## 24.779 Register Details

### 24.779.1 PPU_PR

#### 24.779.1.1 PERI_MS_PPU_PR_SL_ADDR

**Description:** Slave region, base address
**Address:** 0x40020000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_ADDR can only be written by protection context '0' (protection context '0' has unrestricted access). The access privileges for other protection contexts are determined by MS_ATT0, ..., MS_ATT3, with the additional restriction that SL_ADDR can NOT be written.

Typically, the SL_ADDR and SL_SIZE registers are programmed by the boot process with protection context '0'.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [7:2] | | | | | | None [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2:31 | ADDR30 | RW | R | Undefined | This field specifies the base address of the slave region. The region size is defined by SL_SIZE.REGION_SIZE. A region of n Bytes must be n Byte aligned. Therefore, some of the lesser significant address bits of ADDR30 must be '0's. E.g., a 64 KB address region (REGION_SIZE is '15') must be 64 KByte aligned, and ADDR30[13:0] must be '0's. |

### 24.779.1.2 PERI_MS_PPU_PR_SL_SIZE

**Description:** Slave region, size
**Address:** 0x40020004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_SIZE can only be written by protection context '0' (protection context '0' has unrestricted access). The access privileges for other protection contexts are determined by MS_ATT0, ..., MS_ATT3, with the additional restriction that SL_SIZE can NOT be written.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | RW | R | Undefined | This field specifies the size of the slave region:<br>'0': Undefined.<br>'1': 4 B region (this is the smallest region size).<br>'2': 8 B region<br>'3': 16 B region<br>'4': 32 B region<br>'5': 64 B region<br>'6': 128 B region<br>'7': 256 B region<br>'8': 512 B region<br>'9': 1 KB region<br>'10': 2 KB region<br>'11': 4 KB region<br>'12': 8 KB region<br>'13': 16 KB region<br>'14': 32 KB region<br>'15': 64 KB region<br>'16': 128 KB region<br>'17': 256 KB region<br>'18': 512 KB region<br>'19': 1 MB region<br>'20': 2 MB region<br>'21': 4 MB region<br>'22': 8 MB region<br>'23': 16 MB region<br>'24': 32 MB region<br>'25': 64 MB region<br>'26': 128 MB region<br>'27': 256 MB region<br>'28': 512 MB region<br>'29': 1 GB region<br>'30': 2 GB region<br>'31': 4 GB region |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | VALID | RW | R | 0 | Slave region enable:<br>'0': Disabled. A disabled region will never result in a match on the transfer address.<br>'1': Enabled. |

### 24.779.1.3 PERI_MS_PPU_PR_SL_ATT0

**Description:** Slave attributes 0
**Address:** 0x40020010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for SL_ATT0, ..., SL_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the SL_ATT0, ..., SL_ATT3 registers are initialized by the boot process with protection context '0'.

For 4 or less protection contexts (PC_NR <= 4), only SL_ATT0 is present. For 5 through 8 protection contexts, only SL_ATT0 and SL_ATT1 are present. For 9 through 12 or less protection contexts, only SL_ATT0, SL_ATT1 and SL_ATT2 are present. For 13 through 16 protection contexts, SL_ATT0, SL_ATT1, SL_ATT2 and SL_ATT3 are all present. If the number of protection contexts is not a multiple of 4, the 'missing' protection contexts in a register have no associated access fields (and the field positions read as '0').

**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | PC0_NS [4:4] | PC0_PW [3:3] | PC0_PR [2:2] | PC0_UW [1:1] | PC0_UR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | PC1_NS [12:12] | PC1_PW [11:11] | PC1_PR [10:10] | PC1_UW [9:9] | PC1_UR [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|

### 24.779.1.7 PERI_MS_PPU_PR_MS_ADDR

**Description:** Master region, base address
**Address:** 0x40020020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_ADDR is fixed (non-programmable).

The access privileges for MS_ADDR are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [7:6] | | None [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 6:31 | ADDR26 | R | R | 16779264 | This field specifies the base address of the master region. The base address of the region is the address of the SL_ADDR register. |

### 24.779.1.8 PERI_MS_PPU_PR_MS_SIZE

**Description:** Master region, size
**Address:** 0x40020024
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_SIZE is fixed (non-programmable).

The access privileges for MS_SIZE are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x85000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | R | R | 5 | This field specifies the size of the master region:<br>'5': 64 B region<br><br>The master region includes the SL_ADDR, SL_SIZE, SL_ATT0, ..., SL_ATT3, MS_ADDR, MS_SIZE, MS_ATT0, ..., MS_ATT3 registers. Therefore, the access privileges for all these registers is determined by MS_ATT0, ..., MS_ATT3. |
| 31 | VALID | R | R | 1 | Master region enable:<br>'1': Enabled. |

### 24.779.1.9 PERI_MS_PPU_PR_MS_ATT0

**Description:** Master attributes 0
**Address:** 0x40020030
**Offset:** 0x30
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for MS_ATT0, ..., MS_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the MS_ATT0, ..., MS_ATT3 registers are programmed by the boot process with protection context '0'.
**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

### 24.779.2 PPU_FX

#### 24.779.2.1 PERI_MS_PPU_FX_SL_ADDR

**Description:** Slave region, base address
**Address:** 0x40020800
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_ADDR is fixed (non-programmable).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [7:2] | | | | | | None [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR30 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2:31 | ADDR30 | R | R | 268435584 | This field specifies the base address of the slave region. The region size is defined by SL_SIZE.REGION_SIZE. A region of n Bytes must be n Byte aligned. Therefore, some of the lesser significant address bits of ADDR30 must be '0's. E.g., a 64 KB address region (REGION_SIZE is '15') must be 64 KByte aligned, and ADDR30[13:0] must be '0's. |

### 24.779.2.2 PERI_MS_PPU_FX_SL_SIZE

**Description:** Slave region, size
**Address:** 0x40020804
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** SL_SIZE is fixed (non-programmable).
**Default:** 0x80000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | R | R | 5 | This field specifies the size of the slave region:<br>'0': Undefined.<br>'1': 4 B region (this is the smallest region size).<br>'2': 8 B region<br>'3': 16 B region<br>'4': 32 B region<br>'5': 64 B region<br>'6': 128 B region<br>'7': 256 B region<br>'8': 512 B region<br>'9': 1 KB region<br>'10': 2 KB region<br>'11': 4 KB region<br>'12': 8 KB region<br>'13': 16 KB region<br>'14': 32 KB region<br>'15': 64 KB region<br>'16': 128 KB region<br>'17': 256 KB region<br>'18': 512 KB region<br>'19': 1 MB region<br>'20': 2 MB region<br>'21': 4 MB region<br>'22': 8 MB region<br>'23': 16 MB region<br>'24': 32 MB region<br>'25': 64 MB region<br>'26': 128 MB region<br>'27': 256 MB region<br>'28': 512 MB region<br>'29': 1 GB region<br>'30': 2 GB region<br>'31': 4 GB region |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | VALID | R | R | 1 | Slave region enable:<br>'0': Disabled. A disabled region will never result in a match on the transfer address.<br>'1': Enabled. |

### 24.779.2.3 PERI_MS_PPU_FX_SL_ATT0

**Description:** Slave attributes 0
**Address:** 0x40020810
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for SL_ATT0, ..., SL_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the SL_ATT0, ..., SL_ATT3 registers are initialized by the boot process with protection context '0'.

For 4 or less protection contexts (PC_NR <= 4), only SL_ATT0 is present. For 5 through 8 protection contexts, only SL_ATT0 and SL_ATT1 are present. For 9 through 12 or less protection contexts, only SL_ATT0, SL_ATT1 and SL_ATT2 are present. For 13 through 16 protection contexts, SL_ATT0, SL_ATT1, SL_ATT2 and SL_ATT3 are all present. If the number of protection contexts is not a multiple of 4, the 'missing' protection contexts in a register have no associated access fields (and the field positions read as '0').

**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | PC0_NS [4:4] | PC0_PW [3:3] | PC0_PR [2:2] | PC0_UW [1:1] | PC0_UR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | PC1_NS [12:12] | PC1_PW [11:11] | PC1_PR [10:10] | PC1_UW [9:9] | PC1_UR [8:8] |

### 24.779.2.7 PERI_MS_PPU_FX_MS_ADDR

**Description:** Master region, base address
**Address:** 0x40020820
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_ADDR is fixed (non-programmable).

The access privileges for MS_ADDR are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [7:6] | | None [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR26 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 6:31 | ADDR26 | R | R | 16779296 | This field specifies the base address of the master region. The base address of the region is the address of the SL_ADDR register. |

### 24.779.2.8 PERI_MS_PPU_FX_MS_SIZE

**Description:** Master region, size
**Address:** 0x40020824
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** MS_SIZE is fixed (non-programmable).

The access privileges for MS_SIZE are determined by MS_ATT0, ..., MS_ATT3.
**Default:** 0x85000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | VALID [31:31] | None [30:29] | | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | REGION_SIZE | R | R | 5 | This field specifies the size of the master region:<br>'5': 64 B region<br><br>The master region includes the SL_ADDR, SL_SIZE, SL_ATT0, ..., SL_ATT3, MS_ADDR, MS_SIZE, MS_ATT0, ..., MS_ATT3 registers. Therefore, the access privileges for all these registers is determined by MS_ATT0, ..., MS_ATT3. |
| 31 | VALID | R | R | 1 | Master region enable:<br>'1': Enabled. |

### 24.779.2.9 PERI_MS_PPU_FX_MS_ATT0

**Description:** Master attributes 0
**Address:** 0x40020830
**Offset:** 0x30
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The access privileges for MS_ATT0, ..., MS_ATT3 are determined by MS_ATT0, ..., MS_ATT3.

Note that protection context '0' has unrestricted access: PC0_UR, ..., PC0_NS fields are fixed to '1's. The other protection contexts have SW programmable fields.

Typically, the MS_ATT0, ..., MS_ATT3 registers are programmed by the boot process with protection context '0'.
**Default:** 0x1F1F1F1F

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | PC0_NS [4:4] | PC0_PW [3:3] | PC0_PR [2:2] | PC0_UW [1:1] | PC0_UR [0:0] |

## 25.3 Register Details

### 25.3.1 GR

#### 25.3.1.1 PERI_PCLK_GR_DIV_CMD

**Description:** Divider command
**Address:** 0x40040000
**Offset:** 0x0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The (PA_TYPE_SEL, PA_DIV_SEL) field pair allows a divider to be phase aligned with another divider. E.g., consider a 48 MHz 'clk_pclk_root[i]', and a need for a 12 MHz divided clock A and a 8 MHz divided clock B. Clock A uses 8.0 integer divider 0 and is created by aligning it to 'clk_pclk_root[i]' ((PA_TYPE_SEL, PA_DIV_SEL) is (3, 63)) and DIV_8_CTL0.INT8_DIV is '4-1'. Clock B uses 8.0 integer divider 1 and is created by aligning it to clock A ((PA_TYPE_SEL, PA_DIV_SEL) is (0, 0)) and DIV_8_CTL1.INT8_DIV is '6-1'. This guarantees that clock B is phase aligned with clock A: as the smallest common multiple of the two clock periods is 12 'clk_pclk_root[i]' cycles, the clocks A and B will be aligned every 12 'clk_pclk_root[i]' cycles. Note: clock B is phase aligned to clock A, but still uses 'clk_pclk_root[i]' as a reference clock for its divider value.
**Default:** 0x3FF03FF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DIV_SEL [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | TYPE_SEL [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | PA_DIV_SEL [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | DISABLE [30:30] | None [29:26] | | | | PA_TYPE_SEL [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DIV_SEL | RW | R | 255 | (TYPE_SEL, DIV_SEL) specifies the divider on which the command (DISABLE/ENABLE) is performed.<br><br>If DIV_SEL is '255' and TYPE_SEL is '3' (default/reset value), no divider is specified and no clock signal(s) are generated. |
| 8:9 | TYPE_SEL | RW | R | 3 | Specifies the divider type of the divider on which the command is performed:<br>0: 8.0 (integer) clock dividers.<br>1: 16.0 (integer) clock dividers.<br>2: 16.5 (fractional) clock dividers.<br>3: 24.5 (fractional) clock dividers. |
| 16:23 | PA_DIV_SEL | RW | R | 255 | (PA_TYPE_SEL, PA_DIV_SEL) specifies the divider to which phase alignment is performed for the clock enable command. Any enabled divider can be used as reference. This allows all dividers to be aligned with each other, even when they are enabled at different times.<br><br>If PA_DIV_SEL is '255' and PA_TYPE_SEL is '3', 'clk_pclk_root[i]' is used as reference. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:25 | PA_TYPE_SEL | RW | R | 3 | Specifies the divider type of the divider to which phase alignment is performed for the clock enable command:<br>0: 8.0 (integer) clock dividers.<br>1: 16.0 (integer) clock dividers.<br>2: 16.5 (fractional) clock dividers.<br>3: 24.5 (fractional) clock dividers. |
| 30 | DISABLE | RW | RW1C | 0 | Clock divider disable command (mutually exclusive with ENABLE). SW sets this field to '1' and HW sets this field to '0'.<br><br>The DIV_SEL and TYPE_SEL fields specify which divider is to be disabled.<br><br>The HW sets the DISABLE field to '0' immediately and the HW sets the DIV_XXX_CTL.EN field of the divider to '0' immediately. |
| 31 | ENABLE | RW | RW1C | 0 | Clock divider enable command (mutually exclusive with DISABLE). Typically, SW sets this field to '1' to enable a divider and HW sets this field to '0' to indicate that divider enabling has completed. When a divider is enabled, its integer and fractional (if present) counters are initialized to '0'. If a divider is to be re-enabled using different integer and fractional divider values, the SW should follow these steps:<br>0: Disable the divider using the DIV_CMD.DISABLE field.<br>1: Configure the divider's DIV_XXX_CTL register.<br>2: Enable the divider using the DIV_CMD_ENABLE field.<br><br>The DIV_SEL and TYPE_SEL fields specify which divider is to be enabled. The enabled divider may be phase aligned to either 'clk_pclk_root[i]' (typical usage) or to ANY enabled divider.<br><br>The PA_DIV_SEL and PA_TYPE_SEL fields specify the reference divider.<br><br>The HW sets the ENABLE field to '0' when the enabling is performed and the HW set the DIV_XXX_CTL.EN field of the divider to '1' when the enabling is performed. Note that enabling with phase alignment to a low frequency divider takes time. E.g. To align to a divider that generates a clock of 'clk_pclk_root[i]'/n (with n being the integer divider value INT_DIV+1), up to n cycles may be required to perform alignment. Phase alignment to 'clk_pclk_root[i]' takes affect immediately. SW can set this field to '0' during phase alignment to abort the enabling process. |

### 25.3.1.2 PERI_PCLK_GR_CLOCK_CTL

**Description:** Clock control
**Address:** 0x40040C00
**Offset:** 0xC00
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x3FF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DIV_SEL | RW | R | 255 | Specifies one of the dividers of the divider type specified by TYPE_SEL.<br><br>If DIV_SEL is '255' and TYPE_SEL is '3' (default/reset value), no divider is specified and no clock control signal(s) are generated.<br><br>When transitioning a clock between two out-of-phase dividers, spurious clock control signals may be generated for one 'clk_pclk_root[i]' cycle during this transition. These clock control signals may cause a single clock period that is smaller than any of the two divider periods. To prevent these spurious clock signals, the clock multiplexer can be disconnected (DIV_SEL is '255' and TYPE_SEL is '3') for a transition time that is larger than the smaller of the two divider periods. |
| 8:9 | TYPE_SEL | RW | R | 3 | Specifies divider type:<br>0: 8.0 (integer) clock dividers.<br>1: 16.0 (integer) clock dividers.<br>2: 16.5 (fractional) clock dividers.<br>3: 24.5 (fractional) clock dividers. |

### 25.3.1.3 PERI_PCLK_GR_DIV_8_CTL

**Description:** Divider control (for 8.0 divider)
**Address:** 0x40041000
**Offset:** 0x1000
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Smallest of the divider types.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EN | R | RW | 0 | Divider enabled. HW sets this field to '1' as a result of an ENABLE command. HW sets this field to '0' as a result on a DISABLE command.<br><br>Note that this field is retained. As a result, the divider does NOT have to be re-enabled after transitioning from DeepSleep to Active power mode. |
| 8:15 | INT8_DIV | RW | R | 0 | Integer division by (1+INT8_DIV). Allows for integer divisions in the range [1, 256]. Note: this type of divider does NOT allow for a fractional division.<br><br>For the generation of a divided clock, the integer division range is restricted to [2, 256].<br><br>For the generation of a 50/50 percent duty cycle digital divided clock, the integer division range is restricted to even numbers in the range [2, 256]. The generation of a 50/50 percent duty cycle analog divided clock has no restrictions.<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |

### 25.3.1.4 PERI_PCLK_GR_DIV_16_CTL

**Description:** Divider control (for 16.0 divider)
**Address:** 0x40041400
**Offset:** 0x1400
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

|---|---|---|---|---|---|---|---|---|
| Name | INT16_DIV [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EN | R | RW | 0 | Divider enabled. HW sets this field to '1' as a result of an ENABLE command. HW sets this field to '0' as a result on a DISABLE command.<br><br>Note that this field is retained. As a result, the divider does NOT have to be re-enabled after transitioning from DeepSleep to Active power mode. |
| 8:23 | INT16_DIV | RW | R | 0 | Integer division by (1+INT16_DIV). Allows for integer divisions in the range [1, 65,536]. Note: this type of divider does NOT allow for a fractional division.<br><br>For the generation of a divided clock, the integer division range is restricted to [2, 65,536].<br><br>For the generation of a 50/50 percent duty cycle digital divided clock, the integer division range is restricted to even numbers in the range [2, 65,536]. The generation of a 50/50 percent duty cycle analog divided clock has no restrictions.<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |

### 25.3.1.5 PERI_PCLK_GR_DIV_24_5_CTL

**Description:** Divider control (for 24.5 divider)
**Address:** 0x40041C00
**Offset:** 0x1C00
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Largest of the divider types.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAC5_DIV [7:3] | | | | | None [2:1] | | EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | INT24_DIV [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | INT24_DIV [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | INT24_DIV [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EN | R | RW | 0 | Divider enabled. HW sets this field to '1' as a result of an ENABLE command. HW sets this field to '0' as a result on a DISABLE command.<br><br>Note that this field is retained. As a result, the divider does NOT have to be re-enabled after transitioning from DeepSleep to Active power mode. |
| 3:7 | FRAC5_DIV | RW | R | 0 | Fractional division by (FRAC5_DIV/32). Allows for fractional divisions in the range [0, 31/32]. Note that fractional division results in clock jitter as some clock periods may be 1 'clk_pclk_root[i]' cycle longer than other clock periods.<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |
| 8:31 | INT24_DIV | RW | R | 0 | Integer division by (1+INT24_DIV). Allows for integer divisions in the range [1, 16,777,216]. Note: combined with fractional division, this divider type allows for a division in the range [1, 16,777,216 31/32] in 1/32 increments.<br><br>For the generation of a divided clock, the integer division range is restricted to [2, 16,777,216 31/32].<br><br>For the generation of a 50/50 percent duty cycle divided clock, the division range is restricted to [2, 16,777,216].<br><br>Note that this field is retained. However, the counter that is used to implement the division is not and will be initialized by HW to '0' when transitioning from DeepSleep to Active power mode. |

### 26.10.1 MPU_STRUCT 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT0_ADDR | 0x40237E00 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT0_ATT | 0x40237E04 | FULL | MPU region attrributes |

### 26.10.2 MPU_STRUCT 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT1_ADDR | 0x40237E20 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT1_ATT | 0x40237E24 | FULL | MPU region attrributes |

### 26.10.3 MPU_STRUCT 2

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT2_ADDR | 0x40237E40 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT2_ATT | 0x40237E44 | FULL | MPU region attrributes |

### 26.10.4 MPU_STRUCT 3

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT3_ADDR | 0x40237E60 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT3_ATT | 0x40237E64 | FULL | MPU region attrributes |

### 26.10.5 MPU_STRUCT 4

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT4_ADDR | 0x40237E80 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT4_ATT | 0x40237E84 | FULL | MPU region attrributes |

### 26.10.6 MPU_STRUCT 5

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT5_ADDR | 0x40237EA0 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT5_ATT | 0x40237EA4 | FULL | MPU region attrributes |

### 26.10.7 MPU_STRUCT 6

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT6_ADDR | 0x40237EC0 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT6_ATT | 0x40237EC4 | FULL | MPU region attrributes |

### 26.10.8 MPU_STRUCT 7

| Register Name | Address | Permission | Description |
|---|---|---|---|
| PROT_MPU15_MPU_STRUCT7_ADDR | 0x40237EE0 | FULL | MPU region address |
| PROT_MPU15_MPU_STRUCT7_ATT | 0x40237EE4 | FULL | MPU region attrributes |

## 26.11 Register Details

### 26.11.1 SMPU

#### 26.11.1.1 PROT_SMPU_MS0_CTL

**Description:** Master 0 protection context control
**Address:** 0x40230000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Each master has an associated SMPU MS_CTL register. This register provides master specific information. In a system with a secure entity, this register is typically only accessible by the secure entity, to prevent a master from changing its own privileged setting, security setting, arbitration priority or enabled protection contexts.
Master 0 (CM0+ processor) uses SMPU MS0_CTL.
Master 1 (cryptography IP) uses SMPU MS1_CTL.
Master 2 (DataWire 0) uses SMPU MS2_CTL.
Master 3 (DataWire 1) uses SMPU MS3_CTL.
....
Master 14 (CM4 processor) uses SMPU MS14_CTL.
Master 15 (test controller) uses SMPU MS15_CTL.
**Default:** 0x303

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | NS [1:1] | P [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | PRIO [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | PC_MASK_15_TO_1 [23:17] | | | | | | | PC_MASK_0 [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | P | RW | R | 1 | Privileged setting ('0': user mode; '1': privileged mode).<br><br>Notes:<br>This field is ONLY used for masters that do NOT provide their own user/privileged access control attribute.<br>The default/reset field value provides privileged mode access capabilities. |
| 1 | NS | RW | R | 1 | Security setting ('0': secure mode; '1': non-secure mode).<br><br>Notes:<br>This field is ONLY used for masters that do NOT provide their own secure/non-secure access control attribute.<br>Note that the default/reset field value provides non-secure mode access capabilities to all masters. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:9 | PRIO | RW | R | 3 | Device wide bus arbitration priority setting ('0': highest priority, '3': lowest priority).<br><br>Notes:<br>The AHB-Lite interconnect performs arbitration on the individual beats/transfers of a burst (this optimizes latency over locality/bandwidth).<br>The AXI-Lite interconnects performs a single arbitration for the complete burst (this optimizes locality/bandwidth over latency).<br>Masters with the same priority setting form a 'priority group'. Within a 'priority group', round robin arbitration is performed. |
| 16 | PC_MASK_0 | R | R | 0 | Protection context mask for protection context '0'. This field is a constant '0':<br>- PC_MASK_0 is '0': MPU MS_CTL.PC[3:0] can NOT be set to '0' and PC[3:0] is not changed. If the protection context of the write transfer is '0', protection is not applied and PC[3:0] can be changed. |
| 17:23 | PC_MASK_15_TO_1 | RW | R | 0 | Protection context mask for protection contexts '15' down to '1'. Bit PC_MASK_15_TO_1[i] indicates if the MPU MS_CTL.PC[3:0] protection context field can be set to the value 'i+1':<br>- PC_MASK_15_TO_1[i] is '0': MPU MS_CTL.PC[3:0] can NOT be set to 'i+1'; and PC[3:0] is not changed. If the protection context of the write transfer is '0', protection is not applied and PC[3:0] can be changed.<br>- PC_MASK_15_TO_1[i] is '1': MPU MS_CTL.PC[3:0] can be set to 'i+1'.<br><br>Note: When CPUSS_CM0_PC_CTL.VALID[i] is '1' (the associated protection context handler is valid), write transfers to PC_MASK_15_TO_1[i-1] always write '0', regardless of data written. This ensures that when valid protection context handlers are used to enter protection contexts 1, 2 or 3 through (HW modifies MPU MS_CTL.PC[3:0] on entry of the handler), it is NOT possible for SW to enter those protection contexts (SW modifies MPU MS_CTL.PC[3:0]). |

### 26.11.1.2 PROT_SMPU_MS1_CTL

**Description:** Master 1 protection context control
**Address:** 0x40230004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x303

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

### 26.11.1.14 SMPU_STRUCT

#### 26.11.1.14.1 PROT_SMPU_SMPU_STRUCT_ADDR0

**Description:** SMPU region address 0 (slave structure)
**Address:** 0x40232000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a SMPU address region.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SUBREGION_DISABLE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SUBREGION_DISABLE | RW | R | Undefined | This field is used to individually disabled the eight equally sized subregions in which a region is partitioned. Subregion disable:<br>Bit 0: subregion 0 disable.<br>Bit 1: subregion 1 disable.<br>Bit 2: subregion 2 disable.<br>Bit 3: subregion 3 disable.<br>Bit 4: subregion 4 disable.<br>Bit 5: subregion 5 disable.<br>Bit 6: subregion 6 disable.<br>Bit 7: subregion 7 disable.<br>E.g., a 64 KByte address region (ATT0.REGION_SIZE is '15') has eight 8 KByte subregions. The access control as defined by ATT0 applies if the bus transfer address is within the address region AND the addressed subregion is NOT disabled. Note that the smallest region size is 256 B and the smallest subregion size is 32 B. |
| 8:31 | ADDR24 | RW | R | Undefined | This field specifies the most significant bits of the 32-bit address of an address region. The region size is defined by ATT0.REGION_SIZE. A region of n Byte is always n Byte aligned. As a result, some of the lesser significant address bits of ADDR24 may be ignored in determining whether a bus transfer address is within an address region. E.g., a 64 KByte address region (REGION_SIZE is '15') is 64 KByte aligned, and ADDR24[7:0] are ignored. |

### 26.11.1.14.2 PROT_SMPU_SMPU_STRUCT_ATT0

**Description:** SMPU region attributes 0 (slave structure)
**Address:** 0x40232004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines SMPU access control.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | NS [6:6] | PX [5:5] | PW [4:4] | PR [3:3] | UX [2:2] | UW [1:1] | UR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | PC_MASK_15_TO_1 [15:9] | | | | | | | PC_MASK_0 [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | PC_MATCH [30:30] | None [29:29] | REGION_SIZE [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | UR | RW | R | Undefined | User read enable:<br>'0': Disabled (user, read accesses are NOT allowed).<br>'1': Enabled (user, read accesses are allowed). |
| 1 | UW | RW | R | Undefined | User write enable:<br>'0': Disabled (user, write accesses are NOT allowed).<br>'1': Enabled (user, write accesses are allowed). |
| 2 | UX | RW | R | Undefined | User execute enable:<br>'0': Disabled (user, execute accesses are NOT allowed).<br>'1': Enabled (user, execute accesses are allowed). |
| 3 | PR | RW | R | Undefined | Privileged read enable:<br>'0': Disabled (privileged, read accesses are NOT allowed).<br>'1': Enabled (privileged, read accesses are allowed). |
| 4 | PW | RW | R | Undefined | Privileged write enable:<br>'0': Disabled (privileged, write accesses are NOT allowed).<br>'1': Enabled (privileged, write accesses are allowed). |
| 5 | PX | RW | R | Undefined | Privileged execute enable:<br>'0': Disabled (privileged, execute accesses are NOT allowed).<br>'1': Enabled (privileged, execute accesses are allowed). |
| 6 | NS | RW | R | Undefined | Non-secure:<br>'0': Secure (secure accesses allowed, non-secure access NOT allowed).<br>'1': Non-secure (both secure and non-secure accesses allowed). |
| 8 | PC_MASK_0 | R | R | 1 | This field specifies protection context identifier based access control for protection context '0'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 9:15 | PC_MASK_15_TO_1 | RW | R | Undefined | This field specifies protection context identifier based access control.<br>Bit i: protection context i+1 enable. If '0', protection context i+1 access is disabled; i.e. not allowed. If '1', protection context i+1 access is enabled; i.e. allowed. |
| 24:28 | REGION_SIZE | RW | R | Undefined | This field specifies the region size:<br>'0'-'6': Undefined.<br>'7': 256 B region<br>'8': 512 B region<br>'9': 1 KB region<br>'10': 2 KB region<br>'11': 4 KB region<br>'12': 8 KB region<br>'13': 16 KB region<br>'14': 32 KB region<br>'15': 64 KB region<br>'16': 128 KB region<br>'17': 256 KB region<br>'18': 512 KB region<br>'19': 1 MB region<br>'20': 2 MB region<br>'21': 4 MB region<br>'22': 8 MB region<br>'23': 16 MB region<br>'24': 32 MB region<br>'25': 64 MB region<br>'26': 128 MB region<br>'27': 256 MB region<br>'28': 512 MB region<br>'39': 1 GB region<br>'30': 2 GB region<br>'31': 4 GB region |
| 30 | PC_MATCH | RW | R | Undefined | This field specifies if the PC field participates in the 'matching' process or the 'access evaluation' process:<br>'0': PC field participates in 'access evaluation'.<br>'1': PC field participates in 'matching'.<br><br>'Matching' process. For each protection structure, the process identifies if a transfer address is contained within the address range. This identifies the 'matching' regions.<br>'Access evaluation' process. For each protection structure, the process evaluates the bus transfer access attributes against the access control attributes.<br><br>Note that it is possible to define different access control for multiple protection contexts by using multiple protection structures with the same address region and PC_MATCH set to '1'. |
| 31 | ENABLED | RW | R | 0 | Region enable:<br>'0': Disabled. A disabled region will never result in a match on the bus transfer address.<br>'1': Enabled.<br><br>Note: a disabled address region performs logic gating to reduce dynamic power consumption. |

### 26.11.1.14.3 PROT_SMPU_SMPU_STRUCT_ADDR1

**Description:** SMPU region address 1 (master structure)
**Address:** 0x40232020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a SMPU address region. The address region is fixed, the region size is 64 B (two 32 B subregions within a 256 B region) and includes the ADDR0, ATT0, ADDR1 and ATT0 registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SUBREGION_DISABLE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | UR | R | R | 1 | User read enable:<br>'0': Disabled (user, read accesses are NOT allowed).<br>'1': Enabled (user, read accesses are allowed).<br><br>Note that this register is constant '1'; i.e. user read accesses are ALWAYS allowed. |
| 1 | UW | RW | R | Undefined | User write enable:<br>'0': Disabled (user, write accesses are NOT allowed).<br>'1': Enabled (user, write accesses are allowed). |
| 2 | UX | R | R | 0 | User execute enable:<br>'0': Disabled (user, execute accesses are NOT allowed).<br>'1': Enabled (user, execute accesses are allowed).<br><br>Note that this register is constant '0'; i.e. user execute accesses are NEVER allowed. |
| 3 | PR | R | R | 1 | Privileged read enable:<br>'0': Disabled (privileged, read accesses are NOT allowed).<br>'1': Enabled (privileged, read accesses are allowed).<br><br>Note that this register is constant '1'; i.e. privileged read accesses are ALWAYS allowed. |
| 4 | PW | RW | R | Undefined | Privileged write enable:<br>'0': Disabled (privileged, write accesses are NOT allowed).<br>'1': Enabled (privileged, write accesses are allowed). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 5 | PX | R | R | 0 | Privileged execute enable:<br>'0': Disabled (privileged, execute accesses are NOT allowed).<br>'1': Enabled (privileged, execute accesses are allowed).<br><br>Note that this register is constant '0'; i.e. privileged execute accesses are NEVER allowed. |
| 6 | NS | RW | R | Undefined | Non-secure:<br>'0': Secure (secure accesses allowed, non-secure access NOT allowed).<br>'1': Non-secure (both secure and non-secure accesses allowed). |
| 8 | PC_MASK_0 | R | R | 1 | This field specifies protection context identifier based access control for protection context '0'. |
| 9:15 | PC_MASK_15_TO_1 | RW | R | Undefined | This field specifies protection context identifier based access control.<br>Bit i: protection context i+1 enable. If '0', protection context i+1 access is disabled; i.e. not allowed. If '1', protection context i+1 access is enabled; i.e. allowed. |
| 24:28 | REGION_SIZE | R | R | 7 | This field specifies the region size:<br>'7': 256 B region (8 32 B subregions)<br><br>Note: this field is read-only. |
| 30 | PC_MATCH | RW | R | Undefined | This field specifies if the PC field participates in the 'matching' process or the 'access evaluation' process:<br>'0': PC field participates in 'access evaluation'.<br>'1': PC field participates in 'matching'.<br><br>'Matching' process. For each protection structure, the process identifies if a transfer address is contained within the address range. This identifies the 'matching' regions.<br>'Access evaluation' process. For each protection structure, the process evaluates the bus transfer access attributes against the access control attributes.<br><br>Note that it is possible to define different access control for multiple protection contexts by using multiple protection structures with the same address region and PC_MATCH set to '1'. |
| 31 | ENABLED | RW | R | 0 | Region enable:<br>'0': Disabled. A disabled region will never result in a match on the bus transfer address.<br>'1': Enabled. |

### 26.11.2 MPU

#### 26.11.2.1 PROT_MPU_MS_CTL

**Description:** Master control
**Address:** 0x40234000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | PC [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:20] | | | | PC_SAVED [19:16] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | PC | RW | RW | 0 | Active protection context (PC). Modifications to this field are constrained by the associated SMPU MS_CTL.PC_MASK_0 and MS_CTL.PC_MASK_15_TO_1[] fields. In addition, a write transfer with protection context '0' can change this field (protection context 0 has unrestricted access).<br><br>The CM0+ MPU MS_CTL register is special: the PC field is modifiable by BOTH HW and SW (for all other masters, the MPU MS_CTL.PC field is modifiable by SW ONLY. For CM0+ PC field HW modifications, the following holds:<br>* On entry of a CM0_PC0/1/2/3_HANDLER exception/interrupt handler:<br>IF (the new PC is the same as MS_CTL.PC)<br>PC is not affected; PC_SAVED is not affected.<br>ELSE IF (CM0_PC_CTL.VALID[MS_CTL.PC])<br>An AHB-Lite bus error is generated for the exception handler fetch;<br>PC is not affected; PC_SAVED is not affected.<br>ELSE<br>PC = 'new PC'; PC_SAVED = PC (push operation).<br>* On entry of any other exception/interrupt handler:<br>PC = PC_SAVED; PC_SAVED is not affected (pop operation).<br><br>Note that the CM0_PC0/1/2/3_HANDLER and CM0_PC_CTL registers are part of repecitve CPUSS MMIO registers.<br><br>Note: this field is NOT used by the DW controllers, DMA controller, AXI DMA controller, CRYPTO component and VIDEOSS. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:19 | PC_SAVED | RW | RW | 0 | Saved protection context. Modifications to this field are constrained by the associated SMPU MS_CTL.PC_MASK_0 and MS_CTL.PC_MASK_15_TO_1[] fields.<br><br>Note: this field is ONLY used by the CM0+. |

### 26.11.2.2 PROT_MPU_MS_CTL_READ_MIR

**Description:** Master control read mirror
**Address:** 0x40234004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | PC [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | PC | R | W | 0 | Read-only mirror of MS_CTL.PC |
| 16:19 | PC_SAVED | R | W | 0 | Read-only mirror of MS_CTL.PC_SAVED |

### 26.11.2.3 MPU_STRUCT

#### 26.11.2.3.1 PROT_MPU_MPU_STRUCT_ADDR

**Description:** MPU region address
**Address:** 0x40234200
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a MPU address region.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SUBREGION_DISABLE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR24 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SUBREGION_DISABLE | RW | R | Undefined | This field is used to individually disabled the eight equally sized subregions in which a region is partitioned. Subregion disable:<br>Bit 0: subregion 0 disable.<br>Bit 1: subregion 1 disable.<br>Bit 2: subregion 2 disable.<br>Bit 3: subregion 3 disable.<br>Bit 4: subregion 4 disable.<br>Bit 5: subregion 5 disable.<br>Bit 6: subregion 6 disable.<br>Bit 7: subregion 7 disable.<br>E.g., a 64 KByte address region (REGION_SIZE is '15') has eight 8 KByte subregions. The access control as defined by MPU_REGION_ATT applies if the bus transfer address is within the address region AND the addressed subregion is NOT disabled. Note that the smallest region size is 256 B and the smallest subregion size is 32 B. |
| 8:31 | ADDR24 | RW | R | Undefined | This field specifies the most significant bits of the 32-bit address of an address region. The region size is defined by ATT.REGION_SIZE. A region of n Byte is always n Byte aligned. As a result, some of the lesser significant address bits of ADDR24 may be ignored in determining whether a bus transfer address is within an address region. E.g., a 64 KByte address region (REGION_SIZE is '15') is 64 KByte aligned, and ADDR24[7:0] are ignored. |

### 26.11.2.3.2 PROT_MPU_MPU_STRUCT_ATT

**Description:** MPU region attrributes
**Address:** 0x40234204
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register defines a MPU access control register.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | NS [6:6] | PX [5:5] | PW [4:4] | PR [3:3] | UX [2:2] | UW [1:1] | UR [0:0] |

## 27.2 SCB 1

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40610000
**Size** 0x10000
**Slave Num** MMIO6 - 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SCB1_CTRL | 0x40610000 | FULL | Generic control<br>Note:CMD_RESP_MODE is not available for this register |

## 27.3 SCB 2

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40620000
**Size** 0x10000
**Slave Num** MMIO6 - 2

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SCB2_CTRL | 0x40620000 | FULL | Generic control<br>Note:CMD_RESP_MODE is not available for this register |

## 27.4 SCB 3

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40630000
**Size** 0x10000
**Slave Num** MMIO6 - 3

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SCB3_CTRL | 0x40630000 | FULL | Generic control<br>Note:CMD_RESP_MODE is not available for this register |

## 27.5 SCB 4

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40640000
**Size** 0x10000
**Slave Num** MMIO6 - 4

| Register Name | Address | Permission | Description |

## 27.6 SCB 5

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40650000
**Size** 0x10000
**Slave Num** MMIO6 - 5

## 27.7 SCB 6

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40660000
**Size** 0x10000
**Slave Num** MMIO6 - 6

## 27.9 SCB 8

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40680000
**Size** 0x10000
**Slave Num** MMIO6 - 8

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SCB8_CTRL | 0x40680000 | FULL | Generic control<br>Note:CMD_RESP_MODE is not available for this register |

## 27.10 SCB 9

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x40690000
**Size** 0x10000
**Slave Num** MMIO6 - 9

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SCB9_CTRL | 0x40690000 | FULL | Generic control<br>Note:CMD_RESP_MODE is not available for this register |

## 27.11 SCB 10

**Description** Serial Communications Block (SPI/UART/I2C)
**Base Address** 0x406A0000
**Size** 0x10000
**Slave Num** MMIO6 - 10

This instance is not available in the following part numbers:
CYT6BJ8DES, CYT6BJ8DEE, CYT6BJ8DDS, CYT6A0M17S, CYT6BJ8DDE, CYT6A0M17E, CYT6BJ8DXE, CYT4A0102S, CYT4BJ8DES, CYT4BJ8DEE, CYT4BJ8DDS, CYT4BJ8DDE, CYT6BH8DES, CYT6BH8DEE, CYT6BH8DDS, CYT6BH8DDE, CYT6A0103S, CYT4BH8DES, CYT4BH8DEE, CYT4BH8DDS, CYT4BH8DDE.

## 27.12 Register Details

### 27.12.1 SCB_CTRL

**Description:** Generic control
**Address:** 0x40600000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_CTRL )
**Comment:**
**Default:** 0x300400F

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | OVS | RW | R | 15 | Serial interface bit period oversampling factor expressed in SCB clock cycles. Used for SPI and UART functionality. OVS + 1 SCB clock cycles constitute a single serial interface clock/bit cycle. This field is NOT used in externally clocked mode. If OVS is odd, the oversampling factor is even and the low and high phase of the interface clock period are the same. If OVS is even, the oversampling factor is odd and the low and high phase can differ by 1 SCB clock period.<br><br>In SPI master mode, the valid range is [3, 15]. At an SCB frequency of 48 MHz, the maximum SPI bit rate is 12 Mbps, assuming ideal (0 ns) IO cell and routing (chip and board) delay. The calculated maximum bit rate decreases, when realistic chip and routing delays are taken into account. The effective system bit rate is dependent on the external SPI slave that we communicate with. If the SPI output clock to SPI MISO input round trip delay is significant (multiple SPI output clock cycles), it may be necessary to increase OVS and/or to set SPI_CTRL.LATE_MISO_SAMPLE to '1' to achieve the maximum possible system bit rate.<br><br>In SPI slave mode, the OVS field is NOT used. However, there is a frequency requirement for the SCB clock wrt. the SPI input clock (IF) on the interface to guarantee functional correct behavior. This requirement is expressed as a ratio: SCB clock/IF clock. The ratio is dependent on the setting of RX_CTRL.MEDIAN and the external SPI master's capability to support 'late MISO sample' functionality (similar to our SPI master functionality represented by SPI_CTRL.LATE_MISO_SAMPLE):<br>- MEDIAN is '0' and external SPI master has NO 'late MISO sample functionality': SCB clock/IF clock >= 6. At a SCB frequency of 48 MHz, the maximum bit rate is 8 Mbps.<br>- MEDIAN is '0' and external SPI master has 'late MISO sample functionality': SCB clock/IF clock >= 3. At a SCB frequency of 48 MHz, the maximum bit rate is 16 Mbps.<br>- MEDIAN is '1' and external SPI master has NO 'late MISO sample functionality': SCB clock/IF clock >= 8. At a SCB frequency of 48 MHz, the maximum bit rate is 6 Mbps.<br>- MEDIAN is '1' and external SPI master has 'late MISO sample functionality': SCB clock/IF clock >= 4. At a SCB frequency of 48 MHz, the maximum bit rate is 12 Mbps.<br>As discussed earlier, the calculated maximum bit rate decreases, when realistic chip and routing delays are taken into account.<br><br>In UART standard submode (including LIN), the valid range is [7, 15]. In UART SmartCard submode, the valid range is [7, 15]. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | | | | | (Continuation)<br>In UART TX IrDA submode this field indirectly specifies the oversampling. The oversampling determines the interface clock/bit cycle and the width of the pulse. Only normal transmission mode is supported, the pulse is roughly 3/16 of the bit period (for all bit rates). There is only one valid OVS value:<br>- 0: 16 times oversampling.<br>SCB clock frequency of 16*115.2 KHz for 115.2 Kbps.<br>SCB clock frequency of 16*57.6 KHz for 57.6 Kbps.<br>SCB clock frequency of 16*38.4 KHz for 38.4 Kbps.<br>SCB clock frequency of 16*19.2 KHz for 19.2 Kbps.<br>SCB clock frequency of 16*9.6 KHz for 9.6 Kbps.<br>SCB clock frequency of 16*2.4 KHz for 2.4 Kbps.<br>SCB clock frequency of 16*1.2 KHz for 1.2 Kbps.<br>- all other values are not used in normal mode.<br><br>In UART RX IrDA submode (1.2, 2.4, 9.6, 19.2, 38.4, 57.6 and 115.2 Kbps) this field indirectly specifies the oversampling. The oversampling determines the interface clock/bit cycle and the width of the pulse. In normal transmission mode, this pulse is roughly 3/16 of the bit period (for all bit rates). In low power transmission mode, this pulse is potentially smaller (down to 1.62 us typical and 1.41 us minimal) than 3/16 of the bit period (for < 115.2 Kbps bitrates). Pulse widths greater or equal than two SCB clock cycles are guaranteed to be detected by the receiver. Pulse widths less than two SCB clock cycles and greater or equal than one SCB clock cycle may be detected by the receiver. Pulse widths less than one SCB clock cycle will not be detected by the receiver.<br>RX_CTRL.MEDIAN should be set to '1' for IrDA receiver functionality. The SCB clock (as provided by the programmable clock block) and the oversampling together determine the IrDA bitrate. Normal mode, OVS field values (with the required SCB clock frequency):<br>- 0: 16 times oversampling.<br>SCB clock frequency of 16*115.2 KHz for 115.2 Kbps.<br>SCB clock frequency of 16*57.6 KHz for 57.6 Kbps.<br>SCB clock frequency of 16*38.4 KHz for 38.4 Kbps.<br>SCB clock frequency of 16*19.2 KHz for 19.2 Kbps.<br>SCB clock frequency of 16*9.6 KHz for 9.6 Kbps.<br>SCB clock frequency of 16*2.4 KHz for 2.4 Kbps.<br>SCB clock frequency of 16*1.2 KHz for 1.2 Kbps.<br>- all other values are not used in normal mode.<br>Low power mode, OVS field values (with the required SCB clock frequency):<br>- 0: 16 times oversampling.<br>SCB clock frequency of 16*115.2 KHz for 115.2 Kbps.<br>- 1: 32 times oversampling.<br>SCB clock frequency of 32*57.6 KHz for 57.6 Kbps.<br>- 2: 48 times oversampling.<br>SCB clock frequency of 48*38.4 KHz for 38.4 Kbps.<br>- 3: 96 times oversampling.<br>SCB clock frequency of 96*19.2 KHz for 19.2 Kbps.<br>- 4: 192 times oversampling. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | | | | | (Continuation)<br>SCB clock frequency of 192*9.6 KHz for 9.6 Kbps.<br>- 5: 768 times oversampling.<br>SCB clock frequency of 768*2.4 KHz for 2.4 Kbps.<br>- 6: 1536 times oversampling.<br>SCB clock frequency of 1536*1.2 KHz for 1.2 Kbps.<br>- all other values are not used in low power mode. |
| 8 | EC_AM_MODE | RW | R | 0 | This field specifies the clocking for the address matching (I2C) or slave selection detection logic (SPI)<br>'0': Internally clocked mode<br>'1': Externally clocked mode<br><br>In internally clocked mode, the serial interface protocols run off the SCB clock. In externally clocked mode, the serial interface protocols run off the clock as provided by the serial interface.<br><br>The clocking for the rest of the logic is determined by CTRL.EC_OP_MODE.<br><br>Externally clocked mode is only used for synchronous serial interface protocols (SPI and I2C) in slave mode. In SPI mode, only Motorola submode (all Motorola modes: 0, 1, 2, 3) is supported.<br><br>In UART mode this field should be '0'. |
| 9 | EC_OP_MODE | RW | R | 0 | This field specifies the clocking for the SCB block<br>'0': Internally clocked mode<br>'1': externally clocked mode<br>In internally clocked mode, the serial interface protocols run off the SCB clock. In externally clocked mode, the serial interface protocols run off the clock as provided by the serial interface.<br><br>Externally clocked operation mode is only used for synchronous serial interface protocols (SPI and I2C) in slave mode AND EZ mode. In SPI mode, only Motorola submode (all Motorola modes: 0, 1, 2, 3) is supported. The maximum SPI slave, EZ mode bitrate is 48 Mbps (transmission and IO delays outside the IP will degrade the effective bitrate).<br><br>In UART mode this field should be '0'. |
| 10 | EZ_MODE | RW | R | 0 | Non EZ mode ('0') or EZ mode ('1').<br>In EZ mode, a meta protocol is applied to the serial interface protocol. This meta protocol adds meaning to the data frames transferred by the serial interface protocol: a data frame can represent a memory address, a write memory data element or a read memory data element. EZ mode is only used for synchronous serial interface protocols: SPI and I2C. In SPI mode, only Motorola submode (all Motorola modes: 0, 1, 2, 3) is supported and the transmitter should use continuous data frames; i.e. data frames not separated by slave deselection. This mode is only applicable to slave functionality. In EZ mode, the slave can read from and write to an addressable memory structure of 32 bytes. In EZ mode, data frames should 8-bit in size and should be transmitted and received with the Most Significant Bit (MSB) first.<br><br>In UART mode this field should be '0'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 12 | CMD_RESP_MODE | RW | R | 0 | Determines CMD_RESP mode of operation:<br>'0': CMD_RESP mode disabled.<br>'1': CMD_RESP mode enabled (also requires EC_AM_MODE and EC_OP_MODE to be set to '1'). |
| 14:15 | MEM_WIDTH | RW | R | 1 | Determines the number of bits per FIFO data element. |
| | BYTE | | | 0 | 8-bit FIFO data elements.<br>This mode provides the biggest amount of FIFO entries, but TX_CTRL.DATA_WIDTH and RX_CTRL.DATA_WIDTH are restricted to [0, 7]. |
| | HALFWORD | | | 1 | 16-bit FIFO data elements.<br>TX_CTRL.DATA_WIDTH and RX_CTRL.DATA_WIDTH are restricted to [0, 15]. |
| | WORD | | | 2 | 32-bit FIFO data elements.<br>This mode provides the smallest amount of FIFO entries, but TX_CTRL.DATA_WIDTH and RX_CTRL.DATA_WIDTH can be in a range of [0, 31]. |
| | Reserved | | | 3 | N/A |
| 16 | ADDR_ACCEPT | RW | R | 0 | Determines whether a received matching address is accepted in the RX FIFO ('1') or not ('0').<br><br>In I2C mode, this field is used to allow the slave to put the received slave address or general call address in the RX FIFO. Note that a received matching address is put in the RX FIFO when this bit is '1' for both I2C read and write transfers.<br><br>In multi-processor UART receiver mode, this field is used to allow the receiver to put the received address in the RX FIFO. Note: non-matching addresses are never put in the RX FIFO. |
| 17 | BLOCK | RW | R | 0 | Only used in externally clocked mode. If the externally clocked logic and the internal CPU accesses to EZ memory coincide/collide, this bit determines whether the CPU access should block and result in bus wait states ('BLOCK is 1') or not (BLOCK is '0'). IF BLOCK is '0' and the accesses collide, CPU read operations return 0xffff:ffff and CPU write operations are ignored. Colliding accesses are registered as interrupt causes: INTR_TX.BLOCKED and INTR_RX.BLOCKED. |
| 24:25 | MODE | RW | R | 3 | Mode of operation (3: Reserved) |
| | I2C | | | 0 | Inter-Integrated Circuits (I2C) mode. |
| | SPI | | | 1 | Serial Peripheral Interface (SPI) mode. |
| | UART | | | 2 | Universal Asynchronous Receiver/Transmitter (UART) mode. |
| 28 | EC_ACCESS | RW | R | 0 | EC_ACCESS is used to enable I2CS_EC or SPIS_EC access to internal EZ memory.<br>1: enable clk_scb<br>0: disable clk_scb<br><br>Before going to deepsleep this field should be set to 1. when waking up from DeepSleep power mode, and PLL is locked (clk_scb is at expected frequency), this filed should be set to 0. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | ENABLED | RW | R | 0 | SCB block is enabled ('1') or not ('0'). The proper order in which to initialize SCB is as follows:<br>- Program protocol specific information using SPI_CTRL, UART_CTRL (and UART_TX_CTRL and UART_RX_CTRL) or I2C_CTRL registers. This includes selection of a submode, master/slave functionality and transmitter/receiver functionality when applicable.<br>- Program generic transmitter (TX_CTRL) and receiver (RX_CTRL) information. This includes enabling of the transmitter and receiver functionality.<br>- Program transmitter FIFO (TX_FIFO_CTRL) and receiver FIFO (RX_FIFO_CTRL) information.<br>- Program CTRL register to enable SCB, select the specific operation mode and oversampling factor.<br>Generally when this block is enabled, no control information should be changed. Changes should be made AFTER disabling this block, e.g. to modify the operation mode (from I2C to SPI) or to go from externally to internally clocked. The change takes effect after the block is re-enabled. Note that disabling the block will cause re-initialization of the design and associated state is lost (e.g. FIFO content).<br><br>Specific to SPI master case, when SCB is idle, below registers can be changed without disabling SCB block,<br>TX_CTRL<br>TX_FIFO_CTRL<br>RX_CTRL<br>RX_FIFO_CTRL<br>SPI_CTRL.SSEL, |

### 27.12.2 SCB_STATUS

**Description:** Generic status
**Address:** 0x40600004
**Offset:** 0x4
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_STATUS )
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | EC_BUSY | R | W | Undefined | Indicates whether the externally clocked logic is potentially accessing the EZ memory (this is only possible in EZ mode). This bit can be used by SW to determine whether it is safe to issue a SW access to the EZ memory (without bus wait states (a blocked SW access) or bus errors being generated). Note that the INTR_TX.BLOCKED and INTR_RX.BLOCKED interrupt causes are used to indicate whether a SW access was actually blocked by externally clocked logic. |

### 27.12.3 SCB_CMD_RESP_CTRL

**Description:** Command/response control
**Address:** 0x40600008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BASE_RD_ADDR [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | BASE_WR_ADDR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | BASE_RD_ADDR | RW | R | 0 | I2C/SPI read base address for CMD_RESP mode. At the start of a read transfer this BASE_RD_ADDR is copied to CMD_RESP_STATUS.CURR_RD_ADDR. This field should not be modified during ongoing bus transfers. |
| 16:23 | BASE_WR_ADDR | RW | R | 0 | I2C/SPI write base address for CMD_RESP mode. At the start of a write transfer this BASE_WR_ADDR is copied to CMD_RESP_STATUS.CURR_WR_ADDR. This field should not be modified during ongoing bus transfers. |

### 27.12.4 SCB_CMD_RESP_STATUS

**Description:** Command/response status
**Address:** 0x4060000C
**Offset:** 0xC
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The register fields reflect register states without a default/reset value (CURR_RD_ADDR and CURR_WR_ADDR) or reflect an external bus state. Therefore, these registers are undefined after the IP is enabled.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CURR_RD_ADDR [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | CURR_WR_ADDR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | CMD_RESP_EC_BUSY [31:31] | CMD_RESP_EC_BUS_BUSY [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | CURR_RD_ADDR | R | W | Undefined | I2C/SPI read current address for CMD_RESP mode. HW increments the field after a read access to the memory buffer. However, when the last memory buffer address is reached, the address is NOT incremented (but remains at the maximum memory buffer address).<br><br>The field is used to determine how many bytes have been read (# bytes = CURR_RD_ADDR - CMD_RESP_CTRL.BASE_RD_ADDR).<br><br>This field is reliable when there is no bus transfer. This field is potentially unreliable when there is a ongoing bus transfer, i.e. when CMD_RESP_EC_BUSY is '0', the field is reliable. |
| 16:23 | CURR_WR_ADDR | R | W | Undefined | I2C/SPI write current address for CMD_RESP mode. HW increments the field after a write access to the memory buffer. However, when the last memory buffer address is reached, the address is NOT incremented (but remains at the maximum memory buffer address).<br><br>The field is used to determine how many bytes have been written (# bytes = CURR_WR_ADDR - CMD_RESP_CTRL.BASE_WR_ADDR).<br><br>This field is reliable when there is no bus transfer. This field is potentially unreliable when there is a ongoing bus transfer, i.e. when CMD_RESP_EC_BUSY is '0', the field is reliable. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30 | CMD_RESP_EC_BUS_BUSY | R | W | Undefined | Indicates whether there is an ongoing bus transfer to the IP.<br>'0': no ongoing bus transfer.<br>'1': ongoing bus transfer.<br><br>For SPI, the field is '1' when slave mode is selected.<br><br>For I2C, the field is set to '1' at a I2C START/RESTART. In case of an address match, the field is set to '0' on a I2C STOP. In case of NO address match, the field is set to '0' after the failing address match. |
| 31 | CMD_RESP_EC_BUSY | R | W | Undefined | Indicates whether the CURR_RD_ADDR and CURR_WR_ADDR fields in this register are reliable (when CMD_RESP_EC_BUSY is '0') or not reliable (when CMD_RESP_EC_BUSY is '1'). Note:<br>- When there is no ongoing bus transfer, CMD_RESP_EC_BUSY is '0' (reliable).<br>- When there is a ongoing bus transfer, CMD_RESP_EC_BUSY is '0' (reliable), when the CURR_RD_ADDR and CURR_WR_ADDR are not being updated by the HW.<br>- When there is a ongoing bus transfer, CMD_RESP_EC_BUSY is '1' (not reliable), when the CURR_RD_ADDR or CURR_WR_ADDR are being updated by the HW.<br>Note that this update lasts one I2C clock cycle, or two SPI clock cycles. |

### 27.12.5 SCB_SPI_CTRL

**Description:** SPI control
**Address:** 0x40600020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_SPI_CTRL )
**Comment:**
**Default:** 0x3000010

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | SCLK_CONTINUOUS [5:5] | LATE_MISO_SAMPLE [4:4] | CPOL [3:3] | CPHA [2:2] | SELECT_PRECEDE [1:1] | SSEL_CONTINUOUS [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | SSEL_INTER_FRAME_DEL [14:14] | SSEL_HOLD_DEL [13:13] | SSEL_SETUP_DEL [12:12] | SSEL_POLARITY3 [11:11] | SSEL_POLARITY2 [10:10] | SSEL_POLARITY1 [9:9] | SSEL_POLARITY0 [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | LOOPBACK [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | MASTER_MODE [31:31] | None [30:28] | | | SSEL [27:26] | | MODE [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | SSEL_CONTINUOUS | RW | R | 0 | Continuous SPI data transfers enabled ('1') or not ('0'). This field is used in master mode. In slave mode, both continuous and non-continuous SPI data transfers are supported independent of this field.<br><br>When continuous transfers are enabled individual data frame transfers are not necessarily separated by slave deselection (as indicated by the level or pulse on the SELECT line): if the TX FIFO has multiple data frames, data frames are send out without slave deselection.<br><br>When continuous transfers are not enabled individual data frame transfers are always separated by slave deselection: independent of the availability of TX FIFO data frames, data frames are sent out with slave deselection. |
| 1 | SELECT_PRECEDE | RW | R | 0 | Only used in SPI Texas Instruments' submode.<br><br>When '1', the data frame start indication is a pulse on the Slave SELECT line that precedes the transfer of the first data frame bit.<br><br>When '0', the data frame start indication is a pulse on the Slave SELECT line that coincides with the transfer of the first data frame bit. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2 | CPHA | RW | R | 0 | Indicates the clock phase. This field, together with the CPOL field, indicates when MOSI data is driven and MISO data is captured:<br>- Motorola mode 0. CPOL is '0', CPHA is '0': MOSI is driven on a falling edge of SCLK. MISO is captured on a rising edge of SCLK.<br>- Motorola mode 1. CPOL is '0', CPHA is '1': MOSI is driven on a rising edge of SCLK. MISO is captured on a falling edge of SCLK.<br>- Motorola mode 2. CPOL is '1', CPHA is '0': MOSI is driven on a rising edge of SCLK. MISO is captured on a falling edge of SCLK.<br>- Motorola mode 3. CPOL is '1', CPHA is '1': MOSI is driven on a falling edge of SCLK. MISO is captured on a rising edge of SCLK.<br><br>In SPI Motorola submode, all four CPOL/CPHA modes are valid.<br>in SPI NS submode, only CPOL=0 CPHA=0 mode is valid.<br>in SPI TI submode, only CPOL=0 CPHA=1 mode is valid. |
| 3 | CPOL | RW | R | 0 | Indicates the clock polarity. This field, together with the CPHA field, indicates when MOSI data is driven and MISO data is captured:<br>- CPOL is '0': SCLK is '0' when not transmitting data.<br>- CPOL is '1': SCLK is '1' when not transmitting data. |
| 4 | LATE_MISO_SAMPLE | RW | R | 1 | Changes the SCLK edge on which MISO is captured. Only used in master mode.<br><br>When '0', the default applies (<br>for Motorola as determined by CPOL and CPHA,<br>for Texas Instruments on the falling edge of SCLK and for National Semiconductors on the rising edge of SCLK).<br><br>When '1', the alternate clock edge is used (which comes half a SPI SCLK period later). Late sampling addresses the round trip delay associated with transmitting SCLK from the master to the slave and transmitting MISO from the slave to the master. |
| 5 | SCLK_CONTINUOUS | RW | R | 0 | Only applicable in master mode.<br>'0': SCLK is generated, when the SPI master is enabled and data is transmitted.<br>'1': SCLK is generated, when the SPI master is enabled. This mode is useful for slave devices that use SCLK for functional operation other than just SPI functionality. |
| 8 | SSEL_POLARITY0 | RW | R | 0 | Slave select polarity. SSEL_POLARITY0 applies to the outgoing SPI slave select signal 0 (master mode) and to the incoming SPI slave select signal (slave mode). For Motorola and National Semiconductors submodes:<br><br>'0': slave select is low/'0' active.<br>'1': slave select is high/'1' active.<br>For Texas Instruments submode:<br>'0': high/'1' active precede/coincide pulse.<br>'1': low/'0' active precede/coincide pulse. |
| 9 | SSEL_POLARITY1 | RW | R | 0 | Slave select polarity. |
| 10 | SSEL_POLARITY2 | RW | R | 0 | Slave select polarity. |
| 11 | SSEL_POLARITY3 | RW | R | 0 | Slave select polarity. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 12 | SSEL_SETUP_DEL | RW | R | 0 | Indicates the SPI SELECT setup delay (between SELECT activation and SCLK clock edge to sample the first MOSI bit).<br>'0': 0.75 SPI clock cycles<br>'1': 1.75 SPI clock cycles<br>Only applies in SPI MOTOROLA submode and when SCLK_CONTINUOUS=0, CTRL.OVS>=3.<br><br>above are ideal case at SCB block level, and there is inaccuracy of one clk_scb cycle. |
| 13 | SSEL_HOLD_DEL | RW | R | 0 | Indicates the SPI SELECT hold delay (between SPI clock edge to sample the last MOSI bit, and SELECT deactivation).<br>'0': 0.75 SPI clock cycles<br>'1': 1.75 SPI clock cycles<br>Only applies in SPI MOTOROLA submode and when SCLK_CONTINUOUS=0, CTRL.OVS>=3.<br><br>above are ideal case at SCB block level, and there is inaccuracy of one clk_scb cycle. |
| 14 | SSEL_INTER_FRAME_DEL | RW | R | 0 | Indicates the SPI SELECT inter-dataframe delay (between SELECT deactivation and SELECT activation).<br>'0': 1.5 SPI clock cycles<br>'1': 2.5 SPI clock cycles<br>Only applies in SPI MOTOROLA submode and when SPI_CTRL.SSEL_CONTINUOUS=0, CTRL.OVS>=3.<br><br>above are ideal case at SCB block level, and there is inaccuracy of one clk_scb cycle. |
| 16 | LOOPBACK | RW | R | 0 | Local loopback control (does NOT affect the information on the pins). Only used in master mode. Not used in National Semiconductors submode.<br>'0': No local loopback<br>'1': the SPI master MISO line is connected to the SPI master MOSI line. In other words, in loopback mode the SPI master receives on MISO what it transmits on MOSI. |
| 24:25 | MODE | RW | R | 3 | Submode of SPI operation (3: Reserved). |
| | SPI_MOTOROLA | | | 0 | SPI Motorola submode. In master mode, when not transmitting data (Slave SELECT is inactive), SCLK is stable at CPOL. In slave mode, when not selected, SCLK is ignored; i.e. it can be either stable or clocking. In master mode, when there is no data to transmit (TX FIFO is empty), Slave SELECT is inactive. |
| | SPI_TI | | | 1 | SPI Texas Instruments submode. In master mode, when not transmitting data, SCLK is stable at '0'. In slave mode, when not selected, SCLK is ignored; i.e. it can be either stable or clocking. In master mode, when there is no data to transmit (TX FIFO is empty), Slave SELECT is inactive; i.e. no pulse is generated. |
| | SPI_NS | | | 2 | SPI National Semiconductors submode. In master mode, when not transmitting data, SCLK is stable at '0'. In slave mode, when not selected, SCLK is ignored; i.e. it can be either stable or clocking. In master mode, when there is no data to transmit (TX FIFO is empty), Slave SELECT is inactive. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 26:27 | SSEL | RW | R | 0 | Selects one of the four incoming/outgoing SPI slave select signals:<br>- 0: Slave 0, SSEL[0].<br>- 1: Slave 1, SSEL[1].<br>- 2: Slave 2, SSEL[2].<br>- 3: Slave 3, SSEL[3]. |
| 31 | MASTER_MODE | RW | R | 0 | Master ('1') or slave ('0') mode. In master mode, transmission will commence on availability of data frames in the TX FIFO. In slave mode, when selected and there is no data frame in the TX FIFO, the slave will transmit all '1's. In both master and slave modes, received data frames will be lost if the RX FIFO is full. |

### 27.12.6 SCB_SPI_STATUS

**Description:** SPI status
**Address:** 0x40600024
**Offset:** 0x24
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_SPI_STATUS )
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | SPI_EC_BUSY [1:1] | BUS_BUSY [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CURR_EZ_ADDR [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | BASE_EZ_ADDR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | BUS_BUSY | R | W | Undefined | SPI bus is busy. The bus is considered busy ('1') during an ongoing transaction. For Motorola and National submodes, the busy bit is '1', when the slave selection is activated. For TI submode, the busy bit is '1' from the time the preceding/coinciding slave select is activated for the first transmitted data frame, till the last MOSI/MISO bit of the last data frame is transmitted. |
| 1 | SPI_EC_BUSY | R | W | Undefined | Indicates whether the externally clocked logic is potentially accessing the EZ memory and/or updating BASE_ADDR or CURR_ADDR (this is only possible in EZ mode). This bit can be used by SW to determine whether BASE_ADDR and CURR_ADDR are reliable. |
| 8:15 | CURR_EZ_ADDR | R | W | Undefined | SPI current EZ address. Current address pointer. This field is only reliable in internally clocked mode. In externally clocked mode the field may be unreliable (during an ongoing transfer when SPI_EC_BUSY is '1'), as clock domain synchronization is not performed in the design. |
| 16:23 | BASE_EZ_ADDR | R | W | Undefined | SPI base EZ address. Address as provided by a SPI write transfer. This field is only reliable in internally clocked mode. In externally clocked mode the field may be unreliable, as clock domain synchronization is not performed in the design. |

### 27.12.7 SCB_SPI_TX_CTRL

**Description:** SPI transmitter control
**Address:** 0x40600028
**Offset:** 0x28
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_SPI_TX_CTRL )
**Comment:** Only applies in SPI MOTOROLA submode, internally clocked SPI operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | PARITY _ENABLED [5:5] | PARITY [4:4] | None [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | PARITY | RW | R | 0 | Parity bit. When '0', the transmitter generates an even parity. When '1', the transmitter generates an odd parity. |
| 5 | PARITY_ENABLED | RW | R | 0 | Parity generation enabled ('1') or not ('0'). |

### 27.12.8 SCB_SPI_RX_CTRL

**Description:** SPI receiver control
**Address:** 0x4060002C
**Offset:** 0x2C
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_SPI_RX_CTRL )
**Comment:** Only applies in SPI MOTOROLA submode, internally clocked SPI operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | PARITY _ENABLED [5:5] | PARITY [4:4] | None [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | DROP_ON _PARITY _ERROR [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | PARITY | RW | R | 0 | Parity bit. When '0', the receiver expects an even parity. When '1', the receiver expects an odd parity. |
| 5 | PARITY_ENABLED | RW | R | 0 | Parity checking enabled ('1') or not ('0'). |
| 8 | DROP_ON_PARITY _ERROR | RW | R | 0 | Behavior when a parity check fails. When '0', received data is send to the RX FIFO. When '1', received data is dropped and lost. |

### 27.12.9 SCB_UART_CTRL

**Description:** UART control
**Address:** 0x40600040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_UART_CTRL )
**Comment:**
**Default:** 0x3000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | LOOPBACK [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | MODE [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16 | LOOPBACK | RW | R | 0 | Local loopback control (does NOT affect the information on the pins).<br>0: Loopback is not enabled<br>1: UART_TX is connected to UART_RX. UART_RTS is connected to UART_CTS.<br>This allows a SCB UART transmitter to communicate with its receiver counterpart. |
| 24:25 | MODE | RW | R | 3 | Submode of UART operation (3: Reserved) |
| | UART_STD | | | 0 | Standard UART submode. |
| | UART_SMARTCARD | | | 1 | SmartCard (ISO7816) submode. Support for negative acknowledgement (NACK) on the receiver side and retransmission on the transmitter side. |
| | UART_IRDA | | | 2 | Infrared Data Association (IrDA) submode. Return to Zero modulation scheme. In this mode, the oversampling factor should be 16, that is OVS should be set to 15. |

### 27.12.10 SCB_UART_TX_CTRL

**Description:** UART transmitter control
**Address:** 0x40600044
**Offset:** 0x44
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_UART_TX_CTRL )
**Comment:**
**Default:** 0x2

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | PARITY _ENABLED [5:5] | PARITY [4:4] | None [3:3] | STOP_BITS [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | RETRY_ON _NACK [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | STOP_BITS | RW | R | 2 | Stop bits. STOP_BITS + 1 is the duration of the stop period in terms of halve bit periods. Valid range is [1, 7]; i.e. a stop period should last at least one bit period. |
| 4 | PARITY | RW | R | 0 | Parity bit. When '0', the transmitter generates an even parity. When '1', the transmitter generates an odd parity. Only applicable in standard UART and SmartCard submodes. |
| 5 | PARITY_ENABLED | RW | R | 0 | Parity generation enabled ('1') or not ('0'). Only applicable in standard UART submodes. In SmartCard submode, parity generation is always enabled through hardware. In IrDA submode, parity generation is always disabled through hardware |
| 8 | RETRY_ON_NACK | RW | R | 0 | When '1', a data frame is retransmitted when a negative acknowledgement is received. Only applicable to the SmartCard submode. |

### 27.12.11 SCB_UART_RX_CTRL

**Description:** UART receiver control
**Address:** 0x40600048
**Offset:** 0x48
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_UART_RX_CTRL )
**Comment:**
**Default:** 0xA0002

**Bit-field Table**

|---|---|---|---|---|---|---|---|---|
| Name | None [31:25] | | | | | | | BREAK _LEVEL [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | STOP_BITS | RW | R | 2 | Stop bits. STOP_BITS + 1 is the duration of the stop period in terms of half bit periods. Valid range is [1, 7]; i.e. a stop period should last at least one bit period.<br><br>Note that in case of a stop bits error, the successive data frames may get lost as the receiver needs to resynchronize its start bit detection. The amount of lost data frames depends on both the amount of stop bits, the idle time between data frames and the data frame value. |
| 4 | PARITY | RW | R | 0 | Parity bit. When '0', the receiver expects an even parity. When '1', the receiver expects an odd parity. Only applicable in standard UART and SmartCard submodes. |
| 5 | PARITY_ENABLED | RW | R | 0 | Parity checking enabled ('1') or not ('0'). Only applicable in standard UART submode. In SmartCard submode, parity checking is always enabled through hardware. In IrDA submode, parity checking is always disabled through hardware. |
| 6 | POLARITY | RW | R | 0 | Inverts incoming RX line signal. Inversion is after local loopback. This functionality is intended for IrDA receiver functionality. |
| 8 | DROP_ON_PARITY _ERROR | RW | R | 0 | Behavior when a parity check fails.<br>When '0', received data is sent to the RX FIFO.<br>When '1', received data is dropped and lost.<br>Only applicable in standard UART and SmartCard submodes (negatively acknowledged SmartCard data frames may be dropped with this field). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 9 | DROP_ON_FRAME_ERROR | RW | R | 0 | Behavior when an error is detected in a start or stop period.<br>When '0', received data is sent to the RX FIFO.<br>When '1', received data is dropped and lost. |
| 10 | MP_MODE | RW | R | 0 | Multi-processor mode. When '1', multi-processor mode is enabled. In this mode, RX_CTRL.DATA_WIDTH should indicate a 9-bit data frame. In multi-processor mode, the 9th received bit of a data frame separates addresses (bit is '1') from data (bit is '0'). A received address is matched with RX_MATCH.DATA and RX_MATCH.MASK. In the case of a match, subsequent received data are sent to the RX FIFO. In the case of NO match, subsequent received data are dropped. |
| 12 | LIN_MODE | RW | R | 0 | Only applicable in standard UART submode. When '1', the receiver performs break detection and baud rate detection on the incoming data. First, break detection counts the amount of bit periods that have a line value of '0'. BREAK_WIDTH specifies the minimum required amount of bit periods. Successful break detection sets the INTR_RX.BREAK_DETECT interrupt cause to '1'. Second, baud rate detection counts the amount of peripheral clock periods that are use to receive the synchronization byte (0x55; least significant bit first). The count is available through UART_RX_STATUS.BR_COUNTER. Successful baud rate detection sets the INTR_RX.BAUD_DETECT interrupt cause to '1' (BR_COUNTER is reliable). This functionality is used to synchronize/refine the receiver clock to the transmitter clock. The receiver software can use the BR_COUNTER value to set the right IP clock (from the programmable clock IP) to guarantee successful receipt of the first LIN data frame (Protected Identifier Field) after the synchronization byte. |
| 13 | SKIP_START | RW | R | 0 | Only applicable in standard UART submode. When '1', the receiver skips start bit detection for the first received data frame. Instead, it synchronizes on the first received data frame bit, which should be a '1'. This functionality is intended for wake up from DeepSleep when receiving a data frame. The transition from idle ('1') to START ('0') on the RX line is used to wake up the CPU. The transition detection (and the associated wake up functionality) is performed by the GPIO2 IP. The woken up CPU will enable the SCB's UART receiver functionality. Once enabled, it is assumed that the START bit is ongoing (the CPU wakeup and SCB enable time should be less than the START bit period). The SCB will synchronize to a '0' to '1' transition, which indicates the first data frame bit is received (first data frame bit should be '1'). After synchronization to the first data frame bit, the SCB will resume normal UART functionality: subsequent data frames will be synchronized on the receipt of a START bit. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:19 | BREAK_WIDTH | RW | R | 10 | Break width. BREAK_WIDTH + 1 is the minimum width in bit periods of a break. During a break the transmitted/received line value is '0'. This feature is useful for standard UART submode and LIN submode ('break field' detection). Once, the break is detected, the INTR_RX.BREAK_DETECT bit is set to '1'. Note that break detection precedes baud rate detection, which is used to synchronize/refine the receiver clock to the transmitter clock. As a result, break detection operates with an unsynchronized/unrefined receiver clock. Therefore, the receiver's definition of a bit period is imprecise and the setting of this field should take this imprecision into account. The LIN standard also accounts for this imprecision: a LIN start bit followed by 8 data bits allows for up to 9 consecutive '0' bit periods during regular transmission, whereas the LIN break detection should be at least 13 consecutive '0' bit periods. This provides for a margin of 4 bit periods. Therefore, the default value of this field is set to 10, representing a minimal break field with of 10+1 = 11 bit periods; a value in between the 9 consecutive bit periods of a regular transmission and the 13 consecutive bit periods of a break field. This provides for slight imprecisions of the receiver clock wrt. the transmitter clock. There should not be a need to program this field to any value other than its default value. |
| 24 | BREAK_LEVEL | RW | R | 0 | 0: low level pulse detection, like Break field in LIN protocol<br>1: high level pulse detection, like IFS field in CXPI protocol, or idle line state in UART |

### 27.12.12 SCB_UART_RX_STATUS

**Description:** UART receiver status
**Address:** 0x4060004C
**Offset:** 0x4C
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_UART_RX_STATUS )
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BR_COUNTER [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | BR_COUNTER [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:11 | BR_COUNTER | R | W | Undefined | Amount of SCB clock periods that constitute the transmission of a 0x55 data frame (sent least significant bit first) as determined by the receiver. BR_COUNTER / 8 is the amount of SCB clock periods that constitute a bit period. This field has valid data when INTR_RX.BAUD_DETECT is set to '1'. |

### 27.12.13 SCB_UART_FLOW_CTRL

**Description:** UART flow control
**Address:** 0x40600050
**Offset:** 0x50
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_UART_FLOW_CTRL )
**Comment:** UART flow control is a design time configuration parameter, which make the presence of this MMIO register conditional to the configuration. The 'uart_rts_out' and 'uart_cts_in' are always present on the IP interface. If flow control is configured out, 'uart_rts_out' is NOT connected, and 'uart_cts_in' should be connected to '0'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TRIGGER_LEVEL [6:0] | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | RTS_POLARITY [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | CTS_ENABLED [25:25] | CTS_POLARITY [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:6 | TRIGGER_LEVEL | RW | R | 0 | Trigger level. When the receiver FIFO has less entries than the amount of this field, a Ready To Send (RTS) output signal is activated. By setting this field to '0', flow control is effectively disabled (may be useful for debug purposes). |
| 16 | RTS_POLARITY | RW | R | 0 | Polarity of the RTS output signal:<br>'0': RTS is active low;<br>'1': RTS is active high;<br><br>During SCB reset (Hibernate system power mode), RTS output signal is '1'. This represents an inactive state assuming an active low polarity. |
| 24 | CTS_POLARITY | RW | R | 0 | Polarity of the CTS input signal<br>'0': CTS is active low ;<br>'1': CTS is active high; |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 25 | CTS_ENABLED | RW | R | 0 | Enable use of CTS input signal by the UART transmitter:<br>'0': Disabled. The UART transmitter ignores the CTS input signal and transmits when a data frame is available for transmission in the TX FIFO or the TX shift register.<br>'1': Enabled. The UART transmitter uses CTS input signal to qualify the transmission of data. It transmits when CTS input signal is active and a data frame is available for transmission in the TX FIFO or the TX shift register.<br><br>If UART_CTRL.LOOPBACK is '1', the CTS input signal is driven by the RTS output signal locally in SCB (both signals are subjected to signal polarity changes are indicated by RTS_POLARITY and CTS_POLARITY). |

### 27.12.14 SCB_I2C_CTRL

**Description:** I2C control
**Address:** 0x40600060
**Offset:** 0x60
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_I2C_CTRL )
**Comment:**
**Default:** 0xFB88

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | LOW_PHASE_OVS [7:4] | | | | HIGH_PHASE_OVS [3:0] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | MASTER_MODE [31:31] | SLAVE_MODE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | HIGH_PHASE_OVS | RW | R | 8 | Serial I2C interface high phase oversampling factor. HIGH_PHASE_OVS + 1 SCB clock periods constitute the high phase of a bit period. The valid range is [5, 15] with input signal median filtering and [4, 15] without input signal median filtering.<br><br>The field is only used in master mode. In slave mode, the field is NOT used. However, there is a frequency requirement for the SCB clock wrt. the regular interface (IF) high time to guarantee functional correct behavior. With input signal median filtering, the IF high time should be >= 6 SCB clock cycles and <= 16 SCB clock cycles. Without input signal median filtering, the IF high time should be >= 5 SCB clock cycles and <= 16 SCB clock cycles. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4:7 | LOW_PHASE_OVS | RW | R | 8 | Serial I2C interface low phase oversampling factor. LOW_PHASE_OVS + 1 SCB clock periods constitute the low phase of a bit period. The valid range is [7, 15] with input signal median filtering and [6, 15] without input signal median filtering.<br><br>The field is only used in master mode. In slave mode, the field is NOT used. However, there is a frequency requirement for the SCB clock wrt. the regular (no stretching) interface (IF) low time to guarantee functionally correct behavior. With input signal median filtering, the IF low time should be >= 8 SCB clock cycles and <= 16 IP clock cycles. Without input signal median filtering, the IF low time should be >= 7 SCB clock cycles and <= 16 SCB clock cycles.<br><br>in slave mode, this field is used to define number of clk_scb cycles for tSU-DAT timing (from ACK/NACK/data ready, to SCL rising edge (released from I2C slave clock stretching)) |
| 8 | M_READY_DATA_ACK | RW | R | 1 | When '1', a received data element by the master is immediately ACK'd when the receiver FIFO is not full. |
| 9 | M_NOT_READY_DATA_NACK | RW | R | 1 | When '1', a received data element byte the master is immediately NACK'd when the receiver FIFO is full. When '0', clock stretching is used instead (till the receiver FIFO is no longer full). |
| 11 | S_GENERAL_IGNORE | RW | R | 1 | When '1', a received general call slave address is immediately NACK'd (no ACK or clock stretching) and treated as a non matching slave address. This is useful for slaves that do not need any data supplied within the general call structure. |
| 12 | S_READY_ADDR_ACK | RW | R | 1 | When '1', a received (matching) slave address is immediately ACK'd when the receiver FIFO is not full. In EZ mode, this field should be set to '1'. |
| 13 | S_READY_DATA_ACK | RW | R | 1 | When '1', a received data element by the slave is immediately ACK'd when the receiver FIFO is not full. In EZ mode, this field should be set to '1'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 14 | S_NOT_READY_ADDR_NACK | RW | R | 1 | This field is used during an address match or general call address in internally clocked mode<br>Only used when:<br>- EC_AM_MODE is '0', EC_OP_MODE is '0', S_GENERAL_IGNORE is '0] and non EZ mode.<br>Functionality is as follows:<br>- 1: a received (matching) slave address is immediately NACK'd when the receiver FIFO is full.<br>- 0: clock stretching is performed (till the receiver FIFO is no longer full).<br><br>For externally clocked logic (EC_AM is '1') on an address match or general call address (and S_GENERAL_IGNORE is '0'). Only used when (NOT used when EC_AM is '1' and EC_OP is '1' and address match and EZ mode):<br>- EC_AM is '1' and EC_OP is '0'.<br>- EC_AM is '1' and general call address match.<br>- EC_AM is '1' and non EZ mode.<br>Functionality is as follows:<br>- 1: a received (matching or general) slave address is always immediately NACK'd. There are two possibilities:<br>1). the SCB clock is available (in Active system power mode) and it handles the rest of the current transfer. In this case the I2C master will not observe the NACK.<br>2).SCB clock is not present (in DeepSleep system power mode). In this case the I2C master will observe the NACK and may retry the transfer in the future (which gives the internally clocked logic the time to wake up from DeepSleep system power mode).<br>- 0: clock stretching is performed (till the SCB clock is available). The logic will handle the ongoing transfer as soon as the clock is enabled. |
| 15 | S_NOT_READY_DATA_NACK | RW | R | 1 | Only used when:<br>- non EZ mode<br>Functionality is as follows:<br>- 1: a received data element byte the slave is immediately NACK'd when the receiver FIFO is full.<br>- 0: clock stretching is performed (till the receiver FIFO is no longer full). |
| 16 | LOOPBACK | RW | R | 0 | Local loopback control (does NOT affect the information on the pins). Only applicable in master/slave mode.<br>When '0', no loopback<br>When '1', loopback is enabled internally in the peripheral, and as a result unaffected by other I2C devices. This allows a SCB I2C peripheral to address itself. |
| 30 | SLAVE_MODE | RW | R | 0 | Slave mode enabled ('1') or not ('0'). |
| 31 | MASTER_MODE | RW | R | 0 | Master mode enabled ('1') or not ('0'). Note that both master and slave modes can be enabled at the same time. This allows the IP to address itself. |

### 27.12.15 SCB_I2C_STATUS

**Description:** I2C status
**Address:** 0x40600064
**Offset:** 0x64
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_I2C_STATUS )
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | M_READ [5:5] | S_READ [4:4] | None [3:3] | I2CS_IC_BUSY [2:2] | I2C_EC_BUSY [1:1] | BUS_BUSY [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CURR_EZ_ADDR [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | BASE_EZ_ADDR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | BUS_BUSY | R | W | 0 | I2C bus is busy. The bus is considered busy ('1'), from the time a START is detected or from the time the SCL line is '0'. The bus is considered idle ('0'), from the time a STOP is detected. If SCB block is disabled, BUS_BUSY is '0'. After enabling the block, it takes time for the BUS_BUSY to detect a busy bus. This time is the maximum high time of the SCL line. For a 100 kHz interface frequency, this maximum high time may last roughly 5 us (half a bit period).<br><br>For single master systems, BUS_BUSY does not have to be used to detect an idle bus before a master starts a transfer using I2C_M_CMD.M_START (no bus collisions).<br><br>For multi-master systems, BUS_BUSY can be used to detect an idle bus before a master starts a transfer using I2C_M_CMD.M_START_ON_IDLE (to prevent bus collisions). |
| 1 | I2C_EC_BUSY | R | W | Undefined | Indicates whether the externally clocked logic is potentially accessing the EZ memory and/or updating BASE_EZ_ADDR or CURR_EZ_ADDR (this is only possible in EZ mode). This bit can be used by SW to determine whether BASE_EZ_ADDR and CURR_EZ_ADDR are reliable. |
| 2 | I2CS_IC_BUSY | R | W | 0 | Indicates whether the internally clocked slave logic is being accessed by external I2C master.<br>--set at ADDR_MATCH<br>--clear at START/RESET, STOP detection, or BUS_ERROR<br>This bit can be used by SW to determine whether I2CS_IC is busy before entering DeepSleep. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | S_READ | R | W | 0 | I2C slave read transfer ('1') or I2C slave write transfer ('0'). When the I2C slave is inactive/idle or receiving START, REPEATED START, STOP or an address, this field is '0". |
| 5 | M_READ | R | W | 0 | I2C master read transfer ('1') or I2C master write transfer ('0'). When the I2C master is inactive/idle or transmitting START, REPEATED START, STOP or an address, this field is '0". |
| 8:15 | CURR_EZ_ADDR | R | W | Undefined | I2C slave current EZ address. Current address pointer. This field is only reliable in internally clocked mode. In externally clocked mode the field may be unreliable (during an ongoing transfer when I2C_EC_BUSY is '1'), as clock domain synchronization is not performed in the design. |
| 16:23 | BASE_EZ_ADDR | R | W | Undefined | I2C slave base EZ address. Address as provided by an I2C write transfer. This field is only reliable in internally clocked mode. In externally clocked mode the field may be unreliable, as clock domain synchronization is not performed in the design. |

### 27.12.16 SCB_I2C_M_CMD

**Description:** I2C master command
**Address:** 0x40600068
**Offset:** 0x68
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_I2C_M_CMD )
**Comment:** The register fields are not retained. This is to ensure that they come up as '0' after coming out of DeepSleep system power mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | M_STOP [4:4] | M_NACK [3:3] | M_ACK [2:2] | M_START_ON_IDLE [1:1] | M_START [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | M_START | RW | RW1C | 0 | When '1', transmit a START or REPEATED START. Whether a START or REPEATED START is transmitted depends on the state of the master state machine. A START is only transmitted when the master state machine is in the default state. A REPEATED START is transmitted when the master state machine is not in the default state, but is working on an ongoing transaction. The REPEATED START can only be transmitted after a NACK or ACK has been received for a transmitted data element or after a NACK has been transmitted for a received data element. When this action is performed, the hardware sets this field to '0'. |
| 1 | M_START_ON_IDLE | RW | RW1C | 0 | When '1', transmit a START as soon as the bus is idle (I2C_STATUS.BUS_BUSY is '0', note that BUSY has a default value of '0'). For bus idle detection the hardware relies on STOP detection. As a result, bus idle detection is only functional after at least one I2C bus transfer has been detected on the bus (default/reset value of BUSY is '0') . A START is only transmitted when the master state machine is in the default state. When this action is performed, the hardware sets this field to '0'. |
| 2 | M_ACK | RW | RW1C | 0 | When '1', attempt to transmit an acknowledgement (ACK). When this action is performed, the hardware sets this field to '0'. |
| 3 | M_NACK | RW | RW1C | 0 | When '1', attempt to transmit a negative acknowledgement (NACK). When this action is performed, the hardware sets this field to '0'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | M_STOP | RW | RW1C | 0 | When '1', attempt to transmit a STOP. When this action is performed, the hardware sets this field to '0'. I2C_M_CMD.M_START has a higher priority than this command: in situations where both a STOP and a REPEATED START could be transmitted, M_START takes precedence over M_STOP. |

### 27.12.17 SCB_I2C_S_CMD

**Description:** I2C slave command
**Address:** 0x4060006C
**Offset:** 0x6C
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_I2C_S_CMD )
**Comment:** The register fields are not retained. This is to ensure that they come up as '0' after coming out of DeepSleep system power mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | S_NACK [1:1] | S_ACK [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | S_ACK | RW | RW1C | 0 | When '1', attempt to transmit an acknowledgement (ACK). When this action is performed, the hardware sets this field to '0'. In EZ mode, this field should be set to '0' (it is only to be used in non EZ mode). |
| 1 | S_NACK | RW | RW1C | 0 | When '1', attempt to transmit a negative acknowledgement (NACK). When this action is performed, the hardware sets this field to '0'. In EZ mode, this field should be set to '0' (it is only to be used in non EZ mode). This command has a higher priority than I2C_S_CMD.S_ACK, I2C_CTRL.S_READY_ADDR_ACK or I2C_CTRL.S_READY_DATA_ACK. |

### 27.12.18 SCB_I2C_CFG

**Description:** I2C configuration
**Address:** 0x40600070
**Offset:** 0x70
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_I2C_CFG )
**Comment:** The filters are used to remove glitches and to guarantee I2C compliant SCL and SDA setup and hold times. The filters are trimmable.
**Default:** 0x2A1013

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | SDA_IN_FILT_SEL [4:4] | None [3:2] | | SDA_IN_FILT_TRIM [1:0] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | SDA_IN_FILT_TRIM | RW | R | 3 | Trim settings for the 50ns glitch filter on the SDA input. Default setting meets the I2C glitch rejections specs. Programmability available if required |
| 4 | SDA_IN_FILT_SEL | RW | R | 1 | Enable for 50ns glitch filter on SDA input<br>'0': 0 ns.<br>'1: 50 ns (filter enabled). |
| 8:9 | SCL_IN_FILT_TRIM | RW | R | 0 | Trim settings for the 50ns glitch filter on the SDA input. Default setting meets the I2C glitch rejections specs. Programmability available if required |
| 12 | SCL_IN_FILT_SEL | RW | R | 1 | Enable for 50ns glitch filter on SCL input<br>'0': 0 ns.<br>'1: 50 ns (filter enabled). |
| 16:17 | SDA_OUT_FILT0_TRIM | RW | R | 2 | Trim settings for the 50ns delay filter on SDA output used to guarantee tHD_DAT I2C parameter. Default setting meets the I2C spec. Programmability available if required |
| 18:19 | SDA_OUT_FILT1_TRIM | RW | R | 2 | Trim settings for the 50ns delay filter on SDA output used to guarantee tHD_DAT I2C parameter. Default setting meets the I2C spec. Programmability available if required |
| 20:21 | SDA_OUT_FILT2_TRIM | RW | R | 2 | Trim settings for the 50ns delay filter on SDA output used to guarantee tHD_DAT I2C parameter. Default setting meets the I2C spec. Programmability available if required |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 28:29 | SDA_OUT_FILT_SEL | RW | R | 0 | Selection of cumulative filter delay on SDA output to meet tHD_DAT parameter<br>'0': 0 ns.<br>'1': 50 ns (filter 0 enabled).<br>'2': 100 ns (filters 0 and 1 enabled).<br>'3': 150 ns (filters 0, 1 and 2 enabled). |

### 27.12.19 SCB_TX_CTRL

**Description:** Transmitter control
**Address:** 0x40600200
**Offset:** 0x200
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_TX_CTRL )
**Comment:**
**Default:** 0x107

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | DATA_WIDTH [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | MSB _FIRST [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | OPEN _DRAIN [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | DATA_WIDTH | RW | R | 7 | Dataframe width. DATA_WIDTH + 1 is the amount of bits in a transmitted data frame. This number does not include start, parity and stop bits. For UART mode, the valid range is [3, 8]. For SPI, the valid range is [3, 31]. For I2C the only valid value is 7. |
| 8 | MSB_FIRST | RW | R | 1 | Least significant bit first ('0') or most significant bit first ('1'). For I2C, this field should be '1'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16 | OPEN_DRAIN | RW | R | 0 | Each IO cell 'xxx' has two associated IP output signals 'xxx_out_en' and 'xxx_out'.<br>'0': Normal operation mode. Typically, this operation mode is used for IO cells that are connected to (board) wires/lines that are driven by a single IO cell. In this operation mode, for an IO cell 'xxx' that is used as an output, the 'xxx_out_en' output enable signal is typically constant '1' the 'xxx_out' output is the outputted value. In other words, in normal operation mode, the 'xxx_out' output is used to control the IO cell output value: 'xxx_out' is '0' to drive an IO cell output value of '0' and 'xxx_out' is '1' to drive an IO cell output value of '1'.<br>'1': Open drain operation mode. Typically this operation mode is used for IO cells that are connected to (board) wires/lines that are driven by multiple IO cells (possibly on multiple chips). In this operation mode, for and IO cell 'xxx' that is used as an output, the 'xxx_out_en' output controls the outputted value. Typically, open drain operation mode drives low/'0' and the 'xxx_out' output is constant '1'. In other words, in open drain operation mode, the 'xxx_out_en' output is used to control the IO cell output value: in drive low/'0' mode: 'xxx_out_en' is '1' (drive enabled) to drive an IO cell output value of '0' and 'xxx_out_en' is '1' (drive disabled) to not drive an IO cell output value (another IO cell can drive the wire/line or a pull up results in a wire/line value '1').<br><br>The open drain mode is supported for:<br>- UART mode, 'uart_tx' IO cell.<br>- SPI mode, 'spi_miso' IO cell.<br><br>not applicable to I2C mode, 'i2c_scl' and 'i2c_sda' IO cells. (I2C SCL/SDA always work in open-drain mode) |

### 27.12.20 SCB_TX_FIFO_CTRL

**Description:** Transmitter FIFO control
**Address:** 0x40600204
**Offset:** 0x204
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_TX_FIFO_CTRL )
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TRIGGER_LEVEL [6:0] | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | FREEZE [17:17] | CLEAR [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:6 | TRIGGER_LEVEL | RW | R | 0 | Trigger level. When the transmitter FIFO has less entries than the number of this field, a transmitter trigger event INTR_TX.TRIGGER is generated. |
| 16 | CLEAR | RW | R | 0 | When '1', the transmitter FIFO and transmitter shift register are cleared/invalidated. Invalidation will last for as long as this field is '1'. If a quick clear/invalidation is required, the field should be set to '1' and be followed by a set to '0'. If a clear/invalidation is required for an extended time period, the field should be set to '1' during the complete time period. |
| 17 | FREEZE | RW | R | 0 | When '1', hardware reads from the transmitter FIFO do not remove FIFO entries. Freeze will not advance the TX FIFO read pointer. |

### 27.12.21 SCB_TX_FIFO_STATUS

**Description:** Transmitter FIFO status
**Address:** 0x40600208
**Offset:** 0x208
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_TX_FIFO_STATUS )
**Comment:** This register is not used in EZ and CMD_RESP modes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | USED [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | SR_VALID [15:15] | None [14:8] | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:23] | RD_PTR [22:16] | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:31] | WR_PTR [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | USED | R | W | 0 | Amount of entries in the transmitter FIFO. The value of this field ranges from 0 to FF_DATA_NR (EZ_DATA_NR/2). |
| 15 | SR_VALID | R | W | 0 | Indicates whether the TX shift registers holds a valid data frame ('1') or not ('0'). The shift register can be considered the top of the TX FIFO (the data frame is not included in the USED field of the TX FIFO). The shift register is a working register and holds the data frame that is currently transmitted (when the protocol state machine is transmitting a data frame) or the data frame that is transmitted next (when the protocol state machine is not transmitting a data frame). |
| 16:22 | RD_PTR | R | W | 0 | FIFO read pointer: FIFO location from which a data frame is read by the hardware. |
| 24:30 | WR_PTR | R | W | 0 | FIFO write pointer: FIFO location at which a new data frame is written. |

### 27.12.22 SCB_TX_FIFO_WR

**Description:** Transmitter FIFO write
**Address:** 0x40600240
**Offset:** 0x240
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_TX_FIFO_WR )
**Comment:** When the IP is disabled (CTRL.ENABLED is '0') or when the TX FIFO is full, a write to this register is dropped. This register should only be used in FIFO mode (and not in EZ or CMD_RESP modes). This register is 'write only'; a read from this register returns '0'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | W | R | 0 | Data frame written into the transmitter FIFO. Behavior is similar to that of a PUSH operation. Note that when CTRL.MEM_WIDTH is '0', only DATA[7:0] are used and when CTRL.MEM_WIDTH is '1', only DATA[15:0] are used.<br><br>A write to a full TX FIFO sets INTR_TX.OVERFLOW to '1'. |

### 27.12.23 SCB_RX_CTRL

**Description:** Receiver control
**Address:** 0x40600300
**Offset:** 0x300
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_RX_CTRL )
**Comment:**
**Default:** 0x107

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | DATA_WIDTH [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | MEDIAN [9:9] | MSB _FIRST [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | DATA_WIDTH | RW | R | 7 | Dataframe width. DATA_WIDTH + 1 is the expected amount of bits in received data frame. This number does not include start, parity and stop bits. For UART mode, the valid range is [3, 8]. For SPI, the valid range is [3, 31]. For I2C the only valid value is 7. In EZ mode (for both SPI and I2C), the only valid value is 7. |
| 8 | MSB_FIRST | RW | R | 1 | Least significant bit first ('0') or most significant bit first ('1'). For I2C, this field should be '1'. |
| 9 | MEDIAN | RW | R | 0 | Median filter. When '1', a digital 3 taps median filter is performed on input interface lines. This filter should reduce the susceptibility to errors. However, its requires higher oversampling values. For UART IrDA submode, this field should always be '1'. |

### 27.12.24 SCB_RX_FIFO_CTRL

**Description:** Receiver FIFO control
**Address:** 0x40600304
**Offset:** 0x304
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_RX_FIFO_CTRL )
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | TRIGGER_LEVEL [6:0] | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | FREEZE [17:17] | CLEAR [16:16] |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:6 | TRIGGER_LEVEL | RW | R | 0 | Trigger level. When the receiver FIFO has more entries than the number of this field, a receiver trigger event INTR_RX.TRIGGER is generated. |
| 16 | CLEAR | RW | R | 0 | When '1', the receiver FIFO and receiver shift register are cleared/invalidated. Invalidation will last for as long as this field is '1'. If a quick clear/invalidation is required, the field should be set to '1' and be followed by a set to '0'. If a clear/invalidation is required for an extended time period, the field should be set to '1' during the complete time period. |
| 17 | FREEZE | RW | R | 0 | When '1', hardware writes to the receiver FIFO have no effect. Freeze will not advance the RX FIFO write pointer. |

### 27.12.25 SCB_RX_FIFO_STATUS

**Description:** Receiver FIFO status
**Address:** 0x40600308
**Offset:** 0x308
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_RX_FIFO_STATUS )
**Comment:** This register is not used in EZ and CMD_RESP modes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | USED [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | SR_VALID [15:15] | None [14:8] | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:31] | WR_PTR [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | USED | R | W | 0 | Amount of entries in the receiver FIFO. The value of this field ranges from 0 to FF_DATA_NR (EZ_DATA_NR/2). |
| 15 | SR_VALID | R | W | 0 | Indicates whether the RX shift registers holds a (partial) valid data frame ('1') or not ('0'). The shift register can be considered the bottom of the RX FIFO (the data frame is not included in the USED field of the RX FIFO). The shift register is a working register and holds the data frame that is currently being received (when the protocol state machine is receiving a data frame). |
| 16:22 | RD_PTR | R | W | 0 | FIFO read pointer: FIFO location from which a data frame is read. |
| 24:30 | WR_PTR | R | W | 0 | FIFO write pointer: FIFO location at which a new data frame is written by the hardware. |

### 27.12.26 SCB_RX_MATCH

**Description:** Slave address and mask
**Address:** 0x40600310
**Offset:** 0x310
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_RX_MATCH )
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | MASK [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | ADDR | RW | R | 0 | Slave device address.<br><br>In UART multi-processor mode, all 8 bits are used.<br><br>In I2C slave mode, only bits 7 down to 1 are used. This reflects the organization of the first transmitted byte in a I2C transfer: the first 7 bits represent the address of the addressed slave, and the last 1 bit is a read/write indicator ('0': write, '1': read). |
| 16:23 | MASK | RW | R | 0 | Slave device address mask. This field is a mask that specifies which of the slave address bits take part in the matching. MATCH = ((ADDR & MASK) == ('slave address' & MASK)). |

### 27.12.27 SCB_RX_FIFO_RD

**Description:** Receiver FIFO read
**Address:** 0x40600340
**Offset:** 0x340
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_RX_FIFO_RD )
**Comment:** When the IP is disabled (CTRL.ENABLED is '0') or when the RX FIFO is empty, a read from this register returns 0xffff:ffff. This register should only be used in FIFO mode (and not in EZ or CMD_RESP modes). This register is 'read only'; a write to this register is ignored.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | R | W | Undefined | Data read from the receiver FIFO. Reading a data frame will remove the data frame from the FIFO; i.e. behavior is similar to that of a POP operation. Note that when CTRL.MEM_WIDTH is '0', only DATA[7:0] are used and when CTRL.MEM_WIDTH is '1', only DATA[15:0] are used<br><br>A read from an empty RX FIFO sets INTR_RX.UNDERFLOW to '1'.<br><br>When this register is read through the debugger, the data frame will not be removed from the FIFO. Similar in operation to RX_FIFO_RD_SILENT |

### 27.12.28 SCB_RX_FIFO_RD_SILENT

**Description:** Receiver FIFO read silent
**Address:** 0x40600344
**Offset:** 0x344
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_RX_FIFO_RD_SILENT )
**Comment:** When the IP is disabled (CTRL.ENABLED is '0') or when the RX FIFO is empty, a read from this register returns 0xffff:ffff. This register should only be used in FIFO mode (and not in EZ or CMD_RESP modes).
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA [23:16] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA | R | W | Undefined | Data read from the receiver FIFO. Reading a data frame will NOT remove the data frame from the FIFO; i.e. behavior is similar to that of a PEEK operation. Note that when CTRL.MEM_WIDTH is '0', only DATA[7:0] are used and when CTRL.MEM_WIDTH is '1', only DATA[15:0] are used<br><br>A read from an empty RX FIFO sets INTR_RX.UNDERFLOW to '1'. |

### 27.12.29 SCB_EZ_DATA

**Description:** Memory buffer
**Address:** 0x40600400
**Offset:** 0x400
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** When the IP is disabled (CTRL.ENABLED is '0'), a read from these registers return 0xffff:ffff. It is under MMIO register control whether accesses to this register should introduce bus wait states or be discarded when the externally clocked logic is accessing the memory structure. These registers should only be used in EZ and CMD_RESP modes (and not in FIFO mode).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | EZ_DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | EZ_DATA | RW | RW | Undefined | Data in buffer memory location. In case of a blocked discarded access, a read access returns 0xffff:ffff and a write access is dropped. Note that the 0xffff:ffff value is unique (not a legal EZ_DATA byte value) and can be detected by SW. Note that a discarded write access can be detected by reading back the written value. |

### 27.12.30 SCB_INTR_CAUSE

**Description:** Active clocked interrupt signal
**Address:** 0x40600E00
**Offset:** 0xE00
**Retention:** Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_CAUSE )
**Comment:** Enables software to determine the source of the combined interrupt output signals 'interrupt_ic', 'interrupt_ec' and 'interrupt'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

| 5 | SPI_EC | R | W | 0 | Externally clocked SPI interrupt active ('interrupt_spi_ec'): INTR_SPI_EC_MASKED != 0. |

### 27.12.31 SCB_INTR_I2C_EC

**Description:** Externally clocked I2C interrupt request
**Address:** 0x40600E80
**Offset:** 0xE80
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The fields in this register are set by HW and are cleared by software by writing a '1'. These interrupt causes are generated by externally clocked logic. HW clears the interrupt causes to '0', when the IP is disabled.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | EZ_READ_STOP [3:3] | EZ_WRITE_STOP [2:2] | EZ_STOP [1:1] | WAKE_UP [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WAKE_UP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 1 | EZ_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 2 | EZ_WRITE_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 3 | EZ_READ_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

### 27.12.33 SCB_INTR_I2C_EC_MASKED

**Description:** Externally clocked I2C interrupt masked
**Address:** 0x40600E8C
**Offset:** 0xE8C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects a bitwise and between the interrupt request and mask registers. This register allows SW to read the status of all mask enabled interrupt causes with a single load operation, rather than two load operations: one for the interrupt causes and one for the masks. This simplifies Firmware development. The associated interrupt is active ('1'), when INTR_I2C_EC_MASKED != 0.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

| 3 | EZ_READ_STOP | R | W | 0 | Logical and of corresponding request and mask bits. |

### 27.12.37 SCB_INTR_M

**Description:** Master interrupt request
**Address:** 0x40600F00
**Offset:** 0xF00
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_M )
**Comment:** The register fields are not retained In DeepSleep power mode: HW clears the interrupt causes to '0', when coming out of DeepSleep power mode. In addition, HW clears the interrupt causes to '0', when the IP is disabled. As a result, the interrupt causes are only available in Active/Sleep power modes; they are generated by internally clocked logic (this logic operates on a clock that is only available in Active/Sleep power modes).

The interrupt causes should only be used for internally clocked operation; i.e. EC_OP is '0'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | I2C_STOP [4:4] | None [3:3] | I2C_ACK [2:2] | I2C_NACK [1:1] | I2C_ARB_LOST [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | SPI_DONE [9:9] | I2C_BUS_ERROR [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | I2C_ARB_LOST | RW1C | RW1S | 0 | I2C master lost arbitration: the value driven by the master on the SDA line is not the same as the value observed on the SDA line. |
| 1 | I2C_NACK | RW1C | RW1S | 0 | I2C master negative acknowledgement. Set to '1', when the master receives a NACK (typically after the master transmitted the slave address or TX data). |
| 2 | I2C_ACK | RW1C | RW1S | 0 | I2C master acknowledgement. Set to '1', when the master receives a ACK (typically after the master transmitted the slave address or TX data). |
| 4 | I2C_STOP | RW1C | RW1S | 0 | I2C master STOP. Set to '1', when the master has transmitted a STOP. |
| 8 | I2C_BUS_ERROR | RW1C | RW1S | 0 | I2C master bus error (unexpected detection of START or STOP condition). |
| 9 | SPI_DONE | RW1C | RW1S | 0 | SPI master transfer done event: all data frames in the transmit FIFO are sent, the transmit FIFO is empty (both TX FIFO and transmit shifter register are empty), and SPI select output pin is deselected. |

### 27.12.38 SCB_INTR_M_SET

**Description:** Master interrupt set request
**Address:** 0x40600F04
**Offset:** 0xF04
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_M_SET )
**Comment:** When read, this register reflects the interrupt request register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | I2C_STOP [4:4] | None [3:3] | I2C_ACK [2:2] | I2C_NACK [1:1] | I2C_ARB_LOST [0:0] |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | I2C_ARB_LOST | R | W | 0 | Logical and of corresponding request and mask bits. |
| 1 | I2C_NACK | R | W | 0 | Logical and of corresponding request and mask bits. |
| 2 | I2C_ACK | R | W | 0 | Logical and of corresponding request and mask bits. |
| 4 | I2C_STOP | R | W | 0 | Logical and of corresponding request and mask bits. |
| 8 | I2C_BUS_ERROR | R | W | 0 | Logical and of corresponding request and mask bits. |
| 9 | SPI_DONE | R | W | 0 | Logical and of corresponding request and mask bits. |

### 27.12.41 SCB_INTR_S

**Description:** Slave interrupt request
**Address:** 0x40600F40
**Offset:** 0xF40
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_S )
**Comment:** The register fields are not retained In DeepSleep power mode: HW clears the interrupt causes to '0', when coming out of DeepSleep power mode. In addition, HW clears the interrupt causes to '0', when the IP is disabled. As a result, the interrupt causes are only available in Active/Sleep power modes; they are generated by internally clocked logic (this logic operates on a clock that is only available in Active/Sleep power modes).

The interrupt causes should only be used for internally clocked operation; i.e. EC_OP is '0'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | I2C _GENERAL [7:7] | I2C_ADDR _MATCH [6:6] | I2C_START [5:5] | I2C_STOP [4:4] | I2C_WRITE _STOP [3:3] | I2C_ACK [2:2] | I2C_NACK [1:1] | I2C_ARB_L OST [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | SPI_BUS_E RROR [11:11] | SPI_EZ_ST OP [10:10] | SPI_EZ _WRITE _STOP [9:9] | I2C_BUS_E RROR [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | I2C_ARB_LOST | RW1C | RW1S | 0 | I2C slave lost arbitration: the value driven on the SDA line is not the same as the value observed on the SDA line (while the SCL line is '1'). This should not occur, it represents erroneous I2C bus behavior. In case of lost arbitration, the I2C slave state machine aborts the ongoing transfer. The Firmware may decide to clear the TX and RX FIFOs in case of this error. |
| 1 | I2C_NACK | RW1C | RW1S | 0 | I2C slave negative acknowledgement received. Set to '1', when the slave receives a NACK (typically after the slave transmitted TX data). |
| 2 | I2C_ACK | RW1C | RW1S | 0 | I2C slave acknowledgement received. Set to '1', when the slave receives a ACK (typically after the slave transmitted TX data). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | I2C_WRITE_STOP | RW1C | RW1S | 0 | I2C STOP event for I2C write transfer intended for this slave (address matching is performed). Set to '1', when STOP or REPEATED START event is detected. The REPEATED START event is included in this interrupt cause such that the I2C transfers separated by a REPEATED START can be distinguished and potentially treated separately by the Firmware. Note that the second I2C transfer (after a REPEATED START) may be to a different slave address.<br><br>In non EZ mode, the event is detected on any I2C write transfer intended for this slave. Note that a I2C write address intended for the slave (address is matching and a it is a write transfer) will result in a I2C_WRITE_STOP event independent of whether the I2C address is ACK'd or NACK'd.<br><br>In EZ mode, the event is detected only on I2C write transfers that have EZ data written to the memory structure (an I2C write transfer that only communicates an I2C address and EZ address, will not result in this event being detected). |
| 4 | I2C_STOP | RW1C | RW1S | 0 | I2C STOP event for I2C (read or write) transfer intended for this slave (address matching is performed). Set to '1', when STOP or REPEATED START event is detected. The REPEATED START event is included in this interrupt cause such that the I2C transfers separated by a REPEATED START can be distinguished and potentially treated separately by the Firmware. Note that the second I2C transfer (after a REPEATED START) may be to a different slave address.<br><br>The event is detected on any I2C transfer intended for this slave. Note that a I2C address intended for the slave (address is matching) will result in a I2C_STOP event independent of whether the I2C address is ACK'd or NACK'd. |
| 5 | I2C_START | RW1C | RW1S | 0 | I2C slave START received. Set to '1', when START or REPEATED START event is detected.<br><br>In the case of externally clocked address matching (CTRL.EC_AM_MODE is '1') AND clock stretching is performed (I2C_CTRL.S_NOT_READY_ADDR_NACK is '0'), this field is NOT set. The Firmware should use INTR_S_EC.WAKE_UP, INTR_S.I2C_ADDR_MATCH and INTR_S.I2C_GENERAL. |
| 6 | I2C_ADDR_MATCH | RW1C | RW1S | 0 | I2C slave matching address received. If CTRL.ADDR_ACCEPT, the received address (including the R/W bit) is available in the RX FIFO. In the case of externally clocked address matching (CTRL.EC_AM_MODE is '1') and internally clocked operation (CTRL.EC_OP_MODE is '0'), this field is set when the event is detected. |
| 7 | I2C_GENERAL | RW1C | RW1S | 0 | I2C slave general call address received. If CTRL.ADDR_ACCEPT, the received address 0x00 (including the R/W bit) is available in the RX FIFO. In the case of externally clocked address matching (CTRL.EC_AM_MODE is '1') and internally clocked operation (CTRL.EC_OP_MODE is '0'), this field is set when the event is detected. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8 | I2C_BUS_ERROR | RW1C | RW1S | 0 | I2C slave bus error (unexpected detection of START or STOP condition). This should not occur, it represents erroneous I2C bus behavior. In case of a bus error, the I2C slave state machine abort the ongoing transfer. The Firmware may decide to clear the TX and RX FIFOs in case of this error. |
| 9 | SPI_EZ_WRITE_STOP | RW1C | RW1S | 0 | SPI slave deselected after a write EZ SPI transfer occurred. |
| 10 | SPI_EZ_STOP | RW1C | RW1S | 0 | SPI slave deselected after any EZ SPI transfer occurred. |
| 11 | SPI_BUS_ERROR | RW1C | RW1S | 0 | SPI slave deselected at an unexpected time in the SPI transfer. The Firmware may decide to clear the TX and RX FIFOs in case of this error. |

### 27.12.42 SCB_INTR_S_SET

**Description:** Slave interrupt set request
**Address:** 0x40600F44
**Offset:** 0xF44
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_S_SET )
**Comment:** When read, this register reflects the interrupt request register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | I2C_ARB_LOST | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 1 | I2C_NACK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 2 | I2C_ACK | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 3 | I2C_WRITE_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 4 | I2C_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 5 | I2C_START | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 6 | I2C_ADDR_MATCH | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 7 | I2C_GENERAL | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 8 | I2C_BUS_ERROR | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 9 | SPI_EZ_WRITE_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 10 | SPI_EZ_STOP | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 11 | SPI_BUS_ERROR | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

### 27.12.44 SCB_INTR_S_MASKED

**Description:** Slave interrupt masked request
**Address:** 0x40600F4C
**Offset:** 0xF4C
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_S_MASKED )
**Comment:** When read, this register reflects a bitwise and between the interrupt request and mask registers. This register allows SW to read the status of all mask enabled interrupt causes with a single load operation, rather than two load operations: one for the interrupt causes and one for the masks. This simplifies Firmware development. The associated interrupt is active ('1'), when INTR_S_MASKED != 0.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | I2C_GENERAL [7:7] | I2C_ADDR_MATCH [6:6] | I2C_START [5:5] | I2C_STOP [4:4] | I2C_WRITE_STOP [3:3] | I2C_ACK [2:2] | I2C_NACK [1:1] | I2C_ARB_LOST [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | SPI_BUS_ERROR [11:11] | SPI_EZ_STOP [10:10] | SPI_EZ_WRITE_STOP [9:9] | I2C_BUS_ERROR [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | I2C_ARB_LOST | R | W | 0 | Logical and of corresponding request and mask bits. |
| 1 | I2C_NACK | R | W | 0 | Logical and of corresponding request and mask bits. |
| 2 | I2C_ACK | R | W | 0 | Logical and of corresponding request and mask bits. |
| 3 | I2C_WRITE_STOP | R | W | 0 | Logical and of corresponding request and mask bits. |
| 4 | I2C_STOP | R | W | 0 | Logical and of corresponding request and mask bits. |
| 5 | I2C_START | R | W | 0 | Logical and of corresponding request and mask bits. |
| 6 | I2C_ADDR_MATCH | R | W | 0 | Logical and of corresponding request and mask bits. |
| 7 | I2C_GENERAL | R | W | 0 | Logical and of corresponding request and mask bits. |
| 8 | I2C_BUS_ERROR | R | W | 0 | Logical and of corresponding request and mask bits. |
| 9 | SPI_EZ_WRITE_STOP | R | W | 0 | Logical and of corresponding request and mask bits. |
| 10 | SPI_EZ_STOP | R | W | 0 | Logical and of corresponding request and mask bits. |
| 11 | SPI_BUS_ERROR | R | W | 0 | Logical and of corresponding request and mask bits. |

### 27.12.45 SCB_INTR_TX

**Description:** Transmitter interrupt request
**Address:** 0x40600F80
**Offset:** 0xF80
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_TX )
**Comment:** The register fields are not retained In DeepSleep power mode: HW clears the interrupt causes to '0', when coming out of DeepSleep power mode. In addition, HW clears the interrupt causes to '0', when the IP is disabled. As a result, the interrupt causes are only available in Active/Sleep power modes; they are generated by internally clocked logic (this logic operates on a clock that is only available in Active/Sleep power modes).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKED [7:7] | UNDERFLOW [6:6] | OVERFLOW [5:5] | EMPTY [4:4] | None [3:2] | | NOT_FULL [1:1] | TRIGGER [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | UART_ARB_LOST [10:10] | UART_DONE [9:9] | UART_NACK [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TRIGGER | RW1C | RW1S | 0 | Less entries in the TX FIFO than the value specified by TX_FIFO_CTRL.TRIGGER_LEVEL.<br><br>Only used in FIFO mode. |
| 1 | NOT_FULL | RW1C | RW1S | 0 | TX FIFO is not full. Dependent on CTRL.MEM_WIDTH: (FF_DATA_NR = EZ_DATA_NR/2)<br>MEM_WIDTH is '0': # entries != FF_DATA_NR.<br>MEM_WIDTH is '1': # entries != FF_DATA_NR/2.<br>MEM_WIDTH is '2': # entries != FF_DATA_NR/4.<br><br>Only used in FIFO mode. |
| 4 | EMPTY | RW1C | RW1S | 0 | TX FIFO is empty; i.e. it has 0 entries.<br><br>Only used in FIFO mode. |
| 5 | OVERFLOW | RW1C | RW1S | 0 | Attempt to write to a full TX FIFO.<br><br>Only used in FIFO mode. |
| 6 | UNDERFLOW | RW1C | RW1S | 0 | Attempt to read from an empty TX FIFO. This happens when SCB is ready to transfer data and EMPTY is '1'.<br><br>Only used in FIFO mode.<br>(Note: This bit may be set unintentionally, even if the FIFO is not empty.<br>Workaround: Ignore the bit when the clock frequency of the AHB bus is greater than 3x the internal frequency of SCB and the FIFO is not empty) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 7 | BLOCKED | RW1C | RW1S | 0 | SW cannot get access to the EZ memory (EZ data access), due to an externally clocked EZ access. This may happen when STATUS.EC_BUSY is '1'. |
| 8 | UART_NACK | RW1C | RW1S | 0 | UART transmitter received a negative acknowledgement in SmartCard mode. Set to '1', when event is detected. Write with '1' to clear bit. |
| 9 | UART_DONE | RW1C | RW1S | 0 | UART transmitter done event. This happens when the IP is done transferring all data in the TX FIFO, and the last stop field is transmitted (both TX FIFO and transmit shifter register are empty). Set to '1', when event is detected. Write with '1' to clear bit. |
| 10 | UART_ARB_LOST | RW1C | RW1S | 0 | UART lost arbitration: the value driven on the TX line is not the same as the value observed on the RX line. This condition event is useful when transmitter and receiver share a TX/RX line. This is the case in LIN or SmartCard modes. Set to '1', when event is detected. Write with '1' to clear bit. |

### 27.12.46 SCB_INTR_TX_SET

**Description:** Transmitter interrupt set request
**Address:** 0x40600F84
**Offset:** 0xF84
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_TX_SET )
**Comment:** When read, this register reflects the interrupt request register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKED [7:7] | UNDERFLOW [6:6] | OVERFLOW [5:5] | EMPTY [4:4] | None [3:2] | | NOT_FULL [1:1] | TRIGGER [0:0] |

| 10 | UART_ARB_LOST | R | W | 0 | Logical and of corresponding request and mask bits. |

### 27.12.49 SCB_INTR_RX

**Description:** Receiver interrupt request
**Address:** 0x40600FC0
**Offset:** 0xFC0
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_RX )
**Comment:** The register fields are not retained In DeepSleep power mode: HW clears the interrupt causes to '0', when coming out of DeepSleep power mode. In addition, HW clears the interrupt causes to '0', when the IP is disabled. As a result, the interrupt causes are only available in Active/Sleep power modes; they are generated by internally clocked logic (this logic operates on a clock that is only available in Active/Sleep power modes).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKED [7:7] | UNDERFLOW [6:6] | OVERFLOW [5:5] | None [4:4] | FULL [3:3] | NOT _EMPTY [2:2] | None [1:1] | TRIGGER [0:0] |

| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TRIGGER | RW1C | RW1S | 0 | More entries in the RX FIFO than the value specified by RX_FIFO_CTRL.TRIGGER_LEVEL.<br><br>Only used in FIFO mode. |
| 2 | NOT_EMPTY | RW1C | RW1S | 0 | RX FIFO is not empty.<br><br>Only used in FIFO mode. |
| 3 | FULL | RW1C | RW1S | 0 | RX FIFO is full. Note that received data frames are lost when the RX FIFO is full. Dependent on CTRL.MEM_WIDTH: (FF_DATA_NR = EZ_DATA_NR/2)<br>MEM_WIDTH is '0': # entries == FF_DATA_NR.<br>MEM_WIDTH is '1': # entries == FF_DATA_NR/2.<br>MEM_WIDTH is '2': # entries == FF_DATA_NR/4.<br><br>Only used in FIFO mode. |
| 5 | OVERFLOW | RW1C | RW1S | 0 | Attempt to write to a full RX FIFO. Note: in I2C mode, the OVERFLOW is set when a data frame is received and the RX FIFO is full, independent of whether it is ACK'd or NACK'd.<br><br>Only used in FIFO mode. |
| 6 | UNDERFLOW | RW1C | RW1S | 0 | Attempt to read from an empty RX FIFO.<br><br>Only used in FIFO mode. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 7 | BLOCKED | RW1C | RW1S | 0 | SW cannot get access to the EZ memory (EZ_DATA accesses), due to an externally clocked EZ access. This may happen when STATUS.EC_BUSY is '1'. |
| 8 | FRAME_ERROR | RW1C | RW1S | 0 | Frame error in received data frame. Set to '1', when event is detected. Write with '1' to clear bit. This can be either a start or stop bit(s) error:<br>Start bit error: after the detection of the beginning of a start bit period (RX line changes from '1' to '0'), the middle of the start bit period is sampled erroneously (RX line is '1'). Note: a start bit error is detected BEFORE a data frame is received.<br>Stop bit error: the RX line is sampled as '0', but a '1' was expected. Note: a stop bit error may result in failure to receive successive data frame(s). Note: a stop bit error is detected AFTER a data frame is received.<br><br>A stop bit error is detected after a data frame is received, and the UART_RX_CTL.DROP_ON_FRAME_ERROR field specifies whether the received frame is dropped or send to the RX FIFO. If UART_RX_CTL.DROP_ON_FRAME_ERROR is '1', the received data frame is dropped. If UART_RX_CTL.DROP_ON_FRAME_ERROR is '0', the received data frame is send to the RX FIFO. Note that Firmware can only identify the erroneous data frame in the RX FIFO if it is fast enough to read the data frame before the hardware writes a next data frame into the RX FIFO; i.e. the RX FIFO does not have error flags to tag erroneous data frames. |
| 9 | PARITY_ERROR | RW1C | RW1S | 0 | Parity error in received data frame. Set to '1', when event is detected. Write with '1' to clear bit. If UART_RX_CTL.DROP_ON_PARITY_ERROR is '1', the received frame is dropped. If UART_RX_CTL.DROP_ON_PARITY_ERROR is '0', the received frame is send to the RX FIFO. In SmartCard submode, negatively acknowledged data frames generate a parity error. Note that Firmware can only identify the erroneous data frame in the RX FIFO if it is fast enough to read the data frame before the hardware writes a next data frame into the RX FIFO. |
| 10 | BAUD_DETECT | RW1C | RW1S | 0 | LIN baudrate detection is completed. The receiver software uses the UART_RX_STATUS.BR_COUNTER value to set the right IP clock (from the programmable clock IP) to guarantee successful receipt of the first LIN data frame (Protected Identifier Field) after the synchronization byte. Set to '1', when event is detected. Write with '1' to clear bit. |
| 11 | BREAK_DETECT | RW1C | RW1S | 0 | Break detection is successful: the line is '0' for UART_RX_CTRL.BREAK_WIDTH + 1 bit period. Can occur at any time to address unanticipated break fields; i.e. 'break-in-data' is supported. This feature is supported for the UART standard and LIN submodes. For the UART standard submodes, ongoing receipt of data frames is NOT affected; i.e. Firmware is expected to take the proper action. For the LIN submode, possible ongoing receipt of a data frame is stopped and the (partially) received data frame is dropped and baud rate detection is started. Set to '1', when event is detected. Write with '1' to clear bit. |

### 27.12.50 SCB_INTR_RX_SET

**Description:** Receiver interrupt set request
**Address:** 0x40600FC4
**Offset:** 0xFC4
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_RX_SET )
**Comment:** When read, this register reflects the interrupt request register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

| 10 | BAUD_DETECT | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 11 | BREAK_DETECT | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

### 27.12.52 SCB_INTR_RX_MASKED

**Description:** Receiver interrupt masked request
**Address:** 0x40600FCC
**Offset:** 0xFCC
**Retention:** Not Retained
**IsDeepSleep:** No ( supported for SCB0_INTR_RX_MASKED )
**Comment:** When read, this register reflects a bitwise and between the interrupt request and mask registers. This register allows SW to read the status of all mask enabled interrupt causes with a single load operation, rather than two load operations: one for the interrupt causes and one for the masks. This simplifies Firmware development. The associated interrupt is active ('1'), when INTR_RX_MASKED != 0.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | ENABLE | RW | R | 0 | IP Enable:<br>0: IP disabled, RAM in DeepSleep, SDHC_CORE regs are inaccessible (any attempts to access will result in AHB Error responses), IP is NOT held in reset but the clocks are gated<br>1: IP enabled, normal operation |

### 28.3.2 CORE

#### 28.3.2.1 SDHC_CORE_SDMASA_R

**Description:** SDMA System Address register
**Address:** 0x40461000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to configure a 32-bit Block Count or an SDMA System Address based on the Host Version 4 Enable bit in the Host Control 2 register. This register is applicable for both SD and eMMC modes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKCNT_SDMASA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKCNT_SDMASA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKCNT_SDMASA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCKCNT_SDMASA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | BLOCKCNT_SDMASA | RW | RW | 0 | 32-bit Block Count (SDMA System Address)<br>- SDMA System Address (Host Version 4 Enable = 0): This<br>register contains the system memory address for an SDMA transfer in the 32-bit addressing mode. When the<br>Host Controller stops an SDMA transfer, this register points to the system address of the next contiguous data<br>position. It can be accessed only if no transaction is executing. Reading this register during data transfers may<br>return an invalid value.<br>- 32-bit Block Count (Host Version 4 Enable = 1): From the<br>Host Controller Version 4.10 specification, this register is<br>redefined as 32-bit Block Count. The Host Controller decrements the block count of this register for every block<br>transfer and the data transfer stops when the count reaches zero. This register must be accessed when no transaction is executing. Reading this register during data<br>transfers may return invalid value.<br>Following are the values for BLOCKCNT_SDMASA:<br>- 0xFFFF_FFFF - 4G - 1 Block<br>- .....<br>- 0x0000_0002 - 2 Blocks<br>- 0x0000_0001 - 1 Block<br>- 0x0000_0000 - Stop Count<br>Note:<br>- When Host Version 4 Enable = 0, SDMA uses this register as system address and hence Auto CMD23 cannot be used with SDMA since this register is assigned for Auto CMD23 as 32-bit Block Count register.<br>-When Host Version 4 Enable = 1, SDMA uses ADMA system address register and this register is reassigned to 32-bit Block Count. This register must be programmed with a non-zero value for data transfer if the 32-bit Block count register is used instead of the 16-bit Block count register. SDMA may use Auto CMD23 if 32-bit Block Count register is used. |

### 28.3.2.2 SDHC_CORE_BLOCKSIZE_R

**Description:** Block Size register
**Address:** 0x40461004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to configure an SDMA buffer boundary and the number of bytes in a data block. This register is applicable for both SD and eMMC modes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | XFER_BLOCK_SIZE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | SDMA_BUF_BDARY [14:12] | | | XFER_BLOCK_SIZE [11:8] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:11 | XFER_BLOCK_SIZE | RW | R | 0 | Transfer Block Size<br>These bits specify the block size of data transfers. In case of<br>memory, it is set to 512 bytes. It can be accessed only if no<br>transaction is executing. Read operations during transfers<br>may return an invalid value, and write operations are ignored. Following are the values for<br>XFER_BLOCK_SIZE:<br>- 0x1: 1 byte<br>- 0x2: 2 bytes<br>- 0x3: 3 bytes<br>- .....<br>- 0x1FF: 511 byte<br>- 0x200: 512 bytes<br>- .....<br>- 0x800: 2048 bytes<br>Note: This register must be programmed with a non-zero<br>value for data transfer. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 12:14 | SDMA_BUF_BDARY | RW | R | 0 | SDMA Buffer Boundary<br>These bits specify the size of contiguous buffer in system<br>memory. The SDMA transfer waits at every boundary specified by these fields and the Host Controller generates<br>the DMA interrupt to request the Host Driver to update the<br>SDMA System Address register.<br>Values:<br>- 0x0 (BYTES_4K): 4K bytes SDMA Buffer Boundary<br>- 0x1 (BYTES_8K): 8K bytes SDMA Buffer Boundary<br>- 0x2 (BYTES_16K): 16K bytes SDMA Buffer Boundary<br>- 0x3 (BYTES_32K): 32K bytes SDMA Buffer Boundary<br>- 0x4 (BYTES_64K): 64K bytes SDMA Buffer Boundary<br>- 0x5 (BYTES_128K): 128K bytes SDMA Buffer Boundary<br>- 0x6 (BYTES_256K): 256K bytes SDMA Buffer Boundary<br>- 0x7 (BYTES_512K): 512K bytes SDMA Buffer Boundary |

### 28.3.2.3 SDHC_CORE_BLOCKCOUNT_R

**Description:** 16-bit Block Count register
**Address:** 0x40461006
**Offset:** 0x6
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to configure the number of data blocks. This register is applicable for both SD and eMMC modes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCK_CNT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | BLOCK_CNT [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | BLOCK_CNT | RW | RW | 0 | 16-bit Block Count<br>- If the Host Version 4 Enable bit is set 0 or the 16-bit Block<br>Count register is set to non-zero, the 16-bit Block Count<br>register is selected.<br>- If the Host Version 4 Enable bit is set 1 and the 16-bit Block Count register is set to zero, the 32-bit Block Count<br>register is selected.<br>Following are the values for BLOCK_CNT:<br>- 0x0: Stop Count<br>- 0x1: 1 Block<br>- 0x2: 2 Blocks<br>- ... - ...<br>- 0xFFFF: 65535 Blocks<br>Note: For Host Version 4 Enable = 0, this register must be<br>set to 0000h before programming the 32-bit block count<br>register when Auto CMD23 is enabled for non-DMA and<br>ADMA modes. |

### 28.3.2.4 SDHC_CORE_ARGUMENT_R

**Description:** Argument register
**Address:** 0x40461008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to configure the SD/eMMC command argument.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ARGUMENT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ARGUMENT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ARGUMENT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ARGUMENT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | ARGUMENT | RW | R | 0 | Command Argument<br>These bits specify the SD/eMMC command argument that is<br>specified in bits 39-8 of the Command format. |

### 28.3.2.5 SDHC_CORE_XFER_MODE_R

**Description:** Transfer Mode register
**Address:** 0x4046100C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control the operation of data transfers for an SD/eMMC mode. The Host driver sets this register before issuing a command that transfers data.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP_ERR_CHK_ENABLE [7:7] | RESP_TYPE [6:6] | MULTI_BLK_SEL [5:5] | DATA_XFER_DIR [4:4] | AUTO_CMD_ENABLE [3:2] | | BLOCK_COUNT_ENABLE [1:1] | DMA_ENABLE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | RESP_INT_DISABLE [8:8] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | DMA_ENABLE | RW | RW | 0 | DMA Enable<br>This bit enables the DMA functionality. If this bit is set to 1, a<br>DMA operation begins when the Host Driver writes to the<br>Command register. You can select one of the DMA modes by<br>using DMA Select in the Host Control 1 register.<br>Values:<br>- 0x1 (ENABLED): DMA Data transfer<br>- 0x0 (DISABLED): No data transfer or Non-DMA data transfer |
| 1 | BLOCK_COUNT_ENABLE | RW | RW | 0 | Block Count Enable<br>This bit is used to enable the Block Count register, which is<br>relevant for multiple block transfers. If this bit is set to 0, the<br>Block Count register is disabled, which is useful in executing<br>an infinite transfer. The Host Driver must set this bit to 0<br>when ADMA is used. When 16-bit Block Count register is used, the Host Driver can set this bit to 0 in ADMA2 mode to enable larger data transfer than the maximum of 65535 block counts supported by the 16-bit Block Count register. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2:3 | AUTO_CMD_ENABLE | RW | RW | 0 | Auto Command Enable<br>This field determines use of Auto Command functions.<br>Note: In SDIO, this field must be set as 00b (Auto Command<br>Disabled).<br>Values:<br>- 0x0 (AUTO_CMD_DISABLED): Auto Command Disabled<br>- 0x1 (AUTO_CMD12_ENABLED): Auto CMD12 Enable<br>- 0x2 (AUTO_CMD23_ENABLED): Auto CMD23 Enable<br>- 0x3 (AUTO_CMD_AUTO_SEL): Auto CMD Auto Select |
| 4 | DATA_XFER_DIR | RW | RW | 0 | Data Transfer Direction Select<br>This bit defines the direction of DAT line data transfers. This<br>bit is set to 1 by the Host Driver to transfer data from the<br>SD/eMMC card to the Host Controller and it is set to 0 for all<br>other commands.<br>Values:<br>- 0x1 (READ): Read (Card to Host)<br>- 0x0 (WRITE): Write (Host to Card) |
| 5 | MULTI_BLK_SEL | RW | RW | 0 | Multi/Single Block Select<br>This bit is set when issuing multiple-block transfer commands using the DAT line. If this bit is set to 0, it is not<br>necessary to set the Block Count register. |
| 6 | RESP_TYPE | RW | RW | 0 | Response Type R1/R5<br>This bit selects either R1 or R5 as a response type when the<br>Response Error Check is selected.<br>Error statuses checked in R1:<br>- OUT_OF_RANGE<br>- ADDRESS_ERROR<br>- BLOCK_LEN_ERROR<br>- WP_VIOLATION<br>- CARD_IS_LOCKED<br>- COM_CRC_ERROR<br>- CARD_ECC_FAILED<br>- CC_ERROR<br>- ERROR<br>Response Flags checked in R5:<br>- COM_CRC_ERROR<br>- ERROR<br>- FUNCTION_NUMBER<br>- OUT_OF_RANGE<br>Values:<br>- 0x0 (RESP_R1): R1 (Memory)<br>- 0x1 (RESP_R5): R5 (SDIO) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 7 | RESP_ERR_CHK _ENABLE | RW | RW | 0 | Response Error Check Enable<br>The Host Controller supports response check function to<br>avoid overhead of response error check by Host driver.<br>Response types of only R1 and R5 can be checked by the<br>Controller. If the Host Controller checks the response error,<br>set this bit to 1 and set Response Interrupt Disable to 1. If an<br>error is detected, the Response Error interrupt is generated<br>in the Error Interrupt Status register.<br>Note:<br>- Response error check must not be enabled for any response type other than R1 and R5.<br>Values:<br>- 0x0 (DISABLED): Response Error Check is disabled<br>- 0x1 (ENABLED): Response Error Check is enabled |
| 8 | RESP_INT_DISABLE | RW | RW | 0 | Response Interrupt Disable<br>The Host Controller supports response check function to<br>avoid overhead of response error check by the Host driver.<br>Response types of only R1 and R5 can be checked by the<br>Controller.<br>If Host Driver checks the response error, set this bit to 0 and<br>wait for Command Complete Interrupt and then check the<br>response register.<br>If the Host Controller checks the response error, set this bit<br>to 1 and set the Response Error Check Enable bit to 1. The<br>Command Complete Interrupt is disabled by this bit<br>regardless of the Command Complete Signal Enable.<br>Values:<br>- 0x0 (ENABLED): Response Interrupt is enabled<br>- 0x1 (DISABLED): Response Interrupt is disabled |

### 28.3.2.6 SDHC_CORE_CMD_R

**Description:** Command register
**Address:** 0x4046100E
**Offset:** 0xE
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to provide the information related to a command and a response packet. This register is applicable for an SD/eMMC mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CMD_TYPE [7:6] | | DATA _PRESENT _SEL [5:5] | CMD_IDX _CHK _ENABLE [4:4] | CMD_CRC _CHK _ENABLE [3:3] | SUB_CMD _FLAG [2:2] | RESP_TYPE_SELECT [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | CMD_INDEX [13:8] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | RESP_TYPE_SELECT | RW | R | 0 | Response Type Select<br>This bit indicates the type of response expected from the<br>card.<br>Values:<br>- 0x0 (NO_RESP): No Response<br>- 0x1 (RESP_LEN_136): Response Length 136<br>- 0x2 (RESP_LEN_48): Response Length 48<br>- 0x3 (RESP_LEN_48B): Response Length 48; Check Busy after response |
| 2 | SUB_CMD_FLAG | RW | R | 0 | Sub Command Flag<br>This bit distinguishes between a main command and a sub<br>command.<br>Values:<br>- 0x0 (MAIN): Main Command<br>- 0x1 (SUB): Sub Command |
| 3 | CMD_CRC_CHK _ENABLE | RW | R | 0 | Command CRC Check Enable<br>This bit enables the Host Controller to check the CRC field in<br>the response. If an error is detected, it is reported as a Command CRC error.<br>Note:<br>- CRC Check enable must be set to 0 for the command with no response, R3 response, and R4 response.<br>Values:<br>- 0x0 (DISABLED): Disable<br>- 0x1 (ENABLED): Enable |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | CMD_IDX_CHK_ENABLE | RW | R | 0 | Command Index Check Enable<br>This bit enables the Host Controller to check the index field in<br>the response to verify if it has the same value as the command index. If the value is not the same, it is reported as<br>a Command Index error.<br>Note:<br>- Index Check enable must be set to 0 for the command<br>with no response, R2 response, R3 response and R4 response.<br>Values:<br>- 0x0 (DISABLED): Disable<br>- 0x1 (ENABLED): Enable |
| 5 | DATA_PRESENT_SEL | RW | R | 0 | Data Present Select<br>This bit is set to 1 to indicate that data is present and that the<br>data is transferred using the DAT line. This bit is set to 0 in<br>the following instances:<br>- Command using the CMD line<br>- Command with no data transfer but using busy signal on<br>the DAT[0] line<br>- Resume Command<br>Values:<br>- 0x0 (NO_DATA): No Data Present<br>- 0x1 (DATA): Data Present |
| 6:7 | CMD_TYPE | RW | R | 0 | Command Type<br>These bits indicate the command type.<br>Note: While issuing Abort CMD using CMD12/CMD52 or<br>reset CMD using CMD0/CMD52, CMD_TYPE field shall be<br>set to 0x3.<br>Values:<br>- 0x3 (ABORT_CMD): Abort<br>- 0x2 (RESUME_CMD): Resume<br>- 0x1 (SUSPEND_CMD): Suspend<br>- 0x0 (NORMAL_CMD): Normal |
| 8:13 | CMD_INDEX | RW | R | 0 | Command Index<br>These bits are set to the command number that is specified<br>in bits 45-40 of the Command Format. |

### 28.3.2.7 SDHC_CORE_RESP01_R

**Description:** Response Register 0/1
**Address:** 0x40461010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register stores 39-08 bits of the Response Field for an SD/eMMC mode. In UHS-II mode, this register stores the response of the TRANS_ABORT CCMD. The response for an SD/eMMC command can be a maximum of 128 bits. These 128 bits are segregated into four 32-bit registers: RESP01_R, RESP23_R, RESP45_R and RESP67_R.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP01 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP01 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP01 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP01 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | RESP01 | R | RW | 0 | Command Response<br>These bits reflect 39-8 bits of SD/eMMC Response Field.<br>Note: For Auto CMD, the 32-bit response (bits 39-8 of the<br>Response Field) is updated in the RESP67_R register. |

### 28.3.2.8 SDHC_CORE_RESP23_R

**Description:** Response Register 2/3
**Address:** 0x40461014
**Offset:** 0x14
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register stores 71-40 bits of the Response Field for an SD/eMMC mode. This register is used to store the response from the cards. The response can be a maximum of 128 bits.
These 128 bits are segregated into four 32-bit registers: RESP01_R, RESP23_R, RESP45_R and
RESP67_R. In UHS-II mode, this register is reserved
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP23 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP23 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP23 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP23 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | RESP23 | R | RW | 0 | Command Response<br>These bits reflect 71-40 bits of the SD/eMMC Response |

### 28.3.2.9 SDHC_CORE_RESP45_R

**Description:** Response Register 4/5
**Address:** 0x40461018
**Offset:** 0x18
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register stores 103-72 bits of the Response Field for an SD/eMMC mode. In UHS-II mode, this register is used to store the lower 4-byte CMD12 response. The response for SD/eMMC
command can be a maximum of 128 bits. These 128 bits are segregated into four 32-bit registers:
RESP01_R, RESP23_R, RESP45_R and RESP67_R.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP45 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP45 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP45 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP45 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | RESP45 | R | RW | 0 | Command Response<br>These bits reflect 103-72 bits of the Response Field. |

### 28.3.2.10 SDHC_CORE_RESP67_R

**Description:** Response Register 6/7
**Address:** 0x4046101C
**Offset:** 0x1C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register stores 135-104 bits of the Response Field for an SD/eMMC mode. In UHSII mode, this register stores the upper 4-byte CMD12 response. The SD/eMMC response can be a
maximum of 128 bits. These 128 bits are segregated into four 32-bit registers: RESP01_R, RESP23_R,
RESP45_R and RESP67_R.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP67 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP67 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP67 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | RESP67 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | RESP67 | R | RW | 0 | Command Response<br>These bits reflect bits 135-104 of SD/EMMC Response Field.<br>Note: For Auto CMD, this register also reflects the 32-bit<br>response (bits 39-8 of the Response Field). |

### 28.3.2.11 SDHC_CORE_BUF_DATA_R

**Description:** Buffer Data Port Register
**Address:** 0x40461020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to access the packet buffer. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BUF_DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | BUF_DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | BUF_DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | BUF_DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | BUF_DATA | RW | RW | 0 | Buffer Data<br>These bits enable access to the Host Controller packet buffer. |

### 28.3.2.12 SDHC_CORE_PSTATE_REG

**Description:** Present State Register
**Address:** 0x40461024
**Offset:** 0x24
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register indicates the present status of the Host Controller. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DAT_7_4 [7:4] | | | | None [3:3] | DAT_LINE_ ACTIVE [2:2] | CMD _INHIBIT _DAT [1:1] | CMD _INHIBIT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | BUF_RD _ENABLE [11:11] | BUF_WR _ENABLE [10:10] | RD_XFER _ACTIVE [9:9] | WR_XFER _ACTIVE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DAT_3_0 [23:20] | | | | WR _PROTECT _SW_LVL [19:19] | CARD _DETECT _PIN_LEV EL [18:18] | CARD _STABLE [17:17] | CARD _INSE RTED [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | SUB_CMD _STAT [28:28] | CMD_ISSU _ERR [27:27] | None [26:26] | HOST _REG_VOL [25:25] | CMD_LINE _LVL [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CMD_INHIBIT | R | RW | 0 | Command Inhibit (CMD)<br>This bit indicates the following :<br>- SD/eMMC mode: If this bit is set to 0, it indicates that the<br>CMD line is not in use and the Host controller can issue<br>an SD/eMMC command using the CMD line. This bit is set when the command register is written. This bit is cleared when the command response is received. This bit<br>is not cleared by the response of auto CMD12/23 but cleared by the response of read/write command.<br>Values:<br>- 0x0 (READY): Host Controller is ready to issue a command<br>- 0x1 (NOT_READY): Host Controller is not ready to issue<br>a command |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | CMD_INHIBIT_DAT | R | RW | 0 | Command Inhibit (DAT)<br>This bit is applicable for SD/eMMC mode and is generated if<br>either DAT line active or Read transfer active is set to 1. If<br>this bit is set to 0, it indicates that the Host Controller can<br>issue subsequent SD/eMMC commands.<br>Values:<br>- 0x0 (READY): Can issue command which used DAT line<br>- 0x1 (NOT_READY): Cannot issue command which used<br>DAT line |
| 2 | DAT_LINE_ACTIVE | R | RW | 0 | DAT Line Active (SD/eMMC Mode only)<br>This bit indicates whether one of the DAT lines on the SD/eMMC bus is in use.<br>In the case of read transactions, this bit indicates whether a<br>read transfer is executing on the SD/eMMC bus.<br>In the case of write transactions, this bit indicates whether a<br>write transfer is executing on the SD/eMMC bus.<br>For a command with busy, this status indicates whether the<br>command executing busy is executing on an SD or eMMC<br>bus.<br>Values:<br>- 0x0 (INACTIVE): DAT Line Inactive<br>- 0x1 (ACTIVE): DAT Line Active |
| 4:7 | DAT_7_4 | R | RW | 0 | DAT[7:4] Line Signal Level<br>This bit is used to check the DAT line level to recover from<br>errors and for debugging. These bits reflect the value of the<br>sd_dat_in (upper nibble) signal. |
| 8 | WR_XFER_ACTIVE | R | RW | 0 | Write Transfer Active<br>This status indicates whether a write transfer is active for<br>SD/eMMC mode.<br>Values:<br>- 0x0 (INACTIVE): No valid data<br>- 0x1 (ACTIVE): Transferring data |
| 9 | RD_XFER_ACTIVE | R | RW | 0 | Read Transfer Active<br>This bit indicates whether a read transfer is active for SD/eMMC mode.<br>Values:<br>- 0x0 (INACTIVE): No valid data<br>- 0x1 (ACTIVE): Transferring data |
| 10 | BUF_WR_ENABLE | R | RW | 0 | Buffer Write Enable<br>This bit is used for non-DMA transfers. This bit is set if space<br>is available for writing data.<br>Values:<br>- 0x0 (DISABLED): Write disable<br>- 0x1 (ENABLED): Write enable |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 11 | BUF_RD_ENABLE | R | RW | 0 | Buffer Read Enable<br>This bit is used for non-DMA transfers. This bit is set if valid<br>data exists in the Host buffer.<br>Values:<br>- 0x0 (DISABLED): Read disable<br>- 0x1 (ENABLED): Read enable |
| 16 | CARD_INSERTED | R | RW | 0 | Card Inserted<br>This bit indicates whether a card has been inserted. The<br>Host Controller debounces this signal so that Host Driver<br>need not wait for it to stabilize.<br>Values:<br>- 0x0 (FALSE): Reset, Debouncing, or No card<br>- 0x1 (TRUE): Card Inserted |
| 17 | CARD_STABLE | R | RW | 0 | Card Stable<br>This bit indicates the stability of the Card Detect Pin Level. A<br>card is not detected if this bit is set to 1 and the value of the<br>CARD_INSERTED bit is 0.<br>Values:<br>- 0x0 (FALSE): Reset or Debouncing<br>- 0x1 (TRUE): No Card or Inserted |
| 18 | CARD_DETECT_PIN_LEVEL | R | RW | 0 | Card Detect Pin Level<br>This bit reflects the inverse synchronized value of the card_detect_n signal.<br>Values:<br>- 0x0 (FALSE): No card present<br>- 0x1 (TRUE): Card Present |
| 19 | WR_PROTECT_SW_LVL | R | RW | 0 | Write Protect Switch Pin Level<br>This bit is supported only for memory and combo cards. This<br>bit reflects the synchronized value of the card_write_prot<br>signal.<br>Values:<br>- 0x0 (FALSE): Write protected<br>- 0x1 (TRUE): Write enabled |
| 20:23 | DAT_3_0 | R | RW | 0 | DAT[3:0] Line Signal Level<br>This bit is used to check the DAT line level to recover from<br>errors and for debugging. These bits reflect the value of the<br>sd_dat_in (lower nibble) signal. |
| 24 | CMD_LINE_LVL | R | RW | 0 | Command-Line Signal Level<br>This bit is used to check the CMD line level to recover from<br>errors and for debugging. These bits reflect the value of the<br>sd_cmd_in signal. |
| 25 | HOST_REG_VOL | R | RW | 0 | Host Regulator Voltage Stable<br>This bit is used to check whether the host regulator voltage is<br>stable for switching the voltage of UHS-I mode. This bit reflects the synchronized value of the host_reg_vol_stable<br>signal.<br>Values:<br>- 0x0 (FALSE): Host Regulator Voltage is not stable<br>- 0x1 (TRUE): Host Regulator Voltage is stable |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 27 | CMD_ISSU_ERR | R | RW | 0 | Command Not Issued by Error<br>This bit is set if a command cannot be issued after setting<br>the command register due to an error except the Auto CMD12 error.<br>Values:<br>- 0x0 (FALSE): No error for issuing a command<br>- 0x1 (TRUE): Command cannot be issued |
| 28 | SUB_CMD_STAT | R | RW | 0 | Sub Command Status<br>This bit is used to distinguish between a main command and<br>a sub command status.<br>Values:<br>- 0x0 (FALSE): Main Command Status<br>- 0x1 (TRUE): Sub Command Status |

### 28.3.2.13 SDHC_CORE_HOST_CTRL1_R

**Description:** Host Control 1 Register
**Address:** 0x40461028
**Offset:** 0x28
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control the operation of the Host Controller. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CARD_DETECT_SIG_SEL [7:7] | CARD_DETECT_TEST_LVL [6:6] | EXT_DAT_XFER [5:5] | DMA_SEL [4:3] | | HIGH_SPEED_EN [2:2] | DAT_XFER_WIDTH [1:1] | LED_CTRL [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | LED_CTRL | RW | R | 0 | LED Control<br>This bit is used to caution the user not to remove the card<br>while the SD card is being accessed. The value is reflected<br>on the led_ctrl ouput.<br>Values:<br>- 0x0 (OFF): LED off<br>- 0x1 (ON): LED on |
| 1 | DAT_XFER_WIDTH | RW | R | 0 | Data Transfer Width<br>For SD/eMMC mode,this bit selects the data transfer width of<br>the Host Controller. The Host Driver sets it to match the data<br>width of the SD/eMMC card.<br>Values:<br>- 0x1 (FOUR_BIT): 4-bit mode<br>- 0x0 (ONE_BIT): 1-bit mode |
| 2 | HIGH_SPEED_EN | RW | R | 0 | High Speed Enable (SD/eMMC Mode only)<br>Before setting this bit, the Host Driver checks the High Speed<br>Support in the Capabilities register.<br>Note: SDHC always outputs the sd_cmd_out and sd_dat_out lines at the rising edge of card clock irrespective of this bit.<br>Values:<br>- 0x1 (HIGH_SPEED): High Speed mode<br>- 0x0 (NORMAL_SPEED): Normal Speed mode |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3:4 | DMA_SEL | RW | R | 0 | DMA Select<br>This field is used to select the DMA type.<br>When Host Version 4 Enable is 1 in Host Control 2 register:<br>- 0x0 - SDMA is selected<br>- 0x1 - Reserved<br>- 0x2 - ADMA2 is selected<br>- 0x3 - ADMA2 or ADMA3 is selected<br>When Host Version 4 Enable is 0 in Host Control 2 register:<br>- 0x0 - SDMA is selected<br>- 0x1 - Reserved<br>- 0x2 - 32-bit Address ADMA2 is selected<br>- 0x3 - Reserved<br>Values:<br>- 0x0 (SDMA): SDMA is selected<br>- 0x1 (RSVD_BIT): Reserved<br>- 0x2 (ADMA2): ADMA2 is selected<br>- 0x3 (ADMA2_3): ADMA2 or ADMA3 is selected |
| 5 | EXT_DAT_XFER | RW | R | 0 | Extended Data Transfer Width<br>This bit controls 8-bit bus width mode of embedded device.<br>Values:<br>- 0x1 (EIGHT_BIT): 8-bit Bus Width<br>- 0x0 (DEFAULT): Bus Width is selected by the Data Transfer Width |
| 6 | CARD_DETECT_TEST_LVL | RW | R | 0 | Card Detect Test Level<br>This bit is enabled while the Card Detect Signal Selection is<br>set to 1 and it indicates whether a card inserted or not.<br>Values:<br>- 0x1 (CARD_INSERTED): Card Inserted<br>- 0x0 (No_CARD): No Card |
| 7 | CARD_DETECT_SIG_SEL | RW | R | 0 | Card Detect Signal Selection<br>This bit selects a source for card detection. When the source<br>for the card detection is switched, the interrupt must be disabled during the switching period.<br>Values:<br>- 0x1 (CARD_DT_TEST_LEVEL): Card Detect Test Level<br>is selected (for test purpose)<br>- 0x0 (card_detect_n): card_detect_n signal is selected (for normal use) |

### 28.3.2.14 SDHC_CORE_PWR_CTRL_R

**Description:** Power Control Register
**Address:** 0x40461029
**Offset:** 0x29
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control the bus power for the Card. This register is applicable for an SD, eMMC, and UHS-II modes.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | SD_BUS_VOL_VDD1 [3:1] | | | SD_BUS_PWR_VDD1 [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | SD_BUS_PWR_VDD1 | RW | RW | 0 | SD Bus Power for VDD1<br>This bit enables VDD1 power of the card. This setting is<br>available on the card_if_pwr_en output so that it<br>can be used to control the VDD1 power supply of the card.<br>Before setting this bit, the SD Host Driver sets the SD Bus<br>Voltage Select bit. If the Host Controller detects a No Card<br>state, this bit is cleared.<br>In SD mode, if this bit is cleared, the Host Controller stops<br>the SD Clock by clearing the SD_CLK_IN bit in the CLK_CTRL_R register.<br>Values:<br>- 0x0 (OFF): Power off<br>- 0x1 (ON): Power on |
| 1:3 | SD_BUS_VOL_VDD1 | RW | R | 0 | These bits are NON-operational (they can be written and read but they have no effect). In a generic HCI host these would select the card supply voltage. But, for the applications targeted for this block it is assumed that the card supply voltage is always fixed at the board level. If for some reason there is a variable power supply then that can be managed through normal GPIO programming separately. |

### 28.3.2.15 SDHC_CORE_BGAP_CTRL_R

**Description:** Block Gap Control Register
**Address:** 0x4046102A
**Offset:** 0x2A
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used by the host driver to control any operation related to Block Gap. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | INT_AT_BGAP [3:3] | RD_WAIT_CTRL [2:2] | CONTINUE_REQ [1:1] | STOP_BG_REQ [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | STOP_BG_REQ | RW | R | 0 | Stop At Block Gap Request<br>This bit is used to stop executing read and write transactions<br>at the next block gap for non-DMA, SDMA, and ADMA transfers.<br>Values:<br>- 0x0 (XFER): Transfer<br>- 0x1 (STOP): Stop |
| 1 | CONTINUE_REQ | RW | RW | 0 | Continue Request<br>This bit is used to restart the transaction, which was stopped<br>using the Stop At Block Gap Request. The Host Controller<br>automatically clears this bit when the transaction restarts. If<br>stop at block gap request is set to 1, any write to this bit is<br>ignored.<br>Values:<br>- 0x0 (NO_AFFECT): No Affect<br>- 0x1 (RESTART): Restart |
| 2 | RD_WAIT_CTRL | RW | R | 0 | Reserved: set to 0 |
| 3 | INT_AT_BGAP | RW | R | 0 | Interrupt At Block Gap<br>This bit is valid only in the 4-bit mode of an SDIO card and is<br>used to select a sample point in the interrupt cycle. Setting to<br>1 enables interrupt detection at the block gap for a multiple<br>block transfer.<br>Values:<br>- 0x0 (DISABLE): Disabled<br>- 0x1 (ENABLE): Enabled |

### 28.3.2.16 SDHC_CORE_WUP_CTRL_R

**Description:** Wakeup Control Register
**Address:** 0x4046102B
**Offset:** 0x2B
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The intention of this 'wakeup' register is to wake up an otherwise idle Host driver. It is NOT a wake up from DeepSleep. clk_peri must be running in order for the events below to be detected and reported. All other clocks to the block can be gated, though. Note that the Host Driver must maintain voltage on the SD Bus by setting the SD Bus Power to 1 in the Power Control Register if a wakeup event through the Card Interrupt is desired.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | WUP _CARD_ REMOVAL [2:2] | WUP _CARD_ INSERT [1:1] | WUP _CARD_ INT [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WUP_CARD_INT | RW | R | 0 | Wakeup Event Enable on SDIO Card Interrupt (through DAT[1]).<br>This bit enables wakeup event through an SDIO Card Interrupt<br>assertion in the Normal Interrupt Status register. This bit can<br>be set to 1 if FN_WUS (Wake Up Support) in CIS is set to 1.<br>Values:<br>- 0x0 (DISABLED): Disable<br>- 0x1 (ENABLED): Enable |
| 1 | WUP_CARD_INSERT | RW | R | 0 | Wakeup Event Enable on SD Card Insertion<br>This bit enables wakeup event through Card Insertion<br>assertion in the Normal Interrupt Status register.<br>FN_WUS<br>(Wake Up Support) in CIS does not affect this bit.<br>Values:<br>- 0x0 (DISABLED): Disable<br>- 0x1 (ENABLED): Enable |
| 2 | WUP_CARD_REMOVAL | RW | R | 0 | Wakeup Event Enable on SD Card Removal<br>This bit enables wakeup event through Card Removal<br>assertion in the Normal Interrupt Status register. For the<br>SDIO card, Wake Up Support (FN_WUS) in the Card Information Structure (CIS) register does not affect this bit.<br>Values:<br>- 0x0 (DISABLED): Disable<br>- 0x1 (ENABLED): Enable |

### 28.3.2.17 SDHC_CORE_CLK_CTRL_R

**Description:** Clock Control Register
**Address:** 0x4046102C
**Offset:** 0x2C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls SDCLK (card clock) in an SD/eMMC mode and RCLK in the UHS-II mode. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_FREQ_SEL [7:6] | | CLK_GEN _SELECT [5:5] | None [4:4] | PLL _ENABLE [3:3] | SD_CLK _EN [2:2] | INTERNAL _CLK _STABLE [1:1] | INTERNAL _CLK_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | FREQ_SEL [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | INTERNAL_CLK_EN | RW | R | 0 | Internal Clock Enable<br>This bit is set to 0 when the Host Driver is not using the Host<br>Controller or the Host Controller awaits a wakeup interrupt.<br>The Host Controller must stop its internal clock to enter a<br>very low power state. Certain registers are not accessible when this bit is off. So, to be safe turn it on for any register access.<br>Values:<br>- 0x0 (FALSE): Stop<br>- 0x1 (TRUE): Oscillate |
| 1 | INTERNAL_CLK _STABLE | R | RW | 0 | Internal Clock Stable<br>This bit enables the Host Driver to check the clock stability<br>twice after the Internal Clock Enable bit is set and after the<br>PLL Enable bit is set. This bit reflects the synchronized value of the Internal Clock Stable signal after the Internal Clock<br>Enable bit is set to 1 and also reflects the synchronized<br>value of the Card Clock Stable signal after the PLL Enable bit is<br>set to 1.<br>Values:<br>- 0x0 (FALSE): Not Ready<br>- 0x1 (TRUE): Ready |
| 2 | SD_CLK_EN | RW | R | 0 | SD/eMMC Clock Enable<br>This bit stops the clk_card output when set to 0. The SDCLK Frequency Select bit can be changed when this bit is set to 0.<br>Values:<br>- 0x0 (FALSE): Disable providing clk_card<br>- 0x1 (TRUE): Enable providing clk_card |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | PLL_ENABLE | RW | R | 0 | PLL Enable<br>This bit is used to activate the PLL (applicable when Host<br>Version 4 Enable = 1).<br>Values:<br>- 0x0 (FALSE): PLL is in low power mode<br>- 0x1 (TRUE): PLL is enabled |
| 5 | CLK_GEN_SELECT | RW | RW | 0 | Clock Generator Select<br>This bit is used to select the clock generator mode in SDCLK Frequency Select.<br>Values:<br>- 0x0 (FALSE): Divided Clock Mode<br>- 0x1 (TRUE): Programmable Clock Mode |
| 6:7 | UPPER_FREQ_SEL | RW | RW | 0 | These bits specify the upper 2 bits of 10-bit SDCLK Frequency Select control. |
| 8:15 | FREQ_SEL | RW | RW | 0 | SDCLK Frequency Select<br>These bits are used to select the frequency of the SDCLK<br>signal.<br>10-bit Divided Clock Mode:<br>- 0x3FF - 1/2046 Divided clock<br>- .....<br>- N - 1/2N Divided Clock<br>- .....<br>- 0x002 - 1/4 Divided Clock<br>- 0x001 - 1/2 Divided Clock<br>- 0x000 - Base clock (10MHz - 255 MHz) |

### 28.3.2.18 SDHC_CORE_TOUT_CTRL_R

**Description:** Timeout Control Register
**Address:** 0x4046102E
**Offset:** 0x2E
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to set the Data Timeout Counter value for an SD/eMMC mode according to the timer clock defined by the Capabilities register, while initializig the Host Controller.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | TOUT_CNT [3:0] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | TOUT_CNT | RW | R | 0 | Data Timeout Counter Value.<br>This value determines the interval by which DAT line timeouts are detected. The Timeout clock frequency is generated by dividing the base clock TMCLK value by this<br>value. When setting this register, prevent inadvertent timeout<br>events by clearing the Data Timeout Error Status Enable (in<br>the Error Interrupt Status Enable register). The values for<br>these bits are:<br>- 0xF - Reserved<br>- 0xE - TMCLK x 2^27<br>- .....<br>- 0x1 - TMCLK x 2^14<br>- 0x0 - TMCLK x 2^13<br>Note: During a boot operating in an eMMC mode, an application must configure the boot data timeout value (approximately 1 sec) in this bit. |

### 28.3.2.19 SDHC_CORE_SW_RST_R

**Description:** Software Reset Register
**Address:** 0x4046102F
**Offset:** 0x2F
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to generate a reset pulse by writing 1 to each bit of this register. After completing the reset, the Host Controller clears each bit. As it takes some time to complete a
software reset, the Host Driver confirms that these bits are 0. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | SW_RST _DAT [2:2] | SW_RST _CMD [1:1] | SW_RST _ALL [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | SW_RST_ALL | RW | RW | 0 | Software Reset For All<br>This reset affects the entire Host Controller except for the<br>card detection circuit. During its initialization, the Host Driver<br>sets this bit to 1 to reset the Host Controller. All registers are<br>reset except the capabilities register. If this bit is set to 1, the<br>Host Driver must issue reset command and reinitialize the<br>card.<br>Values:<br>- 0x0 (FALSE): Work<br>- 0x1 (TRUE): Reset |
| 1 | SW_RST_CMD | RW | RW | 0 | Software Reset For CMD line<br>This bit resets only a part of the command circuit to be able<br>to issue a command. This reset is effective only for a command<br>issuing circuit (including response error statuses related to<br>Command Inhibit (CMD) control) and does not affect the<br>data transfer circuit. Host Controller can continue data transfer even after this reset is executed while handling<br>subcommand-response errors.<br>The following registers and bits are cleared by this bit:<br>- Present State register - Command Inhibit (CMD) bit<br>- Normal Interrupt Status register - Command Complete bit<br>- Error Interrupt Status - Response error statuses related<br>to Command Inhibit (CMD) bit<br>Values:<br>- 0x0 (FALSE): Work<br>- 0x1 (TRUE): Reset |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2 | SW_RST_DAT | RW | RW | 0 | Software Reset For DAT line<br>This bit is used in SD/eMMC mode and it resets only a part<br>of the data circuit and the DMA circuit is also reset.<br>The following registers and bits are cleared by this bit:<br>- Buffer Data Port register<br>- Buffer is cleared and initialized.<br>- Present state register<br>- Buffer Read Enable<br>- Buffer Write Enable<br>- Read Transfer Active<br>- Write Transfer Active<br>- DAT Line Active<br>- Command Inhibit (DAT)<br>- Block Gap Control register<br>- Continue Request<br>- Stop At Block Gap Request<br>- Normal Interrupt status register<br>- Buffer Read Ready<br>- Buffer Write Ready<br>- DMA Interrupt<br>- Block Gap Event<br>- Transfer Complete<br>Values:<br>- 0x0 (FALSE): Work<br>- 0x1 (TRUE): Reset |

### 28.3.2.20 SDHC_CORE_NORMAL_INT_STAT_R

**Description:** Normal Interrupt Status Register
**Address:** 0x40461030
**Offset:** 0x30
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register reflects the status of the Normal Interrupt. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CARD_REMOVAL [7:7] | CARD_INSERTION [6:6] | BUF_RD_READY [5:5] | BUF_WR_READY [4:4] | DMA_INTERRUPT [3:3] | BGAP_EVENT [2:2] | XFER_COMPLETE [1:1] | CMD_COMPLETE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ERR_INTERRUPT [15:15] | CQE_EVENT [14:14] | FX_EVENT [13:13] | None [12:9] | | | | CARD_INTERRUPT [8:8] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CMD_COMPLETE | RW1C | RW | 0 | Command Complete<br>In an SD/eMMC Mode, this bit is set when the end bit of a<br>response except for Auto CMD12 and Auto CMD23.<br>This interrupt is not generated when the Response Interrupt<br>Disable in Transfer Mode Register is set to 1.<br>Values:<br>- 0x0 (FALSE): No command complete<br>- 0x1 (TRUE): Command Complete |
| 1 | XFER_COMPLETE | RW1C | RW | 0 | Transfer Complete<br>This bit is set when a read/write transfer and a command<br>with status busy is completed.<br>Values:<br>- 0x0 (FALSE): Not complete<br>- 0x1 (TRUE): Command execution is completed |
| 2 | BGAP_EVENT | RW1C | RW | 0 | Block Gap Event<br>This bit is set when both read/write transaction is stopped at<br>block gap due to a Stop at Block Gap Request.<br>Values:<br>- 0x0 (FALSE): No Block Gap Event<br>- 0x1 (TRUE): Transaction stopped at block gap |
| 3 | DMA_INTERRUPT | RW1C | RW | 0 | DMA Interrupt<br>This bit is set if the Host Controller detects the SDMA Buffer<br>Boundary during transfer. In case of ADMA, by setting the Int<br>field in the descriptor table, the Host controller generates this<br>interrupt. This interrupt is not generated after a Transfer<br>Complete.<br>Values:<br>- 0x0 (FALSE): No DMA Interrupt<br>- 0x1 (TRUE): DMA Interrupt is generated |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | BUF_WR_READY | RW1C | RW | 0 | Buffer Write Ready<br>This bit is set if the Buffer Write Enable changes from 0 to 1.<br>Values:<br>- 0x0 (FALSE): Not ready to write buffer<br>- 0x1 (TRUE): Ready to write buffer |
| 5 | BUF_RD_READY | RW1C | RW | 0 | Buffer Read Ready<br>This bit is set if the Buffer Read Enable changes from 0 to 1.<br>Values:<br>- 0x0 (FALSE): Not ready to read buffer<br>- 0x1 (TRUE): Ready to read buffer |
| 6 | CARD_INSERTION | RW1C | RW | 0 | Card Insertion<br>This bit is set if the Card Inserted in the Present State register changes from 0 to 1.<br>Values:<br>- 0x0 (FALSE): Card state stable or Debouncing<br>- 0x1 (TRUE): Card Inserted |
| 7 | CARD_REMOVAL | RW1C | RW | 0 | Card Removal<br>This bit is set if the Card Inserted in the Present State register changes from 1 to 0.<br>Values:<br>- 0x0 (FALSE): Card state stable or Debouncing<br>- 0x1 (TRUE): Card Removed |
| 8 | CARD_INTERRUPT | R | RW | 0 | Card Interrupt<br>This bit reflects the synchronized value of:<br>- DAT[1] Interrupt Input for SD Mode<br>Values:<br>- 0x0 (FALSE): No Card Interrupt<br>- 0x1 (TRUE): Generate Card Interrupt |
| 13 | FX_EVENT | R | RW | 0 | FX Event<br>This status is set when R[14] of response register is set to 1<br>and Response Type R1/R5 is set to 0 in Transfer Mode<br>register. This interrupt is used with response check function.<br>Values:<br>- 0x0 (FALSE): No Event<br>- 0x1 (TRUE): FX Event is detected |
| 14 | CQE_EVENT | RW1C | RW | 0 | Command Queuing Event<br>This status is set if Command Queuing/Crypto related event<br>has occurred in eMMC/SD mode. Read CQHCI's CQIS/CRNQIS register for more details. In UHS-II Mode,<br>this bit is irrelevant.<br>Values:<br>- 0x0 (FALSE): No Event<br>- 0x1 (TRUE): Command Queuing Event is detected |
| 15 | ERR_INTERRUPT | R | RW | 0 | Error Interrupt<br>If any of the bits in the Error Interrupt Status register are set,<br>then this bit is set.<br>Values:<br>- 0x0 (FALSE): No Error<br>- 0x1 (TRUE): Error |

### 28.3.2.21 SDHC_CORE_ERROR_INT_STAT_R

**Description:** Error Interrupt Status Register
**Address:** 0x40461032
**Offset:** 0x32
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register enables an interrupt when the Error Interrupt Status Enable is enabled and at least one of the statuses is set to 1. Writing to 1 clears the bit and writing to 0 retains the bit unchanged. Signals defined in this register can be enabled by the Error Interrupt Status Enable register, but not by the Error Interrupt Signal Enable register. More than one status can be cleared with a single register write. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CUR_LMT_ERR [7:7] | DATA_END_BIT_ERR [6:6] | DATA_CRC_ERR [5:5] | DATA_TOUT_ERR [4:4] | CMD_IDX_ERR [3:3] | CMD_END_BIT_ERR [2:2] | CMD_CRC_ERR [1:1] | CMD_TOUT_ERR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | BOOT_ACK_ERR [12:12] | RESP_ERR [11:11] | TUNING_ERR [10:10] | ADMA_ERR [9:9] | AUTO_CMD_ERR [8:8] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CMD_TOUT_ERR | RW1C | RW | 0 | Command Timeout Error<br>In SD/eMMC Mode,this bit is set only if no response is returned within 64 SD clock cycles from the end bit of the command. If the Host Controller detects a CMD line conflict, along with Command CRC Error bit, this bit is set to 1, without waiting for 64 SD/eMMC card clock cycles.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Time out |
| 1 | CMD_CRC_ERR | RW1C | RW | 0 | Command CRC Error<br>Command CRC Error is generated in SD/eMMC mode for following two cases.<br>- If a response is returned and the Command Timeout Error is set to 0 (indicating no timeout), this bit is set to 1 when detecting a CRC error in the command response.<br>- The Host Controller detects a CMD line conflict by monitoring the CMD line when a command is issued. If the Host Controller drives the CMD line to 1 level, but detects 0 level on the CMD line at the next SD clock edge, then the Host Controller aborts the command (stop driving CMD line) and set this bit to 1. The Command Timeout Error is also set to 1 to distinguish a CMD line conflict.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): CRC error generated |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2 | CMD_END_BIT_ERR | RW1C | RW | 0 | Command End Bit Error<br>This bit is set when detecting that the end bit of a command<br>response is 0 in SD/eMMC mode.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): End Bit error generated |
| 3 | CMD_IDX_ERR | RW1C | RW | 0 | Command Index Error<br>This bit is set if a Command Index error occurs in the command respons in SD/eMMC mode.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |
| 4 | DATA_TOUT_ERR | RW1C | RW | 0 | Data Timeout Error<br>This bit is set in SD/eMMC mode when detecting one of the<br>following timeout conditions:<br>- Busy timeout for R1b, R5b type<br>- Busy timeout after Write CRC status<br>- Write CRC Status timeout<br>- Read Data timeout<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Time out |
| 5 | DATA_CRC_ERR | RW1C | RW | 0 | Data CRC Error<br>This error occurs in SD/eMMC mode when detecting CRC<br>error when transferring read data which uses the DAT line,<br>when detecting the Write CRC status having a value of other<br>than 010 or when write CRC status timeout.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |
| 6 | DATA_END_BIT_ERR | RW1C | RW | 0 | Data End Bit Error<br>This error occurs in SD/eMMC mode either when detecting 0<br>at the end bit position of read data that uses the DAT line or<br>at the end bit position of the CRC status.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 7 | CUR_LMT_ERR | RW1C | RW | 0 | Current Limit Error<br>By setting the SD Bus Power bit in the Power Control register, the Host Controller is requested to supply power for<br>the SD Bus. If the Host Controller supports the Current Limit<br>function, it can be protected from an illegal card by stopping<br>power supply to the card in which case this bit indicates a<br>failure status. A reading of 1 for this bit means that the Host<br>Controller is not supplying power to the SD card due to some<br>failure. A reading of 0 for this bit means that the Host Controller is supplying power and no error has occurred. The<br>Host Controller may require some sampling time to detect<br>the current limit. DWC_mshc Host Controller does not support this function, this bit is always set to 0.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Power Fail |
| 8 | AUTO_CMD_ERR | RW1C | RW | 0 | Auto CMD Error<br>This error status is used by Auto CMD12 and Auto CMD23 in<br>SD/eMMC mode. This bit is set when detecting that any of<br>the bits D00 to D05 in Auto CMD Error Status register has<br>changed from 0 to 1. D07 is effective in case of Auto CMD12.<br>Auto CMD Error Status register is valid while this bit is set to<br>1 and may be cleared by clearing of this bit.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 9 | ADMA_ERR | RW1C | RW | 0 | ADMA Error<br>This bit is set when the Host Controller detects error during<br>ADMA-based data transfer. The error could be due to following reasons:<br>- Error response received from System bus (Master I/F)<br>- ADMA3,ADMA2 Descriptors invalid<br>- CQE Task or Transfer descriptors invalid<br>When the error occurs, the state of the ADMA is saved in the<br>ADMA Error Status register.<br>In eMMC CQE mode:<br>The Host Controller generates this Interrupt when it detects<br>an invalid descriptor data (Valid=0) at the ST_FDS state.<br>ADMA Error State in the ADMA Error Status indicates that<br>an error has occurred in ST_FDS state. The Host Driver may<br>find that Valid bit is not set at the error descriptor.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |
| 10 | TUNING_ERR | RW1C | RW | 0 | Reserved |
| 11 | RESP_ERR | RW1C | RW | 0 | Response Error<br>Host Controller Version 4.00 supports response error check<br>function to avoid overhead of response error check by Host<br>Driver during DMA execution. If Response Error Check Enable is set to 1 in the Transfer Mode register, Host Controller Checks R1 or R5 response. If an error is detected<br>in a response, this bit is set to 1.This is applicable in SD/eMMC mode.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |
| 12 | BOOT_ACK_ERR | RW1C | RW | 0 | Boot Acknowledgement Error<br>This bit is set when there is a timeout for boot acknowledgement or when detecting boot ack status having<br>a value other than 010. This is applicable only when boot<br>acknowledgement is expected in eMMC mode.<br>In SD mode, this bit is irrelevant.<br>Values:<br>- 0x0 (FALSE): No error<br>- 0x1 (TRUE): Error |

### 28.3.2.22 SDHC_CORE_NORMAL_INT_STAT_EN_R

**Description:** Normal Interrupt Status Enable Register
**Address:** 0x40461034
**Offset:** 0x34
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register enables the Interrupt Status for Normal Interrupt Status register (NORMAL_INT_STAT_R) when NORMAL_INT_STAT_R is set to 1. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

### 28.3.2.24 SDHC_CORE_NORMAL_INT_SIGNAL_EN_R

**Description:** Normal Interrupt Signal Enable Register
**Address:** 0x40461038
**Offset:** 0x38
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to select the interrupt status that is indicated to the Host System as the interrupt. All these status bits share the same 1-bit interrupt line. Setting any of these bits to 1,
enables interrupt generation. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CARD_REMOVAL_SIGNAL_EN [7:7] | CARD_INSERTION_SIGNAL_EN [6:6] | BUF_RD_READY_SIGNAL_EN [5:5] | BUF_WR_READY_SIGNAL_EN [4:4] | DMA_INTERRUPT_SIGNAL_EN [3:3] | BGAP_EVENT_SIGNAL_EN [2:2] | XFER_COMPLETE_SIGNAL_EN [1:1] | CMD_COMPLETE_SIGNAL_EN [0:0] |

### 28.3.2.26 SDHC_CORE_AUTO_CMD_STAT_R

**Description:** Auto CMD Status Register
**Address:** 0x4046103C
**Offset:** 0x3C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to indicate the CMD12 response error of Auto CMD12, and the CMD23 response error of Auto CMD23. The Host driver can determine the kind of Auto CMD12/CMD23 errors that can occur in this register. Auto CMD23 errors are indicated in bit 04-01.
This register is valid only when Auto CMD Error is set. This register is applicable for an SD/eMMC
mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CMD_NOT_ISSUED_AUTO_CMD12 [7:7] | None [6:6] | AUTO_CMD_RESP_ERR [5:5] | AUTO_CMD_IDX_ERR [4:4] | AUTO_CMD_EBIT_ERR [3:3] | AUTO_CMD_CRC_ERR [2:2] | AUTO_CMD_TOUT_ERR [1:1] | AUTO_CMD12_NOT_EXEC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | AUTO_CMD12_NOT_EXEC | R | RW | 0 | Auto CMD12 Not Executed<br>If multiple memory block data transfer is not started due to a<br>command error, this bit is not set because it is not necessary<br>to issue an Auto CMD12. Setting this bit to 1 means that the<br>Host Controller cannot issue Auto CMD12 to stop multiple<br>memory block data transfer, due to some error. If this bit is<br>set to 1, error status bits (D04-D01) is meaningless.<br>This bit is set to 0 when Auto CMD Error is generated by<br>Auto CMD23.<br>Values:<br>- 0x1 (TRUE): Not Executed<br>- 0x0 (FALSE): Executed |
| 1 | AUTO_CMD_TOUT_ERR | R | RW | 0 | Auto CMD Timeout Error<br>This bit is set if no response is returned with 64 SDCLK<br>cycles from the end bit of the command.<br>If this bit is set to 1, error status bits (D04-D01) are meaningless.<br>Values:<br>- 0x1 (TRUE): Time out<br>- 0x0 (FALSE): No Error |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2 | AUTO_CMD_CRC_ERR | R | RW | 0 | Auto CMD CRC Error<br>This bit is set when detecting a CRC error in the command<br>response.<br>Values:<br>- 0x1 (TRUE): CRC Error Generated<br>- 0x0 (FALSE): No Error |
| 3 | AUTO_CMD_EBIT_ERR | R | RW | 0 | Auto CMD End Bit Error<br>This bit is set when detecting that the end bit of command<br>response is 0.<br>Values:<br>- 0x1 (TRUE): End Bit Error Generated<br>- 0x0 (FALSE): No Error |
| 4 | AUTO_CMD_IDX_ERR | R | RW | 0 | Auto CMD Index Error<br>This bit is set if the command index error occurs in response<br>to a command.<br>Values:<br>- 0x1 (TRUE): Error<br>- 0x0 (FALSE): No Error |
| 5 | AUTO_CMD_RESP_ERR | R | RW | 0 | Auto CMD Response Error<br>This bit is set when Response Error Check Enable in the<br>Transfer Mode register is set to 1 and an error is detected in<br>R1 response of either Auto CMD12 or CMD13. This status is<br>ignored if any bit between D00 to D04 is set to 1.<br>Values:<br>- 0x1 (TRUE): Error<br>- 0x0 (FALSE): No Error |
| 7 | CMD_NOT_ISSUED<br>_AUTO_CMD12 | R | RW | 0 | Command Not Issued By Auto CMD12 Error<br>If this bit is set to 1, CMD_wo_DAT is not executed due to an<br>Auto CMD12 Error (D04-D01) in this register.<br>This bit is set to 0 when Auto CMD Error is generated by<br>Auto CMD23.<br>Values:<br>- 0x1 (TRUE): Not Issued<br>- 0x0 (FALSE): No Error |

### 28.3.2.27 SDHC_CORE_HOST_CTRL2_R

**Description:** Host Control 2 Register
**Address:** 0x4046103E
**Offset:** 0x3E
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control how the Host Controller operates. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SAMPLE_CLK_SEL [7:7] | EXEC_TUNING [6:6] | DRV_STRENGTH_SEL [5:4] | | SIGNALING_EN [3:3] | UHS_MODE_SEL [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | PRESET_VAL_ENABLE [15:15] | ASYNC_INT_ENABLE [14:14] | ADDRESSING [13:13] | HOST_VER4_ENABLE [12:12] | CMD23_ENABLE [11:11] | ADMA2_LEN_MODE [10:10] | None [9:9] | UHS2_IF_ENABLE [8:8] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | UHS_MODE_SEL | RW | R | 0 | UHS Mode/eMMC Speed Mode Select<br>These bits are used to select UHS mode in the SD mode of<br>operation. In eMMC mode, these bits are used to select<br>eMMC Speed mode.<br>UHS-I Mode:<br>- 0x0: SDR12<br>- 0x1: SDR25<br>- 0x2: SDR50<br>- 0x3: Reserved<br>- 0x4: DDR50<br>- 0x5: Reserved<br>- 0x6: Reserved<br>- 0x7: Reserved<br>eMMC Speed Mode (eMMC mode only):<br>- 0x0: Legacy<br>- 0x1: High Speed SDR<br>- 0x2: Reserved<br>- 0x3: Reserved<br>- 0x4: High Speed DDR<br>- 0x5: Reserved<br>- 0x6: Reserved<br>- 0x7: Reserved |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | SIGNALING_EN | RW | RW | 0 | 1.8V Signaling Enable<br>This bit controls voltage regulator for I/O cell in SD UHS-I mode. Setting this bit from 0 to 1 starts changing the<br>signal voltage from 3.3V to 1.8V. Host Controller clears this<br>bit if switching to 1.8V signaling fails per protocol. The value is reflected on the io_volt_sel output which can then be used to change an external regulator to supply 1.8V instead of 3.3V on the VDDIO pin associated with the CLK/CMD/DAT signals.<br>Note: This bit must be set for all UHS-I speed modes (SDR12/SDR25/SDR50/DDR50).<br>Values:<br>- 0x0 (V_3_3): 3.3V Signalling<br>- 0x1 (V_1_8): 1.8V Signalling |
| 4:5 | DRV_STRENGTH_SEL | RW | RW | 0 | Driver Strength Select<br>These bits are used to select the Host Controller output driver in<br>1.8V signaling UHS-I/eMMC speed modes. The value is reflected on the io_drive_strength[1:0] output.<br>- 0x0 (TYPEB): Driver TYPEB is selected<br>- 0x1 (TYPEA): Driver TYPEA is selected<br>- 0x2 (TYPEC): Driver TYPEC is selected<br>- 0x3 (TYPED): Driver TYPED is selected |
| 6 | EXEC_TUNING | RW | RW | 0 | Reserved: set to 0 |
| 7 | SAMPLE_CLK_SEL | RW | RW | 0 | Reserved: set to 0 |
| 8 | UHS2_IF_ENABLE | RW | R | 0 | Reserved: set to 0 |
| 10 | ADMA2_LEN_MODE | RW | R | 0 | ADMA2 Length Mode<br>This bit selects ADMA2 Length mode to be either 16-bit or<br>26-bit.<br>Values:<br>- 0x0 (FALSE): 16-bit Data Length Mode<br>- 0x1 (TRUE): 26-bit Data Length Mode |
| 11 | CMD23_ENABLE | RW | R | 0 | CMD23 Enable<br>If the card supports CMD23, this bit is set to 1. This bit is<br>used to select Auto CMD23 or Auto CMD12 for ADMA3 data<br>transfer.<br>Values:<br>- 0x0 (FALSE): Auto CMD23 is disabled<br>- 0x1 (TRUE): Auto CMD23 is enabled |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 12 | HOST_VER4_ENABLE | RW | R | 0 | Host Version 4 Enable<br>This bit selects either Version 3.00 compatible mode or Version 4 mode.<br>Functions of following fields are modified for Host Version 4<br>mode:<br>- SDMA Address: SDMA uses ADMA System Address (05Fh-058h) instead of SDMA System Address register<br>(003h-000h)<br>- ADMA2/ADMA3 selection: ADMA3 is selected by DMA<br>select in Host Control 1 register<br>- 32-bit Block Count: SDMA System Address register (003h-000h) is modified to 32-bit Block Count register<br>Note: It is recommended not to program ADMA3 Integrated<br>Descriptor Address registers and<br>Command Queuing registers (if applicable) while operating<br>in Host version less than 4 mode (Host Version 4 Enable =<br>0).<br>Values:<br>- 0x0 (FALSE): Version 3.00 compatible mode<br>- 0x1 (TRUE): Version 4 mode |
| 13 | ADDRESSING | RW | R | 0 | Reserved: set to 0 |
| 14 | ASYNC_INT_ENABLE | RW | R | 0 | Asynchronous Interrupt Enable<br>This bit can be set if a card supports asynchronous interrupts and Asynchronous Interrupt Support is set to 1 in<br>the Capabilities register.<br>Values:<br>- 0x0 (FALSE): Disabled<br>- 0x1 (TRUE): Enabled |
| 15 | PRESET_VAL_ENABLE | RW | R | 0 | Reserved: set to 0 |

### 28.3.2.28 SDHC_CORE_CAPABILITIES1_R

**Description:** Capabilities 1 Register - 0 to 31
**Address:** 0x40461040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register provides the Host Driver with information specific to the Host Controller implementation. The host controller may implement these values as fixed or loaded from the flash
memory during power on initialization. Capabilities register is segregated into two 32-bit registers:
CAPABILITIES1_R and CAPABILITIES2_R. The CAPABILITIES1_R register is the lower part of
Capabilities register.
**Default:** 0x276C6481

**Bit-field Table**

| Name | SLOT_TYPE_R [31:30] | | ASYNC_INT_SUPPORT [29:29] | SYS_ADDR_64_V3 [28:28] | SYS_ADDR_64_V4 [27:27] | VOLT_18 [26:26] | VOLT_30 [25:25] | VOLT_33 [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:5 | TOUT_CLK_FREQ | R | R | 1 | Timeout Clock Frequency<br>This bit shows the base clock frequency used to detect Data<br>Timeout Error. The Timeout Clock unit defines the unit of<br>timeout clock frequency. It can be KHz or MHz.<br>- 0x00 - Get information through another method<br>- 0x01 - 1KHz / 1MHz<br>- 0x02 - 2KHz / 2MHz<br>- 0x03 - 3KHz / 3MHz<br>- .....<br>- 0x3F - 63KHz / 63MHz |
| 7 | TOUT_CLK_UNIT | R | R | 1 | Timeout Clock Unit<br>This bit shows the unit of base clock frequency used to detect Data TImeout Error.<br>Values:<br>- 0x0 (KHZ): KHz<br>- 0x1 (MHZ): MHz |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:15 | BASE_CLK_FREQ | R | R | 100 | Base Clock Frequency for SD clock<br>These bits indicate the base (maximum) clock frequency for<br>the SD Clock. The definition of these bits depend on the Host<br>Controller Version.<br>- 6-Bit Base Clock Frequency: This mode is supported by<br>the Host Controller version 1.00 and 2.00. The upper 2 bits are not effective and are always 0. The unit values are 1 MHz. The supported clock range is 10 MHz to 63 MHz.<br>- 0x00 - Get information through another method<br>- 0x01 - 1 MHz<br>- 0x02 - 2 MHz<br>- .....<br>- 0x3F - 63 MHz<br>- 0x40-0xFF - Not Supported<br>- 8-Bit Base Clock Frequency: This mode is supported by<br>the Host Controller version 3.00. The unit values are 1 MHz. The supported clock range is 10 MHz to 255 MHz.<br>- 0x00 - Get information through another method<br>- 0x01 - 1 MHz<br>- 0x02 - 2 MHz<br>- .....<br>- 0xFF - 255 MHz<br>If the frequency is 16.5 MHz, the larger value is set to 0001001b (17 MHz) because the Host Driver uses this value<br>to calculate the clock divider value and it does not exceed<br>the upper limit of the SD Clock frequency. If these bits are all<br>0, the Host system has to get information using a different<br>method. |
| 16:17 | MAX_BLK_LEN | R | R | 0 | Maximum Block Length<br>This bit indicates the maximum block size that the Host driver<br>can read and write to the buffer in the Host Controller. The<br>buffer transfers this block size without wait cycles. The transfer block length is always 512 bytes for the SD Memory<br>irrespective of this bit.<br>Value is fixed to (including the default value):<br>0x0: when MAX_BLK_SIZE=0 indicating 512 Bytes<br>0x1: when MAX_BLK_SIZE=1 indicating 1024 Bytes<br>0x2: Reserved<br>0x3: Reserved |
| 18 | EMBEDDED_8_BIT | R | R | 1 | 8-bit Support for Embedded Device<br>This bit indicates whether the Host Controller is capable of<br>using an 8-bit bus width mode. This bit is not effective when<br>the Slot Type is set to 10b.<br>Values:<br>- 0x0 (FALSE): 8-bit Bus Width not Supported<br>- 0x1 (TRUE): 8-bit Bus Width Supported |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 19 | ADMA2_SUPPORT | R | R | 1 | ADMA2 Support<br>This bit indicates whether the Host Controller is capable of<br>using ADMA2.<br>Values:<br>- 0x0 (FALSE): ADMA2 not Supported<br>- 0x1 (TRUE): ADMA2 Supported |
| 21 | HIGH_SPEED _SUPPORT | R | R | 1 | High Speed Support<br>This bit indicates whether the Host Controller and the Host<br>System supports High Speed mode and they can supply the<br>SD Clock frequency from 25 MHz to 50 MHz.<br>Values:<br>- 0x0 (FALSE): High Speed not Supported<br>- 0x1 (TRUE): High Speed Supported |
| 22 | SDMA_SUPPORT | R | R | 1 | SDMA Support<br>This bit indicates whether the Host Controller is capable of<br>using SDMA to transfer data between the system memory<br>and the Host Controller directly.<br>Values:<br>- 0x0 (FALSE): SDMA not Supported<br>- 0x1 (TRUE): SDMA Supported |
| 23 | SUS_RES_SUPPORT | R | R | 0 | Suspense/Resume Support<br>This bit indicates whether the Host Controller supports Suspend/Resume functionality. If this bit is 0, the Host Driver<br>does not issue either Suspend or Resume commands because the Suspend and Resume mechanism is not supported.<br>Values:<br>- 0x0 (FALSE): Not Supported<br>- 0x1 (TRUE): Supported |
| 24 | VOLT_33 | R | R | 1 | Voltage Support 3.3V<br>Values:<br>- 0x0 (FALSE): 3.3V Not Supported<br>- 0x1 (TRUE): 3.3V Supported |
| 25 | VOLT_30 | R | R | 1 | Voltage Support 3.0V<br>Values:<br>- 0x0 (FALSE): 3.0V Not Supported<br>- 0x1 (TRUE): 3.0V Supported |
| 26 | VOLT_18 | R | R | 1 | Voltage Support 1.8V<br>Values:<br>- 0x0 (FALSE): 1.8V Not Supported<br>- 0x1 (TRUE): 1.8V Supported |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 27 | SYS_ADDR_64_V4 | R | R | 0 | 64-bit System Address Support for V4<br>This bit sets the Host Controller to support 64-bit System<br>Addressing of V4 mode. When this bit is set to 1, full or part<br>of 64-bit address must be used to decode the Host Controller<br>Registers so that Host Controller Registers can be placed<br>above system memory area. 64-bit address decode of Host<br>Controller registers is effective regardless of setting to 64-bit<br>Addressing in Host Control 2.<br>If this bit is set to 1, 64-bit DMA Addressing for version 4 is<br>enabled by setting Host Version 4 Enable (HOST_VER4_ENABLE = 1) and by setting 64-bit Addressing (ADDRESSING =1) in the Host Control 2 register. SDMA can be used and ADMA2 uses 128-bit Descriptor.<br>Values:<br>- 0x0 (FALSE): 64-bit System Address for V4 is Not Supported<br>- 0x1 (TRUE): 64-bit System Address for V4 is Supported |
| 28 | SYS_ADDR_64_V3 | R | R | 0 | 64-bit System Address Support for V3<br>This bit sets the Host controller to support 64-bit System<br>Addressing of V3 mode.<br>SDMA cannot be used in 64-bit Addressing in Version 3<br>Mode.<br>If this bit is set to 1, 64-bit ADMA2 with using 96-bit Descriptor can be enabled by setting Host Version 4 Enable<br>(HOST_VER4_ENABLE = 0) and DMA select (DMA_SEL =<br>11b).<br>Values:<br>- 0x0 (FALSE): 64-bit System Address for V3 is Not Supported<br>- 0x1 (TRUE): 64-bit System Address for V3 is Supported |
| 29 | ASYNC_INT_SUPPORT | R | R | 1 | Asynchronous Interrupt Support (SD Mode only)<br>Values:<br>- 0x0 (FALSE): Asynchronous Interrupt Not Supported<br>- 0x1 (TRUE): Asynchronous Interrupt Supported |
| 30:31 | SLOT_TYPE_R | R | R | 0 | Slot Type<br>These bits indicate usage of a slot by a specific Host System.<br>Values:<br>- 0x0 (REMOVABLE_SLOT): Removable Card Slot<br>- 0x1 (EMBEDDED_SLOT): Embedded Slot for one Device<br>- 0x2 (SHARED_SLOT): Shared Bus Slot (SD mode)<br>- 0x3 (UHS2_EMBEDDED_SLOT): UHS-II Multiple Embedded Devices |

### 28.3.2.29 SDHC_CORE_CAPABILITIES2_R

**Description:** Capabilities Register - 32 to 63
**Address:** 0x40461044
**Offset:** 0x44
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** register provides the Host Driver with information specific to the Host Controller implementation. The host controller may implement these values as fixed or as loaded from flash
memory during power on initialization. Capabilities register is segregated into two 32-bit registers,
namely CAPABILITIES1_R and CAPABILITIES2_R. The CAPABILITIES2_R register is upper part of
Capabilities register.
**Default:** 0x8000077

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | DRV _TYPED [6:6] | DRV _TYPEC [5:5] | DRV _TYPEA [4:4] | UHS2 _SUPPORT [3:3] | DDR50 _SUPPORT [2:2] | SDR104 _SUPPORT [1:1] | SDR50 _SUPPORT [0:0] |

|---|---|---|---|---|---|
| 27 | ADMA3_SUPPORT | R | R | 1 | ADMA3 Support<br>This bit indicates whether the Host Controller is capable of<br>using ADMA3.<br>Values:<br>- 0x0 (FALSE): ADMA3 not Supported<br>- 0x1 (TRUE): ADMA3 Supported |
| 28 | VDD2_18V_SUPPORT | R | R | 0 | 1.8V VDD2 Support<br>This bit indicates support of VDD2 for the Host System.<br>Values:<br>- 0x0 (FALSE): 1.8V VDD2 is not Supported<br>- 0x1 (TRUE): 1.8V VDD2 is Supported |

### 28.3.2.30 SDHC_CORE_CURR_CAPABILITIES1_R

**Description:** Current Capabilities Register - 0 to 31
**Address:** 0x40461048
**Offset:** 0x48
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register indicate the maximum current capability for each voltage, for VDD1. The value is meaningful if the Voltage Support is set in the Capabilities register. If this information is
supplied by the Host System through another method, all the Maximum Current Capabilities registers are set to 0.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MAX_CUR_33V [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | MAX_CUR_30V [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | MAX_CUR_18V [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | MAX_CUR_33V | R | R | 0 | Maximum Current for 3.3V<br>This bit specifies the Maximum Current for 3.3V VDD1 power<br>supply for the card.<br>- 0: Get information through another method<br>- 1: 4mA<br>- 2: 8mA<br>- 3: 13mA<br>- .....<br>- 255: 1020mA |
| 8:15 | MAX_CUR_30V | R | R | 0 | Maximum Current for 3.0V<br>This bit specifies the Maximum Current for 3.0V VDD1 power<br>supply for the card.<br>- 0: Get information through another method<br>- 1: 4mA<br>- 2: 8mA<br>- 3: 13mA<br>- .....<br>- 255: 1020mA |
| 16:23 | MAX_CUR_18V | R | R | 0 | Maximum Current for 1.8V<br>This bit specifies the Maximum Current for 1.8V VDD1 power<br>supply for the card.<br>- 0: Get information through another method<br>- 1: 4mA<br>- 2: 8mA<br>- 3: 13mA<br>- .....<br>- 255: 1020mA |

### 28.3.2.31 SDHC_CORE_CURR_CAPABILITIES2_R

**Description:** Maximum Current Capabilities Register - 32 to 63
**Address:** 0x4046104C
**Offset:** 0x4C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register indicates the maximum current capability for each voltage (for VDD2). The value is meaningful if Voltage Support is set in the Capabilities register. If this information is supplied by the Host System through another method, all the Maximum Current Capabilities registers are set to 0.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MAX_CUR_VDD2_18V [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | MAX_CUR_VDD2_18V | R | R | 0 | Maximum Current for 1.8V VDD2<br>This bit specifies the Maximum Current for 1.8V VDD2 power<br>supply for the UHS-II card.<br>- 0: Get information through another method<br>- 1: 4mA<br>- 2: 8mA<br>- 3: 13mA<br>- .....<br>- 255: 1020mA |

### 28.3.2.32 SDHC_CORE_FORCE_AUTO_CMD_STAT_R

**Description:** Force Event Register for Auto CMD Error Status register
**Address:** 0x40461050
**Offset:** 0x50
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The register is not a physically implemented but is an address at which the Auto CMD Error Status register can be written.This register is applicable for an SD/eMMC mode.
- 1 : Sets each bit of the Auto CMD Error Status register
- 0 : No effect

**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FORCE_CMD_NOT_ISSUED_AUTO_CMD12 [7:7] | None [6:6] | FORCE_AUTO_CMD_RESP_ERR [5:5] | FORCE_AUTO_CMD_IDX_ERR [4:4] | FORCE_AUTO_CMD_EBIT_ERR [3:3] | FORCE_AUTO_CMD_CRC_ERR [2:2] | FORCE_AUTO_CMD_TOUT_ERR [1:1] | FORCE_AUTO_CMD12_NOT_EXEC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | FORCE_AUTO_CMD12_NOT_EXEC | W | R | 0 | Force Event for Auto CMD12 Not Executed<br>Values:<br>- 0x1 (TRUE): Auto CMD12 Not Executed Status is set<br>- 0x0 (FALSE): Not Affected |
| 1 | FORCE_AUTO_CMD_TOUT_ERR | W | R | 0 | Force Event for Auto CMD Timeout Error<br>Values:<br>- 0x1 (TRUE): Auto CMD Timeout Error Status is set<br>- 0x0 (FALSE): Not Affected |
| 2 | FORCE_AUTO_CMD_CRC_ERR | W | R | 0 | Force Event for Auto CMD CRC Error<br>Values:<br>- 0x1 (TRUE): Auto CMD CRC Error Status is set<br>- 0x0 (FALSE): Not Affected |
| 3 | FORCE_AUTO_CMD_EBIT_ERR | W | R | 0 | Force Event for Auto CMD End Bit Error<br>Values:<br>- 0x1 (TRUE): Auto CMD End Bit Error Status is set<br>- 0x0 (FALSE): Not Affected |
| 4 | FORCE_AUTO_CMD_IDX_ERR | W | R | 0 | Force Event for Auto CMD Index Error<br>Values:<br>- 0x1 (TRUE): Auto CMD Index Error Status is set<br>- 0x0 (FALSE): Not Affected |
| 5 | FORCE_AUTO_CMD_RESP_ERR | W | R | 0 | Force Event for Auto CMD Response Error<br>Values:<br>- 0x1 (TRUE): Auto CMD Response Error Status is set<br>- 0x0 (FALSE): Not Affected |
| 7 | FORCE_CMD_NOT_ISSUED_AUTO_CMD12 | W | R | 0 | Force Event for Command Not Issued By Auto CMD12 Error<br>Values:<br>- 0x1 (TRUE): Command Not Issued By Auto CMD12 Error<br>Status is set<br>- 0x0 (FALSE): Not Affected |

### 28.3.2.33 SDHC_CORE_FORCE_ERROR_INT_STAT_R

**Description:** Force Event Register for Error Interrupt Status
**Address:** 0x40461052
**Offset:** 0x52
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is not physically implemented but is an address at which the Error Interrupt Status register can be written. The effect of a write to this address is reflected in the Error Interrupt Status register if the corresponding bit of the Error Interrupt Status Enable register is set. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FORCE_CUR_LMT_ERR [7:7] | FORCE_DATA_END_BIT_ERR [6:6] | FORCE_DATA_CRC_ERR [5:5] | FORCE_DATA_TOUT_ERR [4:4] | FORCE_CMD_IDX_ERR [3:3] | FORCE_CMD_END_BIT_ERR [2:2] | FORCE_CMD_CRC_ERR [1:1] | FORCE_CMD_TOUT_ERR [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | FORCE_VENDOR_ERR3 [15:15] | FORCE_VENDOR_ERR2 [14:14] | FORCE_VENDOR_ERR1 [13:13] | FORCE_BOOT_ACK_ERR [12:12] | FORCE_RESP_ERR [11:11] | FORCE_TUNING_ERR [10:10] | FORCE_ADMA_ERR [9:9] | FORCE_AUTO_CMD_ERR [8:8] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | FORCE_CMD_TOUT_ERR | RW | R | 0 | Force Event for Command Timeout Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Command Timeout Error Status is set |
| 1 | FORCE_CMD_CRC_ERR | RW | R | 0 | Force Event for Command CRC Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Command CRC Error Status is set |
| 2 | FORCE_CMD_END_BIT_ERR | RW | R | 0 | Force Event for Command End Bit Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Command End Bit Error Status is set |
| 3 | FORCE_CMD_IDX_ERR | RW | R | 0 | Force Event for Command Index Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Command Index Error Status is set |
| 4 | FORCE_DATA_TOUT_ERR | RW | R | 0 | Force Event for Data Timeout Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Data Timeout Error Status is set |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 5 | FORCE_DATA_CRC_ERR | RW | R | 0 | Force Event for Data CRC Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Data CRC Error Status is set |
| 6 | FORCE_DATA_END_BIT_ERR | RW | R | 0 | Force Event for Data End Bit Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Data End Bit Error Status is set |
| 7 | FORCE_CUR_LMT_ERR | RW | R | 0 | Force Event for Current Limit Error<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Current Limit Error Status is set |
| 8 | FORCE_AUTO_CMD_ERR | RW | R | 0 | Force Event for Auto CMD Error (SD/eMMC Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Auto CMD Error Status is set |
| 9 | FORCE_ADMA_ERR | RW | R | 0 | Force Event for ADMA Error<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): ADMA Error Status is set |
| 10 | FORCE_TUNING_ERR | RW | R | 0 | Force Event for Tuning Error (UHS-I Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Tuning Error Status is set |
| 11 | FORCE_RESP_ERR | RW | R | 0 | Force Event for Response Error (SD Mode only)<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Response Error Status is set |
| 12 | FORCE_BOOT_ACK_ERR | RW | R | 0 | Force Event for Boot Ack error<br>Values:<br>- 0x0 (FALSE): Not Affected<br>- 0x1 (TRUE): Boot ack Error Status is set |
| 13 | FORCE_VENDOR_ERR1 | RW | R | 0 | This bit (FORCE_VENDOR_ERR1) of the FORCE_ERROR_INT_STAT_R register is reserved. It always returns 0. |
| 14 | FORCE_VENDOR_ERR2 | RW | R | 0 | This bit (FORCE_VENDOR_ERR2) of the FORCE_ERROR_INT_STAT_R register is reserved. It always returns 0. |
| 15 | FORCE_VENDOR_ERR3 | RW | R | 0 | This bit (FORCE_VENDOR_ERR3) of the FORCE_ERROR_INT_STAT_R register is reserved. It always returns 0. |

### 28.3.2.34 SDHC_CORE_ADMA_ERR_STAT_R

**Description:** ADMA Error Status Register
**Address:** 0x40461054
**Offset:** 0x54
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register stores the ADMA state during an ADMA error. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | ADMA_LEN_ERR [2:2] | ADMA_ERR_STATES [1:0] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | ADMA_ERR_STATES | R | RW | 0 | ADMA Error States<br>These bits indicate the state of ADMA when an error occurs<br>during ADMA data transfer.<br>Values:<br>- 0x0 (ST_STOP): Stop DMA - SYS_ADR register points to<br>a location next to the error descriptor<br>- 0x1 (ST_FDS): Fetch Descriptor - SYS_ADR register points to the error descriptor<br>- 0x2 (UNUSED): Never set this state<br>- 0x3 (ST_TFR): Transfer Data - SYS_ADR register points<br>to a location next to the error descriptor |
| 2 | ADMA_LEN_ERR | R | RW | 0 | ADMA Length Mismatch Error States<br>This error occurs in the following instances:<br>- While the Block Count Enable is being set, the total data<br>length specified by the Descriptor table is different from<br>that specified by the Block Count and Block Length<br>- When the total data length cannot be divided by the block<br>length<br>Values:<br>- 0x0 (NO_ERR): No Error<br>- 0x1 (ERROR): Error |

### 28.3.2.35 SDHC_CORE_ADMA_SA_LOW_R

**Description:** ADMA System Address Register - Low
**Address:** 0x40461058
**Offset:** 0x58
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register holds the lower 32-bit system address for DMA transfer. This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_SA_LOW [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_SA_LOW [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_SA_LOW [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_SA_LOW [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | ADMA_SA_LOW | RW | RW | 0 | ADMA System Address<br>These bits indicate the lower 32 bits of the ADMA system<br>address.<br>- SDMA: If Host Version 4 Enable is set to 1, this register<br>stores the system address of the data location<br>- ADMA2: This register stores the byte address of the executing command of the descriptor table<br>- ADMA3: This register is set by ADMA3. ADMA2 increments the address of this register that points to the<br>next line, every time a Descriptor line is fetched. |

### 28.3.2.36 SDHC_CORE_ADMA_ID_LOW_R

**Description:** ADMA3 Integrated Descriptor Address Register - Low
**Address:** 0x40461078
**Offset:** 0x78
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register holds the lower 32-bit Integrated Descriptor address.This register is applicable for an SD/eMMC/UHS-II mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_ID_LOW [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_ID_LOW [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_ID_LOW [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADMA_ID_LOW [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | ADMA_ID_LOW | RW | RW | 0 | ADMA Integrated Descriptor Address<br>These bits indicate the lower 32-bit of the ADMA Integrated<br>Descriptor address. The start address of Integrated Descriptor is set to these register bits. The ADMA3 fetches<br>one Descriptor Address and increments these bits to indicate<br>the next Descriptor address. |

### 28.3.2.37 SDHC_CORE_HOST_CNTRL_VERS_R

**Description:** Host Controller Version
**Address:** 0x404610FE
**Offset:** 0xFE
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to indicate the Host Controller Version number.
**Default:** 0x5

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SPEC_VERSION_NUM [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | VENDOR_VERSION_NUM [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SPEC_VERSION_NUM | R | R | 5 | Specification Version Number<br>These bits indicate the Host controller specification version.<br>The upper and lower 4-bits indicate the version.<br>Values<br>0x06-0xFF are reserved.<br>Values:<br>- 0x0 (VER_1_00): SD Host Controller Specification Version 1.00<br>- 0x1 (VER_2_00): SD Host Controller Specification Version 2.00<br>- 0x2 (VER_3_00): SD Host Controller Specification Version 3.00<br>- 0x3 (VER_4_00): SD Host Controller Specification Version 4.00<br>- 0x4 (VER_4_10): SD Host Controller Specification Version 4.10<br>- 0x5 (VER_4_20): SD Host Controller Specification Version 4.20 |
| 8:15 | VENDOR_VERSION_NUM | R | R | 0 | Vendor Version Number<br>This field is reserved for the vendor version number.<br>Host<br>Driver must not use this status. |

### 28.3.2.38 SDHC_CORE_MSHC_VER_ID_R

**Description:** MSHC version
**Address:** 0x40461500
**Offset:** 0x500
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register reflects the current release number of DWC_mshc/DWC_mshc_lite.
**Default:** 0x3137302A

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_ID [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_ID [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_ID [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_ID [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | MSHC_VER_ID | R | R | 825700394 | Current release number<br>This field indicates the Synopsys DesignWare Cores DWC_mshc/DWC_mshc_lite current release number that is<br>read by an application.<br>For example, release number '1.60a' is represented in ASCII as 0x313630. Lower 8 bits read from this register can<br>be ignored by the application.<br>An application reading this register in conjunction with the<br>MSHC_VER_TYPE_R register, gathers details of the current<br>release. |

### 28.3.2.39 SDHC_CORE_MSHC_VER_TYPE_R

**Description:** MSHC version type
**Address:** 0x40461504
**Offset:** 0x504
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register reflects the current release type of DWC_mshc/DWC_mshc_lite.
**Default:** 0x67612A2A

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_TYPE [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_TYPE [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_TYPE [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | MSHC_VER_TYPE [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | MSHC_VER_TYPE | R | R | 1734421034 | Current release type<br>This field indicates the Synopsys DesignWare Cores DWC_mshc/DWC_mshc_lite current release type that is<br>read by an application.<br>For example, release type is 'ga' is represented in ASCII as<br>0x6761. Lower 16 bits read from this register can be ignored<br>by the application.<br>An application reading this register in conjunction with the<br>MSHC_VER_ID_R register, gathers details of the current<br>release. |

### 28.3.2.40 SDHC_CORE_MSHC_CTRL_R

**Description:** MSHC Control register
**Address:** 0x40461508
**Offset:** 0x508
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control the operation of MSHC Host Controller.
**Default:** 0x1

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | SW_CG _DIS [4:4] | None [3:1] | | | CMD _CONFL ICT _CHECK [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CMD_CONFLICT _CHECK | RW | R | 1 | Command conflict check<br>This bit enables command conflict check.<br>Note: DWC_mshc controller monitors the CMD line whenever a command is issued and checks whether the<br>value driven on sd_cmd_out matches the value on sd_cmd_in at next subsequent edge of cclk_tx to determine<br>command conflict error. This bit is cleared only if the feed<br>back delay (including IO Pad delay) is more than (t_card_clk_period - t_setup), where t_setup is the setup<br>time of a flop in DWC_mshc. The I/O pad delay is consistent<br>across CMD and DATA lines, and it is within the value: (2*t_card_clk_period - t_setup)<br>Values:<br>- 0x0 (DISABLE_CMD_CONFLICT_CHK): Disable command conflict check<br>- 0x1 (CMD_CONFLICT_CHK_LAT1): Check for command<br>conflict after 1 card clock cycle |
| 4 | SW_CG_DIS | RW | R | 0 | Internal clock gating disable control<br>This bit must be used to disable IP's internal clock gating<br>when required. when disabled clocks are not gated. Clocks<br>to the core (except hclk) must be stopped when programming this bit.<br>Values:<br>- 0x0 (ENABLE): Internal clock gates are active and clock<br>gating is controlled internally<br>- 0x1 (DISABLE): Internal clock gating is disabled, clocks<br>are not gated internally |

### 28.3.2.41 SDHC_CORE_MBIU_CTRL_R

**Description:** MBIU Control register
**Address:** 0x40461510
**Offset:** 0x510
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to select the valid burst types that the AHB Master bus interface can generate. When more than one bit is set the master selects the burst it prefers among those that are enabled in this register.
**Default:** 0x1

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | BURST_INCR16_EN [3:3] | BURST_INCR8_EN [2:2] | BURST_INCR4_EN [1:1] | UNDEFL_INCR_EN [0:0] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | UNDEFL_INCR_EN | RW | R | 1 | Undefined INCR Burst<br>Controls generation of undefined length INCR transfer on<br>Master interface.<br>Values:<br>- 0x0 (FALSE): Undefined INCR type burst is the least preferred burst on AHB Master I/F<br>- 0x1 (TRUE): Undefined INCR type burst is the most preferred burst on AHB Master I/F |
| 1 | BURST_INCR4_EN | RW | R | 0 | INCR4 Burst<br>Controls generation of INCR4 transfers on Master interface.<br>Values:<br>- 0x0 (FALSE): AHB INCR4 burst type is not generated on<br>Master I/F<br>- 0x1 (TRUE): AHB INCR4 burst type can be generated on<br>Master I/F |
| 2 | BURST_INCR8_EN | RW | R | 0 | INCR8 Burst<br>Controls generation of INCR8 transfers on Master interface.<br>Values:<br>- 0x0 (FALSE): AHB INCR8 burst type is not generated on<br>Master I/F<br>- 0x1 (TRUE): AHB INCR8 burst type can be generated on<br>Master I/F |
| 3 | BURST_INCR16_EN | RW | R | 0 | INCR16 Burst<br>Controls generation of INCR16 transfers on Master interface.<br>Values:<br>- 0x0 (FALSE): AHB INCR16 burst type is not generated on<br>Master I/F<br>- 0x1 (TRUE): AHB INCR16 burst type can be generated<br>on Master I/F |

### 28.3.2.42 SDHC_CORE_EMMC_CTRL_R

**Description:** eMMC Control register
**Address:** 0x4046152C
**Offset:** 0x52C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control the eMMC operation.
**Default:** 0xC

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | EMMC_RST_N_OE [3:3] | EMMC_RST_N [2:2] | DISABLE_DATA_CRC_CHK [1:1] | CARD_IS_EMMC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CARD_IS_EMMC | RW | R | 0 | eMMC Card present<br>This bit indicates the type of card connected. An application<br>program this bit based on the card connected to SDHC.<br>Values:<br>- 0x1 (EMMC_CARD): Card connected to SDHC is an eMMC card<br>- 0x0 (NON_EMMC_CARD): Card connected to SDHC is<br>a non-eMMC card |
| 1 | DISABLE_DATA_CRC_CHK | RW | R | 0 | Disable Data CRC Check<br>This bit controls masking of CRC16 error for Card Write in<br>eMMC mode. This is useful in bus testing (CMD19) for an<br>eMMC device. In bus testing, an eMMC card does not send<br>CRC status for a block, which may generate CRC error. This<br>CRC error can be masked using this bit during bus testing.<br>Values:<br>- 0x1 (DISABLE): DATA CRC check is disabled<br>- 0x0 (ENABLE): DATA CRC check is enabled |
| 2 | EMMC_RST_N | RW | R | 1 | EMMC Device Reset signal control.<br>This register field controls the card_emmc_reset_n output of SDHC<br>Values:<br>- 0x1 (RST_DEASSERT): Reset to eMMC device is deasserted<br>- 0x0 (RST_ASSERT): Reset to eMMC device asserted<br>(active low) |
| 3 | EMMC_RST_N_OE | RW | R | 1 | Output Enable (OE) control for EMMC Device Reset signal (card_emmc_reset_n).<br>Values:<br>- 0x1 (ENABLE): OE for card_emmc_reset_n is 1<br>- 0x0 (DISABLE): OE for card_emmc_reset_n is 0 |

### 28.3.2.43 SDHC_CORE_BOOT_CTRL_R

**Description:** eMMC Boot Control register
**Address:** 0x4046152E
**Offset:** 0x52E
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used to control the eMMC Boot operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | VALIDATE_ BOOT [7:7] | None [6:1] | | | | | | MAN _BOOT_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | BOOT_TOUT_CNT [15:12] | | | | None [11:9] | | | BOOT_ACK _ENABLE [8:8] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | MAN_BOOT_EN | RW | RW | 0 | Mandatory Boot Enable<br>This bit is used to initiate the mandatory boot operation. The<br>application sets this bit along with VALIDATE_BOOT bit.<br>Writing 0 is ignored. The SDHC clears this bit after the boot transfer is completed or terminated.<br>Values:<br>- 0x1 (MAN_BOOT_EN): Mandatory boot enable<br>- 0x0 (MAN_BOOT_DIS): Mandatory boot disable |
| 7 | VALIDATE_BOOT | W | R | 0 | Validate Mandatory Boot Enable bit<br>This bit is used to validate the MAN_BOOT_EN bit.<br>Values:<br>- 0x1 (TRUE): Validate Mandatory boot enable bit<br>- 0x0 (FALSE): Ignore Mandatory boot Enable bit |
| 8 | BOOT_ACK_ENABLE | RW | R | 0 | Boot Acknowledge Enable<br>When this bit set, SDHC checks for boot acknowledge start pattern of 0-1-0 during boot operation. This bit is applicable for both mandatory and alternate boot mode.<br>Values:<br>- 0x1 (TRUE): Boot Ack enable<br>- 0x0 (FALSE): Boot Ack disable |
| 12:15 | BOOT_TOUT_CNT | RW | R | 0 | Boot Ack Timeout Counter Value.<br>This value determines the interval by which boot ack timeout<br>(50 ms) is detected when boot ack is expected during boot<br>operation.<br>- 0xF - Reserved<br>- 0xE - TMCLK x 2^27<br>- .. - .....<br>- 0x1 - TMCLK x 2^14<br>- 0x0 - TMCLK x 2^13 |

### 28.3.2.44 SDHC_CORE_GP_IN_R

**Description:** General Purpose Input register
**Address:** 0x40461530
**Offset:** 0x530
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used as a general purpose input register. This register stores all the inputs sampled from input port gp_in.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | GP_IN [0:0] |

### 28.3.2.45 SDHC_CORE_GP_OUT_R

**Description:** General Purpose Output register
**Address:** 0x40461534
**Offset:** 0x534
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is used as a general purpose output register. The contents of this register are reflected on the output port gp_out.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CARD_CLOCK_OUT_DLY [7:6] | | IO_VOLT_SEL_OE [5:5] | CARD_IF_PWR_EN_OE [4:4] | CARD_CLOCK_OE [3:3] | LED_CTRL_OE [2:2] | CARD_MECH_WRITE_PROT_EN [1:1] | CARD_DETECT_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CARD_DETECT_EN | RW | R | 0 | 0: Force card_detect_n input to 0<br>1: Normal card_detect_n operation allowing card detection from a device pin |
| 1 | CARD_MECH_WRITE_PROT_EN | RW | R | 0 | card_mech_write_prot, despite its name, is an active low signal (per the SD Host Controller Standard spec it is officially called SDWP#). Consider that in the following:<br>0: Force card_mech_write_prot input to 0 internally; this forces write protection to be active<br>1: Allow card_mech_write_prot to work normally per the device's pin state |
| 2 | LED_CTRL_OE | RW | R | 0 | Active high output enable for the LED output signal (led_ctrl) controlled through HOST_CTRL1_R.LED_CTRL:<br>0: disable OE associated with the led_ctrl output<br>1: enable OE associated with the led_ctrl output |
| 3 | CARD_CLOCK_OE | RW | R | 0 | Active high output enable for the card clock output (clk_card) which is gated by CLK_CTRL_R.SD_CLK_EN:<br>0: disable OE to the clk_card output<br>1: enable OE to the clk_card output |
| 4 | CARD_IF_PWR_EN_OE | RW | R | 0 | Active high output enable for the card interface power enable output (card_if_pwr_en) controlled through PWR_CTRL_R.SD_BUS_PWR_VDD1:<br>0: disable OE to the card_if_pwr_en output<br>1: enable OE to the card_if_pwr_en output |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 5 | IO_VOLT_SEL_OE | RW | R | 0 | Active high output enable for the IO voltage selection signal (io_volt_sel) controlled through HOST_CTRL_2.SIGNALING_EN:<br>0: disable OE to the io_volt_sel output<br>1: enable OE to the io_volt_sel output |
| 6:7 | CARD_CLOCK_OUT _DLY | RW | R | 0 | Delay CARD_CLOCK output relative to CMD/DAT to meet output setup/hold times; set according to interface mode:<br>00: SD Default Speed, SD High Speed, SD SDR12, eMMC Legacy<br>01: SD SDR25, SD SDR50, eMMC High Speed SDR<br>10: RESERVED<br>11: SD DDR50, eMMC DDR |
| 8:9 | CARD_CLOCK_IN_DLY | RW | R | 0 | Delay CARD_CLOCK input internally to optimally sample CMD/DAT; set according to interface mode:<br>00: SD Default Speed, SD SDR12, eMMC Legacy<br>01: SD SDR25, SD SDR50<br>10: SD High Speed, eMMC High Speed SDR<br>11: SD DDR50, eMMC DDR |

# 29 SFLASH

**Description** FLASH Supervisory Region
**Base Address** 0x17000000
**Size** 0x8000
**Slave Num** MEMORYMAP

| Register Name | Address | Permission | Description |

| SFLASH_APP_PROT_SETTINGS123 | 0x170077EC | FULL | Application protection settings (4*128=512 bytes) |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SFLASH_APP_PROT_SETTINGS124 | 0x170077F0 | FULL | Application protection settings (4*128=512 bytes) |
| SFLASH_APP_PROT_SETTINGS125 | 0x170077F4 | FULL | Application protection settings (4*128=512 bytes) |
| SFLASH_APP_PROT_SETTINGS126 | 0x170077F8 | FULL | Application protection settings (4*128=512 bytes) |
| SFLASH_APP_PROT_SETTINGS127 | 0x170077FC | FULL | Application protection settings (4*128=512 bytes) |
| SFLASH_TOC2_OBJECT_SIZE | 0x17007C00 | FULL | Object size in bytes for CRC calculation starting from offset 0x00 |
| SFLASH_TOC2_MAGIC_NUMBER | 0x17007C04 | FULL | Magic number(0x01211220) |
| SFLASH_TOC2_SMIF_CFG_STRUCT_ADDR | 0x17007C08 | FULL | Null terminated table of pointers representing the SMIF configuration structure |
| SFLASH_TOC2_FIRST_USER_APP_ADDR | 0x17007C0C | FULL | Address of First User Application Object |
| SFLASH_TOC2_FIRST_USER_APP_FORMAT | 0x17007C10 | FULL | Format of First User Application Object. 0 - Basic, 1 - Cypress standard & 2 - Simplified |
| SFLASH_TOC2_SECOND_USER_APP_ADDR | 0x17007C14 | FULL | Address of Second User Application Object |
| SFLASH_TOC2_SECOND_USER_APP_FORMAT | 0x17007C18 | FULL | Format of Second User Application Object. 0 - Basic, 1 - Cypress standard & 2 - Simplified |
| SFLASH_TOC2_FIRST_CMX_1_USER_APP_ADDR | 0x17007C1C | FULL | Address of First CM4 or CM7 core1 User Application Object |
| SFLASH_TOC2_SECOND_CMX_1_USER_APP_ADDR | 0x17007C20 | FULL | Address of Second CM4 or CM7 core1 User Application Object |
| SFLASH_TOC2_FIRST_CMX_2_USER_APP_ADDR | 0x17007C24 | FULL | Address of First CM4 or CM7 core2 User Application Object |
| SFLASH_TOC2_SECOND_CMX_2_USER_APP_ADDR | 0x17007C28 | FULL | Address of Second CM4 or CM7 core2 User Application Object |
| SFLASH_TOC2_SAFETY_CONFIG_FLAG | 0x17007CF4 | FULL | Configuration for Safety Updates |
| SFLASH_TOC2_SAFETY_UPDATES_MARKER | 0x17007CF8 | FULL | Marker for Safety Updates |
| SFLASH_TOC2_SECURITY_UPDATES_MARKER | 0x17007CFC | FULL | Marker for Security Updates |
| SFLASH_TOC2_SHASH_OBJECTS | 0x17007D00 | FULL | Number of additional objects to be verified for SECURE_HASH |
| SFLASH_TOC2_SIGNATURE_VERIF_KEY | 0x17007D04 | FULL | Address of signature verification key (0 if none).The object is signature specific key. It is the public key in case of RSA |
| SFLASH_TOC2_APP_PROTECTION_ADDR | 0x17007D08 | FULL | Address of Application Protection |
| SFLASH_TOC2_REVISION | 0x17007DF4 | FULL | Indicates TOC2 Revision. It is not used now. |
| SFLASH_TOC2_FLAGS | 0x17007DF8 | FULL | Controls default configuration |

## 29.1 Register Details

### 29.1.1 SFLASH_SI_REVISION_ID

**Description:** Indicates Silicon Revision ID of the device
**Address:** 0x17000001
**Offset:** 0x1
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to store Silicon Revision ID
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SI_REVISION_ID [7:0] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | SI_REVISION_ID | RW | | X | Silicon Revision ID |

### 29.1.2 SFLASH_SILICON_ID

**Description:** Indicates Silicon ID of the device
**Address:** 0x17000002
**Offset:** 0x2
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to store silicon ID
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ID [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ID [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | ID | RW | | X | Silicon ID |

### 29.1.3 SFLASH_SFLASH_SVN

**Description:** SFLASH Subversion
**Address:** 0x170000A8
**Offset:** 0xA8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA32 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA32 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA32 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA32 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | DATA32 | RW | | 0 | SFLASH Subversion |

### 29.1.4 SFLASH_FB_FLAGS

**Description:** Flash boot flags
**Address:** 0x170001FC
**Offset:** 0x1FC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Flash boot flags are used by the flash boot. The default value is 0x0000_0021
**Default:** 0x21

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | FB_RSA4K_CTL [5:4] | | FB_RSA3K_CTL [3:2] | | FB_PIN_CTL [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | FB_PIN_CTL | RW | | 1 | Determines toggling a GPIO pin at the start and end of Flash boot<br>2 = Enable toggling a GPIO pin at the start and end of Flash boot<br>Others = Disable toggling a GPIO pin at the start and end of Flash boot<br>Default value = 1. |
| 2:3 | FB_RSA3K_CTL | RW | | 0 | Determines if RSA-3K is supported.<br>2 = RSA-3K is supported. RSA public key modulo length should be in range 512 to 3072 bit. The field FB_RSA4K_CTL must be set to 0.<br>Others = RSA-3K is not supported. RSA public key modulo length should be in range 512 to 2048 bit.<br>Default value = 1. |
| 4:5 | FB_RSA4K_CTL | RW | | 2 | Determines if RSA-4K is supported.<br>2 = RSA-4K is supported. RSA public key modulo length should be in range 512 to 4096 bit. RSA4K already includes RSA3K option. The field FB_RSA3K_CTL must be set to 0.<br>Others = RSA-4K is not supported.<br>Default value = 1. |

### 29.1.5 SFLASH_EPASS_TEMP_TRIM_TEMP_ROOMSORT

**Description:** On Chip temperature measured using external currents and external ADC at ROOM
**Address:** 0x1700064E
**Offset:** 0x64E
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | On Chip temperature measured using external currents and external ADC at ROOM |

### 29.1.6 SFLASH_EPASS_TEMP_TRIM_DIODE_ROOMSORT

**Description:** Temperature sensor calibration data for VDDA=3.3V, Temperature sensor diode voltage at ROOM
**Address:** 0x17000650
**Offset:** 0x650
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | Temperature sensor calibration data for VDDA=3.3V, Temperature sensor diode voltage at ROOM |

### 29.1.7 SFLASH_EPASS_TEMP_TRIM_VBG_ROOMSORT

**Description:** Temperature sensor calibration data for VDDA=3.3V, Bandgap voltage at ROOM
**Address:** 0x17000652
**Offset:** 0x652
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | Temperature sensor calibration data for VDDA=3.3V, Bandgap voltage at ROOM |

### 29.1.8 SFLASH_EPASS_TEMP_TRIM_TEMP_COLDSORT

**Description:** On Chip temperature measured using external currents and external ADC at COLD
**Address:** 0x17000654
**Offset:** 0x654
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | On Chip temperature measured using external currents and external ADC at COLD |

### 29.1.9 SFLASH_EPASS_TEMP_TRIM_DIODE_COLDSORT

**Description:** Temperature sensor calibration data for VDDA=3.3V, Temperature sensor diode voltage at COLD
**Address:** 0x17000656
**Offset:** 0x656
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | Temperature sensor calibration data for VDDA=3.3V, Temperature sensor diode voltage at COLD |

### 29.1.10 SFLASH_EPASS_TEMP_TRIM_VBG_COLDSORT

**Description:** Temperature sensor calibration data for VDDA=3.3V, Bandgap voltage at COLD
**Address:** 0x17000658
**Offset:** 0x658
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | Temperature sensor calibration data for VDDA=3.3V, Bandgap voltage at COLD |

### 29.1.11 SFLASH_EPASS_TEMP_TRIM_TEMP_HOTCLASS

**Description:** On Chip temperature measured using external currents and external ADC at HOT
**Address:** 0x1700065A
**Offset:** 0x65A
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | On Chip temperature measured using external currents and external ADC at HOT |

### 29.1.12 SFLASH_EPASS_TEMP_TRIM_DIODE_HOTCLASS

**Description:** Temperature sensor calibration data for VDDA=3.3V, Temperature sensor diode voltage at HOT
**Address:** 0x1700065C
**Offset:** 0x65C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA16 [15:8] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | DATA16 | RW | | X | Temperature sensor calibration data for VDDA=3.3V, Temperature sensor diode voltage at HOT |

### 29.1.13 SFLASH_EPASS_TEMP_TRIM_VBG_HOTCLASS

**Description:** Temperature sensor calibration data for VDDA=3.3V, Bandgap voltage at HOT
**Address:** 0x1700065E
**Offset:** 0x65E
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Temperature calibration data for EPASS Temperature sensor
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

**IsDeepSleep:** No
**Comment:** If TOC2 is erased (default), Flash boot assumes TOC2_FLAGS = 0x0000_0243
**Default:** 0x243

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | APP_AUTH_CTL [7:7] | SWJ_PINS_CTL [6:5] | | LISTEN_WINDOW [4:2] | | | CLOCK_CONFIG [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | FB_BOOTLOADER_CTL [10:9] | | APP_AUTH_CTL [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | CLOCK_CONFIG | RW | | 3 | Indicates clock frequency configuration. The clock should stay the same after Flash Boot execution.<br>0 = 8 MHz, IMO, no FLL<br>1 = 25 MHz, IMO + FLL<br>2 = 50 MHz, IMO + FLL<br>3 = Use ROM boot clocks configuration (default) |
| 2:4 | LISTEN_WINDOW | RW | | 0 | Determines the Listen window to allow sufficient time to acquire debug port. When CLOCK_CONFIG is set to 3, these window times are calculated assuming ROM boot clock is at 100MHz.<br>0 = 20 ms (Default)<br>1 = 10 ms<br>2 = 1 ms<br>3 = 0 ms (No Listen window)<br>4 = 100 ms |
| 5:6 | SWJ_PINS_CTL | RW | | 2 | Determines if SWJ pins are configured in SWJ mode by Flash boot.<br>Note: SWJ pins may be enabled later in the user code.<br>0 = Do not enable SWJ pins in Flash boot. Listen window is skipped.<br>1 = Do not enable SWJ pins in Flash boot. Listen window is skipped.<br>2 = Enable SWJ pins in Flash boot (default).<br>3 = Do not enable SWJ pins in Flash boot. Listen window is skipped. |
| 7:8 | APP_AUTH_CTL | RW | | 0 | Determines if the application image digital signature verification (authentication) is performed:<br>0 = Authentication is enabled (default).<br>1 = Authentication is disabled.<br>2 = Authentication is enabled (recommended).<br>3 = Authentication is enabled. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 9:10 | FB_BOOTLOADER_CTL | RW | | 1 | Determine if the internal bootloader in Flash boot is disabled:<br>0 = Internal bootloader is disabled.<br>1 = Internal bootloader is launched if the other bootloader conditions are met (default).<br>2 = Internal bootloader is disabled.<br>3 = Internal bootloader is disabled. |

# 30 SMARTIO

**Description** Programmable IO configuration
**Base Address** 0x40320000
**Size** 0x10000
**Slave Num** MMIO3 - 2

## 30.1 PRT 12

| SMARTIO_PRT14_LUT_CTL5 | 0x40320E54 | FULL | LUT component control register |
| SMARTIO_PRT14_LUT_CTL6 | 0x40320E58 | FULL | LUT component control register |
| SMARTIO_PRT14_LUT_CTL7 | 0x40320E5C | FULL | LUT component control register |
| SMARTIO_PRT14_DU_SEL | 0x40320EC0 | FULL | Data unit component input selection |
| SMARTIO_PRT14_DU_CTL | 0x40320EC4 | FULL | Data unit component control register |
| SMARTIO_PRT14_DATA | 0x40320EF0 | FULL | Data register |

## 30.4 PRT 15

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SMARTIO_PRT15_CTL | 0x40320F00 | FULL | Control register |
| SMARTIO_PRT15_SYNC_CTL | 0x40320F10 | FULL | Synchronization control register |
| SMARTIO_PRT15_LUT_SEL0 | 0x40320F20 | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL1 | 0x40320F24 | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL2 | 0x40320F28 | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL3 | 0x40320F2C | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL4 | 0x40320F30 | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL5 | 0x40320F34 | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL6 | 0x40320F38 | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_SEL7 | 0x40320F3C | FULL | LUT component input selection |
| SMARTIO_PRT15_LUT_CTL0 | 0x40320F40 | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL1 | 0x40320F44 | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL2 | 0x40320F48 | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL3 | 0x40320F4C | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL4 | 0x40320F50 | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL5 | 0x40320F54 | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL6 | 0x40320F58 | FULL | LUT component control register |
| SMARTIO_PRT15_LUT_CTL7 | 0x40320F5C | FULL | LUT component control register |
| SMARTIO_PRT15_DU_SEL | 0x40320FC0 | FULL | Data unit component input selection |
| SMARTIO_PRT15_DU_CTL | 0x40320FC4 | FULL | Data unit component control register |
| SMARTIO_PRT15_DATA | 0x40320FF0 | FULL | Data register |

## 30.5 PRT 17

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SMARTIO_PRT17_CTL | 0x40321100 | FULL | Control register |
| SMARTIO_PRT17_SYNC_CTL | 0x40321110 | FULL | Synchronization control register |
| SMARTIO_PRT17_LUT_SEL0 | 0x40321120 | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL1 | 0x40321124 | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL2 | 0x40321128 | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL3 | 0x4032112C | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL4 | 0x40321130 | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL5 | 0x40321134 | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL6 | 0x40321138 | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_SEL7 | 0x4032113C | FULL | LUT component input selection |
| SMARTIO_PRT17_LUT_CTL0 | 0x40321140 | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL1 | 0x40321144 | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL2 | 0x40321148 | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL3 | 0x4032114C | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL4 | 0x40321150 | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL5 | 0x40321154 | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL6 | 0x40321158 | FULL | LUT component control register |
| SMARTIO_PRT17_LUT_CTL7 | 0x4032115C | FULL | LUT component control register |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SMARTIO_PRT17_DU_SEL | 0x403211C0 | FULL | Data unit component input selection |
| SMARTIO_PRT17_DU_CTL | 0x403211C4 | FULL | Data unit component control register |
| SMARTIO_PRT17_DATA | 0x403211F0 | FULL | Data register |

## 30.6 Register Details

### 30.6.1 PRT

#### 30.6.1.1 SMARTIO_PRT_CTL

**Description:** Control register
**Address:** 0x40320000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BYPASS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | CLOCK_SRC [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | None [30:26] | | | | | PIPELINE_EN [25:25] | HLD_OVR [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | BYPASS | RW | R | Undefined | Bypass of the programmable IO, one bit for each IO pin: BYPASS[i] is for IO pin i. When ENABLED is '1', this field is used. When ENABLED is '0', this field is NOT used and SMARTIO fabric is always bypassed.<br>'0': No bypass (programmable SMARTIO fabric is exposed).<br>'1': Bypass (programmable SMARTIOIO fabric is hidden). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:12 | CLOCK_SRC | RW | R | 20 | Clock ('clk_fabric') and reset ('rst_fabric_n') source selection:<br>'0': io_data_in[0]/'1'.<br>...<br>'7': io_data_in[7]/'1'.<br>'8': chip_data[0]/'1'.<br>...<br>'15': chip_data[7]/'1'.<br>'16': clk_smartio/rst_sys_act_n. Used for both Active functionality synchronous logic on 'clk_smartio'. This selection is intended for synchronous operation on a PCLK specified clock frequency ('clock_smartio_pos_en'). Note that the fabric's clocked elements are frequency aligned, but NOT phase aligned to 'clk_sys'.<br>'17': clk_smartio/rst_sys_dpslp_n. Used for both DeepSleep functionality synchronous logic on 'clk_smartio' (note that 'clk_smartio' is NOT available in DeepSleep and Hibernate power modes). This selection is intended for synchronous operation on a PCLK specified clock frequency ('clock_smartio_pos_en'). Note that the fabric's clocked elements are frequency aligned, but NOT phase aligned to 'clk_sys'.<br>'18': Same as '17'. Note that the M0S8 SMARTIO version used the Hibernate reset for this value, but the MXS40 SMARTIO version does not support Hibernate functionality.<br>'19': clk_lf/rst_lf_dpslp_n (note that 'clk_lf' is available in DeepSleep power mode). This selection is intended for synchronous operation on'clk_lf'. Note that the fabric's clocked elements are frequency aligned, but NOT phase aligned to other 'clk_lf' clocked elements.<br>'20'-'30': Clock source is constant '0'. Any of these clock sources should be selected when the IP is disabled to ensure low power consumption.<br>'31': asynchronous mode/'1'. Select this when clockless operation is configured.<br><br>NOTE: Two positive edges of the selected clock are required for the block to be enabled (to deactivate reset). In asynchronous (clockless) mode clk_sys is used to enable the block, but is not available for clocking. |
| 24 | HLD_OVR | RW | R | Undefined | IO cell hold override functionality. In DeepSleep power mode, the HSIOM holds the IO cell output and output enable signals if Active functionality is connected to the IO pads. This is undesirable if the SMARTIO is supposed to deliver DeepSleep output functionality on these IO pads. This field is used to control the hold override functionality from the SMARTIO:<br>'0': The HSIOM controls the IO cell hold override functionality ('hsiom_hld_ovr').<br>'1': The SMARTIO controls the IO cel hold override functionality:<br>- In bypass mode (ENABLED is '0' or BYPASS[i] is '1'), the HSIOM control is used.<br>- In NON bypass mode (ENABLED is '1' and BYPASS[i] is '0'), the SMARTIO sets hold override to 'pwr_hld_ovr_hib' to enable SMARTIO functionality in DeepSleep power mode (but disables it in Hibernate or Stop power mode). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 25 | PIPELINE_EN | RW | R | 1 | Enable for pipeline register:<br>'0': Disabled (register is bypassed).<br>'1': Enabled. |
| 31 | ENABLED | RW | R | 0 | Enable for programmable IO. Should only be set to '1' when the programmable IO is completely configured:<br>'0': Disabled (signals are bypassed; behavior as if BYPASS is 0xFF). When disabled, the fabric (data unit and LUTs) reset is activated.<br><br>If the IP is disabled:<br>- The PIPELINE_EN register field should be set to '1', to ensure low power consumption by preventing combinatorial loops.<br>- The CLOCK_SRC register field should be set to '20'-'30' (clock is constant '0'), to ensure low power consumption.<br><br>'1': Enabled. Once enabled, it takes 3 'clk_fabric' clock cycles till the fabric reset is de-activated and the fabric becomes fully functional. This ensures that the IO pins' input synchronizer states are flushed when the fabric is fully functional. |

### 30.6.1.2 SMARTIO_PRT_SYNC_CTL

**Description:** Synchronization control register
**Address:** 0x40320010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | IO_SYNC_EN [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CHIP_SYNC_EN [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | IO_SYNC_EN | RW | R | Undefined | Synchronization of the IO pin input signals to 'clk_fabric', one bit for each IO pin: IO_SYNC_EN[i] is for IO pin i.<br>'0': No synchronization.<br>'1': Synchronization. |
| 8:15 | CHIP_SYNC_EN | RW | R | Undefined | Synchronization of the chip input signals to 'clk_fabric', one bit for each input: CHIP_SYNC_EN[i] is for input i.<br>'0': No synchronization.<br>'1': Synchronization. |

### 30.6.1.3 SMARTIO_PRT_LUT_SEL

**Description:** LUT component input selection
**Address:** 0x40320020
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | LUT_TR0_SEL [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | LUT_TR1_SEL [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:20] | | | | LUT_TR2_SEL [19:16] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | LUT_TR0_SEL | RW | R | Undefined | LUT input signal 'tr0_in' source selection:<br>'0': Data unit output.<br>'1': LUT 1 output.<br>'2': LUT 2 output.<br>'3': LUT 3 output.<br>'4': LUT 4 output.<br>'5': LUT 5 output.<br>'6': LUT 6 output.<br>'7': LUT 7 output.<br>'8': chip_data[0] (for LUTs 0, 1, 2, 3); chip_data[4] (for LUTs 4, 5, 6, 7).<br>'9': chip_data[1] (for LUTs 0, 1, 2, 3); chip_data[5] (for LUTs 4, 5, 6, 7).<br>'10': chip_data[2] (for LUTs 0, 1, 2, 3); chip_data[6] (for LUTs 4, 5, 6, 7).<br>'11': chip_data[3] (for LUTs 0, 1, 2, 3); chip_data[7] (for LUTs 4, 5, 6, 7).<br>'12': io_data_in[0] (for LUTs 0, 1, 2, 3); io_data_in[4] (for LUTs 4, 5, 6, 7).<br>'13': io_data_in[1] (for LUTs 0, 1, 2, 3); io_data_in[5] (for LUTs 4, 5, 6, 7).<br>'14': io_data_in[2] (for LUTs 0, 1, 2, 3); io_data_in[6] (for LUTs 4, 5, 6, 7).<br>'15': io_data_in[3] (for LUTs 0, 1, 2, 3); io_data_in[7] (for LUTs 4, 5, 6, 7). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:11 | LUT_TR1_SEL | RW | R | Undefined | LUT input signal 'tr1_in' source selection:<br>'0': LUT 0 output.<br>'1': LUT 1 output.<br>'2': LUT 2 output.<br>'3': LUT 3 output.<br>'4': LUT 4 output.<br>'5': LUT 5 output.<br>'6': LUT 6 output.<br>'7': LUT 7 output.<br>'8': chip_data[0] (for LUTs 0, 1, 2, 3); chip_data[4] (for LUTs 4, 5, 6, 7).<br>'9': chip_data[1] (for LUTs 0, 1, 2, 3); chip_data[5] (for LUTs 4, 5, 6, 7).<br>'10': chip_data[2] (for LUTs 0, 1, 2, 3); chip_data[6] (for LUTs 4, 5, 6, 7).<br>'11': chip_data[3] (for LUTs 0, 1, 2, 3); chip_data[7] (for LUTs 4, 5, 6, 7).<br>'12': io_data_in[0] (for LUTs 0, 1, 2, 3); io_data_in[4] (for LUTs 4, 5, 6, 7).<br>'13': io_data_in[1] (for LUTs 0, 1, 2, 3); io_data_in[5] (for LUTs 4, 5, 6, 7).<br>'14': io_data_in[2] (for LUTs 0, 1, 2, 3); io_data_in[6] (for LUTs 4, 5, 6, 7).<br>'15': io_data_in[3] (for LUTs 0, 1, 2, 3); io_data_in[7] (for LUTs 4, 5, 6, 7). |
| 16:19 | LUT_TR2_SEL | RW | R | Undefined | LUT input signal 'tr2_in' source selection. Encoding is the same as for LUT_TR1_SEL. |

### 30.6.1.4 SMARTIO_PRT_LUT_CTL

**Description:** LUT component control register
**Address:** 0x40320040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | LUT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | LUT_OPC [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | LUT | RW | R | Undefined | LUT configuration. Depending on the LUT opcode LUT_OPC, the internal state lut_reg (captured in a flip-flop) and the LUT input signals tr0_in, tr1_in, tr2_in, the LUT configuration is used to determine the LUT output signal and the next sequential state (lut_reg). |
| 8:9 | LUT_OPC | RW | R | Undefined | LUT opcode specifies the LUT operation:<br>'0': Combinatoral output, no feedback.<br>tr_out = LUT[{tr2_in, tr1_in, tr0_in}].<br>'1': Combinatorial output, feedback.<br>tr_out = LUT[{lut_reg, tr1_in, tr0_in}].<br>On clock:<br>lut_reg <= tr_in2.<br>'2': Sequential output, no feedback.<br>temp = LUT[{tr2_in, tr1_in, tr0_in}].<br>tr_out = lut_reg.<br>On clock:<br>lut_reg <= temp.<br>'3': Register with asynchronous set and reset.<br>tr_out = lut_reg.<br>enable = (tr2_in ^ LUT[4]) \| LUT[5].<br>set = enable & (tr1_in ^ LUT[2]) & LUT[3].<br>clr = enable & (tr0_in ^ LUT[0]) & LUT[1].<br>Asynchronously (no clock required):<br>lut_reg <= if (clr) '0' else if (set) '1' |

### 30.6.1.5 SMARTIO_PRT_DU_SEL

**Description:** Data unit component input selection
**Address:** 0x403200C0
**Offset:** 0xC0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | DU_TR0_SEL [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | DU_TR1_SEL [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:20] | | | | DU_TR2_SEL [19:16] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:30] | | DU_DATA1_SEL [29:28] | | None [27:26] | | DU_DATA0_SEL [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | DU_TR0_SEL | RW | R | Undefined | Data unit input signal 'tr0_in' source selection:<br>'0': Constant '0'.<br>'1': Constant '1'.<br>'2': Data unit output.<br>'10-3': LUT 7 - 0 outputs.<br>Otherwise: Undefined. |
| 8:11 | DU_TR1_SEL | RW | R | Undefined | Data unit input signal 'tr1_in' source selection.<br>Encoding is the same as for DU_TR0_SEL. |
| 16:19 | DU_TR2_SEL | RW | R | Undefined | Data unit input signal 'tr2_in' source selection.<br>Encoding is the same as for DU_TR0_SEL. |
| 24:25 | DU_DATA0_SEL | RW | R | Undefined | Data unit input data 'data0_in' source selection:<br>'0': Constant '0'.<br>'1': chip_data[7:0].<br>'2': io_data_in[7:0].<br>'3': DATA.DATA MMIO register field. |
| 28:29 | DU_DATA1_SEL | RW | R | Undefined | Data unit input data 'data1_in' source selection.<br>Encoding is the same as for DU_DATA0_SEL. |

### 30.6.1.6 SMARTIO_PRT_DU_CTL

**Description:** Data unit component control register
**Address:** 0x403200C4
**Offset:** 0xC4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | DU_SIZE [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | DU_OPC [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|

| SMIF0_DEVICE1_ADDR_CTL | 0x404208A0 | FULL | Address control |
| SMIF0_DEVICE1_RD_CMD_CTL | 0x404208C0 | FULL | Read command control |
| SMIF0_DEVICE1_RD_ADDR_CTL | 0x404208C4 | FULL | Read address control |
| SMIF0_DEVICE1_RD_MODE_CTL | 0x404208C8 | FULL | Read mode control |
| SMIF0_DEVICE1_RD_DUMMY_CTL | 0x404208CC | FULL | Read dummy control |
| SMIF0_DEVICE1_RD_DATA_CTL | 0x404208D0 | FULL | Read data control |
| SMIF0_DEVICE1_RD_BOUND_CTL | 0x404208D8 | FULL | Read boundary control |
| SMIF0_DEVICE1_WR_CMD_CTL | 0x404208E0 | FULL | Write command control |
| SMIF0_DEVICE1_WR_ADDR_CTL | 0x404208E4 | FULL | Write address control |
| SMIF0_DEVICE1_WR_MODE_CTL | 0x404208E8 | FULL | Write mode control |
| SMIF0_DEVICE1_WR_DUMMY_CTL | 0x404208EC | FULL | Write dummy control |
| SMIF0_DEVICE1_WR_DATA_CTL | 0x404208F0 | FULL | Write data control |

## 31.3 Register Details

### 31.3.1 SMIF_CTL

**Description:** Control
**Address:** 0x40420000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The register fields should only be changed when the IP is disabled; i.e. CTL.ENABLED is '0'. The only exception to this rule is the CTL.XIP_MODE field, which can be changed when the IP is enabled.
**Default:** 0x503400

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | DELAY_LINE_SEL [6:5] | | CLOCK_IF_TX_SEL [4:4] | None [3:1] | | | XIP_MODE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | CLOCK_IF_RX_SEL [14:12] | | | None [11:9] | | | DELAY_TAP_ENABLED [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | SELECT_HOLD_DELAY [23:22] | | SELECT_SETUP_DELAY [21:20] | | None [19:19] | DESELECT_DELAY [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | None [30:25] | | | | | | BLOCK [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | XIP_MODE | RW | R | 0 | Mode of operation.<br><br>Note: this field should only be changed when the IP is disabled or when STATUS.BUSY is '0' and SW should not be executing from the XIP interface or MMIO interface. |
| | MMIO_MODE | | | 0 | '0': MMIO mode. Individual MMIO accesses to TX and RX FIFOs are used to generate a sequence of SPI transfers. This mode of operation allows for large flexibility in terms of the SPI transfers that can be generated. |
| | XIP_MODE | | | 1 | '1': XIP mode. eXecute-In-Place mode: incoming read and write transfers over the AHB-Lite bus infrastructure are automatically translated in SPI transfers to read data from and write data to a device. This mode of operation allow for efficient device read and write operations. This mode is only supported in SPI_MODE. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | CLOCK_IF_TX_SEL | RW | R | 0 | Specifies device interface transmitter clock options.<br>'0': SDR. Memory interface clock 'spihb_clk_out' is divided (by 2) interface clock 'clk_if', memory interface data signals are driven by divided (by 2) interface clock 'clk_if' with different phase than 'spihb_clk_out'.<br>Results in driving memory interface data signals at falling 'spihb_clk_out' edge.<br>'1': DDR. Memory interface clock 'spihb_clk_out' is divided (by 2) inverted interface clock 'clk_if_inv', memory interface data signals are driven with interface clock 'clk_if'.<br>Results in driving memory interface data signals 90 degrees before rising and falling 'spihb_clk_out' edge. |
| 5:6 | DELAY_LINE_SEL | RW | R | 0 | Specifies the delay line used for RX data capturing with<br>- output / feedback clock based capturing (when CLOCK_IF_RX_SEL = [0..3] and DELAY_TAP_ENABLED = 1)<br>- internal clock based capturing (when CLOCK_IF_RX_SEL = [4..5], INT_CLOCK_CAPTURE_PRESENT = 1 and DELAY_TAP_ENABLED = 1)<br>- RWDS based capturing (when CLOCK_IF_RX_SEL = [6..7]) |
| 8 | DELAY_TAP_ENABLED | RW | R | 0 | Delay Line Tap Enable.<br>'0': Disabled. The delay line tap selections specified in registers DELAY_TAP_SEL or INT_CLOCK_DELAY_TAP_SEL0/1 are not used. The read data is directly captured by the RX data FIFO capture clock as specified by CLOCK_IF_RX_SEL and INT_CLOCK_CAPTURE_CYCLE.<br>'1': Enabled. The delay line tap selections specified in registers DELAY_TAP_SEL or INT_CLOCK_DELAY_TAP_SEL0/1 are used. Note that in RWDS based capture scheme (CLOCK_IF_RX_SEL = [6..7]), DELAY_TAP_ENABLED must be set to '1' as the RWDS based capture scheme requires to use the delay line.<br>If the output / feedback clock based capture scheme (CLOCK_IF_RX_SEL = [0..3]) or the RWDS based capture scheme (CLOCK_IF_RX_SEL = [6..7]) is selected then the register DELAY_TAP_SEL is used to select the capture clock. If the internal clock based capture scheme (CLOCK_IF_RX_SEL = [4..5] and INT_CLOCK_CAPTURE_PRESENT = 1) is selected then the registers INT_CLOCK_DELAY_TAP_SEL0/1 are used to select the capture clock per data bit line (read data is captured by the capture logic and afterwards transferred to the RX data FIFO). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 12:14 | CLOCK_IF_RX_SEL | RW | R | 3 | Specifies device interface receiver clock 'clk_if_rx' source. MISO data is captured on the rising edge of 'clk_if_rx' in SDR mode and on both edges of 'clk_if_rx' in DDR mode.<br>'0': 'spi_clk_out' (output clock) for SDR capturing with output clock<br>'1': !'spi_clk_out' (output clock) for DDR or SDR capturing with inverted output clock<br>'2': 'spi_clk_in' (feedback clock) for SDR capturing with feedback clock<br>'3': !'spi_clk_in' (feedback clock) for DDR or SDR capturing with inverted feedback clock<br>'4': 'clk_if_tx' (internal clock) for DDR or SDR capturing with internal clock<br>'5': 'clk_if_tx_inv' (internal clock) for DDR or SDR capturing with inverted internal clock<br>'6': 'sphb_rwds_inv' (RWDS / DQS strobe signal driven by memory device) for DDR capturing with RWDS / DQS in Hyperbus / Octal SPI mode or for SDR capturing with falling RWDS / DQS edge in Octal SPI mode<br>'7': 'sphb_rwds' (RWDS / DQS strobe signal driven by memory device) for SDR capturing with rising RWDS / DQS edge in Octal SPI mode |
| 16:18 | DESELECT_DELAY | RW | R | 0 | Specifies the minimum duration of SPI deselection ('spi_select_out[]' is high/'1') in between SPI transfers:<br>'0': 1 memory interface clock cycle.<br>'1': 2 memory interface clock cycles.<br>'2': 3 memory interface clock cycles.<br>'3': 4 memory interface clock cycles.<br>'4': 5 memory interface clock cycles.<br>'5': 6 memory interface clock cycles.<br>'6': 7 memory interface clock cycles.<br>'7': 8 memory interface clock cycles.<br><br>During SPI deselection, 'spi_select_out[]' are '1'/inactive, 'spi_data_out[]' are '1' and 'spi_clk_out' is '0'/inactive. |
| 20:21 | SELECT_SETUP_DELAY | RW | R | 1 | Specifies the duration between 'spi_select_out[]' becomes low/'0') to 1st 'spi_clk_out' edge:<br>'0': 0 memory interface clock cycles + min. duration (see below).<br>'1': 1 memory interface clock cycle + min. duration (see below).<br>'2': 2 memory interface clock cycles + min. duration (see below).<br>'3': 3 memory interface clock cycles + min. duration (see below).<br><br>In addition to the number of cycles selected here there is a min. duration of:<br>- 1 memory interface clock cycle (= 2 clk_if cycle) for SDR timing (CLOCK_IF_TX_SEL = 0)<br>- 1/4 memory interface clock cycle (= 1/2 clk_if cycle) for DDR timing (CLOCK_IF_TX_SEL = 1) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 22:23 | SELECT_HOLD_DELAY | RW | R | 1 | Specifies the duration between last 'spi_clk_out' edge to 'spi_select_out[]' becomes high/'1'):<br>'0': 0 memory interface clock cycles + min. duration (see below).<br>'1': 1 memory interface clock cycle + min. duration (see below).<br>'2': 2 memory interface clock cycles + min. duration (see below).<br>'3': 3 memory interface clock cycles + min. duration (see below).<br><br>In addition to the number of cycles selected here there is a min. duration of:<br>- 1/2 memory interface clock cycle (= 1 clk_if cycles) for SDR timing (CLOCK_IF_TX_SEL = 0)<br>- 1/4 memory interface clock cycle (= 1/2 clk_if cycle) for DDR timing (CLOCK_IF_TX_SEL = 1) |
| 24 | BLOCK | RW | R | 0 | Specifies what happens for MMIO interface read accesses to an empty RX data FIFO or to a full TX format/data FIFO. Note: the FIFOs can only be accessed in MMIO_MODE.<br><br>This field is not used for test controller accesses. |
| | BUS_ERROR | | | 0 | 0': Generate an AHB-Lite bus error. This option is useful when SW decides to use polling on STATUS.TR_BUSY to determine if a interface transfer is no longer busy (transfer is completed). This option adds SW complexity, but limits the number of AHB-Lite wait states (and limits ISR latency). |
| | WAIT_STATES | | | 1 | 1': Introduce wait states. This setting potentially locks up the AHB-Lite infrastructure and may increase the CPU interrupt latency.This option is useful when SW performs TX/RX data FIFO accesses immediately after a command is setup using the TX format FIFO. This option has low SW complexity, but may result in a significant number of AHB-Lite wait states (and may increase ISR latency). |
| 31 | ENABLED | RW | R | 0 | IP enable:<br>'0': Disabled. All non-retention registers are reset to their default value when the IP is disabled. When the IP is disabled, the XIP accesses produce AHB-Lite bus errors.<br>'1': Enabled.<br><br>Notes:<br>- Before disabling the IP, SW should ensure that the IP is NOT busy (STATUS.BUSY is '0'), otherwise illegal interface transfers may occur.<br>- After CTL.ENABLED is set to 1 it takes up to 20 clk_if cycles until the memory interface registers are realeased from reset. |
| | DISABLED | | | 0 | N/A |
| | ENABLED | | | 1 | N/A |

### 31.3.2 SMIF_STATUS

**Description:** Status
**Address:** 0x40420004
**Offset:** 0x4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | USED4 | R | W | 0 | Number of entries that are used in the TX command FIFO (available in both XIP_MODE and MMIO_MODE). Legal range: [0, 8]. |

### 31.3.5 SMIF_TX_CMD_FIFO_WR

**Description:** Transmitter command FIFO write
**Address:** 0x40420050
**Offset:** 0x50
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** A read from this register returns '0'. A write to this register in XIP_MODE results in an AHB-Lite bus error. A write to this register in MMIO_MODE writes the top of the FIFO.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA27 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA27 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA27 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:27] | | | | | DATA27 [26:24] | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:26 | DATA27 | W | R | 0 | Command data. The higher two bits DATA[26:24] specify the specific command<br><br>'0'/TX: A SPI transfer always start with a TX command FIFO entry of the 'TX' format.<br>- DATA[23:20] specifies which of the four devices are selected. DATA[23:20] are directly mapped to 'spi_select_out[3:0]'. Two devices can be selected at the same time in dual-quad mode.<br>- '0': device deselected<br>- '1': device selected<br>- DATA[19] specifies whether this is the last TX Byte; i.e. whether the 'spi_select_out[3:0]' IO output signals are de-activated after the transfer.<br>- '0': not the last TX byte<br>- '1': the last TX byte<br>- DATA[18] specifies the mode of transfer rate:<br>- '0': SDR mode<br>- '1': DDR mode<br>- DATA[17:16] specifies the width of the data transfer:<br>- '0': 1 bit/cycle (single data transfer).<br>- '1': 2 bits/cycle (dual data transfer).<br>- '2': 4 bits/cycle (quad data transfer).<br>- '3': 8 bits/cycle (octal data transfer).<br>- DATA[15:8] specifies the second transmitted Byte. This is only used (and must be specified) for octal data transfer with DDR mode, i.e. when DATA[17:16]='3' and DATA[18]='1'.<br>- DATA[7:0] specifies the transmitted Byte.<br><br>'1'/TX_COUNT: The 'TX_COUNT' command relies on the TX data FIFO to provide the transmitted bytes.<br>- DATA[19] specifies whether this is the last command of a data transfer; i.e. whether the 'spi_select_out[3:0]' IO output signals are de-activated after the transfer.<br>- DATA[18] specifies the mode of transfer rate.<br>- DATA[17:16] specifies the width of the transfer.<br>- DATA[15:0] specifies the number of to be transmitted memory data units (minus 1). '0': 1 unit, '1': 2 units. For SPI (except octal SPI with DDR) one memory data unit is a byte, for octal SPI with DDR and Hyperbus one memory data unit is a 2-byte word.<br>The number of used TX data FIFO entries (in TX_DATA_FIFO_STATUS) = number of memory data units to be transmitted.<br><br>'2'/RX_COUNT: The 'RX_COUNT' command relies on the RX data FIFO to accept the received bytes.<br>- DATA[19] specifies whether this is the last command of a data transfer; i.e. whether the 'spi_select_out[3:0]' IO output signals are de-activated after the transfer.<br>- DATA[18] specifies the mode of transfer rate.<br>- DATA[17:16] specifies the width of the transfer.<br>- DATA[15:0] specifies the number of to be received memory data units (minus 1). '0': 1 unit, '1': 2 units. For SPI (except octal SPI with DDR) one memory data unit is a byte, for octal SPI with DDR and Hyperbus one memory data unit is a 2-byte word.<br>The number of used RX data FIFO entries (in RX_DATA_FIFO_STATUS) = number of memory data units to be received * 8 / data width (1, 2, 4, 8).<br>The number of used RX data MMIO FIFO entries (in RX_DATA_MMIO_FIFO_STATUS) = number of bytes. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | | | | | (Continuation)<br>'3'/DUMMY_COUNT: The 'DUMMY_COUNT' command conveys dummy cycles. Dummy cycles are used to implement a Turn-Around time in which the SPI master changes from a transmitter driving the data lines to a receiver receiving on the same data lines. The 'DUMMY_COUNT' command is ALWAYS considered to be NOT the last command of a SPI data transfer; i.e. it needs to be followed by another command.<br>- DATA[23] specifies whether RWDS / DQS based capturing is enabled in the last dummy cycle, i.e. this needs to be set to '1' for read transactions to memory device using RWDS / DQS capturing scheme.<br>- DATA[22] specifies whether data learning is enabled. In XIP mode this field is set for read transactions when CTL.INT_CLOCK_DL_ENABLED is '1').<br>- DATA[21] specifies whether the RWDS output signal should be driven starting in the last dummy cycle until DESELECT. This is needed for write transactions with RWDS (e.g. Hyperbus) before a TX_COUNT command.<br>- DATA[20] specifies whether an active RWDS refresh indicator (captured with the previous rising memory clock output) causes to double the number of dummy cycles. This is used for the variable latency in HyperRAM.<br>- DATA[18] specifies the mode of transfer rate. This is used for data learning and RWDS / DQS capturing. In XIP mode the field is taken from DEVICE.RD_DATA_CTL.DDR_MODE.<br>- DATA[17:16] specifies the width of the transfer. This is used for data learning and RWDS / DQS capturing. In XIP mode the field is taken from DEVICE.RD_DATA_CTL.WIDTH.<br>- DATA[15:0] specifies the number of dummy cycles (minus 1). In dummy cycles, the data lines are not driven.<br>Notes:<br>- If CLOCK_IF_TX_SEL = '0' for transmitting command, address and mode fields in SDR mode (driving data between falling edges of spihb_clk_out) and the memory is driving read data in DDR mode (based on memory type and transmitted command), then there must be at least 1 latency / dummy cycle specified (DUMMY_COUNT command must be present) to prevent controller and memory driving data signals at the same time.<br>The same is true for the theoretical (practically irrelevant case) of transmitting at least one of the command, address and mode fields in DDR mode but receiving data from the memory in SDR mode.<br>- When using the RWDS / DQS based capturing scheme (CTL.CLK_IF_RX_SEL=[6,7]), then there is a minimum number of latency / dummy cycles required (DUMMY_COUNT command must be present). For the Hyperbus protocol (DDR_CTL.SIZE3=7) at least 1 latency / dummy cycle has to be specified, for SPI with DQS capturing at least 2 latency / dummy cycles need to be selected (RD_DUMMY_CTL.SIZE5 > 0, exception see following note). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | | | | | (Continuation)<br>- In case of falling edge RWDS / DQS capturing (CTL.CLOCK_IF_RX_SEL = '6') and SDR mode, SW should reduce the number of dummy cycles by 1 compared to the latency cycles required by the memory device.<br><br>'4'/DESELECT: The 'DESELECT' command de-activates the 'spi'select_out[3:0] IO output signals. The 'DESELECT' command is ALWAYS considered to be the last command of an SPI data transfer. It is used to finish the last transfer of merged continuous transfers. |

### 31.3.6 SMIF_TX_DATA_FIFO_CTL

**Description:** Transmitter data FIFO control
**Address:** 0x40420080
**Offset:** 0x80
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** The TX data FIFO has 8 entries.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | USED4 | R | W | 0 | Number of entries that are used in the TX data FIFO (available in both XIP_MODE and MMIO_MODE). Legal range: [0, 8]. |

### 31.3.8 SMIF_TX_DATA_FIFO_WR1

**Description:** Transmitter data FIFO write
**Address:** 0x40420090
**Offset:** 0x90
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides for single byte writes to the TX FIFO. MMIO register accesses must be 32-bit accesses.
Note: In case octal data transfer width and DDR mode (Hyperbus / Octal SPI) has been selected in TX_COUNT command via TX_CMD_FIFO_WR, i.e. 2 bytes are written in one cycle, the lower byte is written with DATA0 and the upper byte is masked (not written). This register must not be used for a word based memory protocol (Hyperbus / Octal SPI) without write byte masking.

A read from this register returns '0'. A write to this register in XIP_MODE results in an AHB-Lite bus error. A write to this register in MMIO_MODE writes the top entry of the FIFO.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA0 | W | R | 0 | TX data (written to TX data FIFO). |

### 31.3.9 SMIF_TX_DATA_FIFO_WR2

**Description:** Transmitter data FIFO write
**Address:** 0x40420094
**Offset:** 0x94
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides for two simultaneous byte writes to the TX FIFO. MMIO register accesses must be 32-bit accesses.
Note:

A read from this register returns '0'. A write to this register in XIP_MODE results in an AHB-Lite bus error. A write to this register in MMIO_MODE writes the top two entries of the FIFO.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA1 [15:8] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA0 | W | R | 0 | TX data (written to TX data FIFO, first byte). |
| 8:15 | DATA1 | W | R | 0 | TX data (written to TX data FIFO, second byte). |

### 31.3.10 SMIF_TX_DATA_FIFO_WR4

**Description:** Transmitter data FIFO write
**Address:** 0x40420098
**Offset:** 0x98
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides for four simultaneous byte writes to the TX FIFO. MMIO register accesses must be 32-bit accesses.

A read from this register returns '0'. A write to this register in XIP_MODE results in an AHB-Lite bus error. A write to this register in MMIO_MODE writes the top four entrues of the FIFO.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA0 [7:0] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA0 | W | R | 0 | TX data (written to TX data FIFO, first byte). |
| 8:15 | DATA1 | W | R | 0 | TX data (written to TX data FIFO, second byte). |
| 16:23 | DATA2 | W | R | 0 | TX data (written to TX data FIFO, third byte). |
| 24:31 | DATA3 | W | R | 0 | TX data (written to TX data FIFO, fourth byte). |

### 31.3.11 SMIF_TX_DATA_FIFO_WR1ODD

**Description:** Transmitter data FIFO write
**Address:** 0x4042009C
**Offset:** 0x9C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides for single byte writes to the TX FIFO for odd byte addresses when using a word based memory protocol (Hyperbus / Octal SPI). MMIO register accesses must be 32-bit accesses.
Note: In case octal data transfer width and DDR mode (Hyperbus / Octal SPI) has been selected in TX_COUNT command via TX_CMD_FIFO_WR, i.e. 2 bytes are written in one cycle, the upper byte is written with DATA0 and the lower byte is masked (not written). This register must not be used for a byte based memory protocol or for a word based memory protocol (Hyperbus / Octal SPI) without write byte masking.

A read from this register returns '0'. A write to this register in XIP_MODE results in an AHB-Lite bus error. A write to this register in MMIO_MODE writes the top entry of the FIFO.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA0 [7:0] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | USED5 | R | W | 0 | Number of entries that are used in the RX data FIFO (available in both XIP_MODE and MMIO_MODE). Legal range: [0, 16]. |
| 8 | RX_SR_USED | R | W | 0 | Data available in RX Shift Register, i.e. completely read from RX data FIFO (availabe in both XIP_MODE and MMIO_MODE). |

### 31.3.15 SMIF_RX_DATA_MMIO_FIFO_RD1

**Description:** Receiver data MMIO FIFO read
**Address:** 0x404200D0
**Offset:** 0xD0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides a single byte from the RX data MMIO FIFO: a read from this register in MMIO_MODE reads the top entry of the FIFO. MMIO register accesses must be 32-bit accesses.

A write to this register is ignored (no AHB-Lite bus error is generated). A read from this register in XIP_MODE results in an AHB-Lite bus error.

Non test controller read accesses (AHB-Lite bus master identifier is NOT '15') when the RX FIFO is empty behave as specified by CTL.BLOCK and the RX_DATA_FIFO_UNDERFLOW interrupt cause is set to '1'.

Test controller (AHB-Lite bus master identifier is '15') read accesses behave the same as RX_DATA_FIFO_RD1_SILENT read accesses.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA0 | R | W | 0 | RX data (read from RX data FIFO). |

### 31.3.16 SMIF_RX_DATA_MMIO_FIFO_RD2

**Description:** Receiver data MMIO FIFO read
**Address:** 0x404200D4
**Offset:** 0xD4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides two bytes from the RX data MMIO FIFO: a read from this register in MMIO_MODE reads the top two entries of the FIFO. MMIO register accesses must be 32-bit accesses.

A write to this register is ignored (no AHB-Lite bus error is generated). A read from this register in XIP_MODE results in an AHB-Lite bus error.

Non test controller read accesses (AHB-Lite bus master identifier is NOT '15') when the RX FIFO is empty behave as specified by CTL.BLOCK and the RX_DATA_FIFO_UNDERFLOW interrupt cause is set to '1'.

Test controller (AHB-Lite bus master identifier is '15') read accesses ALWAYS result in an AHB-Lite bus error. Test controller read accesses do NOT affect the RX_DATA_FIFO_UNDERFLOW interrupt cause.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | DATA0 [7:0] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA0 | R | W | 0 | RX data (read from RX data FIFO, first byte). |
| 8:15 | DATA1 | R | W | 0 | RX data (read from RX data FIFO, second byte). |

### 31.3.17 SMIF_RX_DATA_MMIO_FIFO_RD4

**Description:** Receiver data MMIO FIFO read
**Address:** 0x404200D8
**Offset:** 0xD8
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register provides four bytes from the RX data MMIO FIFO: a read from this register in MMIO_MODE reads the top four entries of the FIFO. MMIO register accesses must be 32-bit accesses.

A write to this register is ignored (no AHB-Lite bus error is generated). A read from this register in XIP_MODE results in an AHB-Lite bus error.

Non test controller read accesses (AHB-Lite bus master identifier is NOT '15') when the RX FIFO is empty behave as specified by CTL.BLOCK and the RX_DATA_FIFO_UNDERFLOW interrupt cause is set to '1'.

Test controller (AHB-Lite bus master identifier is '15') read accesses ALWAYS result in an AHB-Lite bus error. Test controller read accesses do NOT affect the RX_DATA_FIFO_UNDERFLOW interrupt cause.
**Default:** 0x0

|---|---|---|---|---|---|---|---|---|
| Name | DATA3 [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DATA0 | R | W | 0 | RX data (read from RX data FIFO, first byte). |
| 8:15 | DATA1 | R | W | 0 | RX data (read from RX data FIFO, second byte). |
| 16:23 | DATA2 | R | W | 0 | RX data (read from RX data FIFO, third byte). |
| 24:31 | DATA3 | R | W | 0 | RX data (read from RX data FIFO, fourth byte). |

### 31.3.18 SMIF_RX_DATA_MMIO_FIFO_RD1_SILENT

**Description:** Receiver data MMIO FIFO silent read
**Address:** 0x404200E0
**Offset:** 0xE0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register is similar to RX_DATA_MMIO_FIFO_RD1, with the exception that the entry is NOT removed from the FIFO. MMIO register accesses must be 32-bit accesses.

A write to this register is ignored (no AHB-Lite bus error is generated). A read from this register in XIP_MODE results in an AHB-Lite bus error.

A read from this register when the RX FIFO is empty results in the return of the value 0xffff_ffff (independent of CTL.BLOCK). Read accesses do NOT affect the RX_DATA_FIFO_UNDERFLOW interrupt cause.

Note: this register is intended to be used by the test controller (AHB-Lite bus master identifier is '15'), but can also be used by other bus masters).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | START | RW1S | RW1C | 0 | SW sets this field to '1' to start a AES-128 forward block cipher operation (on the address in CRYPTO_ADDR). HW sets this field to '0' to indicate that the operation has completed. Once completed, the result of the operation can be read from CRYPTO_RESULT0, ..., CRYPTO_RESULT3.<br><br>The operation takes roughly 13 clk_mem clock cycles.<br><br>Note: An operation can only be started in MMIO_MODE. |

### 31.3.22 SMIF_CRYPTO_INPUT0

**Description:** Cryptography input 0
**Address:** 0x40420220
**Offset:** 0x220
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The CRYPT_INPUT0, ..., CRYPTO_INPUT3 registers provide the plaintext PT[127:0]. The plaintext PT[127:0] is the input to the AES-128 forward block cipher.

These registers are ONLY used in MMIO_MODE. In XIP_MODE, the AHB-Lite bus transfer address CRYPTO_INPUT3, CRYPTO_INPUT2, CRYPTO_INPUT1, A[31:4] and CRYPTO_INPUT0.INPUT[3:0] are used as the plaintext PT[127:0] (the CRYPTO_INPUT0 register is partially used) of the block cipher.

These register should NOT be changed when the IP is busy; i.e. STATUS.BUSY is '1'.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | KEY | W | R | Undefined | Four Bytes of the key KEY[127:96] = CRYPTO_KEY3.KEY[31:0]. |

### 31.3.30 SMIF_CRYPTO_OUTPUT0

**Description:** Cryptography output 0
**Address:** 0x40420260
**Offset:** 0x260
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The CRYPTO_OUTPUT3, ..., CRYPTO_OUTPUT0 registers provide the ciphertext CT[127:0]. The ciphertext CT[127:0] is the output of the AES-128 forward block cipher. The block cipher use the plaintext PT[127:0] as input (CRYPTO_INPUT3, ..., CRYPTO_INPUT0) and key KEY[127:0] as the key (CRYPTO_KEY3, ..., CRYPTO_KEY0).

These registers are ONLY used in MMIO_MODE. In XIP_MODE, the ciphertext CT[127:0] is used (CRYPTO_OUTPUT3, ..., CRYPTO_OUTPUT0 registers are not used) to XOR the plaintext data PD[127:0] (for write operations) or ciphertext CD[127:0] (for read operations).

These register should NOT be changed when the IP is busy; i.e. STATUS.BUSY is '1'.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| 0:31 | OUTPUT | RW | A | Undefined | Four Bytes of the ciphertext CT[127:96] = CRYPTO_OUTPUT3.OUTPUT[31:0]. |

### 31.3.34 SMIF_INTR

**Description:** Interrupt register
**Address:** 0x404207C0
**Offset:** 0x7C0
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The IP has a single Active functionality interrupt. The interrupt causes are described in this register. Interrupt causes are only activated when the IP is enabled; i.e. CTL.ENABLED is '1'.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | RX_DATA_MMIO_FIFO_UNDERFLOW [5:5] | TX_DATA_FIFO_OVERFLOW [4:4] | TX_CMD_FIFO_OVERFLOW [3:3] | XIP_ALIGNMENT_ERROR [2:2] | TR_RX_REQ [1:1] | TR_TX_REQ [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TR_TX_REQ | RW1C | RW1S | 0 | Activated in MMIO mode, when a TX data FIFO trigger 'tr_tx_req' is activated. |
| 1 | TR_RX_REQ | RW1C | RW1S | 0 | Activated in MMIO mode, when a RX data FIFO trigger 'tr_rx_req' is activated. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 2 | XIP_ALIGNMENT _ERROR | RW1C | RW1S | 0 | Activated in XIP mode, when:<br>- a write transfer is requested<br>and<br>- Dual-Quad SPI mode (selected device's ADDR_CTL.DIV2 is '1') is selected or<br>- Octal SPI DDR mode (selected device's DATA_CTL.DDR_MODE = '1' and DATA_CTL.WIDTH = '3') or Hyperbus mode (selected device's ADDR_CTL.SIZE3 = '7') is selected without memory write byte masking (selected device's WR_DUMMY_CTL.RWDS_EN = '0')<br>and<br>- the AHB-Lite / AXI bus transfer address is not a multiple of '2' or<br>- the requested AHB-Lite / AXI bus transfer size is NOT a multiple of '2'.<br><br>Additionally, it is activated in XIP mode when the selected memory device does not support write byte masking (WR_DUMMY_CTL.RWDS_EN=0) and an AXI transfer occurs with not all of the AXI write strobes ('wstrb') enabled according to the transfer size ('assize').<br><br>Note: In dual-quad SPI mode (ADDR_CTL.DIV is '1'), each memory device contributes a 4-bit nibble for read data or write data. Write accesses are only possible if the request address is a multiple of 2 and the number of requested Bytes is a multiple of 2. Octal SPI DDR mode or Hyperbus mode are 16-bit word based protocols, writing single bytes is only possible when write byte masking is supported (via RWDS). Read accesses are always possible by extending the transfer size and / or aligning the address as needed and discarding the non-relevant byte(s). |
| 3 | TX_CMD_FIFO _OVERFLOW | RW1C | RW1S | 0 | Activated in MMIO mode, on an AHB-Lite write transfer to the TX command FIFO (TX_CMD_FIFO_WR) with not enough free entries available. |
| 4 | TX_DATA_FIFO _OVERFLOW | RW1C | RW1S | 0 | Activated in MMIO mode, on an AHB-Lite write transfer to the TX data FIFO (TX_DATA_FIFO_WR1, TX_DATA_FIFO_WR2, TX_DATA_FIFO_WR4) with not enough free entries available. |
| 5 | RX_DATA_MMIO_FIFO _UNDERFLOW | RW1C | RW1S | 0 | Activated in MMIO mode, on an AHB-Lite read transfer from the RX data MMIO FIFO (RX_DATA_MMIO_FIFO_RD1, RX_DATA_MMIO_FIFO_RD2, RX_DATA_MMIO_FIFO_RD4) with not enough entries available. Only activated for NON test bus controller transfers. |

### 31.3.35 SMIF_INTR_SET

**Description:** Interrupt set register
**Address:** 0x404207C4
**Offset:** 0x7C4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects the interrupt request register. For debug purposes, SW can write a '1' to trigger the cause of an interrupt.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | RX_DATA_MMIO_FIFO_UNDERFLOW [5:5] | TX_DATA_FIFO_OVERFLOW [4:4] | TX_CMD_FIFO_OVERFLOW [3:3] | XIP_ALIGNMENT_ERROR [2:2] | TR_RX_REQ [1:1] | TR_TX_REQ [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TR_TX_REQ | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 1 | TR_RX_REQ | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 2 | XIP_ALIGNMENT_ERROR | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 3 | TX_CMD_FIFO_OVERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 4 | TX_DATA_FIFO_OVERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 5 | RX_DATA_MMIO_FIFO_UNDERFLOW | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |

### 31.3.36 SMIF_INTR_MASK

**Description:** Interrupt mask register
**Address:** 0x404207C8
**Offset:** 0x7C8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | RX_DATA_MMIO_FIFO_UNDERFLOW [5:5] | TX_DATA_FIFO_OVERFLOW [4:4] | TX_CMD_FIFO_OVERFLOW [3:3] | XIP_ALIGNMENT_ERROR [2:2] | TR_RX_REQ [1:1] | TR_TX_REQ [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TR_TX_REQ | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 1 | TR_RX_REQ | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 2 | XIP_ALIGNMENT_ERROR | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 3 | TX_CMD_FIFO_OVERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 4 | TX_DATA_FIFO_OVERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 5 | RX_DATA_MMIO_FIFO_UNDERFLOW | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

### 31.3.37 SMIF_INTR_MASKED

**Description:** Interrupt masked register
**Address:** 0x404207CC
**Offset:** 0x7CC
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects a bitwise and between the interrupt request and mask registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | RX_DATA_MMIO_FIFO_UNDERFLOW [5:5] | TX_DATA_FIFO_OVERFLOW [4:4] | TX_CMD_FIFO_OVERFLOW [3:3] | XIP_ALIGNMENT_ERROR [2:2] | TR_RX_REQ [1:1] | TR_TX_REQ [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TR_TX_REQ | R | W | 0 | Logical and of corresponding request and mask bits. |
| 1 | TR_RX_REQ | R | W | 0 | Logical and of corresponding request and mask bits. |
| 2 | XIP_ALIGNMENT_ERROR | R | W | 0 | Logical and of corresponding request and mask bits. |
| 3 | TX_CMD_FIFO_OVERFLOW | R | W | 0 | Logical and of corresponding request and mask bits. |
| 4 | TX_DATA_FIFO_OVERFLOW | R | W | 0 | Logical and of corresponding request and mask bits. |
| 5 | RX_DATA_MMIO_FIFO_UNDERFLOW | R | W | 0 | Logical and of corresponding request and mask bits. |

### 31.3.38 DEVICE

#### 31.3.38.1 SMIF_DEVICE_CTL

**Description:** Control
**Address:** 0x40420800
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is only used in XIP_MODE (except for the DATA_SEL field, which is used in bot the XIP_MODE and MMIO_MODE).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | CRYPTO_EN [4:4] | None [3:1] | | | WR_EN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | MERGE_EN [15:15] | MERGE_TIMEOUT [14:12] | | | None [11:10] | | DATA_SEL [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | TOTAL_TIMEOUT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | TOTAL_TIMEOUT_EN [30:30] | TOTAL_TIMEOUT [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WR_EN | RW | R | 0 | Write enable:<br>'0': write transfers are not allowed to this device. An attempt to write to this device results in an AHB-Lite bus error.<br>'1': write transfers are allowed to this device. |
| 4 | CRYPTO_EN | RW | R | 0 | Cryptography on read/write accesses:<br>'0': disabled.<br>'1': enabled. |
| 8:9 | DATA_SEL | RW | R | 0 | Specifies the connection of the IP's data lines (spi_data[0], ..., spi_data[7]) to the device's data lines (SI/IO0, SO/IO1, IO2, IO3, IO4, IO5, IO6, IO7):<br>'0': spi_data[0] = IO0, spi_data[1] = IO1, ..., spi_data[7] = IO7. This value is allowed for single, dual, quad, dual quad and octal SPI modes. This value must be used for the first device in dual quad SPI mode. This value must be used for octal SPI mode.<br>'1': spi_data[2] = IO0, spi_data[3] = IO1. This value is only allowed for single and dual SPI modes.<br>'2': spi_data[4] = IO0, spi_data[5] = IO1, ..., spi_data[7] = IO3. This value is only allowed for single, dual, quad and dual quad SPI modes. In dual quad SPI mode, this value must be used for the second device.<br>'3': spi_data[6] = IO0, spi_data[7] = IO1. This value is only allowed for single and dual SPI modes. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 12:14 | MERGE_TIMEOUT | RW | R | 0 | Continuous transfer merge timeout in clk_mem cycles. This limits the standby time of the memory interface, i.e. the time the memory device is selected but no data is transferred.<br>The counting of the merge timeout period is done in the XIP block using clk_mem cycles. It starts when the last TX or RX byte is transferred to or from the data FIFOs.<br>After this period the memory device is deselected. A later transfer, even from a continuous address, starts with the overhead phases (command, address, mode, dummy cycles). |
| | _1_cycle | | | 0 | Timeout after 1 clk_mem cycle.<br>That means transfers will only be merged if the continuous transfer request is already available when the previous transfer is finished. |
| | _16_cycles | | | 1 | Timeout after 2^4 = 16 clk_mem cycles.<br>At a clk_mem frequency of 200MHz this means 80ns. |
| | _256_cycles | | | 2 | Timeout after 2^8 = 256 clk_mem cycles.<br>At a clk_mem frequency of 200MHz this means ~1.3us. |
| | _4096_cycles | | | 3 | Timeout after 2^12 = 4096 clk_mem cycles.<br>At a clk_mem frequency of 200MHz this means ~20us. |
| | _65536_cycles | | | 4 | Timeout after 2^16 = 65536 clk_mem cycles.<br>At a clk_mem frequency of 200MHz this means ~330us. |
| | Reserved5 | | | 5 | N/A |
| | Reserved6 | | | 6 | N/A |
| | Reserved7 | | | 7 | N/A |
| 15 | MERGE_EN | RW | R | 0 | Continous transfer merge enable:<br>'0': Disabled. No merging of transfers is done. Longest possible memory transfer is 16 Byte.<br>'1': Enabled. Merging of continous transfers is done. This skips the overhead (command, address, mode, dummy cycles) for a continuous (linear sequential) transfer. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:29 | TOTAL_TIMEOUT | RW | R | 0 | Total transfer timeout in clk_mem cycles.<br>The counting of the total timout period is done in the XIP block using clk_mem cycles. It starts when the first command of a new (not merged) transaction is transferred to the TX command FIFO causing the interface logic to select the memory.<br>After this period the memory device is deselected.<br><br>This feature is needed for RAM devices requiring refresh cycles. The value needs to be derived from the RAMs maximum transaction length time (tCMS) minus the time of transferring 2x16byte data block (data granularity of the XIP ports is 16byte, 1 16byte block transfer outstanding, another available for merging). If the result in negative, MERGE_EN must be set to '0'.<br><br>Example: RAM device tCMS = 4us, interface clock frequency = 100MHz: total transfer timeout is 4us - 2x16x10ns = 3680ns.<br>With clk_mem frequency of 200MHz the TOTAL_TIMEOUT value is 3680/5 = 736.<br><br>Note: In the unlikely case that the total transfer timeout is used (usually for RAM devices) while the page boundary crossing latency generation is enabled via RD_BOUND_CTL.PRESENT (usually for FLASH devices) the additional time needs to taken into account. |
| 30 | TOTAL_TIMEOUT_EN | RW | R | 0 | Total transfer timeout enable.<br>'0': Disabled. There is no limit for the total transfer time. The continuous transfer merge timeout for limiting the idle time of the memory interface still applies.<br>'1': Enabled. The maximum total transfer time is limited by field TOTAL_TIMEOUT. |
| 31 | ENABLED | RW | R | 0 | Device enable:<br>'0': Disabled.<br>'1': Enabled. |

### 31.3.38.2 SMIF_DEVICE_ADDR

**Description:** Device region base address
**Address:** 0x40420808
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is only used in XIP_MODE.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ADDR [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:31 | ADDR | RW | A | Undefined | Specifies the base address of the device region. If the device region is 2^m Bytes, ADDR MUST be a multiple of 2^m.<br><br>In dual quad SPI data transfer, the two devices should have the same ADDR and MASK register settings. The device control information (ADDR_CTL, RD_CMD_CTL, etc.) are provided by the MMIO control registers of the device with the lowest index.<br><br>The most significant bit fields are constants and set based on the SMIF_XIP_ADDR parameter. The most significant bits are identified on the SMIF_XIP_MASK parameter. E.g., if SMIF_XIP_MASK is 0xff00:0000 (16 MB XIP memory region), ADDR[31:24] = SMIF_XIP_ADDR[31:24]. |

### 31.3.38.3 SMIF_DEVICE_MASK

**Description:** Device region mask
**Address:** 0x4042080C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is only used in XIP_MODE.
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:31 | MASK | RW | A | Undefined | Specifies the size of the device region. All '1' bits are used to compare the incoming transfer request address A[31:0] with the address as specified in ADDR.ADDR: Address A is in the device when (A[31:8] & MASK[31:8]) == ADDR.ADDR[31:8].<br><br>The most significant bit fields are constants and set to'1'. The most significant bits are identified on the SMIF_XIP_MASK parameter. E.g., if SMIF_XIP_MASK is 0xff00:0000 (16 MB XIP memory region), MASK[31:24] = 0xff.<br><br>Note: a transfer request that is not in any device region results in an AHB-Lite bus error. |

### 31.3.38.4 SMIF_DEVICE_ADDR_CTL

**Description:** Address control
**Address:** 0x40420820
**Offset:** 0x20
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is only used in XIP_MODE.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | SIZE3 [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | DIV2 [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | SIZE3 | RW | R | 0 | Specifies the size of the XIP device address in Bytes:<br>'0': 1 Byte address.<br>'1': 2 Byte address.<br>'2': 3 Byte address.<br>'3': 4 Byte address.<br>'4'-'6': These settings are reserved. Do not use.<br>'7': 4 Byte address (spread over 5 bytes) according to Hyperbus protocol.<br>The lower significant address Bytes of the transfer request are used as XIP address to the external device. Note that for dual quad SPI data transfer, the XIP transfer request address is divided by 2. Therefore, the XIP transfer request address needs to be a multiple of 2. If the address is NOT a multiple of 2, the XIP_ALIGNMENT_ERROR interrupt cause is activated.<br><br>Note: If Hyperbus protocol is selected (SIZE3='7') then the WIDTH field must be set to '3' (octal data transfer) and the DDR_MODE field must be set to '1' (DDR mode) in the read/write command and address control registers, and the PRESENT field in read/write command control registers need be set to '1' (1 command byte). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8 | DIV2 | RW | R | 0 | Specifies if the AHB-Lite bus transfer address is divided by 2 or not:<br>'0': No divide by 2.<br>'1': Divide by 2.<br><br>This functionality is used for read and write operation in XIP, dual quad SPI mode; i.e. this DIV2 must be set to '1' in dual quad SPI mode.<br>If DIV2 is set to '1', the memory does not support write masking (WR_DUMMY_CTL.RWDS_EN = '0'), and in this configuration a write transfer is requested and the write transfer request address is NOT a multiple of 2 or the requested number of Bytes to be written is not a multiple of 2, the XIP_ALIGNMENT_ERROR interrupt cause is activated. |

### 31.3.38.5 SMIF_DEVICE_RD_CMD_CTL

**Description:** Read command control
**Address:** 0x40420840
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is only used in XIP_MODE.
**Default:** 0x0

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | PRESENT2 [31:30] | | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | SIZE5 | RW | R | 0 | Number of dummy cycles (minus 1):<br>'0': 1 cycles<br>...<br>'31': 32 cycles.<br><br>Note: this field specifies dummy cycles, not dummy Bytes! |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30:31 | PRESENT2 | RW | R | 0 | Presence of dummy cycles:<br>'0': not present<br>'1': present<br>'2': present - Dummy cycles are doubled when RWDS refresh indicator is high during CA cycle. (HyperRAM variable latency mode)<br><br>Notes:<br>- If CLOCK_IF_TX_SEL = '0' for transmitting command, address and mode fields in SDR mode (driving data between falling edges of spihb_clk_out) and the memory is driving read data in DDR mode (based on memory type and transmitted command), then there must be at least 1 latency / dummy cycle specified (RD_DUMMY_CTL.PRESENT2 > 0') to prevent controller and memory driving data signals at the same time.<br>The same is true for the theoretical (practically irrelevant case) of transmitting at least one of the command, address and mode fields in DDR mode but receiving data from the memory in SDR mode.<br><br>- When using the RWDS / DQS based capturing scheme (CTL.CLK_IF_RX_SEL=[6,7]), then there is a minimum number of latency / dummy cycles required (RD_DUMMY_CTL.PRESENT2 > 0). For the Hyperbus protocol (DDR_CTL.SIZE3=7) at least 1 latency / dummy cycle has to be specified, for SPI with DQS capturing at least 2 latency / dummy cycles need to be selected (RD_DUMMY_CTL.SIZE5 > 0, exception see following note).<br><br>- In case of falling edge RWDS / DQS capturing (CTL.CLOCK_IF_RX_SEL = '6') and SDR mode, SW should reduce the number of dummy cycles by 1 compared to the latency cycles required by the memory device.<br><br>- For Hyperbus, set RD DUMMY_CTL.SIZE5=initial latency cycles-2 |

### 31.3.38.9 SMIF_DEVICE_RD_DATA_CTL

**Description:** Read data control
**Address:** 0x40420850

## 32.1 CSV_HF

### 32.1.1 CSV 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV0_REF_CTL | 0x40261400 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV0_REF_LIMIT | 0x40261404 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV0_MON_CTL | 0x40261408 | FULL | Clock Supervision Monitor Control |

### 32.1.2 CSV 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV1_REF_CTL | 0x40261410 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV1_REF_LIMIT | 0x40261414 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV1_MON_CTL | 0x40261418 | FULL | Clock Supervision Monitor Control |

### 32.1.3 CSV 2

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV2_REF_CTL | 0x40261420 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV2_REF_LIMIT | 0x40261424 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV2_MON_CTL | 0x40261428 | FULL | Clock Supervision Monitor Control |

### 32.1.4 CSV 3

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV3_REF_CTL | 0x40261430 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV3_REF_LIMIT | 0x40261434 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV3_MON_CTL | 0x40261438 | FULL | Clock Supervision Monitor Control |

### 32.1.5 CSV 4

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV4_REF_CTL | 0x40261440 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV4_REF_LIMIT | 0x40261444 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV4_MON_CTL | 0x40261448 | FULL | Clock Supervision Monitor Control |

### 32.1.6 CSV 5

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV5_REF_CTL | 0x40261450 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV5_REF_LIMIT | 0x40261454 | FULL | Clock Supervision Reference Limits |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV5_MON_CTL | 0x40261458 | FULL | Clock Supervision Monitor Control |

### 32.1.7 CSV 6

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV6_REF_CTL | 0x40261460 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV6_REF_LIMIT | 0x40261464 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV6_MON_CTL | 0x40261468 | FULL | Clock Supervision Monitor Control |

### 32.1.8 CSV 7

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_HF_CSV7_REF_CTL | 0x40261470 | FULL | Clock Supervision Reference Control |
| CSV_HF_CSV7_REF_LIMIT | 0x40261474 | FULL | Clock Supervision Reference Limits |
| CSV_HF_CSV7_MON_CTL | 0x40261478 | FULL | Clock Supervision Monitor Control |

## 32.2 CSV_REF

### 32.2.1 CSV

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_REF_CSV_REF_CTL | 0x40261710 | FULL | Clock Supervision Reference Control |
| CSV_REF_CSV_REF_LIMIT | 0x40261714 | FULL | Clock Supervision Reference Limits |
| CSV_REF_CSV_MON_CTL | 0x40261718 | FULL | Clock Supervision Monitor Control |

## 32.3 CSV_LF

### 32.3.1 CSV

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_LF_CSV_REF_CTL | 0x40261720 | FULL | Clock Supervision Reference Control |
| CSV_LF_CSV_REF_LIMIT | 0x40261724 | FULL | Clock Supervision Reference Limits |
| CSV_LF_CSV_MON_CTL | 0x40261728 | FULL | Clock Supervision Monitor Control |

## 32.4 CSV_ILO

### 32.4.1 CSV

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CSV_ILO_CSV_REF_CTL | 0x40261730 | FULL | Clock Supervision Reference Control |
| CSV_ILO_CSV_REF_LIMIT | 0x40261734 | FULL | Clock Supervision Reference Limits |
| CSV_ILO_CSV_MON_CTL | 0x40261738 | FULL | Clock Supervision Monitor Control |

## 32.5 CLK_PLL400M 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CLK_PLL400M0_CONFIG | 0x40261900 | FULL | 400MHz PLL Configuration Register |
| CLK_PLL400M0_CONFIG2 | 0x40261904 | FULL | 400MHz PLL Configuration Register 2 |
| CLK_PLL400M0_CONFIG3 | 0x40261908 | FULL | 400MHz PLL Configuration Register 3 |
| CLK_PLL400M0_STATUS | 0x4026190C | FULL | 400MHz PLL Status Register |

## 32.6 CLK_PLL400M 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| CLK_PLL400M1_CONFIG | 0x40261910 | FULL | 400MHz PLL Configuration Register |
| CLK_PLL400M1_CONFIG2 | 0x40261914 | FULL | 400MHz PLL Configuration Register 2 |
| CLK_PLL400M1_CONFIG3 | 0x40261918 | FULL | 400MHz PLL Configuration Register 3 |
| CLK_PLL400M1_STATUS | 0x4026191C | FULL | 400MHz PLL Status Register |

## 32.7 MCWDT 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT0_CPU_SELECT | 0x40268040 | FULL | MCWDT CPU selection register |
| MCWDT0_CTR2_CTL | 0x40268080 | FULL | MCWDT Subcounter 2 Control register |
| MCWDT0_CTR2_CONFIG | 0x40268084 | FULL | MCWDT Subcounter 2 Configuration register |
| MCWDT0_CTR2_CNT | 0x40268088 | FULL | MCWDT Subcounter 2 Count Register |
| MCWDT0_LOCK | 0x40268090 | FULL | MCWDT Lock Register |
| MCWDT0_SERVICE | 0x40268094 | FULL | MCWDT Service Register |
| MCWDT0_INTR | 0x402680A0 | FULL | MCWDT Interrupt Register |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT0_INTR_SET | 0x402680A4 | FULL | MCWDT Interrupt Set Register |
| MCWDT0_INTR_MASK | 0x402680A8 | FULL | MCWDT Interrupt Mask Register |
| MCWDT0_INTR_MASKED | 0x402680AC | FULL | MCWDT Interrupt Masked Register |

### 32.7.1 CTR 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT0_CTR0_CTL | 0x40268000 | FULL | MCWDT Subcounter Control Register |
| MCWDT0_CTR0_LOWER_LIMIT | 0x40268004 | FULL | MCWDT Subcounter Lower Limit Register |
| MCWDT0_CTR0_UPPER_LIMIT | 0x40268008 | FULL | MCWDT Subcounter Upper Limit Register |
| MCWDT0_CTR0_WARN_LIMIT | 0x4026800C | FULL | MCWDT Subcounter Warn Limit Register |
| MCWDT0_CTR0_CONFIG | 0x40268010 | FULL | MCWDT Subcounter Configuration Register |
| MCWDT0_CTR0_CNT | 0x40268014 | FULL | MCWDT Subcounter Count Register |

### 32.7.2 CTR 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT0_CTR1_CTL | 0x40268020 | FULL | MCWDT Subcounter Control Register |
| MCWDT0_CTR1_LOWER_LIMIT | 0x40268024 | FULL | MCWDT Subcounter Lower Limit Register |
| MCWDT0_CTR1_UPPER_LIMIT | 0x40268028 | FULL | MCWDT Subcounter Upper Limit Register |
| MCWDT0_CTR1_WARN_LIMIT | 0x4026802C | FULL | MCWDT Subcounter Warn Limit Register |
| MCWDT0_CTR1_CONFIG | 0x40268030 | FULL | MCWDT Subcounter Configuration Register |
| MCWDT0_CTR1_CNT | 0x40268034 | FULL | MCWDT Subcounter Count Register |

## 32.8 MCWDT 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT1_CPU_SELECT | 0x40268140 | FULL | MCWDT CPU selection register |
| MCWDT1_CTR2_CTL | 0x40268180 | FULL | MCWDT Subcounter 2 Control register |
| MCWDT1_CTR2_CONFIG | 0x40268184 | FULL | MCWDT Subcounter 2 Configuration register |
| MCWDT1_CTR2_CNT | 0x40268188 | FULL | MCWDT Subcounter 2 Count Register |
| MCWDT1_LOCK | 0x40268190 | FULL | MCWDT Lock Register |
| MCWDT1_SERVICE | 0x40268194 | FULL | MCWDT Service Register |
| MCWDT1_INTR | 0x402681A0 | FULL | MCWDT Interrupt Register |
| MCWDT1_INTR_SET | 0x402681A4 | FULL | MCWDT Interrupt Set Register |
| MCWDT1_INTR_MASK | 0x402681A8 | FULL | MCWDT Interrupt Mask Register |
| MCWDT1_INTR_MASKED | 0x402681AC | FULL | MCWDT Interrupt Masked Register |

### 32.8.1 CTR 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT1_CTR0_CTL | 0x40268100 | FULL | MCWDT Subcounter Control Register |
| MCWDT1_CTR0_LOWER_LIMIT | 0x40268104 | FULL | MCWDT Subcounter Lower Limit Register |
| MCWDT1_CTR0_UPPER_LIMIT | 0x40268108 | FULL | MCWDT Subcounter Upper Limit Register |
| MCWDT1_CTR0_WARN_LIMIT | 0x4026810C | FULL | MCWDT Subcounter Warn Limit Register |
| MCWDT1_CTR0_CONFIG | 0x40268110 | FULL | MCWDT Subcounter Configuration Register |
| MCWDT1_CTR0_CNT | 0x40268114 | FULL | MCWDT Subcounter Count Register |

### 32.8.2 CTR 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT1_CTR1_CTL | 0x40268120 | FULL | MCWDT Subcounter Control Register |
| MCWDT1_CTR1_LOWER_LIMIT | 0x40268124 | FULL | MCWDT Subcounter Lower Limit Register |
| MCWDT1_CTR1_UPPER_LIMIT | 0x40268128 | FULL | MCWDT Subcounter Upper Limit Register |
| MCWDT1_CTR1_WARN_LIMIT | 0x4026812C | FULL | MCWDT Subcounter Warn Limit Register |
| MCWDT1_CTR1_CONFIG | 0x40268130 | FULL | MCWDT Subcounter Configuration Register |
| MCWDT1_CTR1_CNT | 0x40268134 | FULL | MCWDT Subcounter Count Register |

## 32.9 MCWDT 2

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT2_CPU_SELECT | 0x40268240 | FULL | MCWDT CPU selection register |
| MCWDT2_CTR2_CTL | 0x40268280 | FULL | MCWDT Subcounter 2 Control register |
| MCWDT2_CTR2_CONFIG | 0x40268284 | FULL | MCWDT Subcounter 2 Configuration register |
| MCWDT2_CTR2_CNT | 0x40268288 | FULL | MCWDT Subcounter 2 Count Register |
| MCWDT2_LOCK | 0x40268290 | FULL | MCWDT Lock Register |
| MCWDT2_SERVICE | 0x40268294 | FULL | MCWDT Service Register |
| MCWDT2_INTR | 0x402682A0 | FULL | MCWDT Interrupt Register |

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT2_INTR_SET | 0x402682A4 | FULL | MCWDT Interrupt Set Register |
| MCWDT2_INTR_MASK | 0x402682A8 | FULL | MCWDT Interrupt Mask Register |
| MCWDT2_INTR_MASKED | 0x402682AC | FULL | MCWDT Interrupt Masked Register |

### 32.9.1 CTR 0

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT2_CTR0_CTL | 0x40268200 | FULL | MCWDT Subcounter Control Register |
| MCWDT2_CTR0_LOWER_LIMIT | 0x40268204 | FULL | MCWDT Subcounter Lower Limit Register |
| MCWDT2_CTR0_UPPER_LIMIT | 0x40268208 | FULL | MCWDT Subcounter Upper Limit Register |
| MCWDT2_CTR0_WARN_LIMIT | 0x4026820C | FULL | MCWDT Subcounter Warn Limit Register |
| MCWDT2_CTR0_CONFIG | 0x40268210 | FULL | MCWDT Subcounter Configuration Register |
| MCWDT2_CTR0_CNT | 0x40268214 | FULL | MCWDT Subcounter Count Register |

### 32.9.2 CTR 1

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT2_CTR1_CTL | 0x40268220 | FULL | MCWDT Subcounter Control Register |
| MCWDT2_CTR1_LOWER_LIMIT | 0x40268224 | FULL | MCWDT Subcounter Lower Limit Register |
| MCWDT2_CTR1_UPPER_LIMIT | 0x40268228 | FULL | MCWDT Subcounter Upper Limit Register |
| MCWDT2_CTR1_WARN_LIMIT | 0x4026822C | FULL | MCWDT Subcounter Warn Limit Register |
| MCWDT2_CTR1_CONFIG | 0x40268230 | FULL | MCWDT Subcounter Configuration Register |
| MCWDT2_CTR1_CNT | 0x40268234 | FULL | MCWDT Subcounter Count Register |

## 32.10 MCWDT 3

| Register Name | Address | Permission | Description |
|---|---|---|---|
| MCWDT3_CPU_SELECT | 0x40268340 | FULL | MCWDT CPU selection register |
| MCWDT3_CTR2_CTL | 0x40268380 | FULL | MCWDT Subcounter 2 Control register |

## 32.12 Register Details

### 32.12.1 PWR_LVD_STATUS

**Description:** High Voltage / Low Voltage Detector (HVLVD) Status Register
**Address:** 0x40260040
**Offset:** 0x40
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Real-time status for Voltage Monitoring System
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | HVLVD1 _OUT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | HVLVD1_OUT | R | RW | 0 | HVLVD1 output.<br>0: below voltage threshold<br>1: above voltage threshold |

### 32.12.2 PWR_LVD_STATUS2

**Description:** High Voltage / Low Voltage Detector (HVLVD) Status Register #2
**Address:** 0x40260044
**Offset:** 0x44
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Real-time status for Voltage Monitoring System
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | HVLVD2_OUT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | HVLVD2_OUT | R | RW | 0 | HVLVD2 output.<br>0: below voltage threshold<br>1: above voltage threshold |

### 32.12.3 CLK_DSI_SELECT

**Description:** Clock DSI Select Register
**Address:** 0x40260100
**Offset:** 0x100
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Configures DSI mux in clock generation path. Each path has its own copy of this register. See PAS for DSI signal connectivity list.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | DSI_MUX [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | DSI_MUX | RW | R | 0 | Selects a DSI source or low frequency clock for use in a clock path. The output of this mux can be selected for clock PATH<i> using CLK_PATH_SELECT register. Using the output of this mux as HFCLK source will result in undefined behavior. It can be used to clocks to DSI or as reference inputs for the FLL/PLL, subject to the frequency limits of those circuits. This mux is not glitch free, so do not change the selection while it is an actively selected clock. |
| | DSI_OUT0 | | | 0 | DSI0 - dsi_out[0] |
| | DSI_OUT1 | | | 1 | DSI1 - dsi_out[1] |
| | DSI_OUT2 | | | 2 | DSI2 - dsi_out[2] |
| | DSI_OUT3 | | | 3 | DSI3 - dsi_out[3] |
| | DSI_OUT4 | | | 4 | DSI4 - dsi_out[4] |
| | DSI_OUT5 | | | 5 | DSI5 - dsi_out[5] |
| | DSI_OUT6 | | | 6 | DSI6 - dsi_out[6] |
| | DSI_OUT7 | | | 7 | DSI7 - dsi_out[7] |
| | DSI_OUT8 | | | 8 | DSI8 - dsi_out[8] |
| | DSI_OUT9 | | | 9 | DSI9 - dsi_out[9] |
| | DSI_OUT10 | | | 10 | DSI10 - dsi_out[10] |
| | DSI_OUT11 | | | 11 | DSI11 - dsi_out[11] |
| | DSI_OUT12 | | | 12 | DSI12 - dsi_out[12] |
| | DSI_OUT13 | | | 13 | DSI13 - dsi_out[13] |
| | DSI_OUT14 | | | 14 | DSI14 - dsi_out[14] |
| | DSI_OUT15 | | | 15 | DSI15 - dsi_out[15] |
| | ILO0 | | | 16 | ILO0 - Internal Low-speed Oscillator #0 |
| | WCO | | | 17 | WCO - Watch-Crystal Oscillator |
| | ALTLF | | | 18 | ALTLF - Alternate Low-Frequency Clock |
| | PILO | | | 19 | PILO - Precision Internal Low-speed Oscillator |
| | ILO1 | | | 20 | ILO1 - Internal Low-speed Oscillator #1, if present. |

### 32.12.4 CLK_OUTPUT_FAST

**Description:** Fast Clock Output Select Register
**Address:** 0x40260140
**Offset:** 0x140
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Selects clocks for calibration
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | PATH_SEL0 [7:4] | | | | FAST_SEL0 [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | HFCLK_SEL0 [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | PATH_SEL1 [23:20] | | | | FAST_SEL1 [19:16] | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:28] | | | | HFCLK_SEL1 [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | FAST_SEL0 | RW | R | 0 | Select signal for fast clock output #0 |
| | NC | | | 0 | Disabled - output is 0. For power savings, clocks are blocked before entering any muxes, including PATH_SEL0 and HFCLK_SEL0. |
| | ECO | | | 1 | External Crystal Oscillator (ECO) |
| | EXTCLK | | | 2 | External clock input (EXTCLK) |
| | ALTHF | | | 3 | Alternate High-Frequency (ALTHF) clock input to SRSS |
| | TIMERCLK | | | 4 | Timer clock. It is grouped with the fast clocks because it may be a gated version of a fast clock, and therefore may have a short high pulse. |
| | PATH_SEL0 | | | 5 | Selects the clock path chosen by PATH_SEL0 field |
| | HFCLK_SEL0 | | | 6 | Selects the output of the HFCLK_SEL0 mux |
| | SLOW_SEL0 | | | 7 | Selects the output of CLK_OUTPUT_SLOW.SLOW_SEL0 |
| 4:7 | PATH_SEL0 | RW | R | 0 | Selects a clock path to use in fast clock output #0 logic.<br>0: FLL output<br>1-15: PLL output on path1-path15 (if available) |
| 8:11 | HFCLK_SEL0 | RW | R | 0 | Selects a HFCLK tree for use in fast clock output #0 |
| 16:19 | FAST_SEL1 | RW | R | 0 | Select signal for fast clock output #1 |
| | NC | | | 0 | Disabled - output is 0. For power savings, clocks are blocked before entering any muxes, including PATH_SEL1 and HFCLK_SEL1. |
| | ECO | | | 1 | External Crystal Oscillator (ECO) |
| | EXTCLK | | | 2 | External clock input (EXTCLK) |
| | ALTHF | | | 3 | Alternate High-Frequency (ALTHF) clock input to SRSS |
| | TIMERCLK | | | 4 | Timer clock. It is grouped with the fast clocks because it may be a gated version of a fast clock, and therefore may have a short high pulse. |
| | PATH_SEL1 | | | 5 | Selects the clock path chosen by PATH_SEL1 field |
| | HFCLK_SEL1 | | | 6 | Selects the output of the HFCLK_SEL1 mux |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | SLOW_SEL1 | | | 7 | Selects the output of CLK_OUTPUT_SLOW.SLOW_SEL1 |
| 20:23 | PATH_SEL1 | RW | R | 0 | Selects a clock path to use in fast clock output #1 logic.<br>0: FLL output<br>1-15: PLL output on path1-path15 (if available) |
| 24:27 | HFCLK_SEL1 | RW | R | 0 | Selects a HFCLK tree for use in fast clock output #1 logic |

### 32.12.5 CLK_OUTPUT_SLOW

**Description:** Slow Clock Output Select Register
**Address:** 0x40260144
**Offset:** 0x144
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Selects a slow clock for calibration. The outputs of these muxes go into CLK_OUTPUT_FAST.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SLOW_SEL1 [7:4] | | | | SLOW_SEL0 [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | SLOW_SEL0 | RW | R | 0 | Select signal for slow clock output #0 |
| | NC | | | 0 | Disabled - output is 0. For power savings, clocks are blocked before entering any muxes. |
| | ILO0 | | | 1 | Internal Low Speed Oscillator (ILO0) |
| | WCO | | | 2 | Watch-Crystal Oscillator (WCO) |
| | BAK | | | 3 | Root of the Backup domain clock tree (BAK) |
| | ALTLF | | | 4 | Alternate low-frequency clock input to SRSS (ALTLF) |
| | LFCLK | | | 5 | Root of the low-speed clock tree (LFCLK) |
| | IMO | | | 6 | Internal Main Oscillator (IMO). This is grouped with the slow clocks so it can be observed during DEEPSLEEP entry/exit. |
| | SLPCTRL | | | 7 | Sleep Controller clock (SLPCTRL). This is grouped with the slow clocks so it can be observed during DEEPSLEEP entry/exit. |
| | PILO | | | 8 | Precision Internal Low Speed Oscillator (PILO) |
| | ILO1 | | | 9 | Internal Low Speed Oscillator (ILO1), if present on the product. |
| | ECO_PRESCALER | | | 10 | ECO Prescaler (ECO_PRESCALER) |
| | LPECO | | | 11 | LPECO |
| | LPECO_PRESCALER | | | 12 | LPECO Prescaler (LPECO_PRESCALER) |
| 4:7 | SLOW_SEL1 | RW | R | 0 | Select signal for slow clock output #1 |
| | NC | | | 0 | Disabled - output is 0. For power savings, clocks are blocked before entering any muxes. |
| | ILO0 | | | 1 | Internal Low Speed Oscillator (ILO) |
| | WCO | | | 2 | Watch-Crystal Oscillator (WCO) |
| | BAK | | | 3 | Root of the Backup domain clock tree (BAK) |
| | ALTLF | | | 4 | Alternate low-frequency clock input to SRSS (ALTLF) |
| | LFCLK | | | 5 | Root of the low-speed clock tree (LFCLK) |
| | IMO | | | 6 | Internal Main Oscillator (IMO). This is grouped with the slow clocks so it can be observed during DEEPSLEEP entry/exit. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | SLPCTRL | | | 7 | Sleep Controller clock (SLPCTRL). This is grouped with the slow clocks so it can be observed during DEEPSLEEP entry/exit. |
| | PILO | | | 8 | Precision Internal Low Speed Oscillator (PILO) |
| | ILO1 | | | 9 | Internal Low Speed Oscillator (ILO1), if present on the product. |
| | ECO_PRESCALER | | | 10 | ECO Prescaler (ECO_PRESCALER) |
| | LPECO | | | 11 | LPECO |
| | LPECO_PRESCALER | | | 12 | LPECO Prescaler (LPECO_PRESCALER) |

### 32.12.6 CLK_CAL_CNT1

**Description:** Clock Calibration Counter 1
**Address:** 0x40260148
**Offset:** 0x148
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x80000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER1 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER1 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER1 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER_DONE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:23 | CAL_COUNTER1 | RW | A | 0 | Down-counter clocked on fast clock output #0 (see CLK_OUTPUT_FAST). This register always reads as zero. Counting starts internally when this register is written with a nonzero value. CAL_COUNTER_DONE goes immediately low to indicate that the counter has started and will be asserted when the counters are done. Do not write this field unless CAL_COUNTER_DONE==1. Both clocks must be running or the measurement will not complete. A stalled counter can be recovered by selecting valid clocks, waiting until the measurement completes, and discarding the first result. |
| 31 | CAL_COUNTER_DONE | R | W | 1 | Status bit indicating that the internal counter #1 is finished counting and CLK_CAL_CNT2.COUNTER stopped counting up |

### 32.12.7 CLK_CAL_CNT2

**Description:** Clock Calibration Counter 2
**Address:** 0x4026014C
**Offset:** 0x14C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER2 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER2 [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | CAL_COUNTER2 [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:23 | CAL_COUNTER2 | R | RW | 0 | Up-counter clocked on fast clock output #1 (see CLK_OUTPUT_FAST). When CLK_CAL_CNT1.CAL_COUNTER_DONE==1, the counter is stopped and can be read by SW. Do not read this value unless CAL_COUNTER_DONE==1. The expected final value is related to the ratio of clock frequencies used for the two counters and the value loaded into counter 1: CLK_CAL_CNT2.COUNTER=(F_cnt2/F_cnt1)*(CLK_CAL_CNT1.COUNTER) |

### 32.12.8 SRSS_INTR

**Description:** SRSS Interrupt Register
**Address:** 0x40260200
**Offset:** 0x200
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Interrupt signal from SRSS includes this register and also BACKUP_INTR, if present.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | CLK_CAL [5:5] | None [4:3] | | HVLVD2 [2:2] | HVLVD1 [1:1] | None [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | HVLVD1 | RW1C | A | 0 | Interrupt for low voltage detector HVLVD1 |
| 2 | HVLVD2 | RW1C | A | 0 | Interrupt for low voltage detector HVLVD2 |
| 5 | CLK_CAL | RW1C | A | 0 | Clock calibration counter is done. This field is reset during DEEPSLEEP mode. |

### 32.12.9 SRSS_INTR_SET

**Description:** SRSS Interrupt Set Register
**Address:** 0x40260204
**Offset:** 0x204
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Can be used to set interrupts for firmware testing.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | CLK_CAL [5:5] | None [4:3] | | HVLVD2 [2:2] | HVLVD1 [1:1] | None [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | HVLVD1 | RW1S | A | 0 | Set interrupt for low voltage detector HVLVD1 |
| 2 | HVLVD2 | RW1S | A | 0 | Set interrupt for low voltage detector HVLVD2 |
| 5 | CLK_CAL | RW1S | A | 0 | Set interrupt for clock calibration counter done. This field is reset during DEEPSLEEP mode. |

### 32.12.10 SRSS_INTR_MASK

**Description:** SRSS Interrupt Mask Register
**Address:** 0x40260208
**Offset:** 0x208
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Controls whether interrupt is forwarded to CPU. All masks block the interrupt when 0 and forward the interrupt when 1
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | CLK_CAL [5:5] | None [4:3] | | HVLVD2 [2:2] | HVLVD1 [1:1] | None [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | HVLVD1 | RW | R | 0 | Mask for low voltage detector HVLVD1 |
| 2 | HVLVD2 | RW | R | 0 | Mask for low voltage detector HVLVD2 |
| 5 | CLK_CAL | RW | R | 0 | Mask for clock calibration done |

### 32.12.11 SRSS_INTR_MASKED

**Description:** SRSS Interrupt Masked Register
**Address:** 0x4026020C
**Offset:** 0x20C
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Bitwise and between the interrupt request and mask registers so firmware can read the status of all mask enabled interrupt causes with a single load operation
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | CLK_CAL [5:5] | None [4:3] | | HVLVD2 [2:2] | HVLVD1 [1:1] | None [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | HVLVD1 | R | RW | 0 | Logical and of corresponding request and mask bits. |
| 2 | HVLVD2 | R | RW | 0 | Logical and of corresponding request and mask bits. |
| 5 | CLK_CAL | R | RW | 0 | Logical and of corresponding request and mask bits. |

### 32.12.12 PWR_CTL

**Description:** Power Mode Control
**Address:** 0x40261000
**Offset:** 0x1000
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Controls the device power mode options and allows observation of current state.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | LPM _READY [5:5] | DEBUG _SESSION [4:4] | None [3:2] | | POWER_MODE [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | POWER_MODE | R | RW | 0 | Current power mode of the device. Note that this field cannot be read in all power modes on actual silicon. |
| | RESET | | | 0 | System is resetting. |
| | ACTIVE | | | 1 | At least one CPU is running. |
| | SLEEP | | | 2 | No CPUs are running. Peripherals may be running. |
| | DEEPSLEEP | | | 3 | Main high-frequency clock is off; low speed clocks are available. Communication interface clocks may be present. |
| 4 | DEBUG_SESSION | R | RW | 0 | Indicates whether a debug session is active (CDBGPWRUPREQ signal is 1) |
| | NO_SESSION | | | 0 | No debug session active |
| | SESSION_ACTIVE | | | 1 | Debug session is active. Power modes behave differently to keep the debug session active. |
| 5 | LPM_READY | R | RW | 0 | Indicates whether certain low power functions are ready. The low current circuits take longer to startup after XRES, HIBERNATE wakeup, or supply supervision reset wakeup than the normal mode circuits. HIBERNATE mode may be entered regardless of this bit.<br>0: If a low power circuit operation is requested, it will stay in its normal operating mode until it is ready. If DEEPSLEEP is requested by all processors WFI/WFE, the device will instead enter SLEEP. When low power circuits are ready, device will automatically enter the originally requested mode.<br>1: Normal operation. DEEPSLEEP and low power circuits operate as requested in other registers. |

### 32.12.13 PWR_CTL2

**Description:** Power Mode Control 2
**Address:** 0x40261004
**Offset:** 0x1004
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Controls the device power mode options and allows observation of current state.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | DPSLP_REG_DIS [4:4] | None [3:2] | | LINREG_OK [1:1] | LINREG_DIS [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:22] | | REFVBUF_OK [21:21] | REFVBUF_DIS [20:20] | None [19:17] | | | REFV_DIS [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | PLL_LS_BYPASS [31:31] | None [30:29] | | BGREF_LPMODE [28:28] | None [27:26] | | REFI_OK [25:25] | REFI_DIS [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | LINREG_DIS | RW | A | 0 | Explicitly disable the linear Core Regulator. Write zero for Traveo II devices. This register is only reset by XRES, HIBERNATE wakeup, or supply supervision reset.<br>0: Linear Core Regulator is not explicitly disabled. Hardware disables it automatically for internal sequences, including for DEEPSLEEP, HIBERNATE, and XRES low power modes.<br>1: Linear Core Regulator is explicitly disabled. Only use this for special cases when another source supplies vccd during ACTIVE and SLEEP modes. This setting is only legal when another source supplies vccd, but there is no special hardware protection for this case. |
| 1 | LINREG_OK | R | RW | 0 | Status of the linear Core Regulator. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4 | DPSLP_REG_DIS | RW | A | 0 | Explicity disable the DeepSleep regulator, including circuits shared with the Active Regulator. This register must not be set except as part of a Cypress-provided sequence or API, such as the PMIC case described below. This register is only reset by XRES, HIBERNATE wakeup, or supply supervision reset. If the DeepSleep regulator is disabled, it is not supported to enable it again later by clearing this bit.<br>0: DeepSleep Regulator is not explicitly disabled. This is the normal setting, and hardware automatically controls the DeepSleep regulator for most sequences, including for HIBERNATE and XRES low power modes. This setting must be used if the Active Linear Regulator is used, because some circuitry is shared.<br>1: DeepSleep Regulator is explicitly disabled. Only use this for special cases when another source supplies vccdpslp during DEEPSLEEP mode and there is no future intention to use the Active Regulator for ACTIVE/SLEEP modes. For example, this setting is used as part of a Cypress-provided handover sequence to a PMIC that operates in ACTIVE, SLEEP, and DEEPSLEEP and disables both the Active Linear Regulator and DeepSleep Regulator. |
| 16 | REFV_DIS | RW | A | 0 | Disables the voltage reference.<br>PSoC products: This disables the Active voltage reference. Firmware must ensure that LPM_READY==1 and BGREF_LPMODE==1 for at least 1us before disabling the Active Reference. When enabling the Active Reference, use REFV_OK indicator to know when it is ready. This register is only reset by XRES, HIBERNATE wakeup, or supply supervision reset.<br>Traveo II products: Reserved. Write zero. |
| 20 | REFVBUF_DIS | RW | A | 0 | Disable the voltage reference buffer. Firmware should only disable the buffer when there is no connected circuit that is using it. SRSS circuits that require it are the PLL and ECO. A particular product may have circuits outside the SRSS that use the buffer. This register is only reset by XRES, HIBERNATE wakeup, or supply supervision reset. |
| 21 | REFVBUF_OK | R | RW | 0 | Indicates that the voltage reference buffer is ready. Due to synchronization delays, it may take two IMO clock cycles for hardware to clear this bit after asserting REFVBUF_DIS=1. |
| 24 | REFI_DIS | RW | A | 0 | Reserved. Write zero. |
| 25 | REFI_OK | R | RW | 0 | Indicates that the current reference is ready. Due to synchronization delays, it may take two IMO clock cycles for hardware to clear this bit after asserting REFI_DIS=1. |
| 28 | BGREF_LPMODE | RW | A | 0 | Control the circuit-level power mode of the Bandgap Reference circuits.<br>0: Bandgap Reference circuits operate in higher current mode.<br>1: Bandgap Reference circuits operate in low power. Refer to documentation for restrictions.<br><br>HT-variant: This register will not set unless CLK_ILO0_CONFIG.ILO0_ENABLE==1. When disabling low power operation, keep ILO0 enabled for at least 5 cycles after clearing this bit to allow for internal synchronization. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | PLL_LS_BYPASS | RW | R | 0 | Bypass level shifter inside the PLL. Unused, if no PLL is present in the product.<br>0: Do not bypass the level shifter. This setting is ok for all operational modes and vccd target voltage.<br>1: Bypass the level shifter. This may reduce jitter on the PLL output clock, but can only be used when vccd is targeted to 1.1V nominal. Otherwise, it can result in clock degradation and static current. |

### 32.12.14 PWR_HIBERNATE

**Description:** HIBERNATE Mode Register
**Address:** 0x40261008
**Offset:** 0x1008
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls entry/exit from HIBERNATE power mode. This register is implemented in the unregulated voltage domain. This register and PWR_HIB_DATA registers are the only ones that continue to retain information during HIBERNATE mode. Three identical writes are required to enter HIBERNATE mode. Ensure changes settle after the third write by reading this register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TOKEN [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | UNLOCK [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | POLARITY_HIBPIN [23:20] | | | | MASK_HIBWDT [19:19] | MASK_HIBALARM [18:18] | FREEZE [17:17] | None [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | HIBERNATE [31:31] | HIBERNATE_DISABLE [30:30] | SENSE_MODE [29:29] | None [28:28] | MASK_HIBPIN [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | TOKEN | RW | A | 0 | Contains a 8-bit token that is retained through a HIBERNATE/WAKEUP sequence that can be used by firmware to differentiate WAKEUP from a general RESET event. Note that waking up from HIBERNATE using XRES will reset this register. |
| 8:15 | UNLOCK | RW | A | 0 | This byte must be set to 0x3A for FREEZE or HIBERNATE fields to operate. Any other value in this register will cause FREEZE/HIBERNATE to have no effect, except as noted in the FREEZE description. |
| 17 | FREEZE | RW | A | 0 | Firmware sets this bit to freeze the configuration, mode and state of all GPIOs and SIOs in the system. When entering HIBERNATE mode, the first write instructs DEEPSLEEP peripherals that they cannot ignore the upcoming freeze command. This occurs even in the illegal condition where UNLOCK is not set. If UNLOCK and HIBERNATE are properly set, the IOs actually freeze on the second write. Supply supervision is disabled during HIBERNATE mode. HIBERNATE peripherals ignore resets (excluding XRES) while FREEZE==1. |
| 18 | MASK_HIBALARM | RW | A | 0 | Obsolete. Use PWR_HIB_WAKE_CTL.HIB_WAKE_RTC for new designs. |
| 19 | MASK_HIBWDT | RW | A | 0 | Obsolete. Use PWR_HIB_WAKE_CTL.HIB_WAKE_WDT for new designs. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 20:23 | POLARITY_HIBPIN | RW | A | 0 | Obsolete. Use PWR_HIB_WAKE_CTL2.HIB_WAKE_SRC for new designs. |
| 24:27 | MASK_HIBPIN | RW | A | 0 | Obsolete. Use PWR_HIB_WAKE_CTL.HIB_WAKE_SRC for new designs. |
| 29 | SENSE_MODE | RW1S | A | 0 | Power mode when wakeups are sensitive. The default of this field is 0 for software compatibility with other products. It is recommended to set this field to 1 for new/updated software.<br>0: Wakeups are sensitive only during HIBERNATE mode. A wakeup pulse that comes just before HIBERNATE entry may be missed. Backward compatible.<br>1: Wakeups are sensitive in HIBERNATE and higher modes. Before entering HIBERNATE, software must clear all unmasked, pending wakeups in PWR_HIB_WAKE_CAUSE register. An unmasked, pending wakeup causes HIBERNATE wakeup, even if it was pending from before HIBERNATE entry. This prevents missed wakeups. |
| 30 | HIBERNATE_DISABLE | RW1S | R | 0 | Hibernate disable bit.<br>0: Normal operation, HIBERNATE works as described<br>1: Further writes to this register are ignored<br>Note: This bit is a write-once bit until the next reset. Avoid changing any other bits in this register while disabling HIBERNATE mode. Also, it is recommended to clear the UNLOCK code, if it was previously written.. |
| 31 | HIBERNATE | RW | A | 0 | Firmware sets this bit to enter HIBERNATE mode. The system will enter HIBERNATE mode immediately after writing to this bit and will wakeup only in response to XRES or WAKEUP. Both UNLOCK and FREEZE must have been set correctly in a previous write operations. Otherwise, it will not enter HIBERNATE. External supplies must have been stable for 250us before entering HIBERNATE mode. |

### 32.12.15 PWR_SSV_CTL

**Description:** Supply Supervision Control Register
**Address:** 0x40261018
**Offset:** 0x1018
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Controls for brownout and over-voltage detectors. Fields *_VSEL and *_ACTION are only reset by XRES/POR/BOD/OVD/OCD/HIBERNATE. Fields *_ENABLE are reset by all resets.
**Default:** 0x8080808

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | BODVDDA_ACTION [7:6] | | None [5:5] | BODVDDA_VSEL [4:4] | BODVDDD_ENABLE [3:3] | None [2:1] | | BODVDDD_VSEL [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | BODVCCD_ENABLE [11:11] | None [10:9] | | BODVDDA_ENABLE [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | OVDVDDA_ACTION [23:22] | | None [21:21] | OVDVDDA_VSEL [20:20] | OVDVDDD_ENABLE [19:19] | None [18:17] | | OVDVDDD_VSEL [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:28] | | | | OVDVCCD_ENABLE [27:27] | None [26:25] | | OVDVDDA_ENABLE [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | BODVDDD_VSEL | RW | A | 0 | Selects the voltage threshold for BOD on vddd. The BOD does not reliably monitor the supply during the transition.<br>0: vddd<2.7V<br>1: vddd<3.0V |
| 3 | BODVDDD_ENABLE | RW | A | 1 | Enable for BOD on vddd. This cannot be disabled during normal operation. |
| 4 | BODVDDA_VSEL | RW | A | 0 | Selects the voltage threshold for BOD on vdda. Ensure BODVDDA_ENABLE==0 before changing this setting to prevent false triggers.<br>0: vdda<2.7V<br>1: vdda<3.0V |
| 6:7 | BODVDDA_ACTION | RW | A | 0 | Action taken when the BOD on vdda triggers. |
| | NOTHING | | | 0 | No action |
| | FAULT | | | 1 | Generate a fault |
| | RESET | | | 2 | Reset the chip |
| 8 | BODVDDA_ENABLE | RW | A | 0 | Enable for BOD on vdda. BODVDDA_ACTION will be triggered when the BOD is disabled. If no action is desired when disabling, firmware must first write BODVDDA_ACTION=NOTHING in a separate write cycle. |
| 11 | BODVCCD_ENABLE | RW | A | 1 | Enable for BOD on vccd. This cannot be disabled during normal operation. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16 | OVDVDDD_VSEL | RW | A | 0 | Selects the voltage threshold for OVD on vddd. The OVD does not reliably monitor the supply during the transition.<br>0: vddd>5.5V<br>1: vddd>5.0V |
| 19 | OVDVDDD_ENABLE | RW | A | 1 | Enable for OVD on vddd. This cannot be disabled during normal operation. |
| 20 | OVDVDDA_VSEL | RW | A | 0 | Selects the voltage threshold for OVD on vdda. Ensure OVDVDDA_ENABLE==0 before changing this setting to prevent false triggers<br>0: vddd>5.5V<br>1: vddd>5.0V |
| 22:23 | OVDVDDA_ACTION | RW | A | 0 | Action taken when the OVD on vdda triggers. |
| | NOTHING | | | 0 | No action |
| | FAULT | | | 1 | Generate a fault |
| | RESET | | | 2 | Reset the chip |
| 24 | OVDVDDA_ENABLE | RW | A | 0 | Enable for OVD on vdda. |
| 27 | OVDVCCD_ENABLE | RW | A | 1 | Enable for OVD on vccd. This cannot be disabled during normal operation. |

### 32.12.16 PWR_SSV_STATUS

**Description:** Supply Supervision Status Register
**Address:** 0x4026101C
**Offset:** 0x101C
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Status for brownout and over-voltage detectors.
**Default:** 0x30505

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | BODVCCD_OK [2:2] | BODVDDA_OK [1:1] | BODVDDD_OK [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | OVDVCCD_OK [10:10] | OVDVDDA_OK [9:9] | OVDVDDD_OK [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | OCD_DPSLP_REG_OK [17:17] | OCD_ACT_LINREG_OK [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | BODVDDD_OK | R | RW | 1 | BOD indicates vddd is ok. This will always read 1, because a detected brownout will reset the chip. |
| 1 | BODVDDA_OK | R | RW | 0 | BOD indicates vdda is ok. |
| 2 | BODVCCD_OK | R | RW | 1 | BOD indicates vccd is ok. This will always read 1, because a detected brownout will reset the chip. |
| 8 | OVDVDDD_OK | R | RW | 1 | OVD indicates vddd is ok. This will always read 1, because a detected over-voltage condition will reset the chip. |
| 9 | OVDVDDA_OK | R | RW | 0 | OVD indicates vdda is ok. |
| 10 | OVDVCCD_OK | R | RW | 1 | OVD indicates vccd is ok. This will always read 1, because a detected over-over-voltage condition will reset the chip. |
| 16 | OCD_ACT_LINREG_OK | R | RW | 1 | OCD indicates the current drawn from the linear Active Regulator is ok. This will always read 1, because a detected over-current condition will reset the chip. |
| 17 | OCD_DPSLP_REG_OK | R | RW | 1 | OCD indicates the current drawn from the linear DeepSleep Regulator is ok. This will always read 1, because a detected over-current condition will reset the chip. |

### 32.12.17 PWR_LVD_CTL

**Description:** High Voltage / Low Voltage Detector (HVLVD) Configuration Register
**Address:** 0x40261020
**Offset:** 0x1020
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Trim and configuration bits for Voltage Monitoring System.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:12 | HVLVD1_TRIPSEL_HT | RW | R | 0 | Threshold selection for HVLVD1 for HT products. Detector accuracy is +/-4 percent of the nominal values listed below. Disable the detector (HVLVD1_EN=0) before changing the threshold. NOTE: When increasing the trip selection bits, the user must increase by one binary unit in 10us cycle, otherwise there is the potential to generate an HV OVD reset.<br>0: rise 2.825V (nom), fall=2.8V (nom)<br>1: rise 2.925V (nom), fall=2.9V (nom)<br>2: rise 3.025V (nom), fall=3.0V (nom)<br>3: rise 3.125V (nom), fall=3.1V (nom)<br>4: rise 3.225V (nom), fall=3.2V (nom)<br>5: rise 3.325V (nom), fall=3.3V (nom)<br>6: rise 3.425V (nom), fall=3.4V (nom)<br>7: rise 3.525V (nom), fall=3.5V (nom)<br>8: rise 3.625V (nom), fall=3.6V (nom)<br>9: rise 3.725V (nom), fall=3.7V (nom)<br>10: rise 3.825V (nom), fall=3.8V (nom)<br>11: rise 3.925V (nom), fall=3.9V (nom)<br>12: rise 4.025V (nom), fall=4.0V (nom)<br>13: rise 4.125V (nom), fall=4.1V (nom)<br>14: rise 4.225V (nom), fall=4.2V (nom)<br>15: rise 4.325V (nom), fall=4.3V (nom)<br>16: rise 4.425V (nom), fall=4.4V (nom)<br>17: rise 4.525V (nom), fall=4.5V (nom)<br>18: rise 4.625V (nom), fall=4.6V (nom)<br>19: rise 4.725V (nom), fall=4.7V (nom)<br>20: rise 4.825V (nom), fall=4.8V (nom)<br>21: rise 4.925V (nom), fall=4.9V (nom)<br>22: rise 5.025V (nom), fall=5.0V (nom)<br>23: rise 5.125V (nom), fall=5.1V (nom)<br>24: rise 5.225V (nom), fall=5.2V (nom)<br>25: rise 5.325V (nom), fall=5.3V (nom)<br>others: reserved |
| 14 | HVLVD1_DPSLP_EN_HT | RW | R | 0 | Keep HVLVD1 voltage monitor enabled during DEEPSLEEP mode. This field is only used when HVLVD1_EN_HT==1. |
| 15 | HVLVD1_EN_HT | RW | R | 0 | Enable HVLVD1 voltage monitor. This detector monitors vddd only. Do not change other HVLVD1 settings when enabled. |
| 16:17 | HVLVD1_EDGE_SEL | RW | R | 0 | Sets which edge(s) will trigger an action when the threshold is crossed. |
| | DISABLE | | | 0 | Disabled |
| | RISING | | | 1 | Rising edge |
| | FALLING | | | 2 | Falling edge |
| | BOTH | | | 3 | Both rising and falling edges |
| 18 | HVLVD1_ACTION | RW | R | 0 | Action taken when the threshold is crossed in the programmed directions(s) |
| | INTERRUPT | | | 0 | Generate an interrupt |
| | FAULT | | | 1 | Generate a fault |

### 32.12.18 PWR_LVD_CTL2

**Description:** High Voltage / Low Voltage Detector (HVLVD) Configuration Register #2
**Address:** 0x40261024
**Offset:** 0x1024
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Trim and configuration bits for Voltage Monitoring System.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:12 | HVLVD2_TRIPSEL_HT | RW | R | 0 | Threshold selection for HVLVD2 for HT products. Detector accuracy is +/-4 percent of the nominal values listed below. Disable the detector (HVLVD1_EN=0) before changing the threshold. NOTE: When increasing the trip selection bits, the user must increase by one binary unit in 10us cycle, otherwise there is the potential to generate an HV OVD reset.<br>0: rise 2.825V (nom), fall=2.8V (nom)<br>1: rise 2.925V (nom), fall=2.9V (nom)<br>2: rise 3.025V (nom), fall=3.0V (nom)<br>3: rise 3.125V (nom), fall=3.1V (nom)<br>4: rise 3.225V (nom), fall=3.2V (nom)<br>5: rise 3.325V (nom), fall=3.3V (nom)<br>6: rise 3.425V (nom), fall=3.4V (nom)<br>7: rise 3.525V (nom), fall=3.5V (nom)<br>8: rise 3.625V (nom), fall=3.6V (nom)<br>9: rise 3.725V (nom), fall=3.7V (nom)<br>10: rise 3.825V (nom), fall=3.8V (nom)<br>11: rise 3.925V (nom), fall=3.9V (nom)<br>12: rise 4.025V (nom), fall=4.0V (nom)<br>13: rise 4.125V (nom), fall=4.1V (nom)<br>14: rise 4.225V (nom), fall=4.2V (nom)<br>15: rise 4.325V (nom), fall=4.3V (nom)<br>16: rise 4.425V (nom), fall=4.4V (nom)<br>17: rise 4.525V (nom), fall=4.5V (nom)<br>18: rise 4.625V (nom), fall=4.6V (nom)<br>19: rise 4.725V (nom), fall=4.7V (nom)<br>20: rise 4.825V (nom), fall=4.8V (nom)<br>21: rise 4.925V (nom), fall=4.9V (nom)<br>22: rise 5.025V (nom), fall=5.0V (nom)<br>23: rise 5.125V (nom), fall=5.1V (nom)<br>24: rise 5.225V (nom), fall=5.2V (nom)<br>25: rise 5.325V (nom), fall=5.3V (nom)<br>others: reserved |
| 14 | HVLVD2_DPSLP_EN_HT | RW | R | 0 | Keep HVLVD2 voltage monitor enabled during DEEPSLEEP mode. This field is only used when HVLVD1_EN_HT==1. |
| 15 | HVLVD2_EN_HT | RW | R | 0 | Enable HVLVD2 voltage monitor. This detector monitors vddd only. Do not change other HVLVD2 settings when enabled. |
| 16:17 | HVLVD2_EDGE_SEL | RW | R | 0 | Sets which edge(s) will trigger an action when the threshold is crossed. |
| | DISABLE | | | 0 | Disabled |
| | RISING | | | 1 | Rising edge |
| | FALLING | | | 2 | Falling edge |
| | BOTH | | | 3 | Both rising and falling edges |
| 18 | HVLVD2_ACTION | RW | R | 0 | Action taken when the threshold is crossed in the programmed directions(s) |
| | INTERRUPT | | | 0 | Generate an interrupt |
| | FAULT | | | 1 | Generate a fault |

### 32.12.19 PWR_REGHC_CTL

**Description:** REGHC Control Register
**Address:** 0x40261028
**Offset:** 0x1028
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control for the high-current regulator. This regulator requires external components. See datasheet. This register is only reset by HV resets (XRES, POR, BOD, OVD, OCD, HIBERNATE wakeup).
**Default:** 0x40000104

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC_VADJ [7:4] | | | | REGHC_PMIC_DRV_VOUT [3:2] | | None [1:1] | REGHC_MODE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | REGHC_PMIC_RADJ [14:12] | | | REGHC_PMIC_USE_RADJ [11:11] | REGHC_PMIC_USE_LINREG [10:10] | None [9:9] | REGHC_VADJ [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC_PMIC_STATUS_WAIT [23:20] | | | | REGHC_PMIC_STATUS_POLARITY [19:19] | REGHC_PMIC_STATUS_INEN [18:18] | REGHC_PMIC_CTL_POLARITY [17:17] | REGHC_PMIC_CTL_OUTEN [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC_CONFIGURED [31:31] | REGHC_TRANS_USE_OCD [30:30] | REGHC_PMIC_STATUS_WAIT [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | REGHC_MODE | RW | A | 0 | REGHC control mode:<br>0: external transistor connected,<br>1: external PMIC connected |
| 2:3 | REGHC_PMIC_DRV_VOUT | RW | A | 1 | Setting for DRV_VOUT pin for PMIC mode. See REGHC_VADJ for calculation of vadj.<br>2'b00: DRV_VOUT=vccd*0.9/vadj;<br>2'b01: DRV_VOUT=vccd*0.8/vadj;<br>2'b10: DRV_VOUT=vccd*0.6/vadj;<br>2'b11: DRV_VOUT=vccd |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4:8 | REGHC_VADJ | RW | A | 16 | Regulator output trim according to the formula vadj=(1.020V + REGHC_VADJ*0.005V) plus an offset described below. For example, 0x1A=>1.15V (nominal).<br><br>For transistor mode, REGHC will dynamically adjust DRV_VOUT so the supply targets the vadj voltage. Adjust for die to die variation by adding the signed offset value in SFLASH SRSS_PWR_OFFSET.REGHC_TRANS_VADJ_OFFSET.<br><br>Note: SRSS_PWR_OFFSET.REGHC_TRANS_VADJ_OFFSET value is calculated using the default value of the REGHC_VADJ: 0x10 (1.1V) and applies to the full range of REGHC target voltages.<br><br>For PMIC mode, adjust for die to die variation by adding the signed offset value in SFLASH SRSS_PWR_OFFSET.PMIC_VADJ_OFFSET to the nominal calculated code. For PMIC mode, also see REGHC_PMIC_DRV_VOUT. |
| 10 | REGHC_PMIC_USE_LINREG | RW | A | 0 | For REGHC external PMIC mode, controls whether hardware sequencer keeps the internal Active Linear Regulator enabled to improve supply supervision of vccd. When using this feature, if the PMIC fails to keep vccd above the internal regulator target, then the internal regulator will attempt to recover vccd. If the regulator current is too high, the regulator triggers an over-current detector (OCD) reset.<br>0: Internal Active Linear Regulator disabled after PMIC enabled. OCD is disabled.;<br>1: Internal Active Linear Regulator kept enabled. See datasheet for minimum PMIC vccd input to prevent OCD. |
| 11 | REGHC_PMIC_USE_RADJ | RW | A | 0 | Controls whether hardware sequencer enables reset voltage adjustment circuit when enabling a PMIC. |
| 12:14 | REGHC_PMIC_RADJ | RW | A | 0 | Reset voltage adjustment for PMIC as a factor (Vfbk/Vref) where Vfbk is the feedback voltage and Vref is the PMIC internal reference. The reset voltage adjustment circuit is enabled by the hardware sequencer if REGHC_PMIC_USE_RADJ=1. PMIC have Vref of 0.8V or 0.9V, and the resulting reset voltage (Vreset) are precalculated in the table below:<br>3'b000: Vfbk/Vref=1.0000, Vreset=.800V@(Vref=0.8V), .900V@(Vref=0.9V);<br>3'b001: Vfbk/Vref=1.0556, Vreset=.844V@(Vref=0.8V), .950V@(Vref=0.9V);<br>3'b010: Vfbk/Vref=1.1111, Vreset=.889V@(Vref=0.8V), 1.000V@(Vref=0.9V);<br>3'b011: Vfbk/Vref=1.1250, Vreset=.900V@(Vref=0.8V), 1.013V@(Vref=0.9V);<br>3'b100: Vfbk/Vref=1.1667, Vreset=.933V@(Vref=0.8V), 1.050V@(Vref=0.9V);<br>3'b101: Vfbk/Vref=1.1875, Vreset=.950V@(Vref=0.8V), 1.069V@(Vref=0.9V);<br>3'b110: Vfbk/Vref=1.2500, Vreset=1.000V@(Vref=0.8V), 1.125V@(Vref=0.9V);<br>3'b111: Vfbk/Vref=1.3125, Vreset=1.050V@(Vref=0.8V), 1.181V@(Vref=0.9V); |
| 16 | REGHC_PMIC_CTL_OUTEN | RW | A | 0 | Output enable for PMIC enable pin. Set this bit high to enable the driver on this pin. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 17 | REGHC_PMIC_CTL _POLARITY | RW | A | 0 | Polarity used to enable the PMIC. The sequencer uses REGHC_PMIC_CTL_POLARITY to enable the PMIC, and it uses the complement to disable the PMIC. |
| 18 | REGHC_PMIC_STATUS _INEN | RW | A | 0 | Input buffer enable for PMIC status input. Set this bit high to enable the input receiver. |
| 19 | REGHC_PMIC_STATUS _POLARITY | RW | A | 0 | The polarity used to trigger a reset action based on the PMIC status input. The reset system triggers a reset when the unmasked PMIC status matches this value. |
| 20:29 | REGHC_PMIC_STATUS _WAIT | RW | A | 0 | Wait count in 4us steps after PMIC status ok. This is used by the hardware sequencer to allow additional settling time before disabling the internal regulator. The LSB is 32 IMO periods which results in a nominal LSB step of 4us. |
| 30 | REGHC_TRANS_USE _OCD | RW | A | 1 | Reserved. Always write high. |
| 31 | REGHC_CONFIGURED | RW1S | A | 0 | Indicates the REGHC has been configured. This is used to know if REGHC should be enabled in response to a debug power up request. It is recommended to not change REGHC settings after REGHC_CONFIGURED is set high, because it can cause failure if REGHC is enabled or transitioning. |

### 32.12.20 PWR_REGHC_STATUS

**Description:** REGHC Status Register
**Address:** 0x4026102C
**Offset:** 0x102C
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Status register for REGHC.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | REGHC _CKT_OK [2:2] | REGHC _OCD_OK [1:1] | REGHC _ENABLED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | REGHC _PMIC _STATUS _OK [12:12] | None [11:10] | | REGHC _OV_OUT [9:9] | REGHC _UV_OUT [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC _SEQ _BUSY [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | REGHC_ENABLED | R | RW | 0 | Indicates the state of the REGHC enable/disable sequencer. This bit is only valid when REGHC_SEQ_BUSY==0.<br>0: REGHC sequencer indicates REGHC is disabled.<br>1: REGHC sequencer indicates REGHC is enabled. |
| 1 | REGHC_OCD_OK | R | RW | 0 | Indicates the over-current detector is operating and the current drawn from REGHC is within limits. OCD is only a choice for transistor mode, and it is disabled for PMIC mode.<br>0: Current measurement exceeds limit or detector is OFF,<br>1: Current measurement within limit |
| 2 | REGHC_CKT_OK | R | RW | 0 | Indicates the REGHC circuit is enabled and operating. It does not indicate that the voltage and current are within required limits for robust operation.<br>0: REGHC circuit is not ready. This can occur if the REGHC circuit is disabled or if it was recently enabled.<br>1: REGHC circuit is enabled and operating. |
| 8 | REGHC_UV_OUT | R | RW | 0 | Reserved |
| 9 | REGHC_OV_OUT | R | RW | 0 | Reserved |
| 12 | REGHC_PMIC_STATUS _OK | R | RW | 0 | Indicates the PMIC status is ok. This includes polarity adjustment according to REGHC_PMIC_STATUS_POLARITY.<br>0: PMIC status is not ok or PMIC input buffer is disabled (REGHC_PMIC_STATUS_INEN==0);<br>1: PMIC status input buffer is enabled and indicates ok |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | REGHC_SEQ_BUSY | R | RW | 0 | Indicates the REGHC enable/disable sequencer is busy transitioning to/from REGHC.<br>0: Sequencer is not busy;<br>1: Sequencer is busy either enabling or disabling REGHC. |

### 32.12.21 PWR_REGHC_CTL2

**Description:** REGHC Control Register 2
**Address:** 0x40261030
**Offset:** 0x1030
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control for the high-current regulator. This regulator requires external components. See datasheet. This register is only reset by HV resets (XRES, POR, BOD, OVD, OCD, HIBERNATE wakeup).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC_PMIC_STATUS_TIMEOUT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC_EN [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | REGHC_PMIC_STATUS_TIMEOUT | RW | A | 0 | Timeout while waiting for REGHC_PMIC_STATUS_OK==1 when switching to PMIC.<br>0: disables timeout.<br>>0: enables timeout of REGHC_PMIC_STATUS_TIMEOUT*128us (nominal, clocked by IMO). Timeout expiration generates a 'reset' condition that is only recorded in RES_CAUSE but does not trigger a reset for the SOC, however a WDT will reset the system with REGHC RES_CAUSE. |
| 31 | REGHC_EN | RW | A | 0 | Enable REGHC. This bit will not set if REGHC_CONFIGURED==0. Use PWR_REGHC_STATUS.ENABLED to know the actual status of REGHC. It will differ from this bit in the following cases:<br>A) Do not enter DEEPSLEEP while the sequencer is busy (see PWR_REGHC_STATUS.REGHC_SEQ_BUSY). The hardware sequencer disables REGHC during DEEPSLEEP entry and enables it upon wakeup.<br>B) The debugger requests the chip remain powered up. Hardware prevents REGHC from disabling when this bit is cleared. Hardware does not automatically enable REGHC in response to debugger power up request. If this bit is low when the debugger deasserts the power up request, the hardware sequencer will disable REGHC. |

### 32.12.22 PWR_REGHC_CTL4

**Description:** REGHC Control Register 4
**Address:** 0x40261038
**Offset:** 0x1038
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control for the high-current regulator. This regulator requires external components. See datasheet. This register is only reset by HV resets (XRES, POR, BOD, OVD, OCD, HIBERNATE wakeup). Do not change this register after setting PWR_REGHC_CTL.REGHC_CONFIGURED.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | REGHC_PMIC_DPSLP [31:31] | REGHC_PMIC_VADJ_DIS [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30 | REGHC_PMIC_VADJ_DIS | RW | A | 0 | When operating in PMIC mode, disables the VADJ circuitry. This can be used to decrease current consumption if the entire feedback network is outside the device.<br>0: Device generates VADJ when PMIC is enabled. This allows the feedback loop to compensate for voltage drops in the PCB and package.<br>1: Device does not generate VADJ, and it must not be part of the PMIC feedback loop. This reduces current by turning off the internal resistor divider that generates VADJ. This setting is ineffective when REGHC_PMIC_RADJ_EN==1, and VADJ is generated in that case when PMIC is enabled. |
| 31 | REGHC_PMIC_DPSLP | RW | A | 0 | When operating in PMIC mode, configures PMIC behavior during DEEPSLEEP.<br>0: Device operates from internal regulators during DEEPSLEEP. If PMIC is enabled at the beginning of the DEEPSLEEP transition, hardware changes to the internal regulators and disables the PMIC.<br>1: DEEPSLEEP transition does not change PMIC enable. |

### 32.12.23 PWR_HIB_DATA

**Description:** HIBERNATE Data Register
**Address:** 0x40261040
**Offset:** 0x1040
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register can retain information during HIBERNATE mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | HIB_DATA [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | HIB_DATA [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | HIB_DATA [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | HIB_DATA [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | HIB_DATA | RW | A | 0 | Additional data that is retained through a HIBERNATE/WAKEUP sequence that can be used by firmware for any application-specific purpose. Note that waking up from HIBERNATE using XRES will reset this register. |

### 32.12.24 PWR_HIB_WAKE_CTL

**Description:** Hibernate Wakeup Mask Register
**Address:** 0x402610E0
**Offset:** 0x10E0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is implemented in vddd domain. This register retains information during HIBERNATE mode. All fields block the wakeup and cause recording when 0 (masked) and allow them when 1 (unmasked).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | HIB_WAKE_SRC [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | HIB_WAKE_WDT [31:31] | HIB_WAKE_RTC [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | HIB_WAKE_SRC | RW | A | 0 | When set, HIBERNATE will wakeup for the assigned source The number and assignment of wakeup sources are product-specific. |
| 30 | HIB_WAKE_RTC | RW | A | 0 | When set, HIBERNATE will wakeup for a pending RTC interrupt. |
| 31 | HIB_WAKE_WDT | RW | A | 0 | When set, HIBERNATE will wakeup for a pending WDT interrupt. |

### 32.12.25 PWR_HIB_WAKE_CTL2

**Description:** Hibernate Wakeup Polarity Register
**Address:** 0x402610E4
**Offset:** 0x10E4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is implemented in vddd domain. This register retains information during HIBERNATE mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | HIB_WAKE_SRC [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | HIB_WAKE_SRC | RW | A | 0 | Each bit selects the polarity for the corresponding HIBERNATE wakeup source. The number and assignment of wakeup sources are product-specific.<br>0: Wakes when unmasked input is 0.<br>1: Wakes when unmasked input is 1. |

### 32.12.26 PWR_HIB_WAKE_CAUSE

**Description:** Hibernate Wakeup Cause Register
**Address:** 0x402610EC
**Offset:** 0x10EC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register is implemented in vddd domain. This register records HIBERNATE unmasked wakeup causes and retains during HIBERNATE mode. When PWR_HIBERNATE.SENSE_MODE==1, any unmasked, pending HIBERNATE wakeup cause triggers HIBERNATE wakeup. Multiple causes may be recorded.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:4] | | | | HIB_WAKE_SRC [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | HIB_WAKE_WDT [31:31] | HIB_WAKE_RTC [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | HIB_WAKE_SRC | RW1C | A | 0 | Each bit indicates a HIBERNATE wakeup cause. The number and assigment of wakeup sources are product-specific. For each bit, writing a 1 clears the cause flag. |
| 30 | HIB_WAKE_RTC | RW1C | A | 0 | Indicates RTC wakeup cause. The RTC interrupt must be cleared before this bit can be cleared. |
| 31 | HIB_WAKE_WDT | RW1C | A | 0 | Indicates WDT wakeup cause. The WDT interrupt must be cleared before this bit can be cleared. |

### 32.12.27 CLK_PATH_SELECT

**Description:** Clock Path Select Register
**Address:** 0x40261200
**Offset:** 0x1200
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Selects a source for clock path. The output of this mux can be used as the root of a clock tree. If there is a PLL on the path, this mux output is the PLL reference clock. The related PLL register contains a mux to select whether the clock path uses the PLL output or is bypassed to the PLL reference clock.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | PATH_MUX [2:0] | | |

|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | PATH_MUX | RW | R | 0 | Selects a source for clock PATH<i>. Note that not all products support all clock sources. Selecting a clock source that is not supported will result in undefined behavior. It takes four cycles of the originally selected clock to switch away from it. Do not disable the original clock during this time. |
| | IMO | | | 0 | IMO - Internal R/C Oscillator |
| | EXTCLK | | | 1 | EXTCLK - External Clock Pin |
| | ECO | | | 2 | ECO - External-Crystal Oscillator |
| | ALTHF | | | 3 | ALTHF - Alternate High-Frequency clock input (product-specific clock) |
| | DSI_MUX | | | 4 | DSI_MUX - Output of DSI mux for this path. Using a DSI source directly as root of HFCLK will result in undefined behavior. |
| | LPECO | | | 5 | LPECO - Low-Power External-Crystal Oscillator |

### 32.12.28 CLK_ROOT_SELECT

**Description:** Clock Root Select Register
**Address:** 0x40261240
**Offset:** 0x1240
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Selects a root for a HF clock tree and DSI input. There is a copy of this register for each clock root.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | ROOT_DIV [5:4] | | ROOT_MUX [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | DIRECT _MUX [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | ROOT_MUX | RW | R | 0 | Selects a clock path as the root of HFCLK<k> and for SRSS DSI input <k>. Use CLK_PATH_SELECT[i] to configure the desired path. Some paths may have FLL or PLL available (product-specific), and the control and bypass mux selections of these are in other registers. Configure the FLL using CLK_FLL_CONFIG register. Configure a PLL using the related CLK_PLL_CONFIG[k] register. Note that not all products support all clock sources. Selecting a clock source that is not supported will result in undefined behavior. It takes four cycles of the originally selected clock to switch away from it. Do not disable the original clock during this time. |
| | PATH0 | | | 0 | Select PATH0 (can be configured for FLL) |
| | PATH1 | | | 1 | Select PATH1 (can be configured for PLL0, if available in the product) |
| | PATH2 | | | 2 | Select PATH2 (can be configured for PLL1, if available in the product) |
| | PATH3 | | | 3 | Select PATH3 (can be configured for PLL2, if available in the product) |
| | PATH4 | | | 4 | Select PATH4 (can be configured for PLL3, if available in the product) |
| | PATH5 | | | 5 | Select PATH5 (can be configured for PLL4, if available in the product) |
| | PATH6 | | | 6 | Select PATH6 (can be configured for PLL5, if available in the product) |
| | PATH7 | | | 7 | Select PATH7 (can be configured for PLL6, if available in the product) |
| | PATH8 | | | 8 | Select PATH8 (can be configured for PLL7, if available in the product) |
| | PATH9 | | | 9 | Select PATH9 (can be configured for PLL8, if available in the product) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | PATH10 | | | 10 | Select PATH10 (can be configured for PLL9, if available in the product) |
| | PATH11 | | | 11 | Select PATH11 (can be configured for PLL10, if available in the product) |
| | PATH12 | | | 12 | Select PATH12 (can be configured for PLL11, if available in the product) |
| | PATH13 | | | 13 | Select PATH13 (can be configured for PLL12, if available in the product) |
| | PATH14 | | | 14 | Select PATH14 (can be configured for PLL13, if available in the product) |
| | PATH15 | | | 15 | Select PATH15 (can be configured for PLL14, if available in the product) |
| 4:5 | ROOT_DIV | RW | R | 0 | Selects predivider value for this clock root and DSI input. This divider is after DIRECT_MUX. For products with DSI, the output of this mux is routed to DSI for use as a signal. For products with clock supervision, the output of this mux is the monitored clock for CSV_HF<k>. |
| | NO_DIV | | | 0 | Transparent mode, feed through selected clock source w/o dividing. |
| | DIV_BY_2 | | | 1 | Divide selected clock source by 2 |
| | DIV_BY_4 | | | 2 | Divide selected clock source by 4 |
| | DIV_BY_8 | | | 3 | Divide selected clock source by 8 |
| 8 | DIRECT_MUX | RW | A | (1 << internals.reg_index & MASK_DIRECTMUX_DEF) >> internals.reg_index | Direct selection mux that allows IMO to bypass most of the clock mux structure. For products with multiple regulators, this mux can be used to reduce current without requiring significant reconfiguration of the clocking network. The default value of HFCLK<0>==ROOT_MUX, and the default value for other clock trees is product-specific. |
| | IMO | | | 0 | Select IMO |
| | ROOT_MUX | | | 1 | Select ROOT_MUX selection |
| 31 | ENABLE | RW | A | 0 | Enable for this clock root. All clock roots default to disabled (ENABLE==0) except HFCLK0, which cannot be disabled. |

### 32.12.29 CLK_SELECT

**Description:** Clock selection register
**Address:** 0x40261500
**Offset:** 0x1500
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Clock source selection register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | LFCLK_SEL [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | PUMP_ENABLE [15:15] | PUMP_DIV [14:12] | | | PUMP_SEL [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | LFCLK_SEL | RW | A | 0 | Select source for LFCLK. Note that not all products support all clock sources. Selecting a clock source that is not supported will result in undefined behavior. Writes to this field are ignored unless the WDT is unlocked using WDT_LOCK register. It takes four cycles of the originally selected clock to switch away from it. Do not disable the original clock during this time. |
| | ILO0 | | | 0 | ILO0 - Internal Low-speed Oscillator #0. |
| | WCO | | | 1 | WCO - Watch-Crystal Oscillator. Requires Backup domain to be present and properly configured (including external watch crystal, if used). |
| | ALTLF | | | 2 | ALTLF - Alternate Low-Frequency Clock. Capability is product-specific |
| | PILO | | | 3 | PILO - Precision ILO. If present, it works in DEEPSLEEP and higher modes. Does not work in HIBERNATE mode. |
| | ILO1 | | | 4 | ILO1 - Internal Low-speed Oscillator #1, if present. |
| | ECO_PRESCALER | | | 5 | ECO_PRESCALER - External-Crystal Oscillator after prescaling, if present. Does not work in DEEPSLEEP or HIBERNATE modes. Intended for applications that operate in ACTIVE/SLEEP modes only. This option is only valid when ECO is present in the product. |
| | LPECO_PRESCALER | | | 6 | LPECO_PRESCALER - Low-Power External-Crystal Oscillator after prescaling, if present. This choice works in ACTIVE/SLEEP/DEEPSLEEP modes. This option is only valid when LPECO is present in the product. |
| 8:11 | PUMP_SEL | RW | R | 0 | Reserved. Not used the product. |
| 12:14 | PUMP_DIV | RW | R | 0 | Reserved. Not used in the product. |
| | NO_DIV | | | 0 | N/A |
| | DIV_BY_2 | | | 1 | N/A |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | DIV_BY_4 | | | 2 | N/A |
| | DIV_BY_8 | | | 3 | N/A |
| | DIV_BY_16 | | | 4 | N/A |
| 15 | PUMP_ENABLE | RW | R | 0 | Reserved. Not used in the product. |

### 32.12.30 CLK_ILO0_CONFIG

**Description:** ILO0 Configuration
**Address:** 0x40261508
**Offset:** 0x1508
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Configuration register for ILO0. ILO0 configuration and trims are reset by XRES, HIBERNATE, and power-related resets, unless otherwise noted.
**Default:** 0x80000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | ILO0_BACKUP [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | ILO0_MON_ENABLE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ILO0_BACKUP | RW | A | 0 | This register indicates that ILO0 should stay enabled during XRES and HIBERNATE modes. If backup voltage domain is implemented on the product, this bit also indicates if ILO0 should stay enabled through power-related resets on other supplies, e.g.. BOD on VDDD/VCCD. Writes to this field are ignored unless the WDT is unlocked using WDT_LOCK register. This register is reset when the backup logic resets.<br>0: ILO0 turns off during XRES, HIBERNATE, and power-related resets. ILO0 configuration and trims are reset by these events.<br>1: ILO0 stays enabled, as described above. ILO0 configuration and trims are not reset by these events. |
| 30 | ILO0_MON_ENABLE | RW | A | 0 | Reserved. Always write a zero. Writes to this field are ignored unless the WDT is unlocked using WDT_LOCK register. |
| 31 | ENABLE | RW | A | 1 | Master enable for ILO. Writes to this field are ignored unless the WDT is unlocked using WDT_LOCK register.<br><br>HT-variant: This register will not clear unless PWR_CTL2.BGREF_LPMODE==0. After enabling, the first ILO0 cycle occurs within 12us and is +/-10 percent accuracy. Thereafter, ILO0 is +/-5 percent accurate. |

### 32.12.31 CLK_ILO1_CONFIG

**Description:** ILO1 Configuration
**Address:** 0x4026150C
**Offset:** 0x150C
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Configuration register for ILO1.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | ILO1_MON_ENABLE [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30 | ILO1_MON_ENABLE | RW | R | 0 | Reserved. Always write a zero. |
| 31 | ENABLE | RW | R | 0 | Master enable for ILO1.<br><br>HT-variant: After enabling, the first ILO1 cycle occurs within 12us and is +/-10 percent accuracy. Thereafter, ILO1 is +/-5 percent accurate. |

### 32.12.32 CLK_IMO_CONFIG

**Description:** IMO Configuration
**Address:** 0x40261518
**Offset:** 0x1518
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Internal high speed R/C oscillator configuration register. Note that this oscillator comes up active on power up. The oscillator provides the primary system clock (HFCLK) on power up until firmware configures differently. This oscillator is also used before system start to count out power up delays. This is done in fast IMO (FIMO) mode that does not require any external references and runs at a fixed 12MHz.
**Default:** 0x80000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | ENABLE | RW | R | 1 | Master enable for IMO oscillator. This bit must be high at all times for all functions to work properly. Hardware will automatically disable the IMO during DEEPSLEEP, HIBERNATE, and XRES. |

### 32.12.33 CLK_ECO_CONFIG

**Description:** ECO Configuration Register
**Address:** 0x4026151C
**Offset:** 0x151C
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Internal high speed oscillator configuration register for External-Crystal.
**Default:** 0x2

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | AGC_EN [1:1] | None [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ECO_EN [31:31] | None [30:29] | | ECO_DIV_ENABLE [28:28] | ECO_DIV_DISABLE [27:27] | None [26:24] | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | AGC_EN | RW | R | 1 | Automatic Gain Control (AGC) enable. When set, the oscillation amplitude is controlled to the level selected by CLK_ECO_CONFIG2.ATRIM. When low, the amplitude is not explicitly controlled and can be as high as the vddd supply. WARNING: use care when disabling AGC because driving a crystal beyond its rated limit can permanently damage the crystal. |
| 27 | ECO_DIV_DISABLE | RW | RW1C | 0 | ECO prescaler disable command (mutually exclusive with ECO_DIV_ENABLE). SW sets this field to '1' and HW sets this field to '0'.<br><br>HW sets ECO_DIV_DISABLE field to '0' immediately and HW sets CLK_ECO_PRESCALE.ECO_DIV_EN field to '0' immediately. |
| 28 | ECO_DIV_ENABLE | RW | RW1C | 0 | ECO prescaler enable command (mutually exclusive with ECO_DIV_DISABLE). ECO Prescaler only works in ACTIVE and SLEEP modes. SW sets this field to '1' to enable the divider and HW sets this field to '0' to indicate that divider enabling has completed. When the divider is enabled, its integer and fractional counters are initialized to '0'. If a divider is to be re-enabled using different integer and fractional divider values, the SW should follow these steps:<br>0: Disable the divider using the ECO_DIV_DISABLE field.<br>1: Configure CLK_ECO_PRESCALE registers.<br>2: Enable the divider using the ECO_DIV_ENABLE field.<br><br>HW sets the ECO_DIV_ENABLE field to '0' when the enabling is performed and HW set CLK_ECO_PRESCALER.ENABLED to '1' when the enabling is performed. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | ECO_EN | RW | R | 0 | Master enable for ECO oscillator. Configure the settings in CLK_ECO_CONFIG2 to work with the selected crystal, before enabling ECO. |

### 32.12.34 CLK_ECO_PRESCALE

**Description:** ECO Prescaler Configuration Register
**Address:** 0x40261520
**Offset:** 0x1520
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Fractional prescaler value to bring down the average ECO frequency to 32768 Hz if used as LFCLK. Do not change divider settings while ECO prescaler is enabled or enabling.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | ECO_DIV_ENABLED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | ECO_FRAC_DIV [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | ECO_INT_DIV [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:26] | | | | | | ECO_INT_DIV [25:24] | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ECO_DIV_ENABLED | R | RW | 0 | ECO prescaler enabled. HW sets this field to '1' as a result of an CLK_ECO_CONFIG.ECO_DIV_ENABLE command. HW sets this field to '0' as a result on a CLK_ECO_CONFIG.ECO_DIV_DISABLE command. |
| 8:15 | ECO_FRAC_DIV | RW | R | 0 | 8-bit fractional value, sufficient to get prescaler output within the +/-65ppm calibration range. Subtract one from the desired divide value when writing this field. For example, to divide by 1, write ECO_FRAC_DIV=0. Do not change this setting when ECO Prescaler is enabled. |
| 16:25 | ECO_INT_DIV | RW | R | 0 | 10-bit integer value allows for ECO frequencies up to 33.55MHz. Subtract one from the desired divide value when writing this field. For example, to divide by 1, write ECO_INT_DIV=0. Do not change this setting when ECO Prescaler is enabled. |

### 32.12.35 CLK_ECO_STATUS

**Description:** ECO Status Register
**Address:** 0x40261524
**Offset:** 0x1524
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Status indications for external crystal oscillator (ECO).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | ECO _READY [1:1] | ECO_OK [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ECO_OK | R | W | 0 | Indicates the ECO internal oscillator circuit has sufficient amplitude. It may not meet the PPM accuracy or duty cycle spec. |
| 1 | ECO_READY | R | W | 0 | Indicates the ECO internal oscillator circuit has had enough time to fully stabilize. This is the output of a counter since ECO was enabled, and it does not check the ECO output. It is recommended to also confirm ECO_OK==1. |

### 32.12.36 CLK_FLL_CONFIG

**Description:** FLL Configuration Register
**Address:** 0x40261530
**Offset:** 0x1530
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** This register contains frequency lock loop (FLL) configuration. FLL circuit settings should not be changed while it is a selected clock (connected to logic). This prevents clock glitches that can crash the logic. Deselect the FLL using .BYPASS_SEL=FLL_REF
**Default:** 0x1000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FLL_MULT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | FLL_MULT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:18] | | | | | | FLL_MULT [17:16] | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | FLL_ENABLE [31:31] | None [30:25] | | | | | | FLL_OUTPUT_DIV [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:17 | FLL_MULT | RW | R | 0 | Multiplier to determine CCO frequency in multiples of the frequency of the selected reference clock (Fref).<br><br>Ffll = (FLL_MULT) * (Fref / REFERENCE_DIV) / (OUTPUT_DIV+1) |
| 24 | FLL_OUTPUT_DIV | RW | R | 1 | Control bits for Output divider. Set the divide value before enabling the FLL, and do not change it while FLL is enabled.<br>0: no division<br>1: divide by 2 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | FLL_ENABLE | RW | R | 0 | Master enable for FLL. The FLL requires firmware sequencing when enabling and disabling. Hardware handles sequencing automatically when entering/exiting DEEPSLEEP.<br><br>To enable the FLL, use the following sequence:<br>1) Configure FLL and CCO settings. Do not modify CLK_FLL_CONFIG3.BYPASS_SEL (must be AUTO) or CLK_FLL_CONFIG.FLL_ENABLE (must be 0).<br>2) Enable the CCO by writing CLK_FLL_CONFIG4.CCO_ENABLE=1<br>3) Wait until CLK_FLL_STATUS.CCO_READY==1.<br>4) Ensure the reference clock has stabilized.<br>5) Write FLL_ENABLE=1.<br>6) Optionally wait until CLK_FLL_STATUS.LOCKED==1. The hardware automatically changes to the FLL output when LOCKED==1.<br><br>To disable the FLL, use the following sequence:<br>1) Write CLK_FLL_CONFIG3.BYPASS_SEL=FLL_REF.<br>2) Read CLK_FLL_CONFIG3.BYPASS_SEL to ensure the write completes (read is not optional).<br>3) Wait at least ten cycles of either FLL reference clock or FLL output clock, whichever is slower. It is recommended to use a HW counter (e.g. clock calibration counter, event generator) running on the slower clock.<br>4) Disable FLL with FLL_ENABLE=0.<br>5) Disable the CCO by writing CLK_FLL_CONFIG4.CCO_ENABLE=0.<br>6) Write CLK_FLL_CONFIG3.BYPASS_SEL=AUTO.<br>7) Read CLK_FLL_CONFIG3.BYPASS_SEL to ensure the write completes (read is not optional).<br>8) Wait three cycles of FLL reference clock. It is recommended to use a HW counter (e.g. clock calibration counter, event generator) running on the reference clock.<br><br>0: Block is powered off<br>1: Block is powered on |

### 32.12.37 CLK_FLL_CONFIG2

**Description:** FLL Configuration Register 2
**Address:** 0x40261534
**Offset:** 0x1534
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** This register contains frequency lock loop (FLL) configuration. FLL circuit settings should not be changed while it is a selected clock (connected to logic). This prevents clock glitches that can crash the logic. Deselect the FLL using .BYPASS_SEL=FLL_REF
**Default:** 0x20001

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FLL_REF_DIV [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | FLL_REF_DIV [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | LOCK_TOL [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | UPDATE_TOL [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:12 | FLL_REF_DIV | RW | R | 1 | Control bits for reference divider. Set the divide value before enabling the FLL, and do not change it while FLL is enabled.<br>0: illegal (undefined behavior)<br>1: divide by 1<br>...<br>8191: divide by 8191 |
| 16:23 | LOCK_TOL | RW | R | 2 | Lock tolerance sets the error threshold for when the FLL output is considered locked to the reference input. A high tolerance can be used to lock more quickly or allow less accuracy. The tolerance is the allowed difference between the count value for the ideal formula and the measured value.<br>0: tolerate error of 1 count value<br>1: tolerate error of 2 count values<br>...<br>255: tolerate error of 256 count values |
| 24:31 | UPDATE_TOL | RW | R | 0 | Update tolerance sets the error threshold for when the FLL will update the CCO frequency settings. The update tolerance is the allowed difference between the count value for the ideal formula and the measured value. UPDATE_TOL should be less than LOCK_TOL. |

### 32.12.38 CLK_FLL_CONFIG3

**Description:** FLL Configuration Register 3
**Address:** 0x40261538
**Offset:** 0x1538
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** This register contains frequency lock loop (FLL) configuration. Do not change settings while the FLL is running, except BYPASS_SEL.
**Default:** 0x2800

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FLL_LF_PGAIN [7:4] | | | | FLL_LF_IGAIN [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | SETTLING_COUNT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | SETTLING_COUNT [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:30] | | BYPASS_SEL [29:28] | | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | FLL_LF_IGAIN | RW | R | 0 | FLL Loop Filter Gain Setting #1. The proportional gain is the sum of FLL_LF_IGAIN and FLL_LF_PGAIN.<br>0: 1/256<br>1: 1/128<br>2: 1/64<br>3: 1/32<br>4: 1/16<br>5: 1/8<br>6: 1/4<br>7: 1/2<br>8: 1.0<br>9: 2.0<br>10: 4.0<br>11: 8.0<br>>=12: illegal |
| 4:7 | FLL_LF_PGAIN | RW | R | 0 | FLL Loop Filter Gain Setting #2. The proportional gain is the sum of FLL_LF_IGAIN and FLL_LF_PGAIN.<br>0: 1/256<br>1: 1/128<br>2: 1/64<br>3: 1/32<br>4: 1/16<br>5: 1/8<br>6: 1/4<br>7: 1/2<br>8: 1.0<br>9: 2.0<br>10: 4.0<br>11: 8.0<br>>=12: illegal |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:20 | SETTLING_COUNT | RW | R | 40 | Number of undivided reference clock cycles to wait after changing the CCO trim until the loop measurement restarts. A delay allows the CCO output to settle and gives a more accurate measurement. The default is tuned to an 8MHz reference clock since the IMO is expected to be the most common use case.<br>0: no settling time<br>1: wait one reference clock cycle<br>...<br>8191: wait 8191 reference clock cycles |
| 28:29 | BYPASS_SEL | RW | R | 0 | Bypass mux located just after FLL output. This register can be written while the FLL is enabled. When changing BYPASS_SEL, do not turn off the reference clock or CCO clock for five cycles (whichever is slower). In case of disabling FLL(FLL_ENABLE=0), additional five cycles are required. Refer to FLL disable sequence for more details in CLK_FLL_CONFIG->FLL_ENABLE. Whenever BYPASS_SEL is changed, it is required to read CLK_FLL_CONFIG3 to ensure the change takes effect. |
| | AUTO | | | 0 | Automatic using lock indicator. When unlocked, automatically selects FLL reference input (bypass mode). When locked, automatically selects FLL output. This can allow some processing to occur while the FLL is locking, such as after DEEPSLEEP wakeup. It is incompatible with clock supervision, because the frequency changes based on the lock signal. |
| | LOCKED_OR_NOTHING | | | 1 | Similar to AUTO, except the clock is gated off when unlocked. This is compatible with clock supervision, because the supervisors allow no clock during startup (until a timeout occurs), and the clock targets the proper frequency whenever it is running. |
| | FLL_REF | | | 2 | Select FLL reference input (bypass mode). Ignores lock indicator |
| | FLL_OUT | | | 3 | Select FLL output. Ignores lock indicator. |

### 32.12.39 CLK_FLL_CONFIG4

**Description:** FLL Configuration Register 4
**Address:** 0x4026153C
**Offset:** 0x153C
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** This register contains frequency lock loop (FLL) configuration. Do not change settings while the FLL is running.
**Default:** 0xFF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CCO_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:11] | | | | | CCO_RANGE [10:8] | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | CCO_FREQ [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | CCO_ENABLE [31:31] | CCO_HW_UPDATE_DIS [30:30] | None [29:25] | | | | | CCO_FREQ [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | CCO_LIMIT | RW | R | 255 | Maximum CCO offset allowed (used to prevent FLL dynamics from selecting an CCO frequency that the logic cannot support) |
| 8:10 | CCO_RANGE | RW | R | 0 | Frequency range of CCO |
| | RANGE0 | | | 0 | Target frequency is in range [48, 64) MHz |
| | RANGE1 | | | 1 | Target frequency is in range [64, 85) MHz |
| | RANGE2 | | | 2 | Target frequency is in range [85, 113) MHz |
| | RANGE3 | | | 3 | Target frequency is in range [113, 150) MHz |
| | RANGE4 | | | 4 | Target frequency is in range [150, 200] MHz |
| 16:24 | CCO_FREQ | RW | RW | 0 | CCO frequency code. This is updated by HW when the FLL is enabled. It can be manually updated to use the CCO in an open loop configuration. The meaning of each frequency code depends on the range. |
| 30 | CCO_HW_UPDATE_DIS | RW | R | 0 | Disable CCO frequency update by FLL hardware<br>0: Hardware update of CCO settings is allowed. Use this setting for normal FLL operation.<br>1: Hardware update of CCO settings is disabled. Use this setting for open-loop FLL operation. |
| 31 | CCO_ENABLE | RW | R | 0 | Enable the CCO. It is required to enable the CCO before using the FLL.<br>0: Block is powered off<br>1: Block is powered on |

### 32.12.40 CLK_FLL_STATUS

**Description:** FLL Status Register
**Address:** 0x40261540
**Offset:** 0x1540
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register indicates status for the FLL. This register is synchronized during an AHB read transaction. This causes a number wait-states to be inserted in the transaction depending on the frequency ratio between system and FLL frequency.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CCO _READY [2:2] | UNLOCK _OC CURRED [1:1] | LOCKED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | LOCKED | R | W | 0 | FLL Lock Indicator |
| 1 | UNLOCK_OCCURRED | RW1C | A | 0 | This bit sets whenever the FLL is enabled and goes out of lock. This bit stays set until cleared by firmware. |
| 2 | CCO_READY | R | RW | 0 | This indicates that the CCO is internally settled and ready to use. |

### 32.12.41 CLK_ECO_CONFIG2

**Description:** ECO Configuration Register 2
**Address:** 0x40261544
**Offset:** 0x1544
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Internal high speed oscillator configuration register for External-Crystal.
**Default:** 0x3

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | ATRIM [7:4] | | | | None [3:3] | WDTRIM [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:15] | GTRIM [14:12] | | | RTRIM [11:10] | | FTRIM [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | WDTRIM | RW | R | 3 | Watch Dog Trim. Sets the minimum oscillation amplitude (Vp) for the crystal drive level. The minimum amplitude detector output is readable in CLK_ECO_STATUS.ECO_OK.<br>0x0: Vp > 0.05V<br>0x1: Vp > 0.10V<br>0x2: Vp > 0.15V<br>0x3: Vp > 0.20V<br>0x4: Vp > 0.25V<br>0x5: Vp > 0.30V<br>0x6: Vp > 0.35V<br>0x7: Vp > 0.40V |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 4:7 | ATRIM | RW | R | 0 | Amplitude trim. Sets maximum oscillation amplitude (Vp) to set the crystal drive level when ECO_CONFIG.AGC_EN=1. When AGC_EN=0, most values of this register are unused, except as noted. WARNING: use care when setting this field because driving a crystal beyond its rated limit can permanently damage the crystal.<br>0x0: Vp < 0.35V<br>0x1: Vp < 0.40V<br>0x2: Vp < 0.45V<br>0x3: Vp < 0.50V<br>0x4: Vp < 0.55V<br>0x5: Vp < 0.60V<br>0x6: Vp < 0.65V<br>0x7: Vp < 0.70V<br>0x8: Vp < 0.75V<br>0x9: Vp < 0.80V<br>0xA: Vp < 0.85V<br>0xB: Vp < 0.90V<br>0xC: Vp < 0.95V<br>0xD: Vp < 1.00V<br>0xE: Vp < 1.05V<br>0xF: Vp < 1.10V when AGC_EN=1. When AGC_EN=0, this setting enables maximum swing between vddd and vssd. |
| 8:9 | FTRIM | RW | R | 0 | Filter Trim - 3rd harmonic oscillation |
| 10:11 | RTRIM | RW | R | 0 | Feedback resistor Trim |
| 12:14 | GTRIM | RW | R | 0 | Gain Trim - Startup time. |

### 32.12.42 CLK_PLL_CONFIG

**Description:** PLL Configuration Register
**Address:** 0x40261600
**Offset:** 0x1600
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** This register contains PLL configuration. There is a copy of this register for each PLL. PLL circuit settings should not be changed while it is a selected clock (connected to logic). This prevents clock glitches that can crash the logic.
**Default:** 0x20116

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | FEEDBACK_DIV [6:0] | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | REFERENCE_DIV [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | OUTPUT_DIV [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:30] | BYPASS_SEL [29:28] | | PLL_LF_MODE [27:27] | LOCK_DELAY [26:25] | | None [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:6 | FEEDBACK_DIV | RW | R | 22 | Control bits for feedback divider. Set the divide value before enabling the PLL, and do not change it while PLL is enabled.<br>0-21: illegal (undefined behavior)<br>22: divide by 22<br>...<br>112: divide by 112<br>>112: illegal (undefined behavior) |
| 8:12 | REFERENCE_DIV | RW | R | 1 | Control bits for reference divider. Set the divide value before enabling the PLL, and do not change it while PLL is enabled.<br>0: illegal (undefined behavior)<br>1: divide by 1<br>...<br>20: divide by 20<br>others: illegal (undefined behavior) |
| 16:20 | OUTPUT_DIV | RW | R | 2 | Control bits for Output divider. Set the divide value before enabling the PLL, and do not change it while PLL is enabled.<br>0: illegal (undefined behavior)<br>1: illegal (undefined behavior)<br>2: divide by 2. Suitable for direct usage as HFCLK source.<br>...<br>16: divide by 16. Suitable for direct usage as HFCLK source.<br>>16: illegal (undefined behavior) |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 25:26 | LOCK_DELAY | RW | R | 0 | Configures the sensitivity of the lock detection logic.<br>0: normal operation<br>1: reduced sensitivity to allow tracking a modulating reference clock. When this option is selected, configure fVCO=320MHz. The PLL can track the a reference clock frequency that modulates within +/-4 percent at a rate of fREF/1000 MHz.<br>2,3: reserved (do not use) |
| 27 | PLL_LF_MODE | RW | R | 0 | VCO frequency range selection. Configure this bit according to the targeted VCO frequency. Do not change this setting while the PLL is enabled.<br>0: VCO frequency is [200MHz, 400MHz]<br>1: VCO frequency is [170MHz, 200MHz) |
| 28:29 | BYPASS_SEL | RW | R | 0 | Bypass mux located just after PLL output. This selection is glitch-free and can be changed while the PLL is running. When changing BYPASS_SEL, do not turn off the reference clock or PLL clock for five cycles (whichever is slower). |
| | AUTO | | | 0 | Automatic using lock indicator. When unlocked, automatically selects PLL reference input (bypass mode). When locked, automatically selects PLL output. If ENABLE=0, automatically selects PLL reference input. |
| | LOCKED_OR_NOTHING | | | 1 | Similar to AUTO, except the clock is gated off when unlocked. This is compatible with clock supervision, because the supervisors allow no clock during startup (until a timeout occurs), and the clock targets the proper frequency whenever it is running. If ENABLE=0, no clock is output. |
| | PLL_REF | | | 2 | Select PLL reference input (bypass mode). Ignores lock indicator |
| | PLL_OUT | | | 3 | Select PLL output. Ignores lock indicator. If ENABLE=0, no clock is output. |
| 31 | ENABLE | RW | R | 0 | Master enable for PLL. Setup FEEDBACK_DIV, REFERENCE_DIV, and OUTPUT_DIV at least one cycle before setting ENABLE=1.<br><br>Fpll = (FEEDBACK_DIV) * (Fref / REFERENCE_DIV) / (OUTPUT_DIV)<br><br>0: Block is disabled. When the PLL disables, hardware controls the bypass mux as described in BYPASS_SEL, before disabling the PLL circuit.<br>1: Block is enabled |

### 32.12.43 CLK_PLL_STATUS

**Description:** PLL Status Register
**Address:** 0x40261640
**Offset:** 0x1640
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register indicates status for the PLL. There is a copy of this register for each PLL. This register is synchronized during an AHB read transaction. This causes a number wait-states to be inserted in the transaction depending on the frequency ration between system and PLL frequency.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | UNLOCK_OCCURRED [1:1] | LOCKED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | LOCKED | R | W | 0 | PLL Lock Indicator |
| 1 | UNLOCK_OCCURRED | RW1C | A | 0 | This bit sets whenever the PLL Lock bit goes low, and stays set until cleared by firmware. |

### 32.12.44 CSV_REF_SEL

**Description:** Select CSV Reference clock for Active domain
**Address:** 0x40261700
**Offset:** 0x1700
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Selects a source to be used as the Reference clock for CSV in the Active domain. (matching CLK_PATH_SELECT.PATH_MUX)
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | REF_MUX [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | REF_MUX | RW | R | 0 | Selects a source for clock clk_ref_hf. Note that not all products support all clock sources. Selecting a clock source that is not supported will result in undefined behavior. It takes four cycles of the originally selected clock to switch away from it. Do not disable the original clock during this time. |
| | IMO | | | 0 | IMO - Internal R/C Oscillator |
| | EXTCLK | | | 1 | EXTCLK - External Clock Pin |
| | ECO | | | 2 | ECO - External-Crystal Oscillator |
| | ALTHF | | | 3 | ALTHF - Alternate High-Frequency clock input (product-specific clock) |

### 32.12.45 RES_CAUSE

**Description:** Reset Cause Observation Register
**Address:** 0x40261800
**Offset:** 0x1800
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Indicates the cause for reset(s) that occurred in the system. All bits in this register assert when the corresponding reset cause occurs and must be cleared by firmware. Low-voltage cause bits are reset whenever the low-voltage supply is initialized, including XRES, POR, brown-out, and during Hibernate wakeup. HT products also clear low-voltage cause bits for over-voltage, over-current, and WDT resets. Refer to the reset source documentation to understand what reset source behavior for different configuration or modes.
**Default:** 0x40000000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESET_MCWDT2 [7:7] | RESET_MCWDT1 [6:6] | RESET_MCWDT0 [5:5] | RESET_SOFT [4:4] | RESET_TC_DBGRESET [3:3] | RESET_DPSLP_FAULT [2:2] | RESET_ACT_FAULT [1:1] | RESET_WDT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:9] | | | | | | | RESET_MCWDT3 [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | RESET_OCD_ACT_LINREG [23:23] | RESET_OVD_VCCD [22:22] | RESET_OVD_VDDA [21:21] | RESET_OVD_VDDD [20:20] | RESET_BOD_VCCD [19:19] | RESET_BOD_VDDA [18:18] | RESET_BOD_VDDD [17:17] | RESET_XRES [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:31] | RESET_POR_VDDD [30:30] | RESET_STRUCT_XRES [29:29] | RESET_PXRES [28:28] | None [27:27] | RESET_PMIC [26:26] | RESET_OCD_REGHC [25:25] | RESET_OCD_DPSLP_LINREG [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | RESET_WDT | RW1C | A | 0 | A basic WatchDog Timer (WDT) reset has occurred since last power cycle. ULP products: This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above).<br><br>For products that support high-voltage cause detection, this bit blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. This bit is not blocked by other HV cause bits. |
| 1 | RESET_ACT_FAULT | RW1C | A | 0 | Fault logging system requested a reset from its Active logic. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 2 | RESET_DPSLP_FAULT | RW1C | A | 0 | Fault logging system requested a reset from its DeepSleep logic. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 3 | RESET_TC_DBGRESET | RW1C | A | 0 | Test controller or debugger asserted reset. Only resets debug domain. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 4 | RESET_SOFT | RW1C | A | 0 | A CPU requested a system reset through it's SYSRESETREQ. This can be done via a debugger probe or in firmware. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 5 | RESET_MCWDT0 | RW1C | A | 0 | Multi-Counter Watchdog timer reset #0. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 6 | RESET_MCWDT1 | RW1C | A | 0 | Multi-Counter Watchdog timer reset #1. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 7 | RESET_MCWDT2 | RW1C | A | 0 | Multi-Counter Watchdog timer reset #2. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 8 | RESET_MCWDT3 | RW1C | A | 0 | Multi-Counter Watchdog timer reset #3. This is a low-voltage cause bit that hardware clears when the low-voltage supply is initialized (see comments above). |
| 16 | RESET_XRES | RW1C | A | 0 | External XRES pin was asserted. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. This bit is not blocked by other HV cause bits. |
| 17 | RESET_BODVDDD | RW1C | A | 0 | External VDDD supply crossed brown-out limit. Note that this cause will only be observable as long as the VDDD supply does not go below the POR (power on reset) detection limit. Below this limit it is not possible to reliably retain information in the device. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 18 | RESET_BODVDDA | RW1C | A | 0 | External VDDA supply crossed the brown-out limit. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 19 | RESET_BODVCCD | RW1C | A | 0 | Internal VCCD core supply crossed the brown-out limit. Note that this detector will detect gross issues with the internal core supply, but may not catch all brown-out conditions. Functional and timing supervision (CSV, WDT) is provided to create fully failsafe internal crash detection. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 20 | RESET_OVDVDDD | RW1C | A | 0 | Overvoltage detection on the external VDDD supply. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 21 | RESET_OVDVDDA | RW1C | A | 0 | Overvoltage detection on the external VDDA supply. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 22 | RESET_OVDVCCD | RW1C | A | 0 | Overvoltage detection on the internal core VCCD supply. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 23 | RESET_OCD_ACT _LINREG | RW1C | A | 0 | Overcurrent detection on the internal VCCD supply when supplied by the ACTIVE power mode linear regulator. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 24 | RESET_OCD_DPSLP _LINREG | RW1C | A | 0 | Overcurrent detection on the internal VCCD supply when supplied by the DEEPSLEEP power mode linear regulator. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 25 | RESET_OCD_REGHC | RW1C | A | 0 | Overcurrent detection from REGHC (if present). REGHC_STATUS_TIMEOUT expiration will set this bit without issuing reset, which will be observed by a subsequent WDT reset. If REGHC is not present, hardware will never set this bit. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 26 | RESET_PMIC | RW1C | A | 0 | PMIC status triggered a reset. PMIC_STATUS_TIMEOUT expiration will set this bit without issuing reset, which will be observed by a subsequent WDT reset. If PMIC control is not present, hardware will never set this bit. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. |
| 28 | RESET_PXRES | RW1C | A | 0 | PXRES triggered. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. This bit is not blocked by other HV cause bits. |
| 29 | RESET_STRUCT_XRES | RW1C | A | 0 | Structural reset was asserted. This is a high-voltage cause bit that blocks recording of other high-voltage cause bits, except RESET_PORVDDD. Hardware clears this bit during POR. This bit is not blocked by other HV cause bits. |
| 30 | RESET_PORVDDD | RW1C | A | 1 | Indicator that a POR occurred. This is a high-voltage cause bit, and hardware clears the other bits when this one is set. It does not block further recording of other high-voltage causes. |

### 32.12.46 RES_CAUSE2

**Description:** Reset Cause Observation Register 2
**Address:** 0x40261804
**Offset:** 0x1804
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Indicates the cause for the latest reset(s) that occurred in the system. Note that resets due to power up and brown-outs below state retention voltages in regulated and unregulated domains cannot be distinguished from each other. All bits in this register assert when the corresponding reset cause occurs and must be cleared by firmware. These bits are cleared by hardware only during XRES, POR or after a detected brown-out.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | RESET_CSV_HF [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RESET_CSV_HF [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:17] | | | | | | | RESET_CSV_REF [16:16] |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | RESET_CSV_HF | RW1C | A | 0 | Clock supervision logic requested a reset due to loss or frequency violation of a high-frequency clock. Each bit index K corresponds to a HFCLK<K>. Unimplemented clock bits return zero. |
| 16 | RESET_CSV_REF | RW1C | A | 0 | Clock supervision logic requested a reset due to loss or frequency violation of the reference clock source that is used to monitor the other HF clock sources. |

### 32.12.47 CLK_TRIM_ILO0_CTL

**Description:** ILO0 Trim Register
**Address:** 0x40263014
**Offset:** 0x3014
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Trims ILO frequency. Determined during manufacturing sort/class, but may be updated in the field to calibrate voltage and temperature conditions. This register is protected by WDT_CTL.WDT_LOCK. ILO0 configuration and trims are reset by XRES and power-related resets, unless configured otherwise.
**Default:** 0x52C

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | ILO0_FTRIM [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | ILO0_MONTRIM [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:5 | ILO1_FTRIM | RW | R | 44 | ILO1 frequency trims. LSB step size is 1.5 percent (typical) of the frequency. |
| 8:11 | ILO1_MONTRIM | RW | R | 5 | ILO1 internal monitor trim. |

### 32.12.49 CSV_HF

#### 32.12.49.1 CSV

#### 32.12.49.1.1 CSV_HF_CSV_REF_CTL

**Description:** Clock Supervision Reference Control
**Address:** 0x40261400
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Controls clock supervision for a clock tree.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | STARTUP [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | STARTUP [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | CSV_EN [31:31] | CSV _ACTION [30:30] | None [29:24] | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | STARTUP | RW | R | 0 | Startup delay time -1 (in reference clock cycles), after enable or DeepSleep wakeup, from reference clock start to monitored clock start.<br>At a minimum (both clocks running): STARTUP >= (PERIOD +3) * FREQ_RATIO - UPPER, with FREQ_RATIO = (Reference frequency / Monitored frequency)<br>On top of that the actual clock startup delay and the margin for accuracy of both clocks must be added. |
| 30 | CSV_ACTION | RW | R | 0 | Specifies the action taken when an anomaly is detected on the monitored clock. CSV in DeepSleep domain always do a Fault report (which also wakes up the system). |
| | FAULT | | | 0 | Do a Fault report. |
| | RESET | | | 1 | Cause a power reset. This should only be used for clk_hf0. |
| 31 | CSV_EN | RW | R | 0 | Enables clock supervision, both frequency and loss. CSV in Active domain: Clock supervision is reset during DeepSleep and Hibernate modes. When enabled it begins operating automatically after a DeepSleep wakeup, but it must be reconfigured after Hibernate wakeup.<br>CSV in DeepSleep domain: Clock supervision is reset during Hibernate mode. It must be reconfigured after Hibernate wakeup.<br><br>A CSV error detection is reported to the Fault structure, or instead it can generate a power reset. |

### 32.12.49.1.2 CSV_HF_CSV_REF_LIMIT

**Description:** Clock Supervision Reference Limits
**Address:** 0x40261404
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER [15:8] | | | | | | | |

### 32.12.53 CLK_PLL400M

#### 32.12.53.1 CLK_PLL400M_CONFIG

**Description:** 400MHz PLL Configuration Register
**Address:** 0x40261900
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register contains PLL configuration for 400MHz PLL. There is a copy of this register for each 400MHz PLL. Configuration settings should not be changed while it is a selected clock (connected to logic). This prevents clock glitches that can crash the logic.
**Default:** 0x20116

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FEEDBACK_DIV [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | REFERENCE_DIV [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | OUTPUT_DIV [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:30] | BYPASS_SEL [29:28] | | None [27:27] | LOCK_DELAY [26:25] | | None [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | FEEDBACK_DIV | RW | R | 22 | Control bits for feedback divider. Set the divide value before enabling the PLL, and do not change it while PLL is enabled.<br>0-15: illegal (undefined behavior)<br>16: divide by 16<br>...<br>200: divide by 200<br>>200: illegal (undefined behavior)<br><br>When using fractional mode, the jitter specs are met over the restricted range of 27 to 47, inclusive. |
| 8:12 | REFERENCE_DIV | RW | R | 1 | Control bits for reference divider. Set the divide value before enabling the PLL, and do not change it while PLL is enabled.<br>0: illegal (undefined behavior)<br>1: divide by 1<br>...<br>16: divide by 16<br>others: illegal (undefined behavior)<br><br>When using fractional mode, the jitter specs are met over the restricted range of 1 to 4, inclusive. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:20 | OUTPUT_DIV | RW | R | 2 | Control bits for Output divider. Set the divide value before enabling the PLL, and do not change it while PLL is enabled.<br>0: illegal (undefined behavior)<br>1: illegal (undefined behavior)<br>2: divide by 2. Suitable for direct usage as HFCLK source.<br>...<br>16: divide by 16. Suitable for direct usage as HFCLK source.<br>>16: illegal (undefined behavior) |
| 25:26 | LOCK_DELAY | RW | R | 0 | Configures the sensitivity of the lock detection logic, according to the intended operating mode:<br>0: Integer divider without spreading;<br>1: Fractional division or spreading.<br>2,3: reserved (do not use) |
| 28:29 | BYPASS_SEL | RW | R | 0 | Bypass mux located just after PLL output. This selection is glitch-free and can be changed while the PLL is running. When changing BYPASS_SEL, do not turn off the reference clock or PLL clock for five cycles (whichever is slower). |
| | AUTO | | | 0 | Automatic using lock indicator. When unlocked, automatically selects PLL reference input (bypass mode). When locked, automatically selects PLL output. If ENABLE=0, automatically selects PLL reference input. |
| | LOCKED_OR_NOTHING | | | 1 | Similar to AUTO, except the clock is gated off when unlocked. This is compatible with clock supervision, because the supervisors allow no clock during startup (until a timeout occurs), and the clock targets the proper frequency whenever it is running. If ENABLE=0, no clock is output. |
| | PLL_REF | | | 2 | Select PLL reference input (bypass mode). Ignores lock indicator |
| | PLL_OUT | | | 3 | Select PLL output. Ignores lock indicator. If ENABLE=0, no clock is output. |
| 31 | ENABLE | RW | R | 0 | Master enable for PLL. Setup FEEDBACK_DIV, REFERENCE_DIV, and OUTPUT_DIV at least one cycle before setting ENABLE=1.<br><br>fOUT = (FEEDBACK_DIV + FRAC_EN*FRAC_DIV/2^24) * (fREF / REFERENCE_DIV) / (OUTPUT_DIV)<br><br>0: Block is disabled. When the PLL disables, hardware controls the bypass mux as described in BYPASS_SEL, before disabling the PLL circuit.<br>1: Block is enabled |

### 32.12.53.2 CLK_PLL400M_CONFIG2

**Description:** 400MHz PLL Configuration Register 2
**Address:** 0x40261904
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register contains additional PLL configuration for 400MHz fractional PLLs. There is a copy of this register for each 400MHz PLL. Configure this register before enabling the PLL, and do not change any settings (except FRAC_DIV) while PLL ENABLE==1.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAC_DIV [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAC_DIV [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAC_DIV [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | FRAC_EN [31:31] | FRAC_DITHER_EN [30:28] | | | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:23 | FRAC_DIV | RW | A | 0 | Control bits for fractional divider. This value is interpreted as a fraction of the PFD frequency, i.e. fPFD * (FRAC_DIV/2^24). This field can be dynamically updated within the 1000ppm control limit. It takes up to 115 AHB cycles to transfer the setting to the PLL, and writes that occur faster may be silently ignored and require the application to write again after the previous update has finished. Reading the register returns the accepted value. The PLL will start targeting the new value, but it may take significant time (milliseconds) to stabilize at the new average value. Do not change the FRAC_DIV setting while the PLL is initially locking. |
| 28:30 | FRAC_DITHER_EN | RW | R | 0 | Enables dithering during fractional operation.<br>3'b000: disables dithering;<br>3'b001: enables dithering;<br>others: reserved |
| 31 | FRAC_EN | RW | R | 0 | Enables fractional division mode. When using fractional division mode, see CLK_PLL400M_CONFIG.LOCK_DELAY for an additional configuration requirement. |

### 32.12.53.3 CLK_PLL400M_CONFIG3

**Description:** 400MHz PLL Configuration Register 3
**Address:** 0x40261908
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register contains additional PLL configuration for 400MHz fractional PLLs. There is a copy of this register for each 400MHz PLL. There is a copy of this register for each 400MHz PLL. Configure this register before enabling the PLL, and do not change any settings while PLL ENABLE==1.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | SSCG_DEPTH [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:10] | | | | | | SSCG_DEPTH [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:19] | | | | | SSCG_RATE [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | SSCG_EN [31:31] | None [30:29] | | SSCG_MODE [28:28] | None [27:25] | | | SSCG_DITHER_EN [24:24] |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:9 | SSCG_DEPTH | RW | R | 0 | Control bits for SSCG modulation depth as a percentage of the non-modulated clock. The following choices are supported, and all others are reserved:<br>10'h029: -0.5 percent (down-spread),<br>10'h052: -1 percent (down-spread),<br>10'h0a4: -2 percent (down-spread),<br>10'h0f6: -3 percent (down-spread) |
| 16:18 | SSCG_RATE | RW | R | 0 | Control bits for SSCG modulation rate as a factor of fPFD clock frequency. Audio applications should choose a setting that results in a modulation rate that is greater than 20kHz, so fPFD/512 or fPFD/256 is recommended.<br>0: Modulation rate = fPFD/4096,<br>1: Modulation rate = fPFD/2048,<br>2: Modulation rate = fPFD/1024,<br>3: Modulation rate = fPFD/512,<br>4: Modulation rate = fPFD/256 (limited to 8MHz only), others: reserved |
| 24 | SSCG_DITHER_EN | RW | R | 0 | Reserved. Setting is not used internally. |
| 28 | SSCG_MODE | RW | R | 0 | Reserved. Write zero always. |
| 31 | SSCG_EN | RW | R | 0 | Enables spreading mode. When using spreading, see CLK_PLL400M_CONFIG.LOCK_DELAY for an additional configuration requirement. |

### 32.12.53.4 CLK_PLL400M_STATUS

**Description:** 400MHz PLL Status Register
**Address:** 0x4026190C
**Offset:** 0xC
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** This register indicates status for a PLL400M. There is a copy of this register for each PLL400M. This register is synchronized during an AHB read transaction. This causes a number wait-states to be inserted in the transaction depending on the frequency ration between system and PLL frequency.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | UNLOCK_OCCURRED [1:1] | LOCKED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | LOCKED | R | W | 0 | PLL Lock Indicator |
| 1 | UNLOCK_OCCURRED | RW1C | A | 0 | This bit sets whenever the PLL Lock bit goes low, and stays set until cleared by firmware. |

## 32.12.54 MCWDT

### 32.12.54.1 MCWDT_CPU_SELECT

**Description:** MCWDT CPU selection register
**Address:** 0x40268040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Assigns this MCWDT to a CPU.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | CPU_SEL [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | CPU_SEL | RW | R | 0 | Assigns this MCWDT to a CPU. This selects which CPU SLEEPDEEP signal is used for SLEEPDEEP_PAUSE. |

### 32.12.54.2 MCWDT_CTR2_CTL

**Description:** MCWDT Subcounter 2 Control register
**Address:** 0x40268080
**Offset:** 0x80
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control register for MCWDT subcounter 2. Writes are ignored when locked (i.e. corresponding LOCK.MCWDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | ENABLED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ENABLED | R | RW | 0 | Indicates actual state of this subcounter. May lag ENABLE by up to two clk_lf cycles. |
| 31 | ENABLE | RW | R | 0 | Enable subcounter. May take up to 2 clk_lf cycles to take effect. When ENABLE changes from 1->0, the counter is cleared.<br>0: Counter is disabled (not clocked)<br>1: Counter is enabled (counting up) |

### 32.12.54.3 MCWDT_CTR2_CONFIG

**Description:** MCWDT Subcounter 2 Configuration register
**Address:** 0x40268084
**Offset:** 0x84
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Configuration for MCWDT subcounter 2. Writes are ignored when locked (i.e. corresponding LOCK.MCWDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect. Before changing the limit, it is recommended to set the service bit for this subcounter and wait until it reads back low. This prevents possible unintended actions caused by synchronization delays.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | ACTION [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | BITS [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DEBUG_RUN [31:31] | SLEEPDEEP_PAUSE [30:30] | None [29:29] | DEBUG_TRIGGER_EN [28:28] | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ACTION | RW | R | 0 | Action taken when the specified BIT toggles.<br>Action will be triggered on the same edge where BITS to observe toggle. |
| | NOTHING | | | 0 | Do nothing |
| | INT | | | 1 | Trigger an interrupt |
| 16:20 | BITS | RW | R | 0 | Bit to observe for a toggle:<br>0: Do ACTION after CNT[0] toggles (i.e. every tick)<br>.<br>31: Do ACTION after CNT[31] toggles (i.e. every 2^31 ticks) |
| 28 | DEBUG_TRIGGER_EN | RW | R | 0 | Enables the trigger input for this MCWDT to pause the counter during debug mode. To pause at a breakpoint while debugging, configure the trigger matrix to connect the related CPU halted signal to the trigger input for this MCWDT, and then set this bit. It takes up to two clk_lf cycles for the trigger signal to be processed. Triggers that are less than two clk_lf cycles may be missed. Synchronization errors can accumulate each time it is halted.<br>0: Pauses the counter whenever a debug probe is connected.<br>1: Pauses the counter whenever a debug probe is connected and the trigger input is high. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 30 | SLEEPDEEP_PAUSE | RW | R | 0 | Pauses/runs this counter when the corresponding processor is in SLEEPDEEP. Note it may take up to two clk_lf cycles for the counter to pause and up to two clk_lf cycles for it to unpause, due to internal synchronization.<br>0: Counter runs normally regardless of processor mode.<br>1: Counter pauses when corresponding processor is in SLEEPDEEP. |
| 31 | DEBUG_RUN | RW | R | 0 | Pauses/runs this counter while a debugger is connected. Other behaviors are unchanged during debugging, including service, configuration updates and enable/disable. Note it may take up to two clk_lf cycles for the counter to pause and another two cycles to unpause, due to internal synchronization.<br>0: When debugger connected, counter pauses incrementing as configured in DEBUG_TRIGGER_EN.<br><br>1: When debugger connected, counter increments normally, but reset generation is blocked. |

### 32.12.54.4 MCWDT_CTR2_CNT

**Description:** MCWDT Subcounter 2 Count Register
**Address:** 0x40268088
**Offset:** 0x88
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Count value for this MCWDT subcounter 2. Writes are ignored when this subcounter is enabled or when it is locked (i.e. corresponding LOCK.MCWDT_LOCK<>0).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | CNT2 | RW | A | 0 | Current value of subcounter 2 for this MCWDT. This field may lag the actual count value by up to one clk_lf cycle, due to internal synchronization. When this subcounter is disabled and unlocked, the count value can be written for verification and debugging purposes. Software writes are always ignored when the subcounter is enabled. This register retains information during DeepSleep mode if SLEEPDEEP_PAUSE == 1. |

### 32.12.54.5 MCWDT_LOCK

**Description:** MCWDT Lock Register
**Address:** 0x40268090
**Offset:** 0x90
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Lock or unlock the respective configuration registers of subcounters 0/1/2 of this MCWDT.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | MCWDT_LOCK [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | MCWDT_LOCK | RW | A | 0 | Prohibits writing control and configuration registers related to this MCWDT when not equal 0 (as specified in the other register descriptions). Requires at least two different writes to unlock.<br>Note that this field is 2 bits to force multiple writes only. Each MCWDT has a separate local lock. |
| | NO_CHG | | | 0 | No effect |
| | CLR0 | | | 1 | Clears bit 0 |
| | CLR1 | | | 2 | Clears bit 1 |
| | SET01 | | | 3 | Sets both bits 0 and 1 |

### 32.12.54.6 MCWDT_SERVICE

**Description:** MCWDT Service Register
**Address:** 0x40268094
**Offset:** 0x94
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control the behavior of the Watchdog counters. Writes to this register are ignored when LOCK.MCWDT_LOCK<>0. All fields in this register can be used while counter is in operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | CTR1 _SERVICE [1:1] | CTR0 _SERVICE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CTR0_SERVICE | RW1S | RW1C | 0 | Services subcounter 0. This resets the count value for subcounter 0 to zero. This may take up to three clk_lf cycles to take effect. Hardware clears this bit, after necessary synchronization. To ensure a pending CTR0_SERVICE write is reflected, firmware should wait until this bit reads low before attempting to write CTR0_SERVICE=1. If subcounter 0 is disabled, CTR0_SERVICE will not trigger a LOWER_ACTION and will not clear a preloaded count value. |
| 1 | CTR1_SERVICE | RW1S | RW1C | 0 | Services subcounter 1. This resets the count value for subcounter 1 to zero. This may take up to three clk_lf cycles to take effect. Hardware clears this bit, after necessary synchronization. To ensure a pending CTR1_SERVICE write is reflected, firmware should wait until this bit reads low before attempting to write CTR1_SERVICE=1. If subcounter 1 is disabled, CTR1_SERVICE will not trigger a LOWER_ACTION and will not clear a preloaded count value. |

### 32.12.54.7 MCWDT_INTR

**Description:** MCWDT Interrupt Register
**Address:** 0x402680A0
**Offset:** 0xA0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Interrupt status register for MCWDT subcounters.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CTR2_INT [2:2] | CTR1_INT [1:1] | CTR0_INT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CTR0_INT | RW1C | A | 0 | MCWDT Interrupt Request for sub-counter 0. This bit is set by hardware as configured by this registers. This bit must be cleared by firmware. |
| 1 | CTR1_INT | RW1C | A | 0 | MCWDT Interrupt Request for sub-counter 1. This bit is set by hardware as configured by this registers. This bit must be cleared by firmware. |
| 2 | CTR2_INT | RW1C | A | 0 | MCWDT Interrupt Request for sub-counter 2. This bit is set by hardware as configured by this registers. This bit must be cleared by firmware. |

### 32.12.54.8 MCWDT_INTR_SET

**Description:** MCWDT Interrupt Set Register
**Address:** 0x402680A4
**Offset:** 0xA4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register can be used to trigger an interrupt for firmware testing.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CTR2_INT [2:2] | CTR1_INT [1:1] | CTR0_INT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CTR0_INT | RW1S | A | 0 | Set interrupt for MCWDT_INT0 |
| 1 | CTR1_INT | RW1S | A | 0 | Set interrupt for MCWDT_INT1 |
| 2 | CTR2_INT | RW1S | A | 0 | Set interrupt for MCWDT_INT2 |

### 32.12.54.9 MCWDT_INTR_MASK

**Description:** MCWDT Interrupt Mask Register
**Address:** 0x402680A8
**Offset:** 0xA8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** This register controls whether a subcounter interrupt is forwarded to the corresponding processor. All masks block the interrupt when 0 and forward the interrupt when 1.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CTR2_INT [2:2] | CTR1_INT [1:1] | CTR0_INT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CTR0_INT | RW | R | 0 | Interrupt Mask for sub-counter 0 for warning interrupt. The bit controls if the interrupt is forwarded to the CPU. The interrupt is blocked when the value of the bit is 0. The interrupt is forwarded if the value of the bit is 1. |
| 1 | CTR1_INT | RW | R | 0 | Interrupt Mask for sub-counter 1 for warning interrupt. The bit controls if the interrupt is forwarded to the CPU. The interrupt is blocked when the value of the bit is 0. The interrupt is forwarded if the value of the bit is 1. |
| 2 | CTR2_INT | RW | R | 0 | Interrupt Mask for sub-counter 2. The bit controls if the interrupt is forwarded to the CPU. The interrupt is blocked when the value of the bit is 0. The interrupt is forwarded if the value of the bit is 1. |

### 32.12.54.10 MCWDT_INTR_MASKED

**Description:** MCWDT Interrupt Masked Register
**Address:** 0x402680AC
**Offset:** 0xAC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Bitwise AND between the interrupt request and mask registers so firmware can read the status of all mask enabled interrupt causes with a single load operation. Each available MCWDT has a copy of this register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CTR2_INT [2:2] | CTR1_INT [1:1] | CTR0_INT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CTR0_INT | R | RW | 0 | Logical and of corresponding request and mask bits. |
| 1 | CTR1_INT | R | RW | 0 | Logical and of corresponding request and mask bits. |
| 2 | CTR2_INT | R | RW | 0 | Logical and of corresponding request and mask bits. |

### 32.12.54.11 CTR

#### 32.12.54.11.1 MCWDT_CTR_CTL

**Description:** MCWDT Subcounter Control Register
**Address:** 0x40268000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control register for this MCWDT subcounter. Writes are ignored when locked (i.e. corresponding MCWDT[i]_LOCK.WDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | ENABLED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ENABLED | R | RW | 0 | Indicates actual state of this subcounter. May lag ENABLE by up to two clk_lf cycles. |
| 31 | ENABLE | RW | R | 0 | Enable subcounter. May take up to 2 clk_lf cycles to take effect. When ENABLE changes from 1->0, the counter is cleared.<br>0: Counter is disabled (not clocked)<br>1: Counter is enabled (counting up) |

### 32.12.54.11.2 MCWDT_CTR_LOWER_LIMIT

**Description:** MCWDT Subcounter Lower Limit Register
**Address:** 0x40268004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Lower limit for this MCWDT subcounter. Writes are ignored when locked (i.e. corresponding MCWDT[i]_LOCK.WDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect. Before changing the limit, it is recommended to set the service bit for this subcounter within the configured limits. This prevents possible unintended actions caused by the updated limits.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER_LIMIT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | LOWER_LIMIT | RW | R | 0 | Lower limit for this MCWDT subcounter. See LOWER_ACTION. |

### 32.12.54.11.3 MCWDT_CTR_UPPER_LIMIT

**Description:** MCWDT Subcounter Upper Limit Register
**Address:** 0x40268008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Upper limit for this MCWDT subcounter. Writes are ignored when locked (i.e. corresponding MCWDT[i]_LOCK.WDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect. Before changing the limit, it is recommended to set the service bit for this subcounter within the configured limits. This prevents possible unintended actions caused by the updated limits.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_LIMIT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | UPPER_LIMIT | RW | R | 0 | Upper limit for this MCWDT subcounter. See UPPER_ACTION. |

### 32.12.54.11.4 MCWDT_CTR_WARN_LIMIT

**Description:** MCWDT Subcounter Warn Limit Register
**Address:** 0x4026800C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Warn limit for this MCWDT subcounter. Writes are ignored when locked (i.e. corresponding MCWDT[i]_LOCK.WDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect. Before changing the limit, it is recommended to set the service bit for this subcounter within the configured limits. This prevents possible unintended actions caused by the updated limits.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WARN_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | WARN_LIMIT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | WARN_LIMIT | RW | R | 0 | Warn limit for this MCWDT subcounter. See WARN_ACTION. |

### 32.12.54.11.5 MCWDT_CTR_CONFIG

**Description:** MCWDT Subcounter Configuration Register
**Address:** 0x40268010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Configuration for this MCWDT subcounter. Writes are ignored when locked (i.e. corresponding MCWDT[i]_LOCK.WDT_LOCK<>0). This register may be written while the counter is running, but new values may take up to 2 clk_lf cycles to take effect. MCWDT always reports the first fault that occurs across subcounter #0 and subcounter #1 for this MCWDT, but may not report additional faults that occur while the first is being processed.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | UPPER_ACTION [5:4] | | None [3:2] | | LOWER_ACTION [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | AUTO _SERVICE [12:12] | None [11:9] | | | WARN _ACTION [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DEBUG _RUN [31:31] | SLEEPDEEP _PAUSE [30:30] | None [29:29] | DEBUG _TRIGGER _EN [28:28] | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | LOWER_ACTION | RW | R | 0 | Action taken if this watchdog is serviced before LOWER_LIMIT is reached. LOWER_ACTION is ignored (i.e. treated as NOTHING) when a debugger is connected and/or when the corresponding processor is in SLEEPDEEP. |
| | NOTHING | | | 0 | Do nothing |
| | FAULT | | | 1 | Trigger a fault. It can take up to 3 clk_lf cycles for the fault to be transferred to the fault manager.<br>For LOWER_LIMIT >= 1: The action is triggered on same edge when it meets this condition.<br>For LOWER_LIMIT == 0: No action is triggered. |
| | FAULT_THEN_RESET | | | 2 | Trigger a fault. Further, trigger a system-wide reset if the fault is not serviced and the watchdog is not cleared within 6 clk_lf cycles. It can take up to 3 clk_lf cycles for the fault to be transferred to the fault manager, which gives at least 3 clk_lf cycles for software to respond.<br>For LOWER_LIMIT >= 1: The action is triggered on same edge when it meets this condition.<br>For LOWER_LIMIT == 0: No action is triggered. |
| 4:5 | UPPER_ACTION | RW | R | 0 | Action taken if this watchdog is not serviced before UPPER_LIMIT is reached. The counter stops counting when UPPER_LIMIT is reached, regardless of UPPER_ACTION setting. UPPER_ACTION is ignored (i.e. treated as NOTHING) when a debugger is connected. |
| | NOTHING | | | 0 | Do nothing |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | FAULT | | | 1 | Trigger a fault.<br>For UPPER_LIMIT >= 2: The action is triggered on same edge when it meets this condition.<br>For UPPER_LIMIT < 2: The action may take up to one extra clk_lf cycle to trigger. |
| | FAULT_THEN_RESET | | | 2 | Trigger a fault. Further, trigger a system-wide reset if the fault is not serviced and the watchdog is not cleared within 6 clk_lf cycles. It can take up to 3 clk_lf cycles for the fault to be transferred to the fault manager, which gives at least 3 clk_lf cycles for software to respond.<br>For UPPER_LIMIT >= 2: The action is triggered on same edge when it meets this condition.<br>For UPPER_LIMIT < 2: The action may take up to one extra clk_lf cycle to trigger. |
| 8 | WARN_ACTION | RW | R | 0 | Action taken when the count value reaches WARN_LIMIT. The minimum setting to achieve a periodic interrupt is WARN_LIMIT==1. A setting of zero will trigger once but not periodically.<br>For WARN_LIMIT >= 2: The action is triggered on same edge when it meets this condition.<br>For WARN_LIMIT == [0,1] : The action may take up to one extra clk_lf cycle to trigger. |
| | NOTHING | | | 0 | Do nothing |
| | INT | | | 1 | Trigger an interrupt. |
| 12 | AUTO_SERVICE | RW | R | 0 | Automatically service when the count value reaches WARN_LIMIT. This allows creation of a periodic interrupt if this counter is not needed as a watchdog. This field is ignored when LOWER_ACTION<>NOTHING or when UPPER_ACTION<>NOTHING. |
| 28 | DEBUG_TRIGGER_EN | RW | R | 0 | Enables the trigger input for this MCWDT to pause the counter during debug mode. To pause at a breakpoint while debugging, configure the trigger matrix to connect the related CPU halted signal to the trigger input for this MCWDT, and then set this bit. It takes up to two clk_lf cycles for the trigger signal to be processed. Triggers that are less than two clk_lf cycles may be missed. Synchronization errors can accumulate each time it is halted.<br>0: Pauses the counter whenever a debug probe is connected.<br>1: Pauses the counter whenever a debug probe is connected and the trigger input is high. |
| 30 | SLEEPDEEP_PAUSE | RW | R | 0 | Pauses/runs this counter when the corresponding processor is in SLEEPDEEP. Note it may take up to two clk_lf cycles for the counter to pause and up to two clk_lf cycles for it to unpause, due to internal synchronization. After wakeup, the LOWER_ACTION is ignored until after the first service. This prevents an unintentional trigger of the LOWER_ACTION before the firmware realigns the servicing period. After the first service, LOWER_ACTION behaves as configured.<br>0: Counter runs normally regardless of processor mode.<br>1: Counter pauses when corresponding processor is in SLEEPDEEP. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | DEBUG_RUN | RW | R | 0 | Pauses/runs this counter while a debugger is connected. Other behaviors are unchanged during debugging, including service, configuration updates and enable/disable. Note it may take up to two clk_lf cycles for the counter to pause, due to internal synchronization.<br><br>When (DEBUG_RUN==1 or DEBUG_TRIGGER_EN==0) and the debugger is connected for at least two clk_lf cycles, the LOWER_ACTION is ignored until after the first service after the debugger is disconnected. After the debugger is disconnected, the LOWER_ACTION is ignored until after the first service. This prevents an unintentional trigger of the LOWER_ACTION before the firmware realigns the servicing period. After the first service, LOWER_ACTION behaves as configured. If the debugger is disconnected before two clk_lf cycles, the LOWER_ACTION may or may not be ignored.<br><br>0: When debugger connected, counter pauses incrementing as configured in DEBUG_TRIGGER_EN.<br><br>1: When debugger connected, counter increments normally, but reset generation is blocked. To block LOWER_ACTION fault generation, write DEBUG_TRIGGER_EN==0. |

### 32.12.54.11.6 MCWDT_CTR_CNT

**Description:** MCWDT Subcounter Count Register
**Address:** 0x40268014
**Offset:** 0x14
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Count value for this MCWDT subcounter. Writes are ignored when this subcounter is enabled or when it is locked (i.e. corresponding MCWDT[i]_LOCK.WDT_LOCK<>0).
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CNT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CNT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:15 | CNT | RW | A | 0 | Current value of subcounter for this MCWDT. This field may lag the actual count value by up to one clk_lf cycle, due to internal synchronization. When this subcounter is disabled and unlocked, the count value can be written for verification and debugging purposes. Software writes are always ignored when the subcounter is enabled.This register retains information during DeepSleep mode if SLEEPDEEP_PAUSE == 1. |

## 32.12.55 WDT

### 32.12.55.1 WDT_CTL

**Description:** WDT Control Register
**Address:** 0x4026C000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control register for watchdog. Writes are ignored when locked (i.e. Corresponding LOCK.WDT_LOCK<>0).
**Default:** 0x80000001

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | ENABLED [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLE [31:31] | None [30:24] | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | ENABLED | R | RW | 1 | Indicates actual state of watchdog. May lag ENABLE by up to three clk_ilo0 cycles. |
| 31 | ENABLE | RW | A | 1 | Enable watchdog. May take up to three clk_ilo0 cycles to take effect. When ENABLE changes from 1->0, the counter is cleared. Do not enter DEEPSLEEP or HIBERNATE mode if ENABLE<>ENABLED. This can be done by waiting until ENABLE==ENABLED whenever ENABLE is changed.<br>0: Counter is disabled (not clocked).<br>1: Counter is enabled (counting up) |

### 32.12.55.2 WDT_LOWER_LIMIT

**Description:** WDT Lower Limit Register
**Address:** 0x4026C004
**Offset:** 0x4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Lower limit for watchdog. Writes are ignored when locked (i.e. Corresponding LOCK.WDT_LOCK<>0) or when enabled (i.e. ENABLE==1 and ENABLED==1). This register is implemented in vddd domain. This register retains information during HIBERNATE mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER_LIMIT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER_LIMIT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | LOWER_LIMIT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | LOWER_LIMIT | RW | A | 0 | Lower limit for watchdog. See LOWER_ACTION. |

### 32.12.55.3 WDT_UPPER_LIMIT

**Description:** WDT Upper Limit Register
**Address:** 0x4026C008
**Offset:** 0x8
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Upper limit for watchdog. Writes are ignored when locked (i.e. Corresponding LOCK.WDT_LOCK<>0) or when enabled (i.e. ENABLE==1 and ENABLED==1). This register is implemented in vddd domain. This register retains information during HIBERNATE mode.
**Default:** 0x8000

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_LIMIT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_LIMIT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | UPPER_LIMIT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | UPPER_LIMIT | RW | A | 32768 | Upper limit for watchdog. See UPPER_ACTION. |

### 32.12.55.4 WDT_WARN_LIMIT

**Description:** WDT Warn Limit Register
**Address:** 0x4026C00C
**Offset:** 0xC
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Warn limit for watchdog. Writes are ignored when locked (i.e. Corresponding LOCK.WDT_LOCK<>0) or when enabled (i.e. ENABLE==1 and ENABLED==1). This register is implemented in vddd domain. This register retains information during HIBERNATE mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | WARN_LIMIT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | WARN_LIMIT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | WARN_LIMIT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | WARN_LIMIT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | WARN_LIMIT | RW | A | 0 | Warn limit for watchdog. See WARN_ACTION. |

### 32.12.55.5 WDT_CONFIG

**Description:** WDT Configuration Register
**Address:** 0x4026C010
**Offset:** 0x10
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Configuration for watchdog. Writes are ignored when locked (i.e. Corresponding LOCK.WDT_LOCK<>0) or when enabled (i.e. ENABLE==1 and ENABLED==1). This register is implemented in vddd domain. This register retains information during HIBERNATE mode.
**Default:** 0x10

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | UPPER_ACTION [4:4] | None [3:1] | | | LOWER_ACTION [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | AUTO_SERVICE [12:12] | None [11:9] | | | WARN_ACTION [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DEBUG_RUN [31:31] | HIB_PAUSE [30:30] | DPSLP_PAUSE [29:29] | DEBUG_TRIGGER_EN [28:28] | None [27:24] | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | LOWER_ACTION | RW | A | 0 | Action taken if this watchdog is serviced before LOWER_LIMIT is reached. LOWER_ACTION is ignored (i.e. treated as NOTHING) when a debugger is connected and/or when the chip is in DEEPSLEEP/HIBERNATE modes.<br>For LOWER_LIMIT >= 1: The action is triggered on same edge when it meets this condition.<br>For LOWER_LIMIT == 0: No action is triggered. |
| | NOTHING | | | 0 | Do nothing |
| | RESET | | | 1 | Trigger a reset. |
| 4 | UPPER_ACTION | RW | A | 1 | Action taken if this watchdog is not serviced before UPPER_LIMIT is reached. The counter stops counting when UPPER_LIMIT is reached, regardless of UPPER_ACTION setting. UPPER_ACTION is ignored (i.e. treated as NOTHING) when a debugger is connected.<br>For UPPER_LIMIT >= 2: The action is triggered on same edge when it meets this condition.<br>For UPPER_LIMIT < 2: The action may take up to one extra clk_ilo0 cycle to trigger. |
| | NOTHING | | | 0 | Do nothing |
| | RESET | | | 1 | Trigger a reset. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8 | WARN_ACTION | RW | A | 0 | Action taken when the count value reaches WARN_LIMIT. The minimum setting to achieve a periodic interrupt is WARN_LIMIT==1. A setting of zero will trigger once but not periodically.<br>For WARN_LIMIT >= 2: The action is triggered on same edge when it meets this condition.<br>For WARN_LIMIT < 2 : The action may take up to one extra clk_ilo0 cycle to trigger. |
| | NOTHING | | | 0 | Do nothing |
| | INT | | | 1 | Trigger an interrupt. |
| 12 | AUTO_SERVICE | RW | A | 0 | Automatically service when the count value reaches WARN_LIMIT. This allows creation of a periodic interrupt if this counter is not needed as a watchdog. This field is ignored when LOWER_ACTION<>NOTHING or when UPPER_ACTION<>NOTHING. |
| 28 | DEBUG_TRIGGER_EN | RW | A | 0 | Enables the trigger input for WDT to pause the counter during debug mode. To pause at a breakpoint while debugging, configure the trigger matrix to connect the related CPU halted signal to the trigger input for this WDT, and then set this bit. It takes up to two clk_ilo0 cycles for the trigger signal to be processed. Triggers that are less than two clk_ilo0 cycles may be missed. Synchronization error can accumulate each time it is halted.<br>0: Pauses the counter whenever a debug probe is connected.<br>1: Pauses the counter whenever a debug probe is connected and the trigger input is high. |
| 29 | DPSLP_PAUSE | RW | A | 0 | Pauses/runs this counter when the system is in DEEPSLEEP. Note it may take up to two clk_ilo0 cycles for the counter to pause, due to internal synchronization. During DEEPSLEEP wakeup, the pause request is removed when clk_hf0 starts clocking, and then it may take up to two clk_ilo0 cycles for the counter to start. After wakeup, the LOWER_ACTION is ignored until after the first service. This prevents an unintentional trigger of the LOWER_ACTION before the firmware realigns the servicing period. After the first service, LOWER_ACTION behaves as configured.<br>0: Counter behaves normally during DEEPSLEEP.<br>1: Counter pauses during DEEPSLEEP. |
| 30 | HIB_PAUSE | RW | A | 0 | Pauses/runs this counter when the system is in HIBERNATE. Note it may take up to two clk_ilo0 cycles for the counter to pause, due to internal synchronization. After wakeup, the LOWER_ACTION is ignored until after the first service. This prevents an unintentional trigger of the LOWER_ACTION before the firmware realigns the servicing period. After the first service, LOWER_ACTION behaves as configured.<br>0: Counter behaves normally during HIBERNATE.<br>1: Counter pauses during HIBERNATE. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 31 | DEBUG_RUN | RW | A | 0 | Pauses/runs this counter while a debugger is connected. Other behaviors are unchanged during debugging, including service, configuration updates and enable/disable. Note it may take up to two clk_ilo0 cycles for the counter to pause and another two cycles to unpause, due to internal synchronization. If the debugger is connected for at least two clk_ilo0 cycles, the LOWER_ACTION is ignored until after the first service after the debugger is disconnected. This prevents an unintentional trigger of the LOWER_ACTION before the firmware realigns the servicing period. After the first service, LOWER_ACTION behaves as configured. If the debugger is disconnected before two clk_ilo0 cycles, the LOWER_ACTION may or may not be ignored.<br>0: When debugger connected, counter pauses incrementing as configured in DEBUG_TRIGGER_EN.<br>1: When debugger connected, counter increments normally, but reset generation is blocked. |

### 32.12.55.6 WDT_CNT

**Description:** WDT Count Register
**Address:** 0x4026C014
**Offset:** 0x14
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Count value for watchdog. Writes are ignored when locked (i.e. Corresponding LOCK.WDT_LOCK<>0) or when enabled (i.e. ENABLE==1 and ENABLED==1). This register is implemented in vddd domain. This register retains information during HIBERNATE mode.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CNT [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | CNT [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | CNT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | CNT [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | CNT | RW | A | 0 | Current value of subcounter for this WDT. This field may lag the actual count value by up to one clk_ilo0 cycle, due to internal synchronization. When this subcounter is disabled and unlocked, the count value can be written for verification and debugging purposes. Software writes are always ignored when the subcounter is enabled. This register retains information during DeepSleep or Hiberbate mode if DPSLP_PAUSE == 1 or HIB_PAUSE == 1. |

### 32.12.55.7 WDT_LOCK

**Description:** WDT Lock register
**Address:** 0x4026C040
**Offset:** 0x40
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Lock or unlock the registers in this WDT
**Default:** 0x3

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:2] | | | | | | WDT_LOCK [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | WDT_LOCK | RW | A | 3 | Prohibits writing control and configuration registers related to this WDT when not equal 0 (as specified in the other register descriptions). Requires at least two different writes to unlock.<br>Note that this field is 2 bits to force multiple writes only. This register also locks the clk_ilo0 settings. |
| | NO_CHG | | | 0 | No effect |
| | CLR0 | | | 1 | Clears bit 0 |
| | CLR1 | | | 2 | Clears bit 1 |
| | SET01 | | | 3 | Sets both bits 0 and 1 |

### 32.12.55.8 WDT_SERVICE

**Description:** WDT Service register
**Address:** 0x4026C044
**Offset:** 0x44
**Retention:** Retained
**IsDeepSleep:** Yes
**Comment:** Control the behavior of the Watchdog counters. Writes to this register are ignored when LOCK.WDT_LOCK<>0. All fields in this register can be used while counter is in operation.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | SERVICE [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | SERVICE | RW1S | RW1C | 0 | Services the watchdog. This resets the count value to zero. This may take up to three clk_ilo0 cycle to take effect. Hardware clears this bit, after necessary synchronization. To ensure a pending SERVICE write is reflected, firmware should wait until this bit reads low before attempting to write SERVICE=1. If WDT is disabled, SERVICE will not trigger a LOWER_ACTION and will not clear a preloaded count value. |

### 32.12.55.9 WDT_INTR

**Description:** WDT Interrupt Register
**Address:** 0x4026C050
**Offset:** 0x50
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Interrupt signal from WDT
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | WDT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WDT | RW1C | A | 0 | WDT Interrupt Request. This bit is set as configured by WDT action and limits. Due to internal synchronization, it takes up to 8 SYSCLK cycles to update after a W1C or reading this register and during this time AHB bus is stalled. |

### 32.12.55.10 WDT_INTR_SET

**Description:** WDT Interrupt Set Register
**Address:** 0x4026C054
**Offset:** 0x54
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Can be used to set interrupts for firmware testing.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | WDT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WDT | RW1S | A | 0 | Set interrupt.<br>Due to internal synchronization, it takes up to 8 SYSCLK cycles to update after a W1S or reading from this register and during this time AHB bus is stalled. |

### 32.12.55.11 WDT_INTR_MASK

**Description:** WDT Interrupt Mask Register
**Address:** 0x4026C058
**Offset:** 0x58
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Controls whether interrupt is forwarded to CPU. All masks block the interrupt when 0 and forward the interrupt when 1
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | WDT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WDT | RW | R | 0 | Mask for watchdog timer. Clearing this bit will not forward the interrupt to the CPU. |

### 32.12.55.12 WDT_INTR_MASKED

**Description:** WDT Interrupt Masked Register
**Address:** 0x4026C05C
**Offset:** 0x5C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Bitwise AND between the interrupt request and mask registers so firmware can read the status of all mask enabled interrupt causes with a single load operation
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:1] | | | | | | | WDT [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | WDT | R | RW | 0 | Logical and of corresponding request and mask bits. Due to internal synchronization, it takes up to 8 SYSCLK cycles to read from this register. During this time AHB bus is stalled. |

# 33 SYSAP

**Description** System debug Access Port (SYSAP) registers
**Base Address** 0xE0000000
**Size** 0x20000000
**Slave Num** SYSTEM

## 33.1 ROMTABLE

| Register Name | Address | Permission | Description |
|---|---|---|---|
| SYSAP_ROMTABLE_DID | 0xF1000FCC | FULL | Device Type Identifier register. |
| SYSAP_ROMTABLE_PID4 | 0xF1000FD0 | FULL | Peripheral Identification Register 4. |
| SYSAP_ROMTABLE_PID5 | 0xF1000FD4 | FULL | Peripheral Identification Register 5. |

|---|---|---|---|---|---|---|---|---|
| Name | VALUE [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:31 | VALUE | R | R | 1 | . |

### 33.2.1.2 SYSAP_ROMTABLE_PID4

**Description:** Peripheral Identification Register 4.
**Address:** 0xF1000FD0
**Offset:** 0xFD0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** Undefined as one or more bit fields have a default value that is undefined

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | COUNT [7:4] | | | | JEP_CONTINUATION [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:3 | JEP_CONTINUATION | R | R | Undefined | JEP106 continuation code. This value is product specific and specified as part of the product definition in the CPUSS.JEPCONTINUATION parameter. |
| 4:7 | COUNT | R | R | 0 | Size of ROM Table is 2^COUNT * 4 KByte. |

### 33.2.1.3 SYSAP_ROMTABLE_PID5

**Description:** Peripheral Identification Register 5.
**Address:** 0xF1000FD4
**Offset:** 0xFD4
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

## 34.3 Register Details

### 34.3.1 GRP

#### 34.3.1.1 CNT

##### 34.3.1.1.1 TCPWM_GRP_CNT_CTRL

**Description:** Counter control register
**Address:** 0x40380000
**Offset:** 0x0
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0xF0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CC1_MATCH_DOWN_EN [7:7] | CC1_MATCH_UP_EN [6:6] | CC0_MATCH_DOWN_EN [5:5] | CC0_MATCH_UP_EN [4:4] | AUTO_RELOAD_LINE_SEL [3:3] | AUTO_RELOAD_PERIOD [2:2] | AUTO_RELOAD_CC1 [1:1] | AUTO_RELOAD_CC0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:14] | | PWM_DISABLE_MODE [13:12] | | None [11:11] | PWM_SYNC_KILL [10:10] | PWM_STOP_ON_KILL [9:9] | PWM_IMM_KILL [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:22] | | QUAD_ENCODING_MODE [21:20] | | None [19:19] | ONE_SHOT [18:18] | UP_DOWN_MODE [17:16] | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | ENABLED [31:31] | DBG_FREEZE_EN [30:30] | None [29:27] | | | MODE [26:24] | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | AUTO_RELOAD_CC0 | RW | R | 0 | Specifies switching of the CC0 and buffered CC0 values. This field has a function in TIMER, QUAD (QUAD_RANGE0_CMP, QUAD_RANGE1_CMP range modes), SR, PWM, PWM_DT and PWM_PR modes.<br>Timer, QUAD, SR modes:<br>'0': never switch.<br>'1': switch on a compare match 0 event.<br>PWM, PWM_DT, PWM_PR modes:<br>'0: never switch.<br>'1': switch on a terminal count event with an actively pending switch event. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 1 | AUTO_RELOAD_CC1 | RW | R | 0 | Specifies switching of the CC1 and buffered CC1 values. This field has a function in TIMER, QUAD (QUAD_RANGE0_CMP, QUAD_RANGE1_CMP range modes), SR, PWM, PWM_DT and PWM_PR modes.<br>Timer, QUAD, SR modes:<br>'0': never switch.<br>'1': switch on a compare match 1 event.<br>PWM, PWM_DT, PWM_PR modes:<br>'0: never switch.<br>'1': switch on a terminal count event with an actively pending switch event. |
| 2 | AUTO_RELOAD _PERIOD | RW | R | 0 | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM and PWM_DT modes.<br>'0': never switch.<br>'1': switch on a terminal count event with and actively pending switch event.<br><br>In QUAD mode, QUAD_RANGE0_CMP range mode this field is used to select the index / wrap-around capture function.<br>'0': Captures on index (reload) event. The counter value is copied to the PERIOD register on an index (reload) event.<br>'1': Captures when COUNTER equals 0 or 0xffff. The counter value is copied to the PERIOD register when COUNTER equals 0 or 0xffff. |
| 3 | AUTO_RELOAD_LINE _SEL | RW | R | 0 | Specifies switching of the LINE_SEL and LINE_BUFF_SEL values. This field has a function in PWM and PWM_PR modes.<br>'0': never switch.<br>'1': switch on a terminal count event with and actively pending switch event. |
| 4 | CC0_MATCH_UP_EN | RW | R | 1 | Enables / disables the compare match 0 event generation (COUNTER equals CC0 register) when counting up (STATUS.DOWN = 0) in CNT_UPDN1/2 mode.<br>'0': compare match 0 event generation disabled when counting up<br>'1': compare match 0 event generation enabled when counting up<br><br>This field has a function in PWM and PWM_DT modes only. |
| 5 | CC0_MATCH_DOWN_EN | RW | R | 1 | Enables / disables the compare match 0 event generation (COUNTER equals CC0 register) when counting down (STATUS.DOWN = 1) in CNT_UPDN1/2 mode.<br>'0': compare match 0 event generation disabled when counting down<br>'1': compare match 0 event generation enabled when counting down<br><br>This field has a function in PWM and PWM_DT modes only. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 6 | CC1_MATCH_UP_EN | RW | R | 1 | Enables / disables the compare match 1 event generation (COUNTER equals CC0 register) when counting up (STATUS.DOWN = 0) in CNT_UPDN1/2 mode.<br>'0': compare match 1 event generation disabled when counting up<br>'1': compare match 1 event generation enabled when counting up<br><br>This field has a function in PWM and PWM_DT modes only. |
| 7 | CC1_MATCH_DOWN_EN | RW | R | 1 | Enables / disables the compare match 1 event generation (COUNTER equals CC0 register) when counting down (STATUS.DOWN = 1) in CNT_UPDN1/2 mode.<br>'0': compare match 1 event generation disabled when counting down<br>'1': compare match 1 event generation enabled when counting down<br><br>This field has a function in PWM and PWM_DT modes only. |
| 8 | PWM_IMM_KILL | RW | R | 0 | Specifies whether the kill event immediately deactivates the 'dt_line_out' and 'dt_line_compl_out' signals or with the next module clock ('active count' pre-scaled 'clk_counter').<br>'0': synchronous kill activation. Deactivates the 'dt_line_out' and 'dt_line_compl_out' signals with the next module clock ('active count' pre-scaled 'clk_counter').<br>'1': immediate kill activation. Immediately deactivates the 'dt_line_out' and 'dt_line_compl_out' signals.<br><br>This field has a function in PWM, PWM_DT and PWM_PR modes only. |
| 9 | PWM_STOP_ON_KILL | RW | R | 0 | Specifies whether the counter stops on a kill events:<br>'0': kill event does NOT stop counter.<br>'1': kill event stops counter.<br><br>This field has a function in PWM, PWM_DT and PWM_PR modes only. |
| 10 | PWM_SYNC_KILL | RW | R | 0 | Specifies asynchronous/synchronous kill behavior:<br>'1': synchronous kill mode: the kill event disables the 'dt_line_out' and 'dt_line_compl_out' signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE.<br>'0': asynchronous kill mode: the kill event only disables the 'dt_line_out' and 'dt_line_compl_out' signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET.<br><br>This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. |
| 12:13 | PWM_DISABLE_MODE | RW | R | 0 | Specifies the behavior of the PWM outputs 'line_out' and 'line_compl_out' while the TCPWM counter is disabled (CTL.ENABLED='0') or stopped.<br><br>Note: The output signal of this selection can be further modified by the immediate kill logic and line_out polarity settings (CTRL.QUAD_ENCODING_MODE). |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | Z | | | 0 | When the counter is disabled the PWM outputs 'line_out' and 'line_compl_out' are NOT driven by the TCPWM. Instead the port default level configuration applies, e.g. 'Z' (high impedance).<br>Note: This is realized by driving the TCPWM output 'line_out_en' to 0.<br><br>When the counter is stopped upon a stop event the PWM outputs are deactivated (to the polarity defined by CTL.QUAD_ENCODING_MODE). |
| | RETAIN | | | 1 | When the counter is disabled the PWM outputs 'line_out' and 'line_compl_out' are driven by the TCPWM.<br>When the counter is disabled or stopped upon a stop event the PWM outputs are retained (keep their previous levels).<br>While the counter is disabled or stopped the PWM outputs can be changed via LINE_SEL (when parameter GRP_SMC_PRESENT = 1). |
| | L | | | 2 | When the counter is disabled the PWM outputs 'line_out' and 'line_compl_out' are driven by the TCPWM.<br>When the counter is disabled or stopped upon a stop event the PWM output 'line_out' is driven as a fixed '0' and the PWM output 'line_compl_out' is driven as a fixed '1'. |
| | H | | | 3 | When the counter is disabled the PWM outputs 'line_out' and 'line_compl_out' are driven by the TCPWM.<br>When the counter is disabled or stopped upon a stop event the PWM output 'line_out' is driven as a fixed '1' and the PWM output 'line_compl_out' is driven as a fixed '0'. |
| 16:17 | UP_DOWN_MODE | RW | R | 0 | Determines counter direction.<br><br>In QUAD mode this field acts as QUAD_RANGE_MODE field selecting between different counter range, reload value and compare / capture behavior. |
| | COUNT_UP | | | 0 | Count up (to PERIOD). An overflow event is generated when the counter changes from a state in which COUNTER equals PERIOD. A terminal count event is generated when the counter changes from a state in which COUNTER equals PERIOD. |
| | COUNT_DOWN | | | 1 | Count down (to '0'). An underflow event is generated when the counter changes from a state in which COUNTER equals '0'. A terminal count event is generated when the counter changes from a state in which COUNTER equals '0'. |
| | COUNT_UPDN1 | | | 2 | Count up (to PERIOD), then count down (to '0'). An overflow event is generated when the counter changes from a state in which COUNTER equals PERIOD. An underflow event is generated when the counter changes from a state in which COUNTER equals '0'. A terminal count event is generated when the counter changes from a state in which COUNTER equals '0'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | COUNT_UPDN2 | | | 3 | Count up (to PERIOD), then count down (to '0'). An overflow event is generated when the counter changes from a state in which COUNTER equals PERIOD. An underflow event is generated when the counter changes from a state in which COUNTER equals '0'. A terminal count event is generated when the counter changes from a state in which COUNTER equals '0' AND when the counter changes from a state in which COUNTER equals PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates). |
| | QUAD_RANGE0 | | | 0 | In QUAD mode this setting selects the QUAD_RANGE0 mode with the following behavior:<br>- COUNTER range is between 0x0000 and 0xFFFF / 0xFFFFFFFF (for GRP_CNT_WIDTH = 16 / 32)<br>- on reload / index event:<br>- CC0 is copied to CC0_BUFF<br>- COUNTER is copied to CC0<br>- COUNTER is set to midpoint (0x8000 / 0x80000000)<br>- tc and cc0_match events are generated<br>- when COUNTER is 0x0000 or 0xFFFF / 0xFFFFFFFF:<br>- CC0 is copied to CC0_BUFF<br>- COUNTER (0x0000 or 0xFFFF / 0xFFFFFFFF) is copied to CC0<br>- COUNTER is set to midpoint (0x8000 / 0x80000000)<br>- cc0_match event is generated |
| | QUAD_RANGE0_CMP | | | 1 | In QUAD mode this setting selects the QUAD_RANGE0_CMP mode with the following behavior:<br>- COUNTER range is between 0x0000 and 0xFFFF / 0xFFFFFFFF (for GRP_CNT_WIDTH = 16 / 32)<br>- the capture0 event acts as 2nd reload / index event<br>- on reload / index event:<br>- COUNTER is set to midpoint (0x8000 / 0x80000000)<br>- when 'capture on index' is selected (AUTO_RELOAD_PERIOD=0):<br>- tc event is generated<br>- PERIOD is copied to PERIOD_BUFF<br>- COUNTER is copied to PERIOD<br>- when COUNTER is 0x0000 or 0xFFFF / 0xFFFFFFFF:<br>- COUNTER is set to midpoint (0x8000 / 0x80000000)<br>- when 'capture on wrap-around' is selected (AUTO_RELOAD_PERIOD=1):<br>- tc event is generated<br>- PERIOD is copied to PERIOD_BUFF<br>- COUNTER (0x0000 or 0xFFFF / 0xFFFFFFFF) is copied to PERIOD<br>- 1 or 2 compare functions (depending on CC1_PRESENT) available<br><br>This mode is to a certain extend backward compatible with previous TCPWM quadrature behavior but allows a compare function during quadrature decoding using the CC0/CC_BUFF registers and the cc0_match event. Because of that the PERIOD/PERIOD_BUFF registers are used instead of CC0/CC_BUFF registers to capture COUNTER at reload / index event or wrap-around. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | QUAD_RANGE1_CAPT | | | 2 | In QUAD mode this setting selects the QUAD_RANGE1_CAPT mode with the following behavior:<br>- COUNTER range is between 0x0000 and PERIOD<br>- on reload / index event:<br>- COUNTER is set to 0x0000<br>- tc event is generated<br>- when COUNTER is 0x0000 and decrementing:<br>- COUNTER is set to PERIOD<br>- tc event is generated<br>- when COUNTER equals PERIOD and is incrementing:<br>- COUNTER is set to 0x0000<br>- tc event is generated<br>- 1 or 2 capture functions (depending on CC1_PRESENT) available<br>- on capture0 / capture1 event:<br>- CC0 / CC1 is copied to CC0_BUFF / CC1_BUFF<br>- COUNTER value is copied to CC0<br><br>It allows that the COUNTER register reflects the current angle position of the rotary encoder, i.e. no MOD or SUB calculations need to be done in SW on the COUNTER value to get the current angle position. This allows a DMA copy of the angle position from the COUNTER register. However, a disadvantage of this mode is that fast sequences of tc interrupts can occur (when encoder moves back and forth around start position). It is recommended to not use the tc interrupt in this mode. |
| | QUAD_RANGE1_CMP | | | 3 | In QUAD mode this setting selects the QUAD_RANGE1_CMP mode.<br>The behavior is the same as for QUAD_RANGE1_CAPT mode described above with the only difference that 1 or 2 compare functions (depending on CC1_PRESENT) are available instead of 1 or 2 capture functions. |
| 18 | ONE_SHOT | RW | R | 0 | When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. |
| 20:21 | QUAD_ENCODING_MODE | RW | R | 0 | In QUAD mode this field selects the quadrature encoding mode (X1/X2/X4) or the Up / Down rotary counting mode.<br>In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert 'dt_line_out' and 'dt_line_compl_out'. Inversion is the last step in generation of 'dt_line_out' and 'dt_line_compl_out'; i.e. a disabled output line 'dt_line_out' has the value QUAD_ENCODING_MODE[0] and a disabled output line 'dt_line_compl_out' has the value QUAD_ENCODING_MODE[1]. |
| | X1 | | | 0 | X1 encoding (QUAD mode)<br>This encoding is identical with an up / down counting functionality of the following way: Rising edges of input phiA increment or decrement the counter depending on the state of input phiB (direction input). |
| | X2 | | | 1 | X2 encoding (QUAD mode) |
| | X4 | | | 2 | X4 encoding (QUAD mode) |
| | UP_DOWN | | | 3 | Up / Down rotary counting mode. Input phiA increments the counter, input phiB decrements the counter. The trigger edge detection settings apply. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | INV_OUT | | | 1 | When bit 0 is '1', QUADRATURE_ENCODING_MODE[0] inverts 'dt_line_out' (PWM/PWM_DT modes) |
| | INV_COMPL_OUT | | | 2 | When bit 1 is '1', QUADRATURE_ENCODING_MODE[1] inverts 'dt_line_compl_out' (PWM/PWM_DT modes) |
| 24:26 | MODE | RW | R | 0 | Counter mode. |
| | TIMER | | | 0 | Timer mode |
| | Reserved1 | | | 1 | N/A |
| | CAPTURE | | | 2 | Capture mode |
| | QUAD | | | 3 | Quadrature mode<br><br>Different encoding modes can be selected by QUAD_ENCODING_MODE including up/down count functionality.<br>Different counter range, reload value and capture behavior can be selected by QUAD_RANGE_MODE (overloaded field UP_DOWN_MODE). |
| | PWM | | | 4 | Pulse width modulation (PWM) mode |
| | PWM_DT | | | 5 | PWM with deadtime insertion mode |
| | PWM_PR | | | 6 | Pseudo random pulse width modulation |
| | SR | | | 7 | Shift register mode. |
| 30 | DBG_FREEZE_EN | RW | R | 0 | Specifies the counter behavior in debug mode.<br>'0': The counter operation continues in debug mode.<br>'1': The counter operation freezes in debug mode. |
| 31 | ENABLED | RW | R | 0 | Counter enable.<br>'0': counter disabled.<br>'1': counter enabled.<br>Counter static configuration information (e.g. CTRL.MODE, all TR_IN_SEL, TR_IN_EDGE_SEL, TR_PWM_CTRL and TR_OUT_SEL register fields) should only be modified when the counter is disabled.<br>When a counter is disabled, command and status information associated to the counter is cleared by HW, this includes:<br>- the associated counter triggers in the CMD register are set to '0'.<br>- the counter's interrupt cause fields in counter's INTR register.<br>- the counter's status fields in counter's STATUS register..<br>- the counter's trigger outputs ('tr_out0' and tr_out1').<br>- the counter's line outputs ('line_out' and 'line_compl_out'). |

#### 34.3.1.1.2 TCPWM_GRP_CNT_STATUS

**Description:** Counter status register
**Address:** 0x40380004
**Offset:** 0x4
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When the counter is disabled (CTRL.ENABLED = 0), then the STATUS.TR_* bit fields are typically reset to their default values. However, there are exceptions possible in the following cases, based on the selected input trigger via TR_IN_SEL*.*_SEL:
- If a constant '0' is selected, then a '0' is read.
- If a constant '1' is selected, then a '1' is read.
- If a general purpose trigger input 'tr_all_cnt_in' is selected which is also selected by another counter and that counter is enabled, then the actual level of the selected trigger is read.

**Default:** 0x20

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | TR_STOP [7:7] | TR _RELOAD [6:6] | TR_COUNT [5:5] | TR _CAPTUR E0 [4:4] | None [3:1] | | | DOWN [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | RUNNING [15:15] | None [14:12] | | | LINE _COMPL _OUT [11:11] | LINE_OUT [10:10] | TR _CAPTUR E1 [9:9] | TR_START [8:8] |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | DT_CNT_L [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | DT_CNT_H [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | DOWN | R | RW | 0 | When '0', counter is counting up. When '1', counter is counting down. In QUAD mode, this field indicates the direction of the latest counter change: '0' when last incremented and '1' when last decremented. |
| 4 | TR_CAPTURE0 | R | RW | 0 | Indicates the actual level of the selected capture 0 trigger. |
| 5 | TR_COUNT | R | RW | 1 | Indicates the actual level of the selected count trigger. |
| 6 | TR_RELOAD | R | RW | 0 | Indicates the actual level of the selected reload trigger. |
| 7 | TR_STOP | R | RW | 0 | Indicates the actual level of the selected stop trigger. |
| 8 | TR_START | R | RW | 0 | Indicates the actual level of the selected start trigger. |
| 9 | TR_CAPTURE1 | R | RW | 0 | Indicates the actual level of the selected capture 1 trigger. |
| 10 | LINE_OUT | R | RW | 0 | Indicates the actual level of the PWM line output signal. |
| 11 | LINE_COMPL_OUT | R | RW | 0 | Indicates the actual level of the complementary PWM line output signal. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 15 | RUNNING | R | RW | 0 | When '0', the counter is NOT running. When '1', the counter is running.<br><br>This field is used to indicate that the counter is running after a start/reload event and that the counter is stopped after a stop event.<br>When a running counter operation is paused in debug state (see CTRL.DBG_PAUSE) then the RUNNING bit is still '1'. |
| 16:23 | DT_CNT_L | R | RW | 0 | Generic 8-bit counter field. In PWM_DT mode, this counter is used for dead time insertion (8bit dead time counter or low byte of 16-bit dead time counter).<br>In all other modes, this counter is used for pre-scaling the selected counter clock. PWM_DT mode can NOT use prescaled clock functionality. |
| 24:31 | DT_CNT_H | R | RW | 0 | High byte of 16-bit dead time counter. In PWM_DT mode, this counter is used for dead time insertion.<br>In all other modes, this field has no effect.<br><br>Note: This field only exists when parameter GRP_AMC_PRESENT for advanced motor control is set to 1. Otherwise the dead time is only 8bit wide and the only the field DT_CNT_L is used as dead time counter. |

#### 34.3.1.1.3 TCPWM_GRP_CNT_COUNTER

**Description:** Counter count register
**Address:** 0x40380008
**Offset:** 0x8
**Retention:** Retained

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:7 | DT_LINE_OUT_L | RW | R | 0 | In PWM_DT mode, this field is used to determine the low byte of the dead time before activating the PWM line output signal 'line_out': amount of dead time cycles in the counter clock domain.<br>In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock.<br><br>Note: This field determines the low byte of the 16-bit dead time before activating 'line_out' when parameter GRP_AMC_PRESENT for advanced motor control is set to 1. Otherwise the dead time is only 8 bit wide and the same dead time specified by this DT_LINE_OUT_L field is used before activating 'line_out' and 'line_compl_out'. |
| | DIVBY1 | | | 0 | Divide by 1 (other-than-PWM_DT mode) |
| | DIVBY2 | | | 1 | Divide by 2 (other-than-PWM_DT mode) |
| | DIVBY4 | | | 2 | Divide by 4 (other-than-PWM_DT mode) |
| | DIVBY8 | | | 3 | Divide by 8 (other-than-PWM_DT mode) |
| | DIVBY16 | | | 4 | Divide by 16 (other-than-PWM_DT mode) |
| | DIVBY32 | | | 5 | Divide by 32 (other-than-PWM_DT mode) |
| | DIVBY64 | | | 6 | Divide by 64 (other-than-PWM_DT mode) |
| | DIVBY128 | | | 7 | Divide by 128 (other-than-PWM_DT mode) |
| 8:15 | DT_LINE_OUT_H | RW | R | 0 | In PWM_DT mode, this field is used to determine the high byte of the dead time before activating the PWM line output signal 'line_out': amount of dead time cycles in the counter clock domain.<br>In all other modes, this field has no effect.<br><br>Note: This field only exists when parameter GRP_AMC_PRESENT for advanced motor control is set to 1. Otherwise the dead time is only 8 bit wide and the same dead time specified by field DT_LINE_OUT_L is used before activating 'line_out' and 'line_compl_out'. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 16:31 | DT_LINE_COMPL_OUT | RW | R | 0 | In PWM_DT mode, this field is used to determine the dead time before activating the complementary PWM line output signal 'line_compl_out': amount of dead time cycles in the counter clock domain.<br>In all other modes, this field has no effect.<br><br>Note: This field only exists when parameter GRP_AMC_PRESENT for advanced motor control is set to 1. Otherwise the dead time is only 8 bit wide and the same dead time specified by field DT_LINE_OUT_L is used before activating 'line_out' and 'line_compl_out'. |

#### 34.3.1.1.13 TCPWM_GRP_CNT_TR_CMD

**Description:** Counter trigger command register
**Address:** 0x40380040
**Offset:** 0x40
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** Enables software controlled operation for this counter.
Note: Synchronized operation on multiple counters can be done using trigger multipliers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:6] | | CAPTURE1 [5:5] | START [4:4] | STOP [3:3] | RELOAD [2:2] | None [1:1] | CAPTURE0 [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | CAPTURE0 | RW1S | RW1C | 0 | SW capture 0 trigger. When written with '1', a capture 0 trigger is generated and the HW sets the field to '0' when the SW trigger has taken effect. It should be noted that the HW operates on the counter frequency. If the counter is disabled through CTRL.ENABLED, the field is immediately set to '0'. |
| 2 | RELOAD | RW1S | RW1C | 0 | SW reload trigger. For HW behavior, see COUNTER_CAPTURE0 field. |
| 3 | STOP | RW1S | RW1C | 0 | SW stop trigger. For HW behavior, see COUNTER_CAPTURE0 field. |
| 4 | START | RW1S | RW1C | 0 | SW start trigger. For HW behavior, see COUNTER_CAPTURE0 field. |
| 5 | CAPTURE1 | RW1S | RW1C | 0 | SW capture 1 trigger. For HW behavior, see COUNTER_CAPTURE0 field. |

### 34.3.1.1.14 TCPWM_GRP_CNT_TR_IN_SEL0

**Description:** Counter input trigger selection register 0
**Address:** 0x40380044
**Offset:** 0x44
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to select triggers for specific counter events.
**Default:** 0x100

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | CAPTURE0_SEL [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | COUNT_SEL [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:21] | | | RELOAD_SEL [20:16] | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:29] | | | STOP_SEL [28:24] | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | CAPTURE0_SEL | RW | R | 0 | Selects one of the up to 256 input triggers as a capture0 trigger. Input trigger 0 is always '0' and input trigger 1 is always '1'. If existing, the one-to-one trigger inputs 'tr_one_cnt_in' (different to each counter) are selected by setting 2 and above. The settings above are used for the general purpose trigger inputs 'tr_all_cnt_in' connected to all counters selected.<br>In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. |
| 8:12 | COUNT_SEL | RW | R | 1 | Selects one of the 256 input triggers as a count trigger.<br><br>In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'.<br><br>Note: In the modes: TIMER, CAPTURE, PWM, PWM_DT, and SR, If the counter is externally triggered ( COUNT_SEL > 1), an external trigger will be required for each TR_CMD to execute. For example, a write to TR_CMD.START will not start the counter until the trigger selected by COUNT_SEL asserts. The next trigger will increment the counter since the counter is now running. This goes for all TR_CMD fields. |
| 16:20 | RELOAD_SEL | RW | R | 0 | Selects one of the 256 input triggers as a reload trigger.<br>In QUAD mode, this is the index or revolution pulse. In these modes, it will update the counter with 0x8000 (counter midpoint) or 0x0000 depending on the QUAD_RANGE_MODE. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 24:28 | STOP_SEL | RW | R | 0 | Selects one of the 256 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. |

#### 34.3.1.1.15 TCPWM_GRP_CNT_TR_IN_SEL1

**Description:** Counter input trigger selection register 1
**Address:** 0x40380048
**Offset:** 0x48
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to select triggers for specific counter events.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:5] | | | START_SEL [4:0] | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:13] | | | CAPTURE1_SEL [12:8] | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:4 | START_SEL | RW | R | 0 | Selects one of the 256 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). |
| 8:12 | CAPTURE1_SEL | RW | R | 0 | Selects one of the 256 input triggers as a capture 1 trigger. |

#### 34.3.1.1.16 TCPWM_GRP_CNT_TR_IN_EDGE_SEL

**Description:** Counter input trigger edge selection register
**Address:** 0x4038004C
**Offset:** 0x4C
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to determine edge detection for specific counter triggers. Events will only take effect on enabled counters.
**Default:** 0xFFF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | STOP_EDGE [7:6] | | RELOAD_EDGE [5:4] | | COUNT_EDGE [3:2] | | CAPTURE0_EDGE [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:12] | | | | CAPTURE1_EDGE [11:10] | | START_EDGE [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | CAPTURE0_EDGE | RW | R | 3 | A capture 0 event will copy the counter value into the CC0 register. |
| | RISING_EDGE | | | 0 | Rising edge. Any rising edge generates an event. |
| | FALLING_EDGE | | | 1 | Falling edge. Any falling edge generates an event. |
| | ANY_EDGE | | | 2 | Rising AND falling edge. Any odd amount of edges generates an event. |
| | NO_EDGE_DET | | | 3 | No edge detection, use trigger as is. |
| 2:3 | COUNT_EDGE | RW | R | 3 | A counter event will increase or decrease the counter by '1'. |
| | RISING_EDGE | | | 0 | Rising edge. Any rising edge generates an event. |
| | FALLING_EDGE | | | 1 | Falling edge. Any falling edge generates an event. |
| | ANY_EDGE | | | 2 | Rising AND falling edge. Any odd amount of edges generates an event. |
| | NO_EDGE_DET | | | 3 | No edge detection, use trigger as is. |
| 4:5 | RELOAD_EDGE | RW | R | 3 | A reload event will initialize the counter. When counting up, the counter is initialized to '0'. When counting down, the counter is initialized with PERIOD. |
| | RISING_EDGE | | | 0 | Rising edge. Any rising edge generates an event. |
| | FALLING_EDGE | | | 1 | Falling edge. Any falling edge generates an event. |
| | ANY_EDGE | | | 2 | Rising AND falling edge. Any odd amount of edges generates an event. |
| | NO_EDGE_DET | | | 3 | No edge detection, use trigger as is. |
| 6:7 | STOP_EDGE | RW | R | 3 | A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. |
| | RISING_EDGE | | | 0 | Rising edge. Any rising edge generates an event. |
| | FALLING_EDGE | | | 1 | Falling edge. Any falling edge generates an event. |
| | ANY_EDGE | | | 2 | Rising AND falling edge. Any odd amount of edges generates an event. |
| | NO_EDGE_DET | | | 3 | No edge detection, use trigger as is. |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 8:9 | START_EDGE | RW | R | 3 | A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. |
| | RISING_EDGE | | | 0 | Rising edge. Any rising edge generates an event. |
| | FALLING_EDGE | | | 1 | Falling edge. Any falling edge generates an event. |
| | ANY_EDGE | | | 2 | Rising AND falling edge. Any odd amount of edges generates an event. |
| | NO_EDGE_DET | | | 3 | No edge detection, use trigger as is. |
| 10:11 | CAPTURE1_EDGE | RW | R | 3 | A capture 1 event will copy the counter value into the CC1 register. |
| | RISING_EDGE | | | 0 | Rising edge. Any rising edge generates an event. |
| | FALLING_EDGE | | | 1 | Falling edge. Any falling edge generates an event. |
| | ANY_EDGE | | | 2 | Rising AND falling edge. Any odd amount of edges generates an event. |
| | NO_EDGE_DET | | | 3 | No edge detection, use trigger as is. |

#### 34.3.1.1.17 TCPWM_GRP_CNT_TR_PWM_CTRL

**Description:** Counter trigger PWM control register
**Address:** 0x40380050
**Offset:** 0x50
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to control counter 'line_out', 'dt_line_out' and 'dt_line_compl_out' output signals.
**Default:** 0xFF

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | CC1_MATCH_MODE [7:6] | | UNDERFLOW_MODE [5:4] | | OVERFLOW_MODE [3:2] | | CC0_MATCH_MODE [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:1 | CC0_MATCH_MODE | RW | R | 3 | Determines the effect of a compare match 0 event (COUNTER equals CC0 register) on the 'line_out' output signals. Note that INVERT is especially useful for center aligned pulse width modulation.<br>To generate a duty cycle of 0 percent, the counter CC0 register should be set to '0'. For a 100 percent duty cycle, the counter CC0 register should be set to larger than the counter PERIOD register. |
| | SET | | | 0 | Set to '1' |
| | CLEAR | | | 1 | Set to '0' |
| | INVERT | | | 2 | Invert |
| | NO_CHANGE | | | 3 | No Change |
| 2:3 | OVERFLOW_MODE | RW | R | 3 | Determines the effect of a counter overflow event (COUNTER reaches PERIOD) on the 'line_out' output signals. |
| | SET | | | 0 | Set to '1' |
| | CLEAR | | | 1 | Set to '0' |
| | INVERT | | | 2 | Invert |
| | NO_CHANGE | | | 3 | No Change |
| 4:5 | UNDERFLOW_MODE | RW | R | 3 | Determines the effect of a counter underflow event (COUNTER reaches '0') on the 'line_out' output signals. |
| | SET | | | 0 | Set to '1' |
| | CLEAR | | | 1 | Set to '0' |
| | INVERT | | | 2 | Invert |
| | NO_CHANGE | | | 3 | No Change |
| 6:7 | CC1_MATCH_MODE | RW | R | 3 | Determines the effect of a compare match 1 event (COUNTER equals CC1 register) on the 'line_out' output signals. |
| | SET | | | 0 | Set to '1' |
| | CLEAR | | | 1 | Set to '0' |
| | INVERT | | | 2 | Invert |

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| | NO_CHANGE | | | 3 | No Change |

#### 34.3.1.1.18 TCPWM_GRP_CNT_TR_OUT_SEL

**Description:** Counter output trigger selection register
**Address:** 0x40380054
**Offset:** 0x54
**Retention:** Retained
**IsDeepSleep:** No
**Comment:** Used to select internal events for output trigger generation.
**Default:** 0x32

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:7] | OUT1 [6:4] | | | None [3:3] | OUT0 [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0:2 | OUT0 | RW | R | 2 | Selects one of the internal events to generate the output trigger 0. Default setting selects the terminal count event. |
| | OVERFLOW | | | 0 | Overflow event |
| | UNDERFLOW | | | 1 | Underflow event |
| | TC | | | 2 | Terminal count event (default selection) |
| | CC0_MATCH | | | 3 | Compare match 0 event |
| | CC1_MATCH | | | 4 | Compare match 1 event |
| | LINE_OUT | | | 5 | PWM output signal 'line_out' |
| | Reserved6 | | | 6 | N/A |
| | Disabled | | | 7 | Output trigger disabled. |
| 4:6 | OUT1 | RW | R | 3 | Selects one of the internal events to generate the output trigger 1. Default setting selects the compare match 0 event. |
| | OVERFLOW | | | 0 | Overflow event |
| | UNDERFLOW | | | 1 | Underflow event |
| | TC | | | 2 | Terminal count event |
| | CC0_MATCH | | | 3 | Compare match 0 event (default selection) |
| | CC1_MATCH | | | 4 | Compare match 1 event |
| | LINE_OUT | | | 5 | PWM output signal 'line_out' |
| | Reserved6 | | | 6 | N/A |
| | Disabled | | | 7 | Output trigger disabled. |

#### 34.3.1.1.19 TCPWM_GRP_CNT_INTR

**Description:** Interrupt request register
**Address:** 0x40380070
**Offset:** 0x70
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** The register fields are not retained. This is to ensure that they come up as '0' after coming out of DeepSleep system power mode. HW clears the interrupt causes to '0', when the counter is disabled.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CC1 _MATCH [2:2] | CC0 _MATCH [1:1] | TC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TC | RW1C | RW1S | 0 | Terminal count event. Set to '1', when event is detected. Write with '1' to clear bit. |
| 1 | CC0_MATCH | RW1C | RW1S | 0 | Counter matches CC0 register event. Set to '1', when event is detected. Write with '1' to clear bit. |
| 2 | CC1_MATCH | RW1C | RW1S | 0 | Counter matches CC1 register event. Set to '1', when event is detected. Write with '1' to clear bit. |

#### 34.3.1.1.20 TCPWM_GRP_CNT_INTR_SET

**Description:** Interrupt set request register
**Address:** 0x40380074
**Offset:** 0x74
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects the interrupt request register.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CC1 _MATCH [2:2] | CC0 _MATCH [1:1] | TC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TC | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 1 | CC0_MATCH | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |
| 2 | CC1_MATCH | RW1S | A | 0 | Write with '1' to set corresponding bit in interrupt request register. |

#### 34.3.1.1.21 TCPWM_GRP_CNT_INTR_MASK

**Description:** Interrupt mask register
**Address:** 0x40380078
**Offset:** 0x78
**Retention:** Retained
**IsDeepSleep:** No
**Comment:**
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CC1 _MATCH [2:2] | CC0 _MATCH [1:1] | TC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|---|---|---|
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|---|---|---|---|---|---|---|---|---|
| Name | None [31:24] | | | | | | | |

**Bit-fields**

| Bits | Name | SW | HW | Default or Enum | Description |
|---|---|---|---|---|---|
| 0 | TC | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 1 | CC0_MATCH | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |
| 2 | CC1_MATCH | RW | R | 0 | Mask bit for corresponding bit in interrupt request register. |

#### 34.3.1.1.22 TCPWM_GRP_CNT_INTR_MASKED

**Description:** Interrupt masked request register
**Address:** 0x4038007C
**Offset:** 0x7C
**Retention:** Not Retained
**IsDeepSleep:** No
**Comment:** When read, this register reflects a bitwise AND between the interrupt request and mask registers.
**Default:** 0x0

**Bit-field Table**

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Name | None [7:3] | | | | | CC1 _MATCH [2:2] | CC0 _MATCH [1:1] | TC [0:0] |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|---|---|---|---|---|---|---|---|---|

**Important Notice**

Products which may also include samples and may be comprised of hardware or software or both ("Product(s)") are sold or provided and delivered by Infineon Technologies AG and its affiliates ("Infineon") subject to the terms and conditions of the frame supply contract or other written agreement(s) executed by a customer and Infineon or, in the absence of the foregoing, the applicable Sales Conditions of Infineon. General terms and conditions of a customer or deviations from applicable Sales Conditions of Infineon shall only be binding for Infineon if and to the extent Infineon has given its express written consent.

For the avoidance of doubt, Infineon disclaims all warranties of non-infringement of third-party rights and implied warranties such as warranties of fitness for a specific use/purpose or merchantability.

Infineon shall not be responsible for any information with respect to samples, the application or customer's specific use of any Product or for any examples or typical values given in this document.

If this document is marked as 'Preliminary', 'Target', 'Draft' or 'Proposal', Infineon reserves the right to change all information given in this document at any time without notice. Subject to the development and release of a Product for series supply by Infineon, the technical specifications of the Product are set forth in the relevant datasheet provided by Infineon without such marking.

The data contained in this document is exclusively intended for technically qualified and skilled customer representatives. It is the responsibility of the customer to evaluate the suitability of the Product for the intended application and the customer's specific use and to verify all relevant technical data contained in this document in the intended application and the customer's specific use. The customer is responsible for properly designing, programming, and testing the functionality and safety of the intended application, as well as complying with any legal requirements related to its use.

Unless otherwise explicitly approved by Infineon, Products may not be used in any application where a failure of the Products or any consequences of the use thereof can reasonably be expected to result in personal injury. However, the foregoing shall not prevent the customer from using any Product in such fields of use that Infineon has explicitly designed and sold it for, provided that the overall responsibility for the application lies with the customer.

Infineon expressly reserves the right to use its content for commercial text and data mining (TDM) according to applicable laws, e.g. Section 44b of the German Copyright Act (UrhG).

If the Product includes security features:
Because no computing device can be absolutely secure, and despite security measures implemented in the Product, Infineon does not guarantee that the Product will be free from intrusion, data theft or loss, or other breaches ("Security Breaches"), and Infineon shall have no liability arising out of any Security Breaches.

If this document includes or references software:
The software is owned by Infineon under the intellectual property laws and treaties of the United States, Germany, and other countries worldwide. All rights reserved.

Therefore, you may use the software only as provided in the software license agreement accompanying the software.

If no software license agreement applies, Infineon hereby grants you a personal, non-exclusive, non-transferable license (without the right to sublicense) under its intellectual property rights in the software (a) for software provided in source code form, to modify and reproduce the software solely for use with Infineon hardware products, only internally within your organization, and (b) to distribute the software in binary code form externally to end users, solely for use on Infineon hardware products. Any other use, reproduction, modification, translation, or compilation of the software is prohibited.

For further information on the Product, technology, delivery terms and conditions, and prices, please contact your nearest Infineon office or visit https://www.infineon.com.
