

Driving decarbonization and digitalization. Together.

Digitalization Methodology Engineer for Requirements Engineering (f/m/div)

Job description

Do you enjoy being part of a team of experts working on the edge of technology? Then join us as Digitalization Methodology Engineer and become part of a successful and growing team on the leading edge of technology!

In your new role you will:

- **Establish cutting-edge** methods and tools, enabling the efficient definition and development of semiconductor product platforms;
- **Conceptualize and drive** the design of software-based methods;
- **Conduct** regular stakeholder management in the whole company to understand the user needs and derive and define scope and roadmap;
- **Develop and harmonize innovative ways-of-working** for company-wide new methods and along complete tool chains;
- Contribute in **establishing Product Line Engineering** as a standard method within our solution portfolio;
- **Extend** our company-wide Requirements Management / Application Lifecycle Management (ALM) solution towards **platform management**;
- **Lead methodology projects** until the successful deployment and introduce the solutions company-wide;
- Initiate the required activities/projects accordingly (e.g. piloting of proposed solution);
- Align with supporting organizations and stakeholders, and perform change management;
- **Conduct trainings, support expert users** and **provide guidance** to development projects in using the methods and tools.

Profile

You are fully committed to making product development processes more efficient without making compromises on quality. You are open-minded and courageous to try new ideas and yet have a high practical sense in proposing new solutions, which you communicate in a clear and effective way. You have knowledge from multiple disciplines and are permanently connected to the latest technology developments.

You are best equipped for this task if you have:

Why Us

Driving decarbonization and digitalization. Together.

Infineon designs, develops, manufactures, and markets a broad range of semiconductors and semiconductor-based solutions, focusing on key markets in the automotive, industrial, and consumer sectors. Its products range from standard components to special components for digital, analog, and mixed-signal applications to customer-specific solutions together with the appropriate software.

We are on a journey to create the best Infineon for everyone.

This means we embrace diversity and inclusion and welcome everyone for who they are. At Infineon, we offer a working environment characterized by trust, openness, respect and tolerance and are committed to give all applicants and employees equal opportunities. We base our recruiting decisions on the applicant's experience and skills.

We look forward to receiving your resume, even if you do not entirely meet all the requirements of the job posting.

Please let your recruiter know if they need to pay special attention to something in order to enable your participation in the interview process.
