

TDA38725A Evaluation Board user guide

25 A single-phase buck regulator

About this document

Scope and purpose

This user guide describes the operation, schematic, and bill of materials (BOM) for the EVAL_TDA38725A_1.1VOUT, EVAL_TDA38725A_1.2VOUT, and EVAL_TDA38725A_3.3VOUT Evaluation Boards.

Detailed application information for TDA38725A is available in the TDA38725A datasheet [\[1\]](#).

Intended audience

This document is intended as a guide for design engineers evaluating TDA38725A performance with EVAL_TDA38725A_1.1VOUT, EVAL_TDA38725A_1.2VOUT, and EVAL_TDA38725A_3.3VOUT Evaluation Boards.

Important notice

“Evaluation Boards and Reference Boards” shall mean products embedded on a printed circuit board (PCB) for demonstration and/or evaluation purposes, which include, without limitation, demonstration, reference and evaluation boards, kits and design (collectively referred to as “Reference Board”).

Environmental conditions have been considered in the design of the Evaluation Boards and Reference Boards provided by Infineon Technologies. The design of the Evaluation Boards and Reference Boards has been tested by Infineon Technologies only as described in this document. The design is not qualified in terms of safety requirements, manufacturing, and operation over the entire operating temperature range or lifetime.

The Evaluation Boards and Reference Boards provided by Infineon Technologies are subject to functional testing only under typical load conditions. Evaluation Boards and Reference Boards are not subject to the same procedures as regular products regarding returned material analysis (RMA), process change notification (PCN) and product discontinuation (PD).

Evaluation Boards and Reference Boards are not commercialized products, and are solely intended for evaluation and testing purposes. In particular, they shall not be used for reliability testing or production. The Evaluation Boards and Reference Boards may therefore not comply with CE or similar standards (including but not limited to the EMC Directive 2004/EC/108 and the EMC Act) and may not fulfill other requirements of the country in which they are operated by the customer. The customer shall ensure that all Evaluation Boards and Reference Boards will be handled in a way, which is compliant with the relevant requirements and standards of the country in which they are operated.

The Evaluation Boards and Reference Boards as well as the information provided in this document are addressed only to qualified and skilled technical staff, for laboratory usage, and shall be used and managed according to the terms and conditions set forth in this document and in other related documentation supplied with the respective Evaluation Board or Reference Board.

It is the responsibility of the customer’s technical departments to evaluate the suitability of the Evaluation Boards and Reference Boards for the intended application, and to evaluate the completeness and correctness of the information provided in this document with respect to such application.

The customer is obliged to ensure that the use of the Evaluation Boards and Reference Boards does not cause any harm to persons or third-party property.

The Evaluation Boards and Reference Boards and any information in this document is provided "as is" and Infineon Technologies disclaims any warranties, express or implied, including but not limited to warranties of noninfringement of third-party rights and implied warranties of fitness for any purpose, or for merchantability.

Infineon Technologies shall not be responsible for any damages resulting from the use of the Evaluation Boards and Reference Boards and/or from any information provided in this document. The customer is obliged to defend, indemnify, and hold Infineon Technologies harmless from and against any claims or damages arising out of or resulting from any use thereof.

Infineon Technologies reserves the right to modify this document and/or any information provided herein at any time without further notice.

Safety precautions

Note: Please note the following warnings regarding the hazards associated with development systems.

Table 1 Safety precautions

	Caution: The evaluation or reference board contains parts and assemblies sensitive to electrostatic discharge (ESD). Electrostatic control precautions are required when installing, testing, servicing or repairing the assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with electrostatic control procedures, refer to the applicable ESD protection handbooks and guidelines.
	Caution: The evaluation or reference board is shipped with packing materials that need to be removed prior to installation. Failure to remove all packing materials that are unnecessary for system installation may result in overheating or abnormal operating conditions.

1 Introduction

The TDA38725A is a synchronous buck converter with PMBus communication interface, providing a compact, high performance, and flexible solution in a small 5 mm X 6 mm Power QFN package. This board is to be used during the designing process for evaluating and measuring characteristic curves, and for understanding various features of a part.

The key programmable features offered by the TDA38725A are:

- Soft start
- Thermal protection
- Switching-frequency
- Enable input, output under-voltage lockout
- Over-voltage and -current protection
- High-side short detection
- Load-line, and pre-bias start-up
- All faults have configurable responses via the available [XDP Designer](#) GUI from Infineon
- Output over-current protection function is implemented by sensing the voltage developed across the on-resistance of the synchronous (low-side) MOSFET for optimum cost and performance and the current limit is thermally compensated.

2 Evaluation Board

EVAL_TDA38725A_1.1VOUT, EVAL_TDA38725A_1.2VOUT, and EVAL_TDA38725A_3.3VOUT Evaluation Boards are synchronous buck converters that steps down 12 V_{in} to 1.1 V_{out}, 1.2 V_{out}, and 3.3 V_{out} respectively. It consists of integrated point-of-load TDA38725A part. TDA38725A is an easy-to-use, fully integrated, and highly efficient DC-DC regulator. The onboard pulse width modulation (PWM) controller and OPTIMOS™ FETs with integrated bootstrap diode make TDA38725A a small footprint solution, providing high-efficiency power delivery. Additionally, it uses a fast constant on-time (COT) control scheme, which simplifies the design efforts and achieves fast transient response.

This document provides description of all the Evaluation Boards mentioned in this document. [Figure 1](#) shows the bench set up of these evaluation boards using 1.1 V_{out} configuration as an example:

Figure 1 Bench setup block diagram

2.1 Evaluation Kit

The Evaluation Kit consists of only the Evaluation Board. There are three options of Evaluation Board with Vout configured to either 1.1 V_{out}, 1.2 V_{out}, and 3.3 V_{out} based on the order requirements of the Evaluation Kit.

The user of this Evaluation Kit should order the [USB005 dongle](#) separately. Contact your distribution partner, account managers, or the [Infineon support](#) for more information about ordering USB005 dongles.

3 Board information

3.1 Board parameters and technical data

$PV_{in} = V_{in} = +12\text{ V}$

$F_{sw} = 800\text{ kHz}$ (this is the default value, but it is configurable using the [XDP Designer](#) GUI)

$C_{in} = 8 \times 22\text{ }\mu\text{F}$ (25 V, Ceramic 0805) + $1 \times 2.2\text{ }\mu\text{F}$ (25 V, Ceramic 0402) + $1 \times 4.7\text{ }\mu\text{F}$ (25 V, Ceramic 0603) + $1 \times 390\text{ }\mu\text{F}$ (20 V, Electrolytic, optional)

Table 2 TDA38725A default output inductor and capacitor bank for each output voltage

Output Voltage	Inductor	Output Capacitors (C_{out})
1.2 V	150 nH	1410 μF (1x470 μF SP Cap, 2.5 V rated + 20x47 μF Ceramic)
3.3 V	470 nH	1410 μF (1x470 μF POSCAP, 6.3 V rated + 20x47 μF Ceramic)

3.2 Connections and operating instructions

EVAL_TDA38725A_1.1VOUT, EVAL_TDA38725A_1.2VOUT, and EVAL_TDA38725A_3.3VOUT Evaluation boards require a single +12 V for the input power and can deliver up to 25 A load current. The operation modes and OCP limits are programmable via XDP Designer GUI.

Table 3 Connections

Label		Descriptions
Input	PVIN	Connect input power (+12 V) to this pin
	GND	Return of input power
	VIN_Eff (J742)	Sense pins for input voltage
	VIN_SEN (J762)	Sense pins for the input voltage
Output	VOUT	V _{out} , connect a load (25 A max) to this pin
	GND	Return of V _{out}
	VOUT_Eff (J748)	Sense pins for efficiency
	VOUT_SEN (J763)	Sense pins for the output voltage
Enable	ENABLE	Connect a scope probe to this pin to monitor Enable Signal. An external Enable signal can be applied to this pin to overdrive the on-board Enable signal by connecting a jumper on EXT-EN header J740.
	GND	Alternatively, the Enable signal can be generated using PVIN using a resistor divider by connecting a jumper on PVIN-EN header J740
BODE	A	For bode plot measurement
	B	
SM_ADDR/PROG	I2C Slave Address Offset	Use this jumper to add an offset to the I2C slave base address of 0x10h. By default, this is set to zero.
I2C/PMbus	J738	This is used to establish communication with the Infineon XDP Designer GUI, which is used to change the default configuration of the part. The dongle USB005 is used for communication.
PGOOD	TP166	This signal is used to indicate that the V _{out} has reached a threshold set by POWER_GOOD_ON PMbus command
SM_ADDR/PROG	J717	This jumper is used to select between 16-programmed files stored in the part. By default, it is set to accept the most recent programmed config file into the part.
ILIM	J728	This jumper is used to select the resistor-programmable current limit.
TON/MODE	J729	This jumper is used to select the resistor-programmable switching frequency and FCCM or DCM mode.
VBT	J727	This jumper is used to set the resistor-programmable boot voltage.
VIN-PVIN	V _{cc}	Connecting a jumper to J751 generates the V _{cc} on board, but removing this jumper and connecting it a 5V external supply to TP169 will also work
EN ON/OFF	SW4	This switch is used to enable the part ON and OFF. The switch is pulled up to an onboard 3.3 V regulator

Board information

3.3 Layout

The PCB is an 8-layer board (5.25 inch x 4.1 inch) using FR4 material. The PCB thickness is 0.062 inch. TDA38725A and other major power components are mounted on the top side of the board. [Table 4](#) details the layer stack-up order and copper weight for each layer.

Table 4 PCB layer stack up

Layer	Layer description	Trace material
1	Top	0.5-Ounce Copper + 1.5-Ounce plating
2	Ground 1	2-Ounce Copper
3	Signal 1	2-Ounce Copper
4	Power 1	2-Ounce Copper
5	Power ground	2-Ounce Copper
6	Signal 2	2-Ounce Copper
7	Ground 2	2-Ounce Copper
8	Bottom	0.5-Ounce Copper + 1.5-Ounce plating

3.7 XDP Designer GUI

Infineon XDP Designer GUI is needed to communicate with the TDA38725A part via I2C. The GUI is a part of the [Infineon XDP Designer](#).

Note that Dongle driver v59.4 or higher is necessary to communicate with the TDA38725A.

Installing and configuring XDP Designer

1. Launch the [Infineon Developer Center](#).
2. Locate and click on the **Manage tools** Section.
3. In the search bar of the **Manage tools** Section, search for **XDP Designer**.
4. Install the **XDP designer** from the search results.
5. Once the installation is complete, launch the XDP Designer.

Configure the XDP Designer

1. Power the Evaluation Board with +12 V V_{in} and connect to your computer with the USB005 dongle.
2. Update system or scan devices: There are two ways to establish connection with your board:
 - Click the **Tuning & Debugging** button within XDP Designer. This should automatically update the system section with the connected device and its configuration.
 - If the automatic update doesn't work, click the **Scan Devices** button.

The device will show with the part number and I2C address, with green circles (if the connection is correct and there are no faults).

3. Use the **XDP Designer toolbar** to alter any system configurations or read the telemetry.

See [Figure 12](#) for an annotated version of the XDP Designer home screen shown for EVAL_TDA38725A_1.1VOUT.

Warnings

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.
