Please note that Cypress is an Infineon Technologies Company.
The document following this cover page is marked as “Cypress” document as this is the company that originally developed the product. Please note that Infineon will continue to offer the product to new and existing customers as part of the Infineon product portfolio.

Continuity of document content
The fact that Infineon offers the following product as part of the Infineon product portfolio does not lead to any changes to this document. Future revisions will occur when appropriate, and any changes will be set out on the document history page.

Continuity of ordering part numbers
Infineon continues to support existing part numbers. Please continue to use the ordering part numbers listed in the datasheet for ordering.

THIS SPEC IS OBSOLETE

Spec No: 002-05070

Spec Title: AN205070 - F2MC-8FX Family MB95390 Series 120 degree Hall Sensor/Sensorless DC Inverter Control

Replaced by: NONE

AN205070

F²MC-8FX Family MB95390 Series 120° Hall Sensor/Sensorless DC Inverter Control

Associated Part Family: MB95390 Series

This Application Note describes the implementation of 120° conduction hall sensor/sensorless brushless DC motor control using the Cypress MB95F390 8-bit microcontroller EV board and MB95F330 EV board together.

1 Introduction

This document describes the implementation of 120° conduction hall sensor/sensorless brushless DC motor control using the Cypress MB95F390 8-bit microcontroller EV board and MB95F330 EV board together.

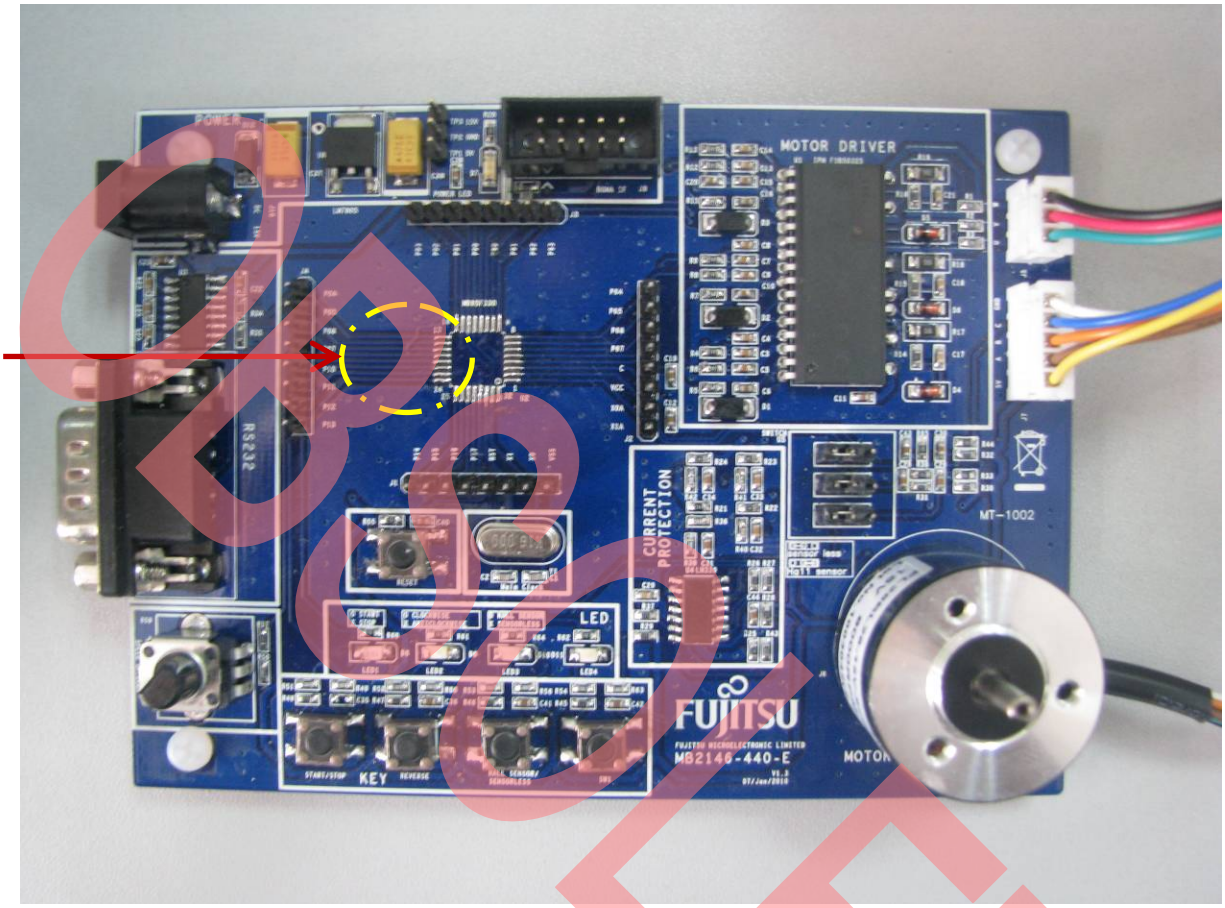

2 Hardware Connection

This chapter introduces hardware connection when MB95390 EV board is used with MB95330 EV board.

2.1 Prepare MB95330 EV Board

The MB95330 EV board PN is MB2146-440-E. It should be removed before connected with MB95390 EV board. Refer to Figure 2-1.

Figure 2-1: MB95330 EV Board

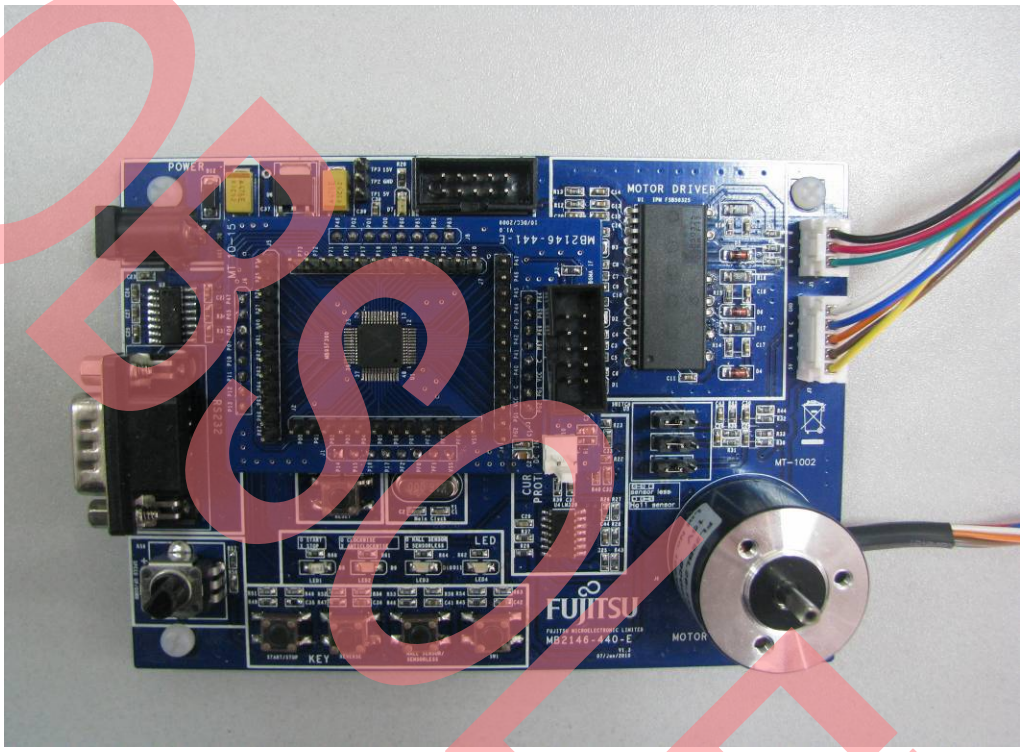

OBSOLETE

2.2 Install the MB95390 EV Board onto the MB95330 EV Board

The MB95390 EV board PN is MB2146-441-E. Install the MB95390 EV board onto the MB95330 EV board, refer to Figure 2-2.

Figure 2-2: Install MB95390 EV Board onto MB95330 EV Board

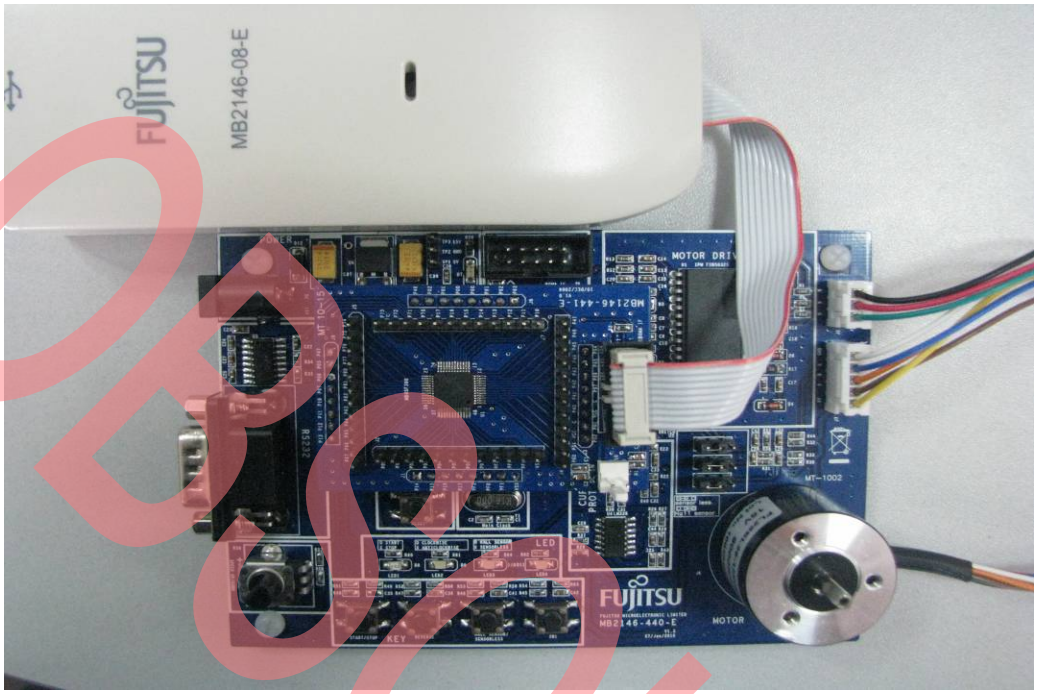

2.3 Connect BGMA to EV Board

Connect BGM Adaptor (BGMA) to EV board. It should be connected to MB2146-441-E's BGMA IF or MB21440-E's BGMA IF. Refer to Figure 2-3

OBSOLETE

Figure 2-3: Connect BGMA to EV Board

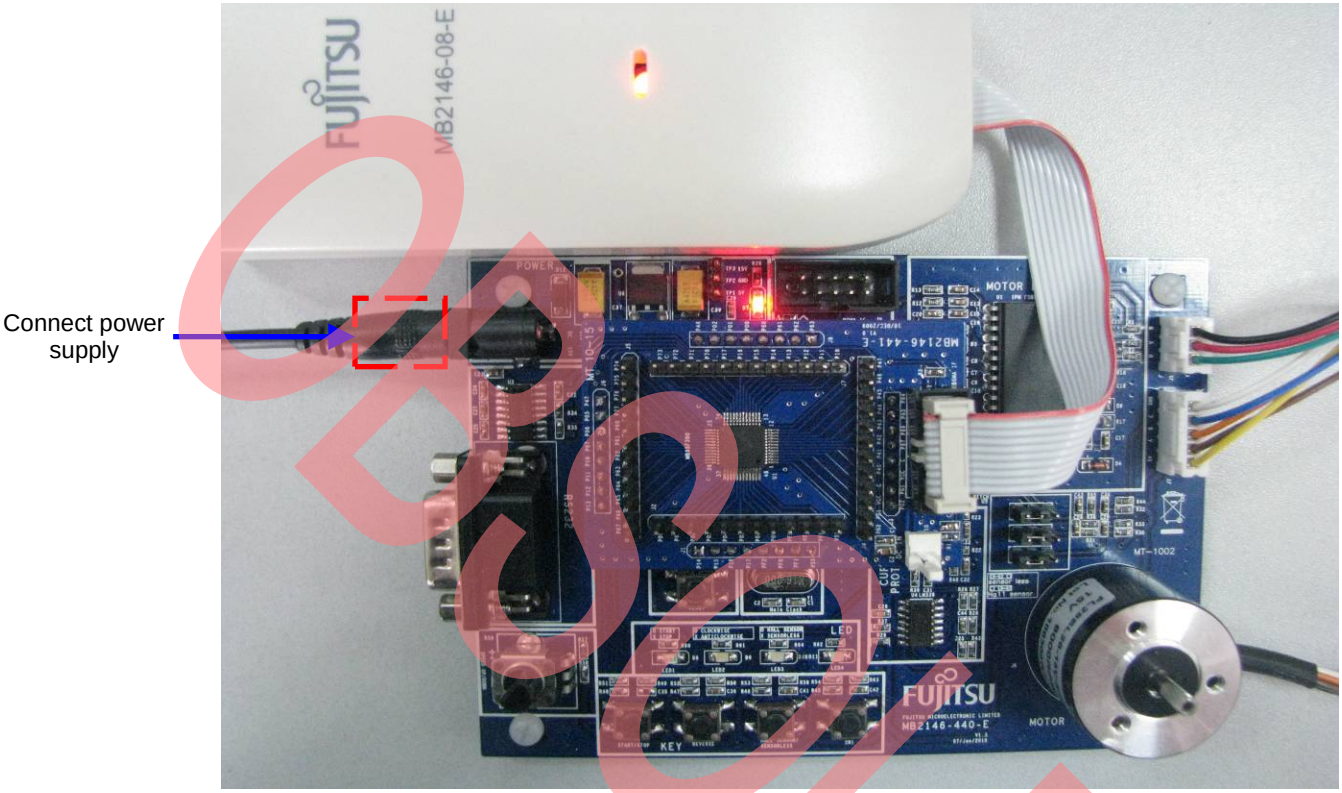

2.4 Power on the EV Board

It should be used MB2146-440-E's power supply and power connector. The power supply is DC 15V, 2A. Refer to Figure 2-4.

OBSOLETE

3 EV Board Operation

3.1 FW Operation

Open the “MB95390 Motor Drive V1.0.prj”, which can be found on MB2146-441-E’s CD-ROM.

- Compile project
- Start debugging
- Run (code update)
- End debugging

Note: The MB95390 motor drive library’s usage is the same as MB95330 motor drive library. Please refer to “MCU-AN-500067-E-13”.

3.2 HW Operation

About HW operation, it includes the following operations:

- Select the driving method as hall sensor or back EMF
- Start/Stop motor
- Adjust motor speed
- Reverse motor rotation

Note: The operation method is the same as MB95330 EV Board User Manual. Please refer to “MCU-AN-500070-E-14”.

4 Additional Information

Please contact your local support team for any technical question.
