | 0x40900AE4 | FULL | Result data register |
| PASS0_SAR0_CH11_GRP_STAT | 0x40900AE8 | FULL | Group status register |
| PASS0_SAR0_CH11_ENABLE | 0x40900AF8 | FULL | Enable register |
| PASS0_SAR0_CH11_TR_CMD | 0x40900AFC | FULL | Software triggers |

### 21.1.13 CH 12

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH12_TR_CTL | 0x40900B00 | FULL | Trigger control. |
| PASS0_SAR0_CH12_SAMPLE_CTL | 0x40900B04 | FULL | Sample control. |
| PASS0_SAR0_CH12_POST_CTL | 0x40900B08 | FULL | Post processing control |
| PASS0_SAR0_CH12_RANGE_CTL | 0x40900B0C | FULL | Range thresholds |
| PASS0_SAR0_CH12_INTR | 0x40900B10 | FULL | Interrupt request register. |
| PASS0_SAR0_CH12_INTR_SET | 0x40900B14 | FULL | Interrupt set request register |
| PASS0_SAR0_CH12_INTR_MASK | 0x40900B18 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH12_INTR_MASKED | 0x40900B1C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH12_WORK | 0x40900B20 | FULL | Working data register |
| PASS0_SAR0_CH12_RESULT | 0x40900B24 | FULL | Result data register |
| PASS0_SAR0_CH12_GRP_STAT | 0x40900B28 | FULL | Group status register |
| PASS0_SAR0_CH12_ENABLE | 0x40900B38 | FULL | Enable register |
| PASS0_SAR0_CH12_TR_CMD | 0x40900B3C | FULL | Software triggers |

### 21.1.14 CH 13

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH13_TR_CTL | 0x40900B40 | FULL | Trigger control. |
| PASS0_SAR0_CH13_SAMPLE_CTL | 0x40900B44 | FULL | Sample control. |
| PASS0_SAR0_CH13_POST_CTL | 0x40900B48 | FULL | Post processing control |
| PASS0_SAR0_CH13_RANGE_CTL | 0x40900B4C | FULL | Range thresholds |
| PASS0_SAR0_CH13_INTR | 0x40900B50 | FULL | Interrupt request register. |
| PASS0_SAR0_CH13_INTR_SET | 0x40900B54 | FULL | Interrupt set request register |
| PASS0_SAR0_CH13_INTR_MASK | 0x40900B58 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH13_INTR_MASKED | 0x40900B5C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH13_WORK | 0x40900B60 | FULL | Working data register |
| PASS0_SAR0_CH13_RESULT | 0x40900B64 | FULL | Result data register |
| PASS0_SAR0_CH13_GRP_STAT | 0x40900B68 | FULL | Group status register |
| PASS0_SAR0_CH13_ENABLE | 0x40900B78 | FULL | Enable register |
| PASS0_SAR0_CH13_TR_CMD | 0x40900B7C | FULL | Software triggers |

### 21.1.15 CH 14

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR0_CH14_TR_CTL | 0x40900B80 | FULL | Trigger control. |
| PASS0_SAR0_CH14_SAMPLE_CTL | 0x40900B84 | FULL | Sample control. |
| PASS0_SAR0_CH14_POST_CTL | 0x40900B88 | FULL | Post processing control |
| PASS0_SAR0_CH14_RANGE_CTL | 0x40900B8C | FULL | Range thresholds |
| PASS0_SAR0_CH14_INTR | 0x40900B90 | FULL | Interrupt request register. |
| PASS0_SAR0_CH14_INTR_SET | 0x40900B94 | FULL | Interrupt set request register |
| PASS0_SAR0_CH14_INTR_MASK | 0x40900B98 | FULL | Interrupt mask register. |
| PASS0_SAR0_CH14_INTR_MASKED | 0x40900B9C | FULL | Interrupt masked request register |
| PASS0_SAR0_CH14_WORK | 0x40900BA0 | FULL | Working data register |
| PASS0_SAR0_CH14_RESULT | 0x40900BA4 | FULL | Result data register |
| PASS0_SAR0_CH14_GRP_STAT | 0x40900BA8 | FULL | Group status register |
| PASS0_SAR0_CH14_ENABLE | 0x40900BB8 | FULL | Enable register |
| PASS0_SAR0_CH14_TR_CMD | 0x40900BBC | FULL | Software triggers |

### 21.1.16 CH 15

| Register Name | Address | Permission | Description |

| PASS0_SAR2_CH16_ENABLE | 0x40902C38 | FULL | Enable register |
| PASS0_SAR2_CH16_TR_CMD | 0x40902C3C | FULL | Software triggers |

### 21.3.18 CH 17

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH17_TR_CTL | 0x40902C40 | FULL | Trigger control. |
| PASS0_SAR2_CH17_SAMPLE_CTL | 0x40902C44 | FULL | Sample control. |
| PASS0_SAR2_CH17_POST_CTL | 0x40902C48 | FULL | Post processing control |
| PASS0_SAR2_CH17_RANGE_CTL | 0x40902C4C | FULL | Range thresholds |
| PASS0_SAR2_CH17_INTR | 0x40902C50 | FULL | Interrupt request register. |
| PASS0_SAR2_CH17_INTR_SET | 0x40902C54 | FULL | Interrupt set request register |
| PASS0_SAR2_CH17_INTR_MASK | 0x40902C58 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH17_INTR_MASKED | 0x40902C5C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH17_WORK | 0x40902C60 | FULL | Working data register |
| PASS0_SAR2_CH17_RESULT | 0x40902C64 | FULL | Result data register |
| PASS0_SAR2_CH17_GRP_STAT | 0x40902C68 | FULL | Group status register |
| PASS0_SAR2_CH17_ENABLE | 0x40902C78 | FULL | Enable register |
| PASS0_SAR2_CH17_TR_CMD | 0x40902C7C | FULL | Software triggers |

### 21.3.19 CH 18

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH18_TR_CTL | 0x40902C80 | FULL | Trigger control. |
| PASS0_SAR2_CH18_SAMPLE_CTL | 0x40902C84 | FULL | Sample control. |
| PASS0_SAR2_CH18_POST_CTL | 0x40902C88 | FULL | Post processing control |
| PASS0_SAR2_CH18_RANGE_CTL | 0x40902C8C | FULL | Range thresholds |
| PASS0_SAR2_CH18_INTR | 0x40902C90 | FULL | Interrupt request register. |
| PASS0_SAR2_CH18_INTR_SET | 0x40902C94 | FULL | Interrupt set request register |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH18_INTR_MASK | 0x40902C98 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH18_INTR_MASKED | 0x40902C9C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH18_WORK | 0x40902CA0 | FULL | Working data register |
| PASS0_SAR2_CH18_RESULT | 0x40902CA4 | FULL | Result data register |
| PASS0_SAR2_CH18_GRP_STAT | 0x40902CA8 | FULL | Group status register |
| PASS0_SAR2_CH18_ENABLE | 0x40902CB8 | FULL | Enable register |
| PASS0_SAR2_CH18_TR_CMD | 0x40902CBC | FULL | Software triggers |

### 21.3.20 CH 19

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH19_TR_CTL | 0x40902CC0 | FULL | Trigger control. |
| PASS0_SAR2_CH19_SAMPLE_CTL | 0x40902CC4 | FULL | Sample control. |
| PASS0_SAR2_CH19_POST_CTL | 0x40902CC8 | FULL | Post processing control |
| PASS0_SAR2_CH19_RANGE_CTL | 0x40902CCC | FULL | Range thresholds |
| PASS0_SAR2_CH19_INTR | 0x40902CD0 | FULL | Interrupt request register. |
| PASS0_SAR2_CH19_INTR_SET | 0x40902CD4 | FULL | Interrupt set request register |
| PASS0_SAR2_CH19_INTR_MASK | 0x40902CD8 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH19_INTR_MASKED | 0x40902CDC | FULL | Interrupt masked request register |
| PASS0_SAR2_CH19_WORK | 0x40902CE0 | FULL | Working data register |
| PASS0_SAR2_CH19_RESULT | 0x40902CE4 | FULL | Result data register |
| PASS0_SAR2_CH19_GRP_STAT | 0x40902CE8 | FULL | Group status register |
| PASS0_SAR2_CH19_ENABLE | 0x40902CF8 | FULL | Enable register |
| PASS0_SAR2_CH19_TR_CMD | 0x40902CFC | FULL | Software triggers |

### 21.3.21 CH 20

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH20_TR_CTL | 0x40902D00 | FULL | Trigger control. |
| PASS0_SAR2_CH20_SAMPLE_CTL | 0x40902D04 | FULL | Sample control. |
| PASS0_SAR2_CH20_POST_CTL | 0x40902D08 | FULL | Post processing control |
| PASS0_SAR2_CH20_RANGE_CTL | 0x40902D0C | FULL | Range thresholds |
| PASS0_SAR2_CH20_INTR | 0x40902D10 | FULL | Interrupt request register. |
| PASS0_SAR2_CH20_INTR_SET | 0x40902D14 | FULL | Interrupt set request register |
| PASS0_SAR2_CH20_INTR_MASK | 0x40902D18 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH20_INTR_MASKED | 0x40902D1C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH20_WORK | 0x40902D20 | FULL | Working data register |
| PASS0_SAR2_CH20_RESULT | 0x40902D24 | FULL | Result data register |
| PASS0_SAR2_CH20_GRP_STAT | 0x40902D28 | FULL | Group status register |
| PASS0_SAR2_CH20_ENABLE | 0x40902D38 | FULL | Enable register |
| PASS0_SAR2_CH20_TR_CMD | 0x40902D3C | FULL | Software triggers |

### 21.3.22 CH 21

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH21_TR_CTL | 0x40902D40 | FULL | Trigger control. |
| PASS0_SAR2_CH21_SAMPLE_CTL | 0x40902D44 | FULL | Sample control. |
| PASS0_SAR2_CH21_POST_CTL | 0x40902D48 | FULL | Post processing control |
| PASS0_SAR2_CH21_RANGE_CTL | 0x40902D4C | FULL | Range thresholds |
| PASS0_SAR2_CH21_INTR | 0x40902D50 | FULL | Interrupt request register. |
| PASS0_SAR2_CH21_INTR_SET | 0x40902D54 | FULL | Interrupt set request register |
| PASS0_SAR2_CH21_INTR_MASK | 0x40902D58 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH21_INTR_MASKED | 0x40902D5C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH21_WORK | 0x40902D60 | FULL | Working data register |
| PASS0_SAR2_CH21_RESULT | 0x40902D64 | FULL | Result data register |
| PASS0_SAR2_CH21_GRP_STAT | 0x40902D68 | FULL | Group status register |
| PASS0_SAR2_CH21_ENABLE | 0x40902D78 | FULL | Enable register |
| PASS0_SAR2_CH21_TR_CMD | 0x40902D7C | FULL | Software triggers |

### 21.3.23 CH 22

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH22_TR_CTL | 0x40902D80 | FULL | Trigger control. |
| PASS0_SAR2_CH22_SAMPLE_CTL | 0x40902D84 | FULL | Sample control. |
| PASS0_SAR2_CH22_POST_CTL | 0x40902D88 | FULL | Post processing control |
| PASS0_SAR2_CH22_RANGE_CTL | 0x40902D8C | FULL | Range thresholds |
| PASS0_SAR2_CH22_INTR | 0x40902D90 | FULL | Interrupt request register. |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH22_INTR_SET | 0x40902D94 | FULL | Interrupt set request register |
| PASS0_SAR2_CH22_INTR_MASK | 0x40902D98 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH22_INTR_MASKED | 0x40902D9C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH22_WORK | 0x40902DA0 | FULL | Working data register |
| PASS0_SAR2_CH22_RESULT | 0x40902DA4 | FULL | Result data register |
| PASS0_SAR2_CH22_GRP_STAT | 0x40902DA8 | FULL | Group status register |
| PASS0_SAR2_CH22_ENABLE | 0x40902DB8 | FULL | Enable register |
| PASS0_SAR2_CH22_TR_CMD | 0x40902DBC | FULL | Software triggers |

### 21.3.24 CH 23

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH23_TR_CTL | 0x40902DC0 | FULL | Trigger control. |
| PASS0_SAR2_CH23_SAMPLE_CTL | 0x40902DC4 | FULL | Sample control. |
| PASS0_SAR2_CH23_POST_CTL | 0x40902DC8 | FULL | Post processing control |
| PASS0_SAR2_CH23_RANGE_CTL | 0x40902DCC | FULL | Range thresholds |
| PASS0_SAR2_CH23_INTR | 0x40902DD0 | FULL | Interrupt request register. |
| PASS0_SAR2_CH23_INTR_SET | 0x40902DD4 | FULL | Interrupt set request register |
| PASS0_SAR2_CH23_INTR_MASK | 0x40902DD8 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH23_INTR_MASKED | 0x40902DDC | FULL | Interrupt masked request register |
| PASS0_SAR2_CH23_WORK | 0x40902DE0 | FULL | Working data register |
| PASS0_SAR2_CH23_RESULT | 0x40902DE4 | FULL | Result data register |
| PASS0_SAR2_CH23_GRP_STAT | 0x40902DE8 | FULL | Group status register |
| PASS0_SAR2_CH23_ENABLE | 0x40902DF8 | FULL | Enable register |
| PASS0_SAR2_CH23_TR_CMD | 0x40902DFC | FULL | Software triggers |

### 21.3.25 CH 24

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH24_TR_CTL | 0x40902E00 | FULL | Trigger control. |
| PASS0_SAR2_CH24_SAMPLE_CTL | 0x40902E04 | FULL | Sample control. |
| PASS0_SAR2_CH24_POST_CTL | 0x40902E08 | FULL | Post processing control |
| PASS0_SAR2_CH24_RANGE_CTL | 0x40902E0C | FULL | Range thresholds |
| PASS0_SAR2_CH24_INTR | 0x40902E10 | FULL | Interrupt request register. |
| PASS0_SAR2_CH24_INTR_SET | 0x40902E14 | FULL | Interrupt set request register |
| PASS0_SAR2_CH24_INTR_MASK | 0x40902E18 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH24_INTR_MASKED | 0x40902E1C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH24_WORK | 0x40902E20 | FULL | Working data register |
| PASS0_SAR2_CH24_RESULT | 0x40902E24 | FULL | Result data register |
| PASS0_SAR2_CH24_GRP_STAT | 0x40902E28 | FULL | Group status register |
| PASS0_SAR2_CH24_ENABLE | 0x40902E38 | FULL | Enable register |
| PASS0_SAR2_CH24_TR_CMD | 0x40902E3C | FULL | Software triggers |

### 21.3.26 CH 25

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH25_TR_CTL | 0x40902E40 | FULL | Trigger control. |
| PASS0_SAR2_CH25_SAMPLE_CTL | 0x40902E44 | FULL | Sample control. |
| PASS0_SAR2_CH25_POST_CTL | 0x40902E48 | FULL | Post processing control |
| PASS0_SAR2_CH25_RANGE_CTL | 0x40902E4C | FULL | Range thresholds |
| PASS0_SAR2_CH25_INTR | 0x40902E50 | FULL | Interrupt request register. |
| PASS0_SAR2_CH25_INTR_SET | 0x40902E54 | FULL | Interrupt set request register |
| PASS0_SAR2_CH25_INTR_MASK | 0x40902E58 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH25_INTR_MASKED | 0x40902E5C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH25_WORK | 0x40902E60 | FULL | Working data register |
| PASS0_SAR2_CH25_RESULT | 0x40902E64 | FULL | Result data register |
| PASS0_SAR2_CH25_GRP_STAT | 0x40902E68 | FULL | Group status register |
| PASS0_SAR2_CH25_ENABLE | 0x40902E78 | FULL | Enable register |
| PASS0_SAR2_CH25_TR_CMD | 0x40902E7C | FULL | Software triggers |

### 21.3.27 CH 26

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH26_TR_CTL | 0x40902E80 | FULL | Trigger control. |
| PASS0_SAR2_CH26_SAMPLE_CTL | 0x40902E84 | FULL | Sample control. |
| PASS0_SAR2_CH26_POST_CTL | 0x40902E88 | FULL | Post processing control |
| PASS0_SAR2_CH26_RANGE_CTL | 0x40902E8C | FULL | Range thresholds |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH26_INTR | 0x40902E90 | FULL | Interrupt request register. |
| PASS0_SAR2_CH26_INTR_SET | 0x40902E94 | FULL | Interrupt set request register |
| PASS0_SAR2_CH26_INTR_MASK | 0x40902E98 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH26_INTR_MASKED | 0x40902E9C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH26_WORK | 0x40902EA0 | FULL | Working data register |
| PASS0_SAR2_CH26_RESULT | 0x40902EA4 | FULL | Result data register |
| PASS0_SAR2_CH26_GRP_STAT | 0x40902EA8 | FULL | Group status register |
| PASS0_SAR2_CH26_ENABLE | 0x40902EB8 | FULL | Enable register |
| PASS0_SAR2_CH26_TR_CMD | 0x40902EBC | FULL | Software triggers |

### 21.3.28 CH 27

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH27_TR_CTL | 0x40902EC0 | FULL | Trigger control. |
| PASS0_SAR2_CH27_SAMPLE_CTL | 0x40902EC4 | FULL | Sample control. |
| PASS0_SAR2_CH27_POST_CTL | 0x40902EC8 | FULL | Post processing control |
| PASS0_SAR2_CH27_RANGE_CTL | 0x40902ECC | FULL | Range thresholds |
| PASS0_SAR2_CH27_INTR | 0x40902ED0 | FULL | Interrupt request register. |
| PASS0_SAR2_CH27_INTR_SET | 0x40902ED4 | FULL | Interrupt set request register |
| PASS0_SAR2_CH27_INTR_MASK | 0x40902ED8 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH27_INTR_MASKED | 0x40902EDC | FULL | Interrupt masked request register |
| PASS0_SAR2_CH27_WORK | 0x40902EE0 | FULL | Working data register |
| PASS0_SAR2_CH27_RESULT | 0x40902EE4 | FULL | Result data register |
| PASS0_SAR2_CH27_GRP_STAT | 0x40902EE8 | FULL | Group status register |
| PASS0_SAR2_CH27_ENABLE | 0x40902EF8 | FULL | Enable register |
| PASS0_SAR2_CH27_TR_CMD | 0x40902EFC | FULL | Software triggers |

### 21.3.29 CH 28

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH28_TR_CTL | 0x40902F00 | FULL | Trigger control. |
| PASS0_SAR2_CH28_SAMPLE_CTL | 0x40902F04 | FULL | Sample control. |
| PASS0_SAR2_CH28_POST_CTL | 0x40902F08 | FULL | Post processing control |
| PASS0_SAR2_CH28_RANGE_CTL | 0x40902F0C | FULL | Range thresholds |
| PASS0_SAR2_CH28_INTR | 0x40902F10 | FULL | Interrupt request register. |
| PASS0_SAR2_CH28_INTR_SET | 0x40902F14 | FULL | Interrupt set request register |
| PASS0_SAR2_CH28_INTR_MASK | 0x40902F18 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH28_INTR_MASKED | 0x40902F1C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH28_WORK | 0x40902F20 | FULL | Working data register |
| PASS0_SAR2_CH28_RESULT | 0x40902F24 | FULL | Result data register |
| PASS0_SAR2_CH28_GRP_STAT | 0x40902F28 | FULL | Group status register |
| PASS0_SAR2_CH28_ENABLE | 0x40902F38 | FULL | Enable register |
| PASS0_SAR2_CH28_TR_CMD | 0x40902F3C | FULL | Software triggers |

### 21.3.30 CH 29

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH29_TR_CTL | 0x40902F40 | FULL | Trigger control. |
| PASS0_SAR2_CH29_SAMPLE_CTL | 0x40902F44 | FULL | Sample control. |
| PASS0_SAR2_CH29_POST_CTL | 0x40902F48 | FULL | Post processing control |
| PASS0_SAR2_CH29_RANGE_CTL | 0x40902F4C | FULL | Range thresholds |
| PASS0_SAR2_CH29_INTR | 0x40902F50 | FULL | Interrupt request register. |
| PASS0_SAR2_CH29_INTR_SET | 0x40902F54 | FULL | Interrupt set request register |
| PASS0_SAR2_CH29_INTR_MASK | 0x40902F58 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH29_INTR_MASKED | 0x40902F5C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH29_WORK | 0x40902F60 | FULL | Working data register |
| PASS0_SAR2_CH29_RESULT | 0x40902F64 | FULL | Result data register |
| PASS0_SAR2_CH29_GRP_STAT | 0x40902F68 | FULL | Group status register |
| PASS0_SAR2_CH29_ENABLE | 0x40902F78 | FULL | Enable register |
| PASS0_SAR2_CH29_TR_CMD | 0x40902F7C | FULL | Software triggers |

### 21.3.31 CH 30

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH30_TR_CTL | 0x40902F80 | FULL | Trigger control. |
| PASS0_SAR2_CH30_SAMPLE_CTL | 0x40902F84 | FULL | Sample control. |
| PASS0_SAR2_CH30_POST_CTL | 0x40902F88 | FULL | Post processing control |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH30_RANGE_CTL | 0x40902F8C | FULL | Range thresholds |
| PASS0_SAR2_CH30_INTR | 0x40902F90 | FULL | Interrupt request register. |
| PASS0_SAR2_CH30_INTR_SET | 0x40902F94 | FULL | Interrupt set request register |
| PASS0_SAR2_CH30_INTR_MASK | 0x40902F98 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH30_INTR_MASKED | 0x40902F9C | FULL | Interrupt masked request register |
| PASS0_SAR2_CH30_WORK | 0x40902FA0 | FULL | Working data register |
| PASS0_SAR2_CH30_RESULT | 0x40902FA4 | FULL | Result data register |
| PASS0_SAR2_CH30_GRP_STAT | 0x40902FA8 | FULL | Group status register |
| PASS0_SAR2_CH30_ENABLE | 0x40902FB8 | FULL | Enable register |
| PASS0_SAR2_CH30_TR_CMD | 0x40902FBC | FULL | Software triggers |

### 21.3.32 CH 31

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_SAR2_CH31_TR_CTL | 0x40902FC0 | FULL | Trigger control. |
| PASS0_SAR2_CH31_SAMPLE_CTL | 0x40902FC4 | FULL | Sample control. |
| PASS0_SAR2_CH31_POST_CTL | 0x40902FC8 | FULL | Post processing control |
| PASS0_SAR2_CH31_RANGE_CTL | 0x40902FCC | FULL | Range thresholds |
| PASS0_SAR2_CH31_INTR | 0x40902FD0 | FULL | Interrupt request register. |
| PASS0_SAR2_CH31_INTR_SET | 0x40902FD4 | FULL | Interrupt set request register |
| PASS0_SAR2_CH31_INTR_MASK | 0x40902FD8 | FULL | Interrupt mask register. |
| PASS0_SAR2_CH31_INTR_MASKED | 0x40902FDC | FULL | Interrupt masked request register |
| PASS0_SAR2_CH31_WORK | 0x40902FE0 | FULL | Working data register |
| PASS0_SAR2_CH31_RESULT | 0x40902FE4 | FULL | Result data register |
| PASS0_SAR2_CH31_GRP_STAT | 0x40902FE8 | FULL | Group status register |
| PASS0_SAR2_CH31_ENABLE | 0x40902FF8 | FULL | Enable register |
| PASS0_SAR2_CH31_TR_CMD | 0x40902FFC | FULL | Software triggers |

## 21.4 EPASS_MMIO

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PASS0_PASS_CTL | 0x409F0000 | FULL | PASS control register |
| PASS0_SAR_TR_IN_SEL0 | 0x409F0020 | FULL | per SAR generic input trigger select |
| PASS0_SAR_TR_IN_SEL1 | 0x409F0024 | FULL | per SAR generic input trigger select |
| PASS0_SAR_TR_IN_SEL2 | 0x409F0028 | FULL | per SAR generic input trigger select |
| PASS0_SAR_TR_OUT_SEL0 | 0x409F0040 | FULL | per SAR generic output trigger select |
| PASS0_SAR_TR_OUT_SEL1 | 0x409F0044 | FULL | per SAR generic output trigger select |
| PASS0_SAR_TR_OUT_SEL2 | 0x409F0048 | FULL | per SAR generic output trigger select |
| PASS0_TEST_CTL | 0x409F0080 | FULL | Test control bits |

## 21.5 Register Details

### 21.5.1 SAR

#### 21.5.1.1 PASS_SAR_CTL

**Description:** Analog control register.
**Address:** 0x40900000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PWRUP_TIME [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | HALF_LSB [10:10] | MSB _STRETCH [9:9] | IDLE _PWRDWN [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | ADC_EN [30:30] | SARMUX _EN [29:29] | None [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | PWRUP_TIME | RW | R | 0 | Number cycles to wait to power up after IDLE_PWRDWN.<br>Check the STATUS.PWRUP_BUSY flag to see if the delay is still in progress.<br>The power up delay is 1 us. |
| 8 | IDLE_PWRDWN | RW | R | 0 | When idle automatically power down the analog.<br>After an automatic power down a new trigger will power up the analog, however it will take PWRUP_TIME cycles before the first acquisition can be started. Note that re-arbitration happens at that time, i.e. the trigger that caused the power up may not get handled first. |
| 9 | MSB_STRETCH | RW | R | 0 | When set use 2 cycles for the Most Significant Bit (MSB)<br>- 0: Use 1 clock cycle for MSB<br>- 1: Use 2 clock cycles for MSB |
| 10 | HALF_LSB | RW | R | 0 | When set take an extra cycle to convert the half LSB and add it to 12-bit result for Missing Code Recovery This bit should always be set to '1'<br>- 0: disable half LSB conversion (not recommended)<br>- 1: enable half LSB conversion |
| 29 | SARMUX_EN | RW | R | 0 | Enable the SARMUX (only valid if ENABLED=1)<br>- 0: SARMUX disabled (put analog in power down)<br>- 1: SARMUX enabled. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30 | ADC_EN | RW | R | 0 | Enable the SAR ADC and SAR sequencer (only valid if ENABLED=1)<br>- 0: SARADC and SARSEQ are disabled (put SARADC analog in power down and stop clocks), also clears all pending triggers.<br>- 1: SAR ADC and SARSEQ are enabled.<br>To enable ADC0 to borrow SARMUX1-3 the corresponding ADC_EN must be set to 0. |
| 31 | ENABLED | RW | R | 0 | - 0: SAR IP disabled (put analog in power down and stop clocks), also clears all pending triggers.<br>- 1: SAR IP enabled. |

### 21.5.1.2 PASS_SAR_DIAG_CTL

**Description:** Diagnostic Reference control register.
**Address:** 0x40900004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | DIAG_SEL [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DIAG_EN [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | DIAG_SEL | RW | R | 0 | Select Diagnostic Reference function |
| | VREFL | | | 0 | DiagOut = VrefL |
| | VREFH_1DIV8 | | | 1 | DiagOut = VrefH * 1/8 |
| | VREFH_2DIV8 | | | 2 | DiagOut = VrefH * 2/8 |
| | VREFH_3DIV8 | | | 3 | DiagOut = VrefH * 3/8 |
| | VREFH_4DIV8 | | | 4 | DiagOut = VrefH * 4/8 |
| | VREFH_5DIV8 | | | 5 | DiagOut = VrefH * 5/8 |
| | VREFH_6DIV8 | | | 6 | DiagOut = VrefH * 6/8 |
| | VREFH_7DIV8 | | | 7 | DiagOut = VrefH * 7/8 |
| | VREFH | | | 8 | DiagOut = VrefH |
| | VREFX | | | 9 | DiagOut = VrefX = VrefH * 199/200 |
| | VBG | | | 10 | DiagOut = Vbg from SRSS |
| | VIN1 | | | 11 | DiagOut = Vin1 |
| | VIN2 | | | 12 | DiagOut = Vin2 |
| | VIN3 | | | 13 | DiagOut = Vin3 |
| | I_SOURCE | | | 14 | DiagOut = Isource (10uA) |
| | I_SINK | | | 15 | DiagOut = Isink (10uA) |
| 31 | DIAG_EN | RW | R | 0 | Diagnostic Reference enable (only valid if ENABLED=1)<br>- 0: Diagnostic Reference disabled (powered down resistor ladder and current mirrors, DiagOut = Vssa).<br>- 1: Diagnostic Reference enabled, output signal select according to DIAG_SEL (note also EPASS_MMIO.PASS_CTL.REFBUF_EN must be set). |

### 21.5.1.3 PASS_SAR_PRECOND_CTL

**Description:** Preconditioning control register.
**Address:** 0x40900010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Precondition time value used when a channel enables preconditioning (PRECOND_MODE)
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | PRECOND_TIME [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | PRECOND_TIME | RW | R | 0 | Number ADC clock cycles that Preconditioning is done before the sample window starts. If OVERLAP_EN=0 there will be 1 additional break before make cycle between preconditioning and sampling.<br>Note that the minimum value is 1 (0 gives the same result as 1). |

### 21.5.1.4 PASS_SAR_ANA_CAL

**Description:** Current analog calibration values
**Address:** 0x40900080
**Offset:** 0x80
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Hardware can update this register if software sets the CAL_UPD_CMD.UPDATE
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | AOFFSET [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | AGAIN [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | AOFFSET | RW | RW | 0 | Analog offset correction |
| 16:20 | AGAIN | RW | RW | 0 | Analog gain correction |

### 21.5.1.5 PASS_SAR_DIG_CAL

**Description:** Current digital calibration values
**Address:** 0x40900084
**Offset:** 0x84
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Hardware can update this register if software sets the CAL_UPD_CMD.UPDATE
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DOFFSET [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | DOFFSET [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:22] | | DGAIN [21:16] | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:11 | DOFFSET | RW | RW | 0 | Digital offset correction<br>Subtract DOFFSET from ADC output. |
| 16:21 | DGAIN | RW | RW | 0 | Digital gain correction.<br>Signed value to correct +/- 30 codes for the maximum input voltage.<br>Corrected = (D - DOFFSET) + ( (D - DOFFSET) * DGAIN + 0x800) / 0x1000 |

### 21.5.1.6 PASS_SAR_ANA_CAL_ALT

**Description:** Alternate analog calibration values
**Address:** 0x40900090
**Offset:** 0x90
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Also known as 'shadow' calibration registers to enable background calibration
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | AOFFSET [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | AGAIN [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | AOFFSET | RW | R | 0 | See corresponding ANA_CAL field |
| 16:20 | AGAIN | RW | R | 0 | See corresponding ANA_CAL field |

### 21.5.1.7 PASS_SAR_DIG_CAL_ALT

**Description:** Alternate digital calibration values
**Address:** 0x40900094
**Offset:** 0x94
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** First use analog calibration to avoid saturation for the required input voltage range. Then use this digital calibration to map codes on full 12-bit range.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DOFFSET [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | DOFFSET [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:22] | | DGAIN [21:16] | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:11 | DOFFSET | RW | R | 0 | See corresponding DIG_CAL field |
| 16:21 | DGAIN | RW | R | 0 | See corresponding DIG_CAL field |

### 21.5.1.8 PASS_SAR_CAL_UPD_CMD

**Description:** Calibration update command
**Address:** 0x40900098
**Offset:** 0x98
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | UPDATE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | UPDATE | RW | RW1C | 0 | Calibration update command: coherently copy values from alternate calibration regs to current calibration regs.<br>Software sets this bit when the alternate calibration values have been set with the new values. Hardware will do the calibration update as soon as the ADC is idle or a 'continuous' triggered group completes. This ensures that all acquisitions within a group scan (even if preempted) are done with the same calibration values.<br>This bit is cleared at the same time the calibration update is done. By clearing this bit software can cancel a requested update.<br>Note: if the ADC is always busy with acquisitions for non continuously triggered groups/channels then the calibration update will remain pending forever. In such a case the software can either do a non coherent update by writing directly to the current calibration registers, or software can force the ADC to idle by disabling some or all channels.<br>Software can check/poll this bit to see if the calibration update has taken effect. |

### 21.5.1.9 PASS_SAR_TR_PEND

**Description:** Trigger pending status
**Address:** 0x40900100
**Offset:** 0x100
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Status
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_PEND [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_PEND [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_PEND [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_PEND [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | TR_PEND | R | W | 0 | Trigger Pending.<br>Hardware will set this bit if a hardware trigger is received. |

### 21.5.1.10 PASS_SAR_WORK_VALID

**Description:** Channel working data register 'valid' bits
**Address:** 0x40900180
**Offset:** 0x180
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** bits of disabled channels will be reset
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WORK_VALID [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | WORK_VALID [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | WORK_VALID [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | WORK_VALID [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | WORK_VALID | R | RW | 0 | If set the corresponding WORK register is valid, i.e. was already acquired during the current group scan. If this bit is low then either the channel is not enabled, not yet acquired or it is used as a pulse detect channel. |

### 21.5.1.11 PASS_SAR_WORK_RANGE

**Description:** Range detected
**Address:** 0x40900184
**Offset:** 0x184
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** bits of disabled channels will be reset
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RANGE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|---|---|
| Name | PULSE [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | PULSE | R | RW | 0 | N/A |

### 21.5.1.14 PASS_SAR_RESULT_VALID

**Description:** Channel result data register 'valid' bits
**Address:** 0x409001A0
**Offset:** 0x1A0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESULT_VALID [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESULT_VALID [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RESULT_VALID [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RESULT_VALID [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | RESULT_VALID | R | RW | 0 | If set the corresponding RESULT register is valid, i.e. was acquired during the preceding group scan. If this bit is low, after a group scan completed, then either the channel is not enabled or is used as a pulse detect channel. |

### 21.5.1.15 PASS_SAR_RESULT_RANGE_HI

**Description:** Channel Range above Hi flags
**Address:** 0x409001A4
**Offset:** 0x1A4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ABOVE_HI [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ABOVE_HI [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ABOVE_HI [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | ABOVE_HI | R | RW | 0 | Out of range was detected and the value was above the Hi threshold |

### 21.5.1.16 PASS_SAR_STATUS

**Description:** Current status of internal SAR registers (mostly for debug)
**Address:** 0x40900200
**Offset:** 0x200
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | CUR_CHAN [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | CUR_PREEMPT_TYPE [13:12] | | None [11:11] | CUR_PRIO [10:8] | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | BUSY [31:31] | PWRUP_BUSY [30:30] | DBG_FREEZE [29:29] | None [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | CUR_CHAN | R | W | 0 | current channel being acquired, only valid if BUSY. |
| 8:10 | CUR_PRIO | R | W | 0 | priority of current group/channel, only valid if BUSY. |
| 12:13 | CUR_PREEMPT_TYPE | R | W | 0 | Preempting type of current group/channel, only valid if BUSY. |
| 29 | DBG_FREEZE | R | W | 0 | If high then the SAR is prevented from starting a new acquisition, see DBG_FREEZE_EN. |
| 30 | PWRUP_BUSY | R | W | 0 | If high then the SAR is waiting for PWRUP_TIME due to IDLE_PWRDWN |
| 31 | BUSY | R | W | 0 | If high then the SAR is busy with a conversion. |

### 21.5.1.17 PASS_SAR_AVG_STAT

**Description:** Current averaging status (for debug)
**Address:** 0x40900204
**Offset:** 0x204
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CUR_AVG_ACCU [7:0] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | CUR_AVG_CNT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:19 | CUR_AVG_ACCU | R | W | 0 | the current value of the averaging accumulator |
| 24:31 | CUR_AVG_CNT | R | W | 0 | the current value of the averaging counter. Note that the value shown is updated after the sample window and therefore runs ahead of the accumulator update. |

### 21.5.1.18 CH

#### 21.5.1.18.1 PASS_SAR_CH_TR_CTL

**Description:** Trigger control.
**Address:** 0x40900800
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Make sure the channel or the IP is disabled before changing this register
**Default:** 0x800

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | PRIO [6:4] | | | None [3:3] | SEL [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | GROUP_END [11:11] | None [10:10] | PREEMPT_TYPE [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DONE_LEVEL [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | SEL | RW | R | 0 | Trigger select |
| | OFF | | | 0 | Use for channels in group, except the first channel |
| | TCPWM | | | 1 | Trigger from corresponding TCPWM channel |
| | GENERIC0 | | | 2 | Generic trigger input 0 |
| | GENERIC1 | | | 3 | N/A |
| | GENERIC2 | | | 4 | N/A |
| | GENERIC3 | | | 5 | N/A |
| | GENERIC4 | | | 6 | N/A |
| | CONTINUOUS | | | 7 | Always triggered (also called idle), can only be used for at most 1 channel |
| 4:6 | PRIO | RW | R | 0 | Channel priority:<br>'0': highest priority.<br>'1'<br>...<br>'6'<br>'7': lowest priority.<br><br>Channels with the same priority constitute a priority level. Priority decoding determines the highest priority pending channel. This channel is determined as follows. First, the highest priority level with pending channels is identified. Second, within this priority level, round robin arbitration is applied. Round robin arbitration (within a priority level) gives the highest priority to the lower channel indices (within the priority level). |
| 8:9 | PREEMPT_TYPE | RW | R | 0 | Preemption type allow for this group |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | ABORT_CANCEL | | | 0 | Abort ongoing acquisition, do not return<br>Clear pending trigger for aborted group and set Cancelled interrupt.<br>Also 'Abort' whenever this group (do not pend the trigger) is not immediately scheduled for acquisition after a new trigger arrives.<br>For this preemption type only, only a positive edge on the trigger can trigger the channel, i.e. CONTINUOUS or level high operation is not supported (to avoid continuous Cancelled interrupts).<br>In case CTL.IDLE_PWRDWN is used and the analog is powered down, the group cannot be immediately scheduled for acquisition and therefore a trigger for a group with this preemption type will power up the analog, but the group will ABORT and set the Cancelled interrupt |
| | ABORT_RESTART | | | 1 | Abort ongoing acquisition, up on return Restart group from first channel. |
| | ABORT_RESUME | | | 2 | Abort ongoing acquisition, up on return Resume group from aborted channel<br>If averaging, discard averaging results so far and restart averaging. |
| | FINISH_RESUME | | | 3 | Complete ongoing acquisition (including averaging), up on return Resume group from next channel |
| 11 | GROUP_END | RW | R | 1 | 0: continue group with next channel<br>1: last channel of a group.<br><br>Note that for the channel with the highest index (SAR_CH_NR) this always needs to be set |
| 31 | DONE_LEVEL | RW | R | 0 | select level or pulse for 'tr_ch_done' trigger output<br>Also see POST_CTL.TR_DONE_GRP_VIO |
| | PULSE | | | 0 | tr_ch_done generates a 2 cycle pulse (clk_sys), no need to read the result to clear (also no ch_overflow detection) |
| | LEVEL | | | 1 | tr_ch_done is a level output until the result register is read (typical for DW usage, this also enables ch_overflow detection when DW is too slow) |

### 21.5.1.18.2 PASS_SAR_CH_SAMPLE_CTL

**Description:** Sample control.
**Address:** 0x40900804
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Make sure the channel or the IP is disabled before changing this register
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PORT_ADDR [7:6] | | PIN_ADDR [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | OVERLAP_DIAG [15:14] | | PRECOND_MODE [13:12] | | EXT_MUX _EN [11:11] | EXT_MUX_SEL [10:8] | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | SAMPLE_TIME [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ALT_CAL [31:31] | None [30:28] | | | SAMPLE_TIME [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:5 | PIN_ADDR | RW | R | Undefined | Address of the analog signal (pin) to be sampled by this channel<br>- 0..31 : Vout = AN0..31, select corresponding analog input<br>- 32: Vout = Vmotor, select motor input<br>- 33: Vout = Vaux, select auxiliary input<br>- 34: Vout = AmuxbusA<br>- 35: Vout = AmuxbusB<br>- 36: Vout = Vccd<br>- 37: Vout = Vdda<br>- 38: Vout = Vbg, Bandgap voltage from SRSS<br>- 39: Vout = Vtemp, select temperature sensor. Make sure that only 1 ADC is allowed to use this.<br>- 40..61: Vout = undefined, reserved for future products<br>- 62: Vout = VrefL (VrefL actually bypasses the SARMUX (XSL))<br>- 63: Vout = VrefH (VrefH actually bypasses the SARMUX (XSH))<br><br>Note: When PORT_ADDR is not set to SARMUX0, pin addresses from 32-63 are not available. Only addresses 0-31 can be accessed from SARMUX1-3 |
| 6:7 | PORT_ADDR | RW | R | Undefined | Select the physical port. This field is only valid for ADC0.<br>ADC0 can control and connect to the SARMUX of the neighboring ADC1-3. This requires the corresponding ADC to be off while the SARMUX is left on.<br>When ADC0 controls another SARMUX it uses the PIN_ADDR, EXT_MUX_EN/SEL of this channel to control the other SARMUX. |
| | SARMUX0 | | | 0 | ADC uses it's own SARMUX |
| | SARMUX1 | | | 1 | ADC0 uses SARMUX1 (only valid for ADC0, undefined result if used for ADC1-3) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | SARMUX2 | | | 2 | ADC0 uses SARMUX2 (only valid for ADC0, undefined result if used for ADC1-3) |
| | SARMUX3 | | | 3 | ADC0 uses SARMUX3 (only valid for ADC0, undefined result if used for ADC1-3) |
| 8:10 | EXT_MUX_SEL | RW | R | Undefined | External analog mux select.<br>This bit setting is related to EXT_MUX[x]_y on pin assignment.<br>0x0: Select EXT_MUX[x]_0 pin<br>0x1: Select EXT_MUX[x]_1 pin |
| 11 | EXT_MUX_EN | RW | R | Undefined | External analog mux enable.<br>This enable can be used as enable (chip select) for the external analog mux (this enable is not used as enable for the GPIO output driver).<br>This enable also prevents unnecessary toggle activity on the select signals of the external analog mux. When this enable is low EXT_MUX_SEL value will be ignored and the previous value will be maintained.<br>Note that an external analog mux can only be used in combination with a pin input, i.e. PIN_ADDR<32 or Vmotor. If an internal signal is selected this enable should be 0. |
| 12:13 | PRECOND_MODE | RW | R | Undefined | Select preconditioning mode.<br>Preconditioning (dis)charges the SAR sample capacitor to the selected reference voltage for PRECOND_TIME (global) cycles, a break before make cycle will be inserted before sampling starts (SAMPLE_TIME). |
| | OFF | | | 0 | No preconditioning |
| | VREFL | | | 1 | Discharge to VREFL |
| | VREFH | | | 2 | Charge to VREFH |
| | DIAG | | | 3 | Connect the Diagnostic reference output during preconditioning. The Diagnostic reference should be configured to output a reference voltage.<br>Note: this selection is mutual exclusive with using the Diagnostic reference to supply an ibias current for OVERLAP. |
| 14:15 | OVERLAP_DIAG | RW | R | Undefined | Select Overlap mode or SARMUX Diagnostics, in both cases the Diagnostic reference is used.<br>With Overlap the Diagnostic reference typically sources or sinks a small current which is connected at the same time as the analog signal being sampled.<br>For SARMUX Diagnostics the Diagnostic reference should provide a reference voltage which is selected at the SARMUX input instead of the normal analog signal being sampled. |
| | OFF | | | 0 | No overlap or SARMUX Diagnostics |
| | HALF | | | 1 | Sample the selected analog input for 2 SAMPLE_TIME periods. During the first period use overlap sampling, i.e. connect both the analog input and Diagnostic reference. During second period only connect the analog input. |
| | FULL | | | 2 | Like normal sample the selected analog input for a single SAMPLE_TIME period but use overlap sampling, i.e. connect both the analog input and Diagnostic reference. |
| | MUX_DIAG | | | 3 | Select Diagnostic reference instead of analog signal at the input of the SARMUX. This enables a functional safety check of the SARMUX analog connections. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:27 | SAMPLE_TIME | RW | R | Undefined | Sample time (aperture) in ADC clock cycles. Minimum is 1 (0 gives the same result as 1), minimum time needed for proper settling is at least 412ns, i.e.11 clock cycles at the max frequency of 26.7MHz. |
| 31 | ALT_CAL | RW | R | Undefined | Use alternate calibration values instead of the current calibration values.<br>This allows the firmware to allocate one or more channels to quietly re-calibrate the ADC in the background of regular processing.<br>0 = use regular calibration values (ANA/DIG_CAL)<br>1 = use alternate calibration values (ANA/DIG_CAL_ALT)<br>Note: typically calibration measurements select VrefL (PIN_ADDR=62) or VrefH (PIN_ADDR=63) |

### 21.5.1.18.3 PASS_SAR_CH_POST_CTL

**Description:** Post processing control
**Address:** 0x40900808
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Make sure the channel or the IP is disabled before changing this register
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SIGN_EXT [7:7] | LEFT_ALIGN [6:6] | None [5:3] | | | POST_PROC [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | AVG_CNT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RANGE_MODE [23:22] | | None [21:21] | SHIFT_R [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | TR_DONE_GRP_VIO [25:25] | None [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | POST_PROC | RW | R | Undefined | Post processing |
| | NONE | | | 0 | No postprocessing |
| | AVG | | | 1 | Averaging |
| | AVG_RANGE | | | 2 | Averaging followed by Range detect |
| | RANGE | | | 3 | Range detect |
| | RANGE_PULSE | | | 4 | Range detect followed by pulse detect |
| | RESERVED0 | | | 5 | N/A |
| | RESERVED1 | | | 6 | N/A |
| | RESERVED2 | | | 7 | N/A |
| 6 | LEFT_ALIGN | RW | R | Undefined | Left or right align data in result[15:0].<br>0: the data is right aligned in result[11:0], with sign extension to 16 bits if enabled<br>1: the data is left aligned in result[15:4] with the lower nibble 0. Caveat if the result was more than 12 bits (e.g. after averaging) then the bits above 12 will be discarded. |
| 7 | SIGN_EXT | RW | R | Undefined | Output data is sign extended |
| | UNSIGNED | | | 0 | Default: result data is unsigned (zero extended if needed) |
| | SIGNED | | | 1 | Result data is signed (sign extended if needed) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:15 | AVG_CNT | RW | R | Undefined | Either averaging count (minus 1) or Pulse positive reload value<br><br>Averaging Count for channels that have averaging enabled. A channel will be sampled (AVG_CNT+1) = [1..256] times.<br>The signal will be acquired back to back (1st order accumulate and dump filter), the average result is calculated and stored and then the next enabled channel is sampled.<br>If more than 16 sample are taken (AVG_CNT>=16) then AVG_SHIFT must be set so that the result after shifting fits in 16 bits<br><br>Pulse detect positive reload value PULSE_POS_RL[7:0] |
| 16:20 | SHIFT_R | RW | R | Undefined | Either Shift Right (no pulse detection) or Pulse negative reload value (if pulse detection is enabled)<br><br>Shift right SHIFT_R[3:0] = [0..12]: the result (typically after averaging) is shifted right as specified here. Software has to make sure that the result fits in less than 16 bits.<br>Any value >12 will be treated as 12, bit [4] is always ignored. This can also be used to fit the 12-bit result in 8 bits.<br><br>Pulse detect negative reload value PULSE_NEG_RL[4:0] |
| 22:23 | RANGE_MODE | RW | R | Undefined | Range detect mode |
| | BELOW_LO | | | 0 | Below Low threshold (result < Lo) |
| | INSIDE_RANGE | | | 1 | Inside range (Lo <= result < Hi) |
| | ABOVE_HI | | | 2 | Above high threshold (Hi <= result) |
| | OUTSIDE_RANGE | | | 3 | Outside range (result < Lo \|\| Hi <= result) |
| 25 | TR_DONE_GRP_VIO | RW | R | Undefined | Select tr_sar_ch_done mode for last channel of a group, ignored for all other channels<br>Also see TR_CTL.DONE_LEVEL |
| | DONE | | | 0 | Default: tr_sar_ch_done is set when the group is done |
| | GRP_RANGE_VIO | | | 1 | tr_sar_ch_done is only set if any of the channels in the group has a Range Violation. This mode is ignored if this is not the last channel in the group.<br>Note that if none of the channels in the group have Range detection enabled then the trigger will never get set. |

### 21.5.1.18.4 PASS_SAR_CH_RANGE_CTL

**Description:** Range thresholds
**Address:** 0x4090080C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Make sure the channel or the IP is disabled before changing this register
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

| Name | RANGE_HI [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RANGE_HI [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | RANGE_LO | RW | R | Undefined | Range detect low threshold (Lo) |
| 16:31 | RANGE_HI | RW | R | Undefined | Range detect high threshold (Hi) |

### 21.5.1.18.5 PASS_SAR_CH_INTR

**Description:** Interrupt request register.
**Address:** 0x40900810
**Offset:** 0x10
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** interrupts for one channel
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | GRP_OVERFLOW [2:2] | GRP_CANCELLED [1:1] | GRP_DONE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | CH_OVERFLOW [10:10] | CH_PULSE [9:9] | CH_RANGE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | GRP_DONE | RW1C | RW1S | 0 | Done Interrupt: hardware sets this interrupt for the last channel of a group if the group scan is done. Write with '1' to clear bit. |
| 1 | GRP_CANCELLED | RW1C | RW1S | 0 | Cancelled Interrupt: hardware sets this interrupt for the last channel of a group if the group scan was preempted and CANCELLED. Note that it is possible that also the GRP_DONE interrupt is set. If that is the case one or more new triggers were detected while the group was already busy, i.e. triggers are too fast. Write with '1' to clear bit. |
| 2 | GRP_OVERFLOW | RW1C | RW1S | 0 | Overflow Interrupt: hardware sets this interrupt for the last channel of a group if the group scan is done and the Done interrupt is already (still) pending. Write with '1' to clear bit. |
| 8 | CH_RANGE | RW1C | RW1S | 0 | Range detect Interrupt: hardware sets this interrupt for each channel if the conversion result (after averaging) of that channel met the condition specified by the SAR_RANGE registers. This interrupt is mutual exclusive with Pulse detect interrupt. Write with '1' to clear bit. |
| 9 | CH_PULSE | RW1C | RW1S | 0 | Pulse detect Interrupt: hardware sets this interrupt for each channel if the positive pulse counter reaches zero. This interrupt is mutual exclusive with Range detect interrupt. Write with '1' to clear bit. |
| 10 | CH_OVERFLOW | RW1C | RW1S | 0 | Channel overflow Interrupt: hardware sets this interrupt for each channel if a new Pulse or Range interrupt is detected while the interrupt is still pending or when DW did not acknowledge data pickup. Write with '1' to clear bit. |

### 21.5.1.18.6 PASS_SAR_CH_INTR_SET

**Description:** Interrupt set request register
**Address:** 0x40900814
**Offset:** 0x14
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Not really a register, intended for verification/debug. When read, this register reflects the interrupt request register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | GRP_OVERFLOW_SET [2:2] | GRP_CANCELLED_SET [1:1] | GRP_DONE_SET [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | CH_OVERFLOW_SET [10:10] | CH_PULSE_SET [9:9] | CH_RANGE_SET [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | GRP_DONE_SET | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 1 | GRP_CANCELLED_SET | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 2 | GRP_OVERFLOW_SET | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 8 | CH_RANGE_SET | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 9 | CH_PULSE_SET | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 10 | CH_OVERFLOW_SET | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |

### 21.5.1.18.7 PASS_SAR_CH_INTR_MASK

**Description:** Interrupt mask register.
**Address:** 0x40900818
**Offset:** 0x18
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | GRP_OVERFLOW_MASK [2:2] | GRP_CANCELLED_MASK [1:1] | GRP_DONE_MASK [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | CH_OVERFLOW_MASK [10:10] | CH_PULSE_MASK [9:9] | CH_RANGE_MASK [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | GRP_DONE_MASK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 1 | GRP_CANCELLED_MASK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 2 | GRP_OVERFLOW_MASK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 8 | CH_RANGE_MASK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 9 | CH_PULSE_MASK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 10 | CH_OVERFLOW_MASK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

### 21.5.1.18.8 PASS_SAR_CH_INTR_MASKED

**Description:** Interrupt masked request register
**Address:** 0x4090081C
**Offset:** 0x1C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** If the value is not zero then the SAR interrupt signal to the NVIC is high. When read, this register reflects a bitwise AND between the interrupt request and mask registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | GRP_OVERFLOW_MASKED [2:2] | GRP_CANCELLED_MASKED [1:1] | GRP_DONE_MASKED [0:0] |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | GRP_DONE_MASKED | R | W | 0 | Logical and of corresponding request and mask bits. |
| 1 | GRP_CANCELLED_MASKED | R | W | 0 | Logical and of corresponding request and mask bits. |
| 2 | GRP_OVERFLOW_MASKED | R | W | 0 | Logical and of corresponding request and mask bits. |
| 8 | CH_RANGE_MASKED | R | W | 0 | Logical and of corresponding request and mask bits. |
| 9 | CH_PULSE_MASKED | R | W | 0 | Logical and of corresponding request and mask bits. |
| 10 | CH_OVERFLOW_MASKED | R | W | 0 | Logical and of corresponding request and mask bits. |

### 21.5.1.18.9 PASS_SAR_CH_WORK

**Description:** Working data register
**Address:** 0x40900820
**Offset:** 0x20
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WORK [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | WORK [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID_MIR [31:31] | PULSE_MIR [30:30] | RANGE_MIR [29:29] | ABOVE_HI_MIR [28:28] | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | WORK | R | RW | Undefined | SAR conversion working data of the channel. The data is written here right after sampling this channel. |
| 28 | ABOVE_HI_MIR | R | W | 0 | mirror bit of the corresponding ABOVE_HI bit |
| 29 | RANGE_MIR | R | W | 0 | mirror bit of corresponding bit in WORK_RANGE register |
| 30 | PULSE_MIR | R | W | 0 | mirror bit of corresponding bit in WORK_PULSE register |
| 31 | VALID_MIR | R | W | 0 | mirror bit of corresponding bit in WORK_VALID register |

### 21.5.1.18.10 PASS_SAR_CH_RESULT

**Description:** Result data register
**Address:** 0x40900824
**Offset:** 0x24
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESULT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESULT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID_MIR [31:31] | PULSE_INTR_MIR [30:30] | RANGE_INTR_MIR [29:29] | ABOVE_HI_MIR [28:28] | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | RESULT | R | W | Undefined | SAR conversion result of the channel. The data is copied here from the WORK field after all enabled channels in this scan have been sampled. |
| 28 | ABOVE_HI_MIR | R | W | 0 | mirror bit of the corresponding ABOVE_HI bit |
| 29 | RANGE_INTR_MIR | R | W | 0 | mirror bit of INTR.CH_RANGE bit |
| 30 | PULSE_INTR_MIR | R | W | 0 | mirror bit of INTR.CH_PULSE bit |
| 31 | VALID_MIR | R | W | 0 | mirror bit of the corresponding bit in RESULT_VALID register |

### 21.5.1.18.11 PASS_SAR_CH_GRP_STAT

**Description:** Group status register
**Address:** 0x40900828
**Offset:** 0x28
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register contains the status information required for a coherent read for the AutoSAR 'ADC Channel Group Status Service'
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | GRP_OVERFLOW [2:2] | GRP_CANCELLED [1:1] | GRP_COMPLETE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | CH_OVERFLOW [10:10] | CH_PULSE_COMPLETE [9:9] | CH_RANGE_COMPLETE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | GRP_BUSY [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | GRP_COMPLETE | R | W | 0 | Group acquisition complete.<br>This is a copy of the INTR.GRP_DONE bit. |
| 1 | GRP_CANCELLED | R | W | 0 | Group Cancelled.<br>This is a copy of the INTR.GRP_CANCELLED bit. |
| 2 | GRP_OVERFLOW | R | W | 0 | Group Overflow.<br>This is a copy of the INTR.GRP_OVERFLOW bit. |
| 8 | CH_RANGE_COMPLETE | R | W | 0 | Channel Range complete.<br>This is a copy of the INTR.CH_RANGE bit. |
| 9 | CH_PULSE_COMPLETE | R | W | 0 | Channel Pulse complete.<br>This is a copy of the INTR.CH_PULSE bit. |
| 10 | CH_OVERFLOW | R | W | 0 | Channel Overflow.<br>This is a copy of the INTR.CH_OVERFLOW bit. |
| 16 | GRP_BUSY | R | W | 0 | Group acquisition busy.<br>This is a copy of the TR_PENDING bit of the first channel of the group. |

### 21.5.1.18.12 PASS_SAR_CH_ENABLE

**Description:** Enable register
**Address:** 0x40900838
**Offset:** 0x38
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | CHAN_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CHAN_EN | RW | R | 0 | Channel enable.<br>- 0: the corresponding channel is disabled. Corresponding trigger will be reset immediately.<br>- 1: the corresponding channel is enabled.<br><br>Note: To disable a group either stop the trigger first or begin with disabling the lowest channel first. To enable a group either start with enabling the last channel first and the first channel last, or start the trigger after all channels are enabled. If these rules are not followed the result is undefined. |

### 21.5.1.18.13 PASS_SAR_CH_TR_CMD

**Description:** Software triggers
**Address:** 0x4090083C
**Offset:** 0x3C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | START [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | START | RW1S | A | 0 | Software start trigger. When written with '1', a start trigger is generated which sets the corresponding TR_PEND bit (only if the channel is enabled). A read always returns a 0. |

### 21.5.2 EPASS_MMIO

#### 21.5.2.1 PASS_PASS_CTL

**Description:** PASS control register
**Address:** 0x409F0000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | SUPPLY_MON_LVL_B [5:5] | SUPPLY_MON_EN_B [4:4] | None [3:2] | | SUPPLY_MON_LVL_A [1:1] | SUPPLY_MON_EN_A [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:23] | REFBUF_MODE [22:21] | | None [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:31] | DBG_FREEZE_EN [30:28] | | | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | SUPPLY_MON_EN_A | RW | R | 0 | Supply monitor enable for AMUXBUS_A (amuxbus_a_mon) |
| 1 | SUPPLY_MON_LVL_A | RW | R | 0 | Supply monitor level select for AMUXBUS_A |
| | VRL | | | 0 | amuxbus_a_mon = VRL |
| | VRH | | | 1 | amuxbus_a_mon = VRH |
| 4 | SUPPLY_MON_EN_B | RW | R | 0 | Supply monitor enable for AMUXBUS_B (amuxbus_b_mon) |
| 5 | SUPPLY_MON_LVL_B | RW | R | 0 | Supply monitor level select for AMUXBUS_B |
| | VRL | | | 0 | amuxbus_b_mon = VRL |
| | VRH | | | 1 | amuxbus_b_mon = VRH |
| 21:22 | REFBUF_MODE | RW | R | 0 | Reference mode.<br>The reference needs to be present when using TEMP sensor or diagnostic reference (in addition to SAR.DIAG_CTL.DIAG_EN).<br>Note that setting this mode is not required for the ADC operation itself. |
| | OFF | | | 0 | No reference |
| | ON | | | 1 | Reference = buffered Vbg from SRSS |
| | RESERVED | | | 2 | undefined |
| | BYPASS | | | 3 | Reference = unbuffered Vbg from SRSS |
| 28:30 | DBG_FREEZE_EN | RW | R | 0 | Debug pause enable, 1 per ADC.<br>When set a high tr_debug_freeze trigger will prevent the scheduler from starting acquisitions on a new channel. Note that averaging for an already started channel will be completed. |

### 21.5.2.2 PASS_SAR_TR_IN_SEL

**Description:** per SAR generic input trigger select
**Address:** 0x409F0020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** forward 5 out of max 16 generic input triggers to one SAR instance (there are 5 generic input triggers per SAR)
**Default:** 0x43210

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | IN1_SEL [7:4] | | | | IN0_SEL [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | IN3_SEL [15:12] | | | | IN2_SEL [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:20] | | | | IN4_SEL [19:16] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | IN0_SEL | RW | R | 0 | Select generic trigger for SAR generic trigger input 0 |
| 4:7 | IN1_SEL | RW | R | 1 | Select generic trigger for SAR generic trigger input 1 |
| 8:11 | IN2_SEL | RW | R | 2 | Select generic trigger for SAR generic trigger input 2 |
| 12:15 | IN3_SEL | RW | R | 3 | Select generic trigger for SAR generic trigger input 3 |
| 16:19 | IN4_SEL | RW | R | 4 | Select generic trigger for SAR generic trigger input 4 |

### 21.5.2.3 PASS_SAR_TR_OUT_SEL

**Description:** per SAR generic output trigger select
**Address:** 0x409F0040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** forward 2 of the up to 64 SAR triggers (tr_sar_ch_done + tr_sar_ch_rangevio) to a generic output trigger
**Default:** 0x100

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | OUT0_SEL [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | OUT1_SEL [13:8] | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:5 | OUT0_SEL | RW | R | 0 | Select SAR output trigger for generic trigger output 0<br>0-31: selects a tr_sar_ch_done trigger<br>32-63: selects a tr_sar_ch_rangvio trigger |
| 8:13 | OUT1_SEL | RW | R | 1 | Select SAR output trigger for generic trigger output 1 |

### 21.5.2.4 PASS_TEST_CTL

**Description:** Test control bits
**Address:** 0x409F0080
**Offset:** 0x80
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Note: All bits besides 6, 8, 9 are reserved, and should not be modified by the user
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TS_CAL_VI_SEL [6:6] | TS_CAL_DIODE_PNP_EN [5:5] | TS_CAL_DIODE_EN [4:4] | TS_CAL_VE_OUT [3:3] | TS_CAL_VB_OUT [2:2] | None [1:1] | TS_CAL_CUR_IN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | TS_CAL_SPARE [12:12] | None [11:10] | | TS_CAL_CUR_SEL [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TS_CAL_CUR_IN | RW | R | 0 | External current input switch control, for Temperature Sensor Calibration |
| 2 | TS_CAL_VB_OUT | RW | R | 0 | Voltage Base switch control, for Temperature Sensor Calibration |
| 3 | TS_CAL_VE_OUT | RW | R | 0 | Voltage Emitter switch control, for Temperature Sensor Calibration |
| 4 | TS_CAL_DIODE_EN | RW | R | 0 | Diode Enable, disconnect or connect the base and collector terminal of the BJT |
| 5 | TS_CAL_DIODE_PNP_EN | RW | R | 0 | Enable signal for PNP transistor. This transistor will be used only during calibration for accurate estimation of chip temp.<br>0 = Turn PNP off<br>1 = Configure PNP as a diode (short base and collector) |
| 6 | TS_CAL_VI_SEL | RW | R | 0 | Select current or voltage output on 'v_temp' pin, for Temperature Sensor Calibration |
| | CURRENT | | | 0 | Current is selected |
| | VOLTAGE | | | 1 | Voltage is selected |
| 8:9 | TS_CAL_CUR_SEL | RW | R | 0 | Select the current going into the BJT, for Temperature Sensor Calibration |
| | I_1U | | | 0 | Select 1 uA |
| | I_2U | | | 1 | Select 2 uA |
| | I_5U | | | 2 | Select 5 uA |
| | I_10U | | | 3 | Select 10 uA |
| 12 | TS_CAL_SPARE | RW | R | 0 | Spare |

| PERI_TR_1TO1_GR13_TR_CTL0 | 0x4000F400 | FULL | Trigger control register |
| PERI_TR_1TO1_GR13_TR_CTL1 | 0x4000F404 | FULL | Trigger control register |

## 22.37 Register Details

### 22.37.1 PERI_TIMEOUT_CTL

**Description:** Timeout control
**Address:** 0x40000200
**Offset:** 0x200
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The presence of the TIMEOUT_CTL register is dependent on the TIMEOUT_PRESENT parameter.

The presence of TIMEOUT_CTL requires slave 0 of the peripheral group to be present (SL0_PRESENT must be '1').
**Default:** 0xFFFF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TIMEOUT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | TIMEOUT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | TIMEOUT | RW | R | 65535 | This field specifies a number of clock cycles (clk_slow). If an AHB-Lite bus transfer takes more than the specified number of cycles (timeout detection), the bus transfer is terminated with an AHB-Lite bus error and a fault is generated (and possibly recorded in the fault report structure(s)).<br>'0x0000'-'0xfffe': Number of clock cycles.<br>'0xffff': This value is the default/reset value and specifies that no timeout detection is performed: a bus transfer will never be terminated and a fault will never be generated. |

### 22.37.2 PERI_TR_CMD

**Description:** Trigger command
**Address:** 0x40000220
**Offset:** 0x220
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides SW control over trigger activation. This is useful for SW initiated triggers (e.g. DW/DMA transfers) or for debugging purposes. The control enables SW activation of one specific input trigger or output trigger of the trigger multiplexer structure.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_SEL [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | GROUP_SEL [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ACTIVATE [31:31] | OUT_SEL [30:30] | TR_EDGE [29:29] | None [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | TR_SEL | RW | R | 0 | Specifies the activated trigger when ACTIVATE is '1'. If the specified trigger is not present, the trigger activation has no effect. |
| 8:12 | GROUP_SEL | RW | R | 0 | Specifies the trigger group:<br>'0'-'15': trigger multiplexer groups.<br>'16'-'31': trigger 1-to-1 groups. |
| 29 | TR_EDGE | RW | R | 0 | Specifies if the activated trigger is treated as a level sensitive or edge sensitive trigger.<br>'0': level sensitive. The trigger reflects TR_CMD.ACTIVATE.<br>'1': edge sensitive trigger. The trigger is activated for two clk_peri cycles. |
| 30 | OUT_SEL | RW | R | 0 | Specifies whether trigger activation is for a specific input or output trigger of the trigger multiplexer. Activation of a specific input trigger, will result in activation of all output triggers that have the specific input trigger selected through their TR_OUT_CTL.TR_SEL field. Activation of a specific output trigger, will result in activation of the specified TR_SEL output trigger only.<br>'0': TR_SEL selection and trigger activation is for an input trigger to the trigger multiplexer.<br>'1': TR_SEL selection and trigger activation is for an output trigger from the trigger multiplexer.<br><br>Note: this field is not used for trigger 1-to-1 groups. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | ACTIVATE | RW | RW1C | 0 | SW sets this field to '1' to activate (set to '1') a trigger as identified by TR_SEL, TR_EDGE and OUT_SEL. HW sets this field to '0' for edge sensitive triggers AFTER the selected trigger is activated for two clk_peri cycles.<br><br>Note: when ACTIVATE is '1', SW should not modify the other register fields.<br>SW MUST NOT set ACTIVATE bit to '1' while updating the other register bits simultaneously. At first the SW MUST update the other register bits as needed, and then set ACTIVATE to '1' with a new register write. |

### 22.37.3 PERI_ECC_CTL

**Description:** ECC control
**Address:** 0x40002000
**Offset:** 0x2000
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register provides ECC support for the protection structures SRAM in the master interfaces peripheral (peripheral group 0, peripheral 1).
**Default:** 0x10000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WORD_ADDR [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | WORD_ADDR [10:8] | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:19] | | | | | ECC_INJ_EN [18:18] | None [17:17] | ECC_EN [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | PARITY [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:10 | WORD_ADDR | RW | R | 0 | Specifies the word address where the parity is injected.<br>- On a 32-bit write access to this SRAM address and when ECC_INJ_EN bit is '1', the parity (PARITY) is injected. |
| 16 | ECC_EN | RW | R | 1 | Enable ECC:<br>'0': Disabled (on write ECC parity bits will not be correctly written).<br>'1': Enabled. |
| 18 | ECC_INJ_EN | RW | R | 0 | Enable error injection for PERI protection structure SRAM.<br>When '1', the parity (PARITY) is used when a write is done to the WORD_ADDR word address of the SRAM. |
| 24:31 | PARITY | RW | R | 0 | ECC parity to use for ECC error injection at address WORD_ADDR. |

## 22.37.4 GR

### 22.37.4.1 PERI_GR_CLOCK_CTL

**Description:** Clock control
**Address:** 0x40004000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The peripheral interconnect supports up to sixteen groups: group 0, group 1, ..., group 15. Peripheral groups 0, 1 and 2 use clk_slow (clk_group[0] = clk_group[1] = clk_group[2] = clk_slow) and do NOT have a CLOCK_GROUP_DIV_CTL register. Peripheral groups 3, 4, ..., 15 have a dedicated CLOCK_GROUP_DIV_CTL register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | INT8_DIV [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:15 | INT8_DIV | RW | R | 0 | Specifies a group clock divider (from the peripheral clock 'clk_peri' to the group clock 'clk_group[3/4/5/...15]'). Integer division by (1+INT8_DIV). Allows for integer divisions in the range [1, 256].<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |

### 22.37.4.2 PERI_GR_SL_CTL

**Description:** Slave control
**Address:** 0x40004010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0xFFFF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED_7 [7:7] | ENABLED_6 [6:6] | ENABLED_5 [5:5] | ENABLED_4 [4:4] | ENABLED_3 [3:3] | ENABLED_2 [2:2] | ENABLED_1 [1:1] | ENABLED_0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | ENABLED_11 [11:11] | ENABLED_10 [10:10] | ENABLED_9 [9:9] | ENABLED_8 [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ENABLED_0 | RW | R | 1 | Peripheral group, slave 0 enable. If the slave is disabled, its clock is gated off (constant '0') and its resets are activated.<br><br>Note: For peripheral group 0 (the peripheral interconnect MMIO registers), this field is a constant '1' (SW: R): the slave can NOT be disabled. |
| 1 | ENABLED_1 | RW | R | 1 | Peripheral group, slave 1 enable. If the slave is disabled, its clock is gated off (constant '0') and its resets are activated.<br><br>Note: For peripheral group 0 (the peripheral interconnect, master interface MMIO registers), this field is a constant '1' (SW: R): the slave can NOT be disabled. |
| 2 | ENABLED_2 | RW | R | 1 | Peripheral group, slave 2 enable. If the slave is disabled, its clock is gated off (constant '0') and its resets are activated.<br><br>Note: For peripheral group 0 (the peripheral interconnect, PCLK group MMIO registers), this field is a constant '1' (SW: R): the slave can NOT be disabled. |
| 3 | ENABLED_3 | RW | R | 1 | N/A |
| 4 | ENABLED_4 | RW | R | 1 | N/A |

## 22.37.5 TR_GR

### 22.37.5.1 PERI_TR_GR_TR_CTL

**Description:** Trigger control register
**Address:** 0x40008000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register specifies the input trigger for a specific output trigger in trigger group 0. Note that for SW initiated triggers, SW is responsible for activating the output trigger, rather than relying on a specific HW input trigger. For this reason, input trigger 0 is typically connected to a constant signal level of '0' at chip integration (design decision) and SW initiated output triggers are all connected to input trigger 0 (SW responsibility: TR_OUT_CTL.TR_SEL should be set to '0' to select the constant signal level '0' from chip level). As a result, SW initiated triggers can never be activated by a HW input trigger to the trigger multiplexer.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_SEL [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | DBG _FREEZE _EN [12:12] | None [11:10] | | TR_EDGE [9:9] | TR_INV [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | TR_SEL | RW | R | 0 | Specifies input trigger. This field is typically set during the setup of a chip use case scenario. Changing this field while activated triggers are present on the input triggers may result in unpredictable behavior. Note that input trigger 0 (default value) is typically connected to a constant signal level of '0', and as a result will not cause HW activation of the output trigger. |
| 8 | TR_INV | RW | R | 0 | Specifies if the output trigger is inverted. |
| 9 | TR_EDGE | RW | R | 0 | Specifies if the (inverted) output trigger is treated as a level sensitive or edge sensitive trigger.<br>'0': level sensitive.<br>'1': edge sensitive trigger. The (inverted) output trigger duration needs to be at least 2 cycles on the consumer clock. the(inverted) output trigger is synchronized to the consumer clock and a two cycle pulse is generated on the consumer clock. |
| 12 | DBG_FREEZE_EN | RW | R | 0 | Specifies if the output trigger is blocked in debug mode. When set high tr_dbg_freeze will block the output trigger generation. |

### 22.37.6 TR_1TO1_GR

#### 22.37.6.1 PERI_TR_1TO1_GR_TR_CTL

**Description:** Trigger control register
**Address:** 0x4000C000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | TR_SEL [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | DBG _FREEZE _EN [12:12] | None [11:10] | | TR_EDGE [9:9] | TR_INV [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |

## 23.719 Register Details

### 23.719.1 PPU_PR

#### 23.719.1.1 PERI_MS_PPU_PR_SL_ADDR

**Description:** Slave region, base address
**Address:** 0x40020000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_ADDR can only be written by protection context '0' (protection context '0' has unrestricted access). The access privileges for other protection contexts are determined by MS_ATT0, ..., MS_ATT3, with the additional restriction that SL_ADDR can NOT be written.

Typically, the SL_ADDR and SL_SIZE registers are programmed by the boot process with protection context '0'.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [7:2] | | | | | | None [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2:31 | ADDR30 | RW | R | Undefined | This field specifies the base address of the slave region. The region size is defined by SL_SIZE.REGION_SIZE. A region of n Bytes must be n Byte aligned. Therefore, some of the lesser significant address bits of ADDR30 must be '0's. E.g., a 64 KB address region (REGION_SIZE is '15') must be 64 KByte aligned, and ADDR30[13:0] must be '0's. |

### 23.719.1.2 PERI_MS_PPU_PR_SL_SIZE

**Description:** Slave region, size
**Address:** 0x40020004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_SIZE can only be written by protection context '0' (protection context '0' has unrestricted access). The access privileges for other protection contexts are determined by MS_ATT0, ..., MS_ATT3, with the additional restriction that SL_SIZE can NOT be written.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | RW | R | Undefined | This field specifies the size of the slave region:<br>'0': Undefined.<br>'1': 4 B region (this is the smallest region size).<br>'2': 8 B region<br>'3': 16 B region<br>'4': 32 B region<br>'5': 64 B region<br>'6': 128 B region<br>'7': 256 B region<br>'8': 512 B region<br>'9': 1 KB region<br>'10': 2 KB region<br>'11': 4 KB region<br>'12': 8 KB region<br>'13': 16 KB region<br>'14': 32 KB region<br>'15': 64 KB region<br>'16': 128 KB region<br>'17': 256 KB region<br>'18': 512 KB region<br>'19': 1 MB region<br>'20': 2 MB region<br>'21': 4 MB region<br>'22': 8 MB region<br>'23': 16 MB region<br>'24': 32 MB region<br>'25': 64 MB region<br>'26': 128 MB region<br>'27': 256 MB region<br>'28': 512 MB region<br>'29': 1 GB region<br>'30': 2 GB region<br>'31': 4 GB region |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | VALID | RW | R | 0 | Slave region enable:<br>'0': Disabled. A disabled region will never result in a match on the transfer address.<br>'1': Enabled. |

### 23.719.1.3 PERI_MS_PPU_PR_SL_ATT0

**Description:** Slave attributes 0
**Address:** 0x40020010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for SL_ATT0, ..., SL_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the SL_ATT0, ..., SL_ATT3 registers are initialized by the boot process with protection context '0'.

For 4 or less protection contexts (PC_NR <= 4), only SL_ATT0 is present. For 5 through 8 protection contexts, only SL_ATT0 and SL_ATT1 are present. For 9 through 12 or less protection contexts, only SL_ATT0, SL_ATT1 and SL_ATT2 are present. For 13 through 16 protection contexts, SL_ATT0, SL_ATT1, SL_ATT2 and SL_ATT3 are all present. If the number of protection contexts is not a multiple of 4, the 'missing' protection contexts in a register have no associated access fields (and the field positions read as '0').

**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | PC0_NS [4:4] | PC0_PW [3:3] | PC0_PR [2:2] | PC0_UW [1:1] | PC0_UR [0:0] |

### 23.719.1.7 PERI_MS_PPU_PR_MS_ADDR

**Description:** Master region, base address
**Address:** 0x40020020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_ADDR is fixed (non-programmable).

The access privileges for MS_ADDR are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [7:6] | | None [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 6:31 | ADDR26 | R | R | 16779264 | This field specifies the base address of the master region. The base address of the region is the address of the SL_ADDR register. |

### 23.719.1.8 PERI_MS_PPU_PR_MS_SIZE

**Description:** Master region, size
**Address:** 0x40020024
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_SIZE is fixed (non-programmable).

The access privileges for MS_SIZE are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x85000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | R | R | 5 | This field specifies the size of the master region:<br>'5': 64 B region<br><br>The master region includes the SL_ADDR, SL_SIZE, SL_ATT0, ..., SL_ATT3, MS_ADDR, MS_SIZE, MS_ATT0, ..., MS_ATT3 registers. Therefore, the access privileges for all these registers is determined by MS_ATT0, ..., MS_ATT3. |
| 31 | VALID | R | R | 1 | Master region enable:<br>'1': Enabled. |

### 23.719.1.9 PERI_MS_PPU_PR_MS_ATT0

**Description:** Master attributes 0
**Address:** 0x40020030
**Offset:** 0x30
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for MS_ATT0, ..., MS_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the MS_ATT0, ..., MS_ATT3 registers are programmed by the boot process with protection context '0'.
**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | PC0_NS [4:4] | PC0_PW [3:3] | PC0_PR [2:2] | PC0_UW [1:1] | PC0_UR [0:0] |

### 23.719.2 PPU_FX

#### 23.719.2.1 PERI_MS_PPU_FX_SL_ADDR

**Description:** Slave region, base address
**Address:** 0x40020800
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_ADDR is fixed (non-programmable).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [7:2] | | | | | | None [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2:31 | ADDR30 | R | R | 268435584 | This field specifies the base address of the slave region. The region size is defined by SL_SIZE.REGION_SIZE. A region of n Bytes must be n Byte aligned. Therefore, some of the lesser significant address bits of ADDR30 must be '0's. E.g., a 64 KB address region (REGION_SIZE is '15') must be 64 KByte aligned, and ADDR30[13:0] must be '0's. |

### 23.719.2.2 PERI_MS_PPU_FX_SL_SIZE

**Description:** Slave region, size
**Address:** 0x40020804
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_SIZE is fixed (non-programmable).
**Default:** 0x80000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | R | R | 5 | This field specifies the size of the slave region:<br>'0': Undefined.<br>'1': 4 B region (this is the smallest region size).<br>'2': 8 B region<br>'3': 16 B region<br>'4': 32 B region<br>'5': 64 B region<br>'6': 128 B region<br>'7': 256 B region<br>'8': 512 B region<br>'9': 1 KB region<br>'10': 2 KB region<br>'11': 4 KB region<br>'12': 8 KB region<br>'13': 16 KB region<br>'14': 32 KB region<br>'15': 64 KB region<br>'16': 128 KB region<br>'17': 256 KB region<br>'18': 512 KB region<br>'19': 1 MB region<br>'20': 2 MB region<br>'21': 4 MB region<br>'22': 8 MB region<br>'23': 16 MB region<br>'24': 32 MB region<br>'25': 64 MB region<br>'26': 128 MB region<br>'27': 256 MB region<br>'28': 512 MB region<br>'29': 1 GB region<br>'30': 2 GB region<br>'31': 4 GB region |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | VALID | R | R | 1 | Slave region enable:<br>'0': Disabled. A disabled region will never result in a match on the transfer address.<br>'1': Enabled. |

### 23.719.2.3 PERI_MS_PPU_FX_SL_ATT0

**Description:** Slave attributes 0
**Address:** 0x40020810
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for SL_ATT0, ..., SL_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the SL_ATT0, ..., SL_ATT3 registers are initialized by the boot process with protection context '0'.

For 4 or less protection contexts (PC_NR <= 4), only SL_ATT0 is present. For 5 through 8 protection contexts, only SL_ATT0 and SL_ATT1 are present. For 9 through 12 or less protection contexts, only SL_ATT0, SL_ATT1 and SL_ATT2 are present. For 13 through 16 protection contexts, SL_ATT0, SL_ATT1, SL_ATT2 and SL_ATT3 are all present. If the number of protection contexts is not a multiple of 4, the 'missing' protection contexts in a register have no associated access fields (and the field positions read as '0').

**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | PC0_NS [4:4] | PC0_PW [3:3] | PC0_PR [2:2] | PC0_UW [1:1] | PC0_UR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | PC1_NS [12:12] | PC1_PW [11:11] | PC1_PR [10:10] | PC1_UW [9:9] | PC1_UR [8:8] |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 6:31 | ADDR26 | R | R | 16779296 | This field specifies the base address of the master region. The base address of the region is the address of the SL_ADDR register. |

### 23.719.2.8 PERI_MS_PPU_FX_MS_SIZE

**Description:** Master region, size
**Address:** 0x40020824
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_SIZE is fixed (non-programmable).

The access privileges for MS_SIZE are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x85000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | R | R | 5 | This field specifies the size of the master region:<br>'5': 64 B region<br><br>The master region includes the SL_ADDR, SL_SIZE, SL_ATT0, ..., SL_ATT3, MS_ADDR, MS_SIZE, MS_ATT0, ..., MS_ATT3 registers. Therefore, the access privileges for all these registers is determined by MS_ATT0, ..., MS_ATT3. |
| 31 | VALID | R | R | 1 | Master region enable:<br>'1': Enabled. |

### 23.719.2.9 PERI_MS_PPU_FX_MS_ATT0

**Description:** Master attributes 0
**Address:** 0x40020830
**Offset:** 0x30
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for MS_ATT0, ..., MS_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the MS_ATT0, ..., MS_ATT3 registers are programmed by the boot process with protection context '0'.
**Default:** 0x1F1F1F1F

**Bit-field Table**

## 24.3 Register Details

### 24.3.1 GR

#### 24.3.1.1 PERI_PCLK_GR_DIV_CMD

**Description:** Divider command
**Address:** 0x40040000
**Offset:** 0x0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The (PA_TYPE_SEL, PA_DIV_SEL) field pair allows a divider to be phase aligned with another divider. E.g., consider a 48 MHz 'clk_pclk_root[i]', and a need for a 12 MHz divided clock A and a 8 MHz divided clock B. Clock A uses 8.0 integer divider 0 and is created by aligning it to 'clk_pclk_root[i]' ((PA_TYPE_SEL, PA_DIV_SEL) is (3, 63)) and DIV_8_CTL0.INT8_DIV is '4-1'. Clock B uses 8.0 integer divider 1 and is created by aligning it to clock A ((PA_TYPE_SEL, PA_DIV_SEL) is (0, 0)) and DIV_8_CTL1.INT8_DIV is '6-1'. This guarantees that clock B is phase aligned with clock A: as the smallest common multiple of the two clock periods is 12 'clk_pclk_root[i]' cycles, the clocks A and B will be aligned every 12 'clk_pclk_root[i]' cycles. Note: clock B is phase aligned to clock A, but still uses 'clk_pclk_root[i]' as a reference clock for its divider value.
**Default:** 0x3FF03FF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DIV_SEL [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | TYPE_SEL [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | PA_DIV_SEL [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | DISABLE [30:30] | None [29:26] | | | | PA_TYPE_SEL [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DIV_SEL | RW | R | 255 | (TYPE_SEL, DIV_SEL) specifies the divider on which the command (DISABLE/ENABLE) is performed.<br><br>If DIV_SEL is '255' and TYPE_SEL is '3' (default/reset value), no divider is specified and no clock signal(s) are generated. |
| 8:9 | TYPE_SEL | RW | R | 3 | Specifies the divider type of the divider on which the command is performed:<br>0: 8.0 (integer) clock dividers.<br>1: 16.0 (integer) clock dividers.<br>2: 16.5 (fractional) clock dividers.<br>3: 24.5 (fractional) clock dividers. |
| 16:23 | PA_DIV_SEL | RW | R | 255 | (PA_TYPE_SEL, PA_DIV_SEL) specifies the divider to which phase alignment is performed for the clock enable command. Any enabled divider can be used as reference. This allows all dividers to be aligned with each other, even when they are enabled at different times.<br><br>If PA_DIV_SEL is '255' and PA_TYPE_SEL is '3', 'clk_pclk_root[i]' is used as reference. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:25 | PA_TYPE_SEL | RW | R | 3 | Specifies the divider type of the divider to which phase alignment is performed for the clock enable command:<br>0: 8.0 (integer) clock dividers.<br>1: 16.0 (integer) clock dividers.<br>2: 16.5 (fractional) clock dividers.<br>3: 24.5 (fractional) clock dividers. |
| 30 | DISABLE | RW | RW1C | 0 | Clock divider disable command (mutually exclusive with ENABLE). SW sets this field to '1' and HW sets this field to '0'.<br><br>The DIV_SEL and TYPE_SEL fields specify which divider is to be disabled.<br><br>The HW sets the DISABLE field to '0' immediately and the HW sets the DIV_XXX_CTL.EN field of the divider to '0' immediately. |
| 31 | ENABLE | RW | RW1C | 0 | Clock divider enable command (mutually exclusive with DISABLE). Typically, SW sets this field to '1' to enable a divider and HW sets this field to '0' to indicate that divider enabling has completed. When a divider is enabled, its integer and fractional (if present) counters are initialized to '0'. If a divider is to be re-enabled using different integer and fractional divider values, the SW should follow these steps:<br>0: Disable the divider using the DIV_CMD.DISABLE field.<br>1: Configure the divider's DIV_XXX_CTL register.<br>2: Enable the divider using the DIV_CMD_ENABLE field.<br><br>The DIV_SEL and TYPE_SEL fields specify which divider is to be enabled. The enabled divider may be phase aligned to either 'clk_pclk_root[i]' (typical usage) or to ANY enabled divider.<br><br>The PA_DIV_SEL and PA_TYPE_SEL fields specify the reference divider.<br><br>The HW sets the ENABLE field to '0' when the enabling is performed and the HW set the DIV_XXX_CTL.EN field of the divider to '1' when the enabling is performed. Note that enabling with phase alignment to a low frequency divider takes time. E.g. To align to a divider that generates a clock of 'clk_pclk_root[i]'/n (with n being the integer divider value INT_DIV+1), up to n cycles may be required to perform alignment. Phase alignment to 'clk_pclk_root[i]' takes affect immediately. SW can set this field to '0' during phase alignment to abort the enabling process. |

### 24.3.1.2 PERI_PCLK_GR_CLOCK_CTL

**Description:** Clock control
**Address:** 0x40040C00
**Offset:** 0xC00
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x3FF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DIV_SEL | RW | R | 255 | Specifies one of the dividers of the divider type specified by TYPE_SEL.<br><br>If DIV_SEL is '255' and TYPE_SEL is '3' (default/reset value), no divider is specified and no clock control signal(s) are generated.<br><br>When transitioning a clock between two out-of-phase dividers, spurious clock control signals may be generated for one 'clk_pclk_root[i]' cycle during this transition. These clock control signals may cause a single clock period that is smaller than any of the two divider periods. To prevent these spurious clock signals, the clock multiplexer can be disconnected (DIV_SEL is '255' and TYPE_SEL is '3') for a transition time that is larger than the smaller of the two divider periods. |
| 8:9 | TYPE_SEL | RW | R | 3 | Specifies divider type:<br>0: 8.0 (integer) clock dividers.<br>1: 16.0 (integer) clock dividers.<br>2: 16.5 (fractional) clock dividers.<br>3: 24.5 (fractional) clock dividers. |

### 24.3.1.3 PERI_PCLK_GR_DIV_8_CTL

**Description:** Divider control (for 8.0 divider)
**Address:** 0x40041000
**Offset:** 0x1000
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Smallest of the divider types.
**Default:** 0x0

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EN | R | RW | 0 | Divider enabled. HW sets this field to '1' as a result of an ENABLE command. HW sets this field to '0' as a result on a DISABLE command.<br><br>Note that this field is retained. As a result, the divider does NOT have to be re-enabled after transitioning from DeepSleep to Active power mode. |
| 8:23 | INT16_DIV | RW | R | 0 | Integer division by (1+INT16_DIV). Allows for integer divisions in the range [1, 65,536]. Note: this type of divider does NOT allow for a fractional division.<br><br>For the generation of a divided clock, the integer division range is restricted to [2, 65,536].<br><br>For the generation of a 50/50 percent duty cycle digital divided clock, the integer division range is restricted to even numbers in the range [2, 65,536]. The generation of a 50/50 percent duty cycle analog divided clock has no restrictions.<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |

### 24.3.1.5 PERI_PCLK_GR_DIV_24_5_CTL

**Description:** Divider control (for 24.5 divider)
**Address:** 0x40041C00
**Offset:** 0x1C00
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Largest of the divider types.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAC5_DIV [7:3] | | | | | None [2:1] | | EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | INT24_DIV [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | INT24_DIV [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | INT24_DIV [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EN | R | RW | 0 | Divider enabled. HW sets this field to '1' as a result of an ENABLE command. HW sets this field to '0' as a result on a DISABLE command.<br><br>Note that this field is retained. As a result, the divider does NOT have to be re-enabled after transitioning from DeepSleep to Active power mode. |
| 3:7 | FRAC5_DIV | RW | R | 0 | Fractional division by (FRAC5_DIV/32). Allows for fractional divisions in the range [0, 31/32]. Note that fractional division results in clock jitter as some clock periods may be 1 'clk_pclk_root[i]' cycle longer than other clock periods.<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |
| 8:31 | INT24_DIV | RW | R | 0 | Integer division by (1+INT24_DIV). Allows for integer divisions in the range [1, 16,777,216]. Note: combined with fractional division, this divider type allows for a division in the range [1, 16,777,216 31/32] in 1/32 increments.<br><br>For the generation of a divided clock, the integer division range is restricted to [2, 16,777,216 31/32].<br><br>For the generation of a 50/50 percent duty cycle divided clock, the division range is restricted to [2, 16,777,216].<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |

## 25.9 Register Details

### 25.9.1 SMPU

#### 25.9.1.1 PROT_SMPU_MS0_CTL

**Description:** Master 0 protection context control
**Address:** 0x40230000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Each master has an associated SMPU MS_CTL register. This register provides master specific information. In a system with a secure entity, this register is typically only accessible by the secure entity, to prevent a master from changing its own privileged setting, security setting, arbitration priority or enabled protection contexts.
Master 0 (CM0+ processor) uses SMPU MS0_CTL.
Master 1 (cryptography IP) uses SMPU MS1_CTL.
Master 2 (DataWire 0) uses SMPU MS2_CTL.
Master 3 (DataWire 1) uses SMPU MS3_CTL.
....
Master 14 (CM4 processor) uses SMPU MS14_CTL.
Master 15 (test controller) uses SMPU MS15_CTL.
**Default:** 0x303

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | NS [1:1] | P [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | PRIO [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | PC_MASK_15_TO_1 [23:17] | | | | | | | PC_MASK_0 [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | P | RW | R | 1 | Privileged setting ('0': user mode; '1': privileged mode).<br><br>Notes:<br>This field is ONLY used for masters that do NOT provide their own user/privileged access control attribute.<br>The default/reset field value provides privileged mode access capabilities. |
| 1 | NS | RW | R | 1 | Security setting ('0': secure mode; '1': non-secure mode).<br><br>Notes:<br>This field is ONLY used for masters that do NOT provide their own secure/non-secure access control attribute.<br>Note that the default/reset field value provides non-secure mode access capabilities to all masters. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:9 | PRIO | RW | R | 3 | Device wide bus arbitration priority setting ('0': highest priority, '3': lowest priority).<br><br>Notes:<br>The AHB-Lite interconnect performs arbitration on the individual beats/transfers of a burst (this optimizes latency over locality/bandwidth).<br>The AXI-Lite interconnects performs a single arbitration for the complete burst (this optimizes locality/bandwidth over latency).<br>Masters with the same priority setting form a 'priority group'. Within a 'priority group', round robin arbitration is performed. |
| 16 | PC_MASK_0 | R | R | 0 | Protection context mask for protection context '0'. This field is a constant '0':<br>- PC_MASK_0 is '0': MPU MS_CTL.PC[3:0] can NOT be set to '0' and PC[3:0] is not changed. If the protection context of the write transfer is '0', protection is not applied and PC[3:0] can be changed. |
| 17:23 | PC_MASK_15_TO_1 | RW | R | 0 | Protection context mask for protection contexts '15' down to '1'. Bit PC_MASK_15_TO_1[i] indicates if the MPU MS_CTL.PC[3:0] protection context field can be set to the value 'i+1':<br>- PC_MASK_15_TO_1[i] is '0': MPU MS_CTL.PC[3:0] can NOT be set to 'i+1'; and PC[3:0] is not changed. If the protection context of the write transfer is '0', protection is not applied and PC[3:0] can be changed.<br>- PC_MASK_15_TO_1[i] is '1': MPU MS_CTL.PC[3:0] can be set to 'i+1'.<br><br>Note: When CPUSS_CM0_PC_CTL.VALID[i] is '1' (the associated protection context handler is valid), write transfers to PC_MASK_15_TO_1[i-1] always write '0', regardless of data written. This ensures that when valid protection context handlers are used to enter protection contexts 1, 2 or 3 through (HW modifies MPU MS_CTL.PC[3:0] on entry of the handler), it is NOT possible for SW to enter those protection contexts (SW modifies MPU MS_CTL.PC[3:0]). |

### 25.9.1.2 PROT_SMPU_MS1_CTL

**Description:** Master 1 protection context control
**Address:** 0x40230004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x303

### 25.9.1.12 SMPU_STRUCT

#### 25.9.1.12.1 PROT_SMPU_SMPU_STRUCT_ADDR0

**Description:** SMPU region address 0 (slave structure)
**Address:** 0x40232000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a SMPU address region.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SUBREGION_DISABLE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SUBREGION_DISABLE | RW | R | Undefined | This field is used to individually disabled the eight equally sized subregions in which a region is partitioned. Subregion disable:<br>Bit 0: subregion 0 disable.<br>Bit 1: subregion 1 disable.<br>Bit 2: subregion 2 disable.<br>Bit 3: subregion 3 disable.<br>Bit 4: subregion 4 disable.<br>Bit 5: subregion 5 disable.<br>Bit 6: subregion 6 disable.<br>Bit 7: subregion 7 disable.<br>E.g., a 64 KByte address region (ATT0.REGION_SIZE is '15') has eight 8 KByte subregions. The access control as defined by ATT0 applies if the bus transfer address is within the address region AND the addressed subregion is NOT disabled. Note that the smallest region size is 256 B and the smallest subregion size is 32 B. |
| 8:31 | ADDR24 | RW | R | Undefined | This field specifies the most significant bits of the 32-bit address of an address region. The region size is defined by ATT0.REGION_SIZE. A region of n Byte is always n Byte aligned. As a result, some of the lesser significant address bits of ADDR24 may be ignored in determining whether a bus transfer address is within an address region. E.g., a 64 KByte address region (REGION_SIZE is '15') is 64 KByte aligned, and ADDR24[7:0] are ignored. |

### 25.9.1.12.2 PROT_SMPU_SMPU_STRUCT_ATT0

**Description:** SMPU region attributes 0 (slave structure)
**Address:** 0x40232004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines SMPU access control.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | NS [6:6] | PX [5:5] | PW [4:4] | PR [3:3] | UX [2:2] | UW [1:1] | UR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | PC_MASK_15_TO_1 [15:9] | | | | | | | PC_MASK_0 [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | PC_MATCH [30:30] | None [29:29] | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | UR | RW | R | Undefined | User read enable:<br>'0': Disabled (user, read accesses are NOT allowed).<br>'1': Enabled (user, read accesses are allowed). |
| 1 | UW | RW | R | Undefined | User write enable:<br>'0': Disabled (user, write accesses are NOT allowed).<br>'1': Enabled (user, write accesses are allowed). |
| 2 | UX | RW | R | Undefined | User execute enable:<br>'0': Disabled (user, execute accesses are NOT allowed).<br>'1': Enabled (user, execute accesses are allowed). |
| 3 | PR | RW | R | Undefined | Privileged read enable:<br>'0': Disabled (privileged, read accesses are NOT allowed).<br>'1': Enabled (privileged, read accesses are allowed). |
| 4 | PW | RW | R | Undefined | Privileged write enable:<br>'0': Disabled (privileged, write accesses are NOT allowed).<br>'1': Enabled (privileged, write accesses are allowed). |
| 5 | PX | RW | R | Undefined | Privileged execute enable:<br>'0': Disabled (privileged, execute accesses are NOT allowed).<br>'1': Enabled (privileged, execute accesses are allowed). |
| 6 | NS | RW | R | Undefined | Non-secure:<br>'0': Secure (secure accesses allowed, non-secure access NOT allowed).<br>'1': Non-secure (both secure and non-secure accesses allowed). |
| 8 | PC_MASK_0 | R | R | 1 | This field specifies protection context identifier based access control for protection context '0'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 9:15 | PC_MASK_15_TO_1 | RW | R | Undefined | This field specifies protection context identifier based access control.<br>Bit i: protection context i+1 enable. If '0', protection context i+1 access is disabled; i.e. not allowed. If '1', protection context i+1 access is enabled; i.e. allowed. |
| 24:28 | REGION_SIZE | RW | R | Undefined | This field specifies the region size:<br>'0'-'6': Undefined.<br>'7': 256 B region<br>'8': 512 B region<br>'9': 1 KB region<br>'10': 2 KB region<br>'11': 4 KB region<br>'12': 8 KB region<br>'13': 16 KB region<br>'14': 32 KB region<br>'15': 64 KB region<br>'16': 128 KB region<br>'17': 256 KB region<br>'18': 512 KB region<br>'19': 1 MB region<br>'20': 2 MB region<br>'21': 4 MB region<br>'22': 8 MB region<br>'23': 16 MB region<br>'24': 32 MB region<br>'25': 64 MB region<br>'26': 128 MB region<br>'27': 256 MB region<br>'28': 512 MB region<br>'39': 1 GB region<br>'30': 2 GB region<br>'31': 4 GB region |
| 30 | PC_MATCH | RW | R | Undefined | This field specifies if the PC field participates in the 'matching' process or the 'access evaluation' process:<br>'0': PC field participates in 'access evaluation'.<br>'1': PC field participates in 'matching'.<br><br>'Matching' process. For each protection structure, the process identifies if a transfer address is contained within the address range. This identifies the 'matching' regions.<br>'Access evaluation' process. For each protection structure, the process evaluates the bus transfer access attributes against the access control attributes.<br><br>Note that it is possible to define different access control for multiple protection contexts by using multiple protection structures with the same address region and PC_MATCH set to '1'. |
| 31 | ENABLED | RW | R | 0 | Region enable:<br>'0': Disabled. A disabled region will never result in a match on the bus transfer address.<br>'1': Enabled.<br><br>Note: a disabled address region performs logic gating to reduce dynamic power consumption. |

### 25.9.1.12.3 PROT_SMPU_SMPU_STRUCT_ADDR1

**Description:** SMPU region address 1 (master structure)
**Address:** 0x40232020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a SMPU address region. The address region is fixed, the region size is 64 B (two 32 B subregions within a 256 B region) and includes the ADDR0, ATT0, ADDR1 and ATT0 registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SUBREGION_DISABLE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SUBREGION_DISABLE | R | R | 252 | This field is used to individually disabled the eight equally sized subregions in which a region is partitioned. Subregion disable:<br>Bit 0: subregion 0 disable.<br>Bit 1: subregion 1 disable.<br>Bit 2: subregion 2 disable.<br>Bit 3: subregion 3 disable.<br>Bit 4: subregion 4 disable.<br>Bit 5: subregion 5 disable.<br>Bit 6: subregion 6 disable.<br>Bit 7: subregion 7 disable.<br><br>Two out of a total of eight 32 B subregions are enabled. These subregions includes region structures 0 and 1.<br><br>Note: this field is read-only. |
| 8:31 | ADDR24 | R | R | 4203296 | This field specifies the most significant bits of the 32-bit address of an address region.<br><br>'ADDR_DEF1': base address of structure.<br><br>Note: this field is read-only. |

### 25.9.1.12.4 PROT_SMPU_SMPU_STRUCT_ATT1

**Description:** SMPU region attributes 1 (master structure)
**Address:** 0x40232024
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines SMPU access control.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | UR | R | R | 1 | User read enable:<br>'0': Disabled (user, read accesses are NOT allowed).<br>'1': Enabled (user, read accesses are allowed).<br><br>Note that this register is constant '1'; i.e. user read accesses are ALWAYS allowed. |
| 1 | UW | RW | R | Undefined | User write enable:<br>'0': Disabled (user, write accesses are NOT allowed).<br>'1': Enabled (user, write accesses are allowed). |
| 2 | UX | R | R | 0 | User execute enable:<br>'0': Disabled (user, execute accesses are NOT allowed).<br>'1': Enabled (user, execute accesses are allowed).<br><br>Note that this register is constant '0'; i.e. user execute accesses are NEVER allowed. |
| 3 | PR | R | R | 1 | Privileged read enable:<br>'0': Disabled (privileged, read accesses are NOT allowed).<br>'1': Enabled (privileged, read accesses are allowed).<br><br>Note that this register is constant '1'; i.e. privileged read accesses are ALWAYS allowed. |
| 4 | PW | RW | R | Undefined | Privileged write enable:<br>'0': Disabled (privileged, write accesses are NOT allowed).<br>'1': Enabled (privileged, write accesses are allowed). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 5 | PX | R | R | 0 | Privileged execute enable:<br>'0': Disabled (privileged, execute accesses are NOT allowed).<br>'1': Enabled (privileged, execute accesses are allowed).<br><br>Note that this register is constant '0'; i.e. privileged execute accesses are NEVER allowed. |
| 6 | NS | RW | R | Undefined | Non-secure:<br>'0': Secure (secure accesses allowed, non-secure access NOT allowed).<br>'1': Non-secure (both secure and non-secure accesses allowed). |
| 8 | PC_MASK_0 | R | R | 1 | This field specifies protection context identifier based access control for protection context '0'. |
| 9:15 | PC_MASK_15_TO_1 | RW | R | Undefined | This field specifies protection context identifier based access control.<br>Bit i: protection context i+1 enable. If '0', protection context i+1 access is disabled; i.e. not allowed. If '1', protection context i+1 access is enabled; i.e. allowed. |
| 24:28 | REGION_SIZE | R | R | 7 | This field specifies the region size:<br>'7': 256 B region (8 32 B subregions)<br><br>Note: this field is read-only. |
| 30 | PC_MATCH | RW | R | Undefined | This field specifies if the PC field participates in the 'matching' process or the 'access evaluation' process:<br>'0': PC field participates in 'access evaluation'.<br>'1': PC field participates in 'matching'.<br><br>'Matching' process. For each protection structure, the process identifies if a transfer address is contained within the address range. This identifies the 'matching' regions.<br>'Access evaluation' process. For each protection structure, the process evaluates the bus transfer access attributes against the access control attributes.<br><br>Note that it is possible to define different access control for multiple protection contexts by using multiple protection structures with the same address region and PC_MATCH set to '1'. |
| 31 | ENABLED | RW | R | 0 | Region enable:<br>'0': Disabled. A disabled region will never result in a match on the bus transfer address.<br>'1': Enabled. |

### 25.9.2 MPU

#### 25.9.2.1 PROT_MPU_MS_CTL

**Description:** Master control
**Address:** 0x40234000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | PC [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:20] | | | | PC_SAVED [19:16] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | PC | RW | RW | 0 | Active protection context (PC). Modifications to this field are constrained by the associated SMPU MS_CTL.PC_MASK_0 and MS_CTL.PC_MASK_15_TO_1[] fields. In addition, a write transfer with protection context '0' can change this field (protection context 0 has unrestricted access).<br><br>The CM0+ MPU MS_CTL register is special: the PC field is modifiable by BOTH HW and SW (for all other masters, the MPU MS_CTL.PC field is modifiable by SW ONLY. For CM0+ PC field HW modifications, the following holds:<br>* On entry of a CM0_PC0/1/2/3_HANDLER exception/interrupt handler:<br>IF (the new PC is the same as MS_CTL.PC)<br>PC is not affected; PC_SAVED is not affected.<br>ELSE IF (CM0_PC_CTL.VALID[MS_CTL.PC])<br>An AHB-Lite bus error is generated for the exception handler fetch;<br>PC is not affected; PC_SAVED is not affected.<br>ELSE<br>PC = 'new PC'; PC_SAVED = PC (push operation).<br>* On entry of any other exception/interrupt handler:<br>PC = PC_SAVED; PC_SAVED is not affected (pop operation).<br><br>Note that the CM0_PC0/1/2/3_HANDLER and CM0_PC_CTL registers are part of repecitve CPUSS MMIO registers.<br><br>Note: this field is NOT used by the DW controllers, DMA controller, AXI DMA controller, CRYPTO component and VIDEOSS. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:19 | PC_SAVED | RW | RW | 0 | Saved protection context. Modifications to this field are constrained by the associated SMPU MS_CTL.PC_MASK_0 and MS_CTL.PC_MASK_15_TO_1[] fields.<br><br>Note: this field is ONLY used by the CM0+. |

### 25.9.2.2 PROT_MPU_MS_CTL_READ_MIR

**Description:** Master control read mirror
**Address:** 0x40234004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | PC [3:0] | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | PC | R | W | 0 | Read-only mirror of MS_CTL.PC |
| 16:19 | PC_SAVED | R | W | 0 | Read-only mirror of MS_CTL.PC_SAVED |

### 25.9.2.3 MPU_STRUCT

#### 25.9.2.3.1 PROT_MPU_MPU_STRUCT_ADDR

**Description:** MPU region address
**Address:** 0x40234200
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a MPU address region.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SUBREGION_DISABLE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SUBREGION_DISABLE | RW | R | Undefined | This field is used to individually disabled the eight equally sized subregions in which a region is partitioned. Subregion disable:<br>Bit 0: subregion 0 disable.<br>Bit 1: subregion 1 disable.<br>Bit 2: subregion 2 disable.<br>Bit 3: subregion 3 disable.<br>Bit 4: subregion 4 disable.<br>Bit 5: subregion 5 disable.<br>Bit 6: subregion 6 disable.<br>Bit 7: subregion 7 disable.<br>E.g., a 64 KByte address region (REGION_SIZE is '15') has eight 8 KByte subregions. The access control as defined by MPU_REGION_ATT applies if the bus transfer address is within the address region AND the addressed subregion is NOT disabled. Note that the smallest region size is 256 B and the smallest subregion size is 32 B. |
| 8:31 | ADDR24 | RW | R | Undefined | This field specifies the most significant bits of the 32-bit address of an address region. The region size is defined by ATT.REGION_SIZE. A region of n Byte is always n Byte aligned. As a result, some of the lesser significant address bits of ADDR24 may be ignored in determining whether a bus transfer address is within an address region. E.g., a 64 KByte address region (REGION_SIZE is '15') is 64 KByte aligned, and ADDR24[7:0] are ignored. |

### 25.9.2.3.2 PROT_MPU_MPU_STRUCT_ATT

**Description:** MPU region attrributes
**Address:** 0x40234204
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a MPU access control register.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

## 26.2 SCB 1

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40610000
**Size** 0x10000
**Slave Num** MMIO6 - 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SCB1_CTRL | 0x40610000 | FULL | Generic control<br>Note:CMD_RESP_MODE is not available for this register |
