

PSOC™ 61 MCU

General description

PSOC™ 6 MCU is a high-performance, ultra-low-power and secured MCU platform, purpose-built for IoT applications. Based on the PSOC™ 6 MCU platform, this product line is a combination of a dual CPU microcontroller with low-power flash technology, digital programmable logic, high-performance analog-to-digital conversion and standard communication and timing peripherals.

Features

Note: In PSOC™ 61 the Cortex® M0+ is reserved for system functions, and is not available for applications.

- 32-bit dual CPU subsystem
 - 150-MHz Arm® Cortex®-M4F (CM4) CPU with single-cycle multiply, floating point, and memory protection unit (MPU)
 - 100-MHz Cortex®-M0+ (CM0+) CPU with single-cycle multiply and MPU
 - User-selectable core logic operation at either 1.1 V or 0.9 V
 - Active CPU current slope with 1.1-V core operation
 - Cortex®-M4: 40 µA/MHz
 - Cortex®-M0+: 20 µA/MHz
 - Active CPU current slope with 0.9-V core operation
 - Cortex®-M4: 22 µA/MHz
 - Cortex®-M0+: 15 µA/MHz
 - Three DMA controllers
- Memory subsystem
 - 512-KB application flash, 32-KB auxiliary flash (AUXflash), and 32-KB supervisory flash (SFlash); read-while-write (RWW) support. Two 8-KB flash caches, one for each CPU
 - 256-KB SRAM with programmable power control and retention granularity
 - One-time-programmable (OTP) 1-Kb eFuse array
- Low-power 1.7-V to 3.6-V operation
 - Six power modes for fine-grained power management
 - Deep Sleep mode current of 7 µA with 64-KB SRAM retention
 - On-chip DC-DC buck converter, <1 µA quiescent current
 - Backup domain with 64 bytes of memory and real-time clock
- Flexible clocking options
 - 8-MHz internal main oscillator (IMO) with ±2% accuracy
 - Ultra-low-power 32-kHz internal low-speed oscillator (ILO)
 - On-chip crystal oscillators (16 to 35 MHz, and 32 kHz)
 - Phase-locked loop (PLL) for multiplying clock frequencies
 - Frequency-locked loop (FLL) for multiplying IMO frequency
 - Integer and fractional peripheral clock dividers
- Quad-SPI (QSPI)/Serial Memory Interface (SMIF)
 - Execute-In-Place (XIP) from external quad SPI flash
 - On-the-fly encryption and decryption
 - 4-KB cache for greater XIP performance with lower power
 - Supports single, dual, and quad interfaces with throughput up to 320 Mbps

Features

- Segment LCD drive
 - Supports up to 63 segments and up to 8 commons
 - Operates in system Deep Sleep mode
- Serial communication
 - Seven run-time configurable serial communication blocks (SCBs)
 - Six SCBs: configurable as SPI, I²C, or UART
 - One Deep Sleep SCB: configurable as SPI or I²C
 - USB Full-Speed device interface
 - One SD Host Controller/eMMC/SD controller
 - One CAN FD block
- Timing and pulse-width modulation
 - Twelve timer/counter/pulse-width modulators (TCPWMs)
 - Center-aligned, edge, and pseudo-random modes
 - Comparator-based triggering of kill signals
- Programmable analog
 - 12-bit 2-Msps SAR ADC with differential and single-ended modes and 16-channel sequencer with result averaging
 - Two low-power comparators available in system Deep Sleep and Hibernate modes
 - Built-in temperature sensor connected to ADC
- Up to 64 programmable GPIOs
 - Two Smart I/O ports (8 I/Os) enable Boolean operations on GPIO pins; available during system Deep Sleep
 - Programmable drive modes, strengths, and slew rates
 - Two overvoltage-tolerant (OVT) pins
- Capacitive sensing
 - Capacitive sigma-delta (CSD) provides best-in-class signal-to-noise ratio (SNR), liquid tolerance, and proximity sensing
 - Enables dynamic usage of both self and mutual sensing
 - Automatic hardware tuning (SmartSense)
- Security built into platform architecture
 - Authentication during boot using hardware hashing
 - All debug and test ingress paths can be disabled
 - Up to eight protection contexts
- Cryptography accelerator
 - Hardware acceleration for symmetric and asymmetric cryptographic methods and hash functions
 - True random number generation (TRNG) function
- Packages
 - 100-TQFP (64 I/Os), 68-QFN (53 I/Os), 49-WLCSP (37 I/Os)
- Device identification and revisions
 - Product line ID (12-bit): 0x105
 - Major/Minor die revision ID: 1/2
 - Firmware revisions: ROM Boot: 7.1, Flash Boot: 3.1.0.378 (see [Boot code](#) section)

This product line has a JTAG ID which is available through the SWJ interface. It is a 32-bit ID, where:

- The most significant digit is the device revision, based on the Major Die Revision
- The next four digits correspond to the part number, for example "E4B0" as a hexadecimal number
- The three least significant digits are the manufacturer ID, in this case "069" as a hexadecimal number

Features

The Silicon ID system call can be used by firmware to get Silicon ID and ROM Boot data. For more information, see the [reference manuals](#).

The Flash Boot version can be read directly from designated addresses 0x1600 2004 and 0x1600 2018. For more information, see the [reference manuals](#).

1 Development ecosystem

1 Development ecosystem

1.1 PSOC™ 6 MCU resources

Infineon provides a wealth of data at www.infineon.com to help you select the right PSOC™ device and quickly and effectively integrate it into your design. The following is an abbreviated list of resources for PSOC™ 6 MCU:

- **Overview:** [PSOC™ portfolio](#)
- **Product Selectors:** [PSOC™ 6 MCU](#)
- [Application notes](#) cover a broad range of topics, from basic to advanced level, and include the following:
 - [AN221774](#): Getting started with PSOC™ MCU on PSOC™ Creator
 - [AN218241](#): PSOC™ 6 MCU hardware design considerations
 - [AN213924](#): PSOC™ 6 MCU Device Firmware Update (DFU) software development kit guide
 - [AN215656](#): PSOC™ 6 MCU dual-core system design
 - [AN219528](#): PSOC™ 6 MCU low-power modes and power reduction techniques
 - [AN221111](#): PSOC™ 6 MCU designing a custom secured system
 - [AN85951](#): PSOC™ 4 and PSOC™ 6 MCU CAPSENSE™ design guide
- [Code examples](#) demonstrate product features and usage, and are also available on the [Infineon GitHub](#) repositories
- [Reference manuals](#) provide detailed descriptions of PSOC™ 6 MCU architecture and registers
- Programming and provisioning
 - [PSOC™ 6 MCU Programming Specification](#) provides the information necessary to program PSOC™ 6 MCU nonvolatile memory
- Development tools
 - [ModusToolbox™ software](#) enables cross platform code development with a robust suite of tools and software libraries
 - There is no kit available for the PSOC™ 61 product line. However, the [CY8CPROTO-062S3-4343W](#) PSOC™ 6 Wi-Fi-BT Prototyping Kit is available: a low-cost hardware platform that enables design and debug of the PSOC™ 62 product line
 - [PSOC™ 6 CAD libraries](#) provide footprint and schematic support for common tools. [BSDL files](#) and [IBIS models](#) are also available
- [Training videos](#) are available on a wide range of topics including the [PSOC™ 6 MCU 101 series](#)
- [Infineon Developer Community](#) enables connection with fellow PSOC™ developers around the world, 24 hours a day, 7 days a week, and hosts a dedicated [PSOC™ 6 MCU Community](#)

1.2 ModusToolbox™ software

[ModusToolbox™ software](#) is a comprehensive collection of multi-platform tools and software libraries that enable an immersive development experience for creating converged MCU and wireless systems. It is:

- Comprehensive - it has the resources you need
- Flexible - you can use the resources in your own workflow
- Atomic - you can get just the resources you want

Infineon provides a large collection of code [repositories on GitHub](#). This includes:

- Board support packages (BSPs) aligned with Infineon kits
- Low-level resources, including a hardware abstraction layer (HAL) and peripheral driver library (PDL)

1 Development ecosystem

- Middleware enabling industry-leading features such as CAPSENSE™, Bluetooth® Low Energy, and mesh networks
- An extensive set of thoroughly tested [code example applications](#)

Note: *The HAL provides a high-level, simplified interface to configure and use the hardware blocks on MCUs. It is a generic interface that can be used across multiple product families. For example, it wraps the PSOC™ 6 PDL with a simplified API, but the PDL exposes all low-level peripheral functionality. You can leverage the HAL's simpler and more generic interface for most of an application, even if one portion requires finer-grained control.*

ModusToolbox™ software is IDE-neutral and easily adaptable to your workflow and preferred development environment. It includes a project creator, peripheral and library configurators, a library manager, as well as the optional Eclipse IDE for ModusToolbox™ software. For information on using Infineon tools, refer to the documentation delivered with the ModusToolbox™ software, and [AN228571: Getting started with PSOC™ 6 MCU on ModusToolbox™ software](#).

Figure 1 ModusToolbox™ Software Tools

2 Blocks and functionality

2 Blocks and functionality

Figure 2 shows the major subsystems and a simplified view of their interconnections. The color coding shows the lowest power mode where the particular block is still functional (for example, the SRAM is functional down to system Deep Sleep mode).

Figure 2 Block diagram

There are three debug access ports, one each for CM4 and CM0+, and a system port.

PSOC™ 6 MCU devices include extensive support for programming, testing, debugging, and tracing both hardware and firmware. All device interfaces can be permanently disabled for applications concerned about a reprogrammed device or starting and interrupting flash programming sequences. All programming, debug, and test interfaces can be disabled.

Complete debug-on-chip functionality enables full device debugging in the final system using the standard production device. It does not require special interfaces, debugging pods, simulators, or emulators. Only the standard programming connections are required to fully support debug.

The Eclipse IDE for ModusToolbox™ provides fully integrated programming and debug support for these devices. The SWJ (SWD and JTAG) interface is fully compatible with industry-standard third party probes. With the ability to disable debug features, with very robust flash protection, and by allowing customer-proprietary

2 Blocks and functionality

functionality to be implemented in on-chip programmable blocks, PSOC™ 6 provides multiple levels of device security.

3 Functional description

3 Functional description

The following sections provide an overview of the features, capabilities and operation of each functional block identified in the [Figure 2](#). For more detailed information, refer to the following documentation:

- **Board Support Package (BSP) Documentation**
BSPs are available on [GitHub](#). They are aligned with Infineon kits and provide files for basic device functionality such as hardware configuration files, startup code, and linker files. The BSP also includes other libraries that are required to support a kit. Each BSP has its own documentation, but typically includes an API reference such as the example [here](#). This [search link](#) finds all currently available BSPs on the Infineon GitHub site
- **Hardware Abstraction Layer API Reference Manual**
The Infineon Hardware Abstraction Layer (HAL) provides a high-level interface to configure and use hardware blocks on Infineon MCUs. It is a generic interface that can be used across multiple product families. You can leverage the HAL's simpler and more generic interface for most of an application, even if one portion requires finer-grained control. The [HAL API Reference](#) provides complete details. Example applications that use the HAL download it automatically from the GitHub repository
- **Peripheral Driver Library (PDL) Application Programming Interface (API) Reference Manual**
The Peripheral Driver Library (PDL) integrates device header files and peripheral drivers into a single package and supports all PSOC™ 6 MCU product lines. The drivers abstract the hardware functions into a set of easy-to-use APIs. These are fully documented in the [PDL API Reference](#). Example applications that use the PSOC™ 6 PDL download it automatically from the GitHub repository
- **Architecture reference manual**
The architecture reference manual provides a detailed description of each resource in the device. This is the next reference to use if it is necessary to understand the operation of the hardware below the software provided by PDL. It describes the architecture and functionality of each resource and explains the operation of each resource in all modes. It provides specific guidance regarding the use of associated registers
- **Register reference manual**
The register reference manual provides a complete list of all registers in the device. It includes the breakdown of all register fields, their possible settings, read/write accessibility, and default states. All registers that have a reasonable use in typical applications have functions to access them from within PDL. Note that ModusToolbox™ and PDL may provide software default conditions for some registers that are different from and override the hardware defaults

3.1 CPU and memory subsystem

PSOC™ 6 has multiple bus masters, as the [Figure 2](#) shows. They are: CPUs, DMA controllers, QSPI, USB, SD Host controller, and a Crypto block. Generally, all memory and peripherals can be accessed and shared by all bus masters through multi-layer Arm® AMBA high-performance bus (AHB) arbitration. Accesses between CPUs can be synchronized using an inter-processor communication (IPC) block.

3.1.1 CPUs

There are two Arm® Cortex® CPUs:

The Cortex®-M4 (CM4) has single-cycle multiply, a floating-point unit (FPU), and a memory protection unit (MPU). It can run at up to 150 MHz. This is the main CPU, designed for a short interrupt response time, high code density, and high throughput.

CM4 implements a version of the Thumb instruction set based on Thumb-2 technology (defined in the [ARMv7-M Architecture Reference Manual](#)).

3 Functional description

The Cortex®-M0+ (CM0+) has single-cycle multiply, and an MPU. It can run at up to 100 MHz; however, for CM4 speeds above 100 MHz, CM0+ and bus peripherals are limited to half the speed of CM4. Thus, for CM4 running at 150 MHz, CM0+ and peripherals are limited to 75 MHz.

CM0+ is the secondary CPU; it is used to implement system calls and device-level security, safety, and protection features.

CM0+ implements the Armv6-M Thumb instruction set (defined in the [ARMv6-M Architecture Reference Manual](#)).

The CPUs have the following power draw, at $V_{DD} = 3.3\text{ V}$ and using the internal buck regulator:

Table 1 Active Current Slope at $V_{DD} = 3.3\text{ V}$ Using the Internal Buck Regulator

		System Power Mode	
		ULP	LP
CPU	Cortex®-M0+	15 $\mu\text{A}/\text{MHz}$	20 $\mu\text{A}/\text{MHz}$
	Cortex®-M4	22 $\mu\text{A}/\text{MHz}$	40 $\mu\text{A}/\text{MHz}$

The CPUs can be selectively placed in their Sleep and Deep Sleep power modes as defined by Arm®.

Both CPUs have nested vectored interrupt controllers (NVIC) for rapid and deterministic interrupt response, and wakeup interrupt controllers (WIC) for CPU wakeup from Deep Sleep power mode.

The CPUs have extensive debug support. PSOC™ 6 has a debug access port (DAP) that acts as the interface for device programming and debug. An external programmer or debugger (the “host”) communicates with the DAP through the device serial wire debug (SWD) or Joint Test Action Group (JTAG) interface pins. Through the DAP (and subject to device security restrictions), the host can access the device memory and peripherals as well as the registers in both CPUs.

Each CPU offers debug and trace features as follows:

- CM4 supports six hardware breakpoints and four watchpoints, 4-bit embedded trace macrocell (ETM), serial wire viewer (SWV), and printf()-style debugging through the single wire output (SWO) pin
- CM0+ supports four hardware breakpoints and two watchpoints, and a micro trace buffer (MTB) with 4-KB dedicated RAM

PSOC™ 6 also has an Embedded Cross Trigger for synchronized debugging and tracing of both CPUs.

3.1.2 Interrupts

This product line has 174 system and peripheral interrupt sources, and supports interrupts and system exceptions on both CPUs. CM4 has 174 interrupt request lines (IRQ), with the interrupt source ‘n’ directly connected to IRQn. CM0+ has eight interrupts IRQ[7:0] with configurable mapping of one or more interrupt sources to any of the IRQ[7:0]. CM0+ also supports eight internal (software only) interrupts.

Each interrupt supports configurable priority levels (eight levels for CM4 and four levels for CM0+). Up to four system interrupts can be mapped to each of the CPUs' non-maskable interrupts (NMI). Up to 39 interrupt sources are capable of waking the device from Deep Sleep power mode using the WIC. Refer to the [reference manual](#).

3.1.3 InterProcessor Communication (IPC)

In addition to the Arm® SEV and WFE instructions, a hardware InterProcessor Communication (IPC) block is included. It includes 16 IPC channels and 16 IPC interrupt structures. The IPC channels can be used to implement data communication between the processors. Each IPC channel also implements a locking scheme which can be used to manage shared resources. The IPC interrupts let one processor interrupt the other, signaling an event. This is used to trigger events such as notify and release of the corresponding IPC channels. Some IPC channels and other resources are reserved, as [Table 2](#) shows:

3 Functional description

Table 2 Distribution of IPC channels and other resources

Resources available	Resources consumed
IPC channels, 16 available	8 reserved
IPC interrupts, 16 available	8 reserved
Other interrupts	1 reserved
CM0+ NMI	Reserved
Other resources: clock dividers, DMA channels, etc.	1 CM0+ interrupt mux

3.1.4 Direct Memory Access (DMA) controllers

This product line has three DMA controllers, with 32, 29, and 2 channels, which support CPU-independent accesses to memory and peripherals. The descriptors for DMA channels can be in SRAM or flash. Therefore, the number of descriptors is limited only by the size of the memory. Each descriptor can transfer data in two nested loops with configurable address increments to the source and destination. The size of data transfer per descriptor varies based on the type of DMA channel. Refer to the [reference manual](#) for detail.

3.1.5 Cryptography accelerator (Crypto)

This subsystem consists of hardware implementation and acceleration of cryptographic functions and random number generators.

The Crypto subsystem supports the following:

- Encryption/Decryption Functions
 - Data Encryption Standard (DES)
 - Triple DES (3DES)
 - Advanced Encryption Standard (AES) (128-, 192-, 256-bit)
 - Elliptic Curve Cryptography (ECC)
 - RSA cryptography functions
- Hashing functions
 - Secure Hash Algorithm (SHA)
 - SHA-1
 - SHA-224/-256/-384/-512
- Message authentication functions (MAC)
 - Hashed message authentication code (HMAC)
 - Cipher-based message authentication code (CMAC)
- 32-bit cyclic redundancy code (CRC) generator
- Random number generators
 - Pseudo random number generator (PRNG)
 - True random number generator (TRNG)

3.1.6 Protection units

This product line has multiple types of protection units to control erroneous or unauthorized access to memory and peripheral registers. CM4 and CM0+ have Arm® MPUs for protection at the bus master level. Other bus masters use additional MPUs. Shared memory protection units (SMPUs) help implement protection for memory

3 Functional description

resources that are shared among multiple bus masters. Peripheral protection units (PPU) are similar to SMPUs but are designed for protecting the peripheral register space.

Protection units support memory and peripheral access attributes including address range, read/write, code/data, privilege level, secured/non-secured, and protection context. Some protection unit resources are reserved for system usage; see the [reference manual](#) for details.

3.1.7 Memory

PSOC™ 6 contains flash, SRAM, ROM, and eFuse memory blocks.

- Flash

There is up to 512 KB of application flash, organized in 256-KB sectors

There are also two 32-KB flash sectors:

- AUXflash, typically used for EEPROM emulation
- Supervisory flash (SFlash). Data stored in Sflash includes device trim values, [Flash Boot](#) code, and encryption keys. After the device transitions into the “Secure” lifecycle stage, SFlash can no longer be changed

The flash uses 128-bit-wide accesses to reduce power. Write operations can be performed at the row level. A row is 512 bytes. Read operations are supported in both Low Power and Ultra-Low Power modes, however write operations may not be performed in Ultra-Low Power mode.

The flash controller has two caches, one for each CPU. Each cache is 8 KB, with 4-way set associativity

- SRAM

Up to 256 KB of SRAM is provided. Power control and retention granularity is implemented in 32-KB blocks allowing the user to control the amount of memory retained in Deep Sleep. Memory is not retained in Hibernate mode

- ROM

The 64-KB ROM, also referred to as the supervisory ROM (SROM), provides code ([ROM Boot](#)) for several system functions. The ROM contains device initialization, flash write, security, eFuse programming, and other system-level routines. ROM code is executed only by the CM0+ CPU, in protection context 0. A system function can be initiated by either CPU, or through the DAP. This causes an NMI in CM0+, which causes CM0+ to execute the system function

- eFuse

A one-time-programmable (OTP) eFuse array consists of 1024 bits, of which 648 are reserved for system use such as die ID, device ID, initial trim settings, device life cycle, and security settings. The remaining bits are available for storing security key information, hash values, unique IDs, or similar custom content.

Each fuse is individually programmed; once programmed (or “blown”), its state cannot be changed.

Blowing a fuse transitions it from the default state of 0 to 1. To program an eFuse, V_{DDIO0} must be at 2.5 V $\pm 5\%$, at 14 mA.

Because blowing an eFuse is an irreversible process, programming is recommended only in mass production under controlled factory conditions. For more information, see [PSOC™ 6 MCU Programming Specifications](#)

3.1.8 Boot code

Two blocks of code, [ROM Boot](#) and [Flash Boot](#), are pre-programmed into the device and work together to provide device startup and configuration, basic security features, life-cycle stage management and other system functions.

- ROM Boot

3 Functional description

On a device reset, the boot code in ROM is the first code to execute. This code performs the following:

- Integrity checks of flash boot code
- Device trim setting (calibration)
- Setting the device protection units
- Setting device access restrictions for “Secure” lifecycle states

ROM cannot be changed and acts as the root of trust in a secured system

- Flash Boot

Flash boot is firmware stored in SFlash that ensures that only a validated application may run on the device. It also ensures that the firmware image has not been modified, such as by a malicious third party.

Flash boot:

- Is validated by ROM Boot
- Runs after ROM Boot and before the user application
- Enables system calls
- Configures the Debug Access Port
- Launches the user application

3.1.9 Memory Map

Both CPUs have a fixed address map, with shared access to memory and peripherals. The 32-bit (4 GB) address space is divided into the Arm®-defined regions shown in [Table 3](#). Note that code can be executed from the Code and External RAM regions.

Table 3 Address Map for CM4 and CM0+

Address Range	Name	Use
0x0000 0000 – 0x1FFF FFFF	Code	Program code region. Data can also be placed here. It includes the exception vector table, which starts at address 0.
0x2000 0000 – 0x3FFF FFFF	SRAM	Data region. This region is not supported in PSOC™ 6.
0x4000 0000 – 0x5FFF FFFF	Peripheral	All peripheral registers. Code cannot be executed from this region. CM4 bit-band in this region is not supported in PSOC™ 6.
0x6000 0000 – 0x9FFF FFFF	External RAM	SMIF or Quad SPI, (see the Quad-SPI/Serial Memory Interface (SMIF) section). Code can be executed from this region.
0xA000 0000 – 0xDFFF FFFF	External Device	Not used.
0xE000 0000 – 0xE00F FFFF	Private Peripheral Bus	Provides access to peripheral registers within the CPU core.
0xE010 0A000 – 0xFFFF FFFF	Device	Device-specific system registers.

The device memory map shown in [Table 4](#) applies to both CPUs. That is, the CPUs share access to all PSOC™ 6 MCU memory and peripheral registers.

3 Functional description

Table 4 Internal Memory Address Map for CM4 and CM0+

Address Range	Memory Type	Size
0x0000 0000 – 0x0000 FFFF	ROM	64 KB
0x0800 0000 – 0x0803 FFFF	SRAM	Up to 256 KB
0x1000 0000 – 0x1007 FFFF	Application flash	Up to 512 KB
0x1400 0000 – 0x1400 7FFF	Auxiliary flash, can be used for EEPROM emulation	32 KB
0x1600 0000 – 0x1600 7FFF	Supervisory flash	32 KB

Note that PSOC™ 6 SRAM is located in the Arm® Code region for both CPUs (see [Table 3](#)). There is no physical memory located in the CPUs Arm® SRAM regions.

3.2 System resources

3.2.1 Power system

The power system provides assurance that voltage levels are as required for each respective mode and will either delay mode entry (on power-on reset (POR), for example) until voltage levels are as required for proper function or generate resets (brown-out detect (BOD)) when the power supply drops below specified levels. The design guarantees safe chip operation between power supply voltage dropping below specified levels (for example, below 1.7 V) and the reset occurring. There are no voltage sequencing requirements.

The V_{DD} supply (1.7 to 3.6 V) powers an on-chip buck regulator or a low-dropout regulator (LDO), selectable by the user. In addition, both the buck and the LDO offer a selectable (0.9 or 1.1 V) core operating voltage (V_{CCD}). The selection lets users choose between two system power modes:

- System Low Power (LP) operates V_{CCD} at 1.1 V and offers high performance, with no restrictions on device configuration
- System Ultra Low Power (ULP) operates V_{CCD} at 0.9 V for exceptional low power, but imposes limitations on clock speeds

In addition, a backup domain adds an “always on” functionality using a separate power domain supplied by a backup supply (V_{BACKUP}) such as a battery or supercapacitor. It includes a real-time clock (RTC) with alarm feature, supported by a 32.768-kHz watch crystal oscillator (WCO), and power-management IC (PMIC) control. See the [Power supply considerations](#) for more details.

3.2.2 Power modes

PSOC™ 6 MCU can operate in four system and three CPU power modes. These modes are intended to minimize the average power consumption in an application. For more details on power modes and other power-saving configuration options, see the application note, [AN219528: PSOC™ 6 MCU low-power modes and power reduction techniques](#) and the [Architecture reference manual](#), Power Modes chapter.

Power modes supported by PSOC™ 6 MCUs, in order of decreasing power consumption, are:

- System Low Power (LP) – All peripherals and CPU power modes are available at maximum speed
- System Ultra Low Power (ULP) – All peripherals and CPU power modes are available, but with limited speed
- CPU Active – CPU is executing code in system LP or ULP mode
- CPU Sleep – CPU code execution is halted in system LP or ULP mode
- CPU Deep Sleep – CPU code execution is halted and system Deep Sleep is requested in system LP or ULP mode

3 Functional description

- System Deep Sleep – Only low-frequency peripherals are available after both CPUs enter CPU Deep Sleep mode
- System Hibernate – Device and I/O states are frozen and the device resets on wakeup

CPU Active, Sleep, and Deep Sleep are standard Arm®-defined power modes supported by the Arm® CPU instruction set architecture (ISA). System LP, ULP, Deep Sleep and Hibernate modes are additional low-power modes supported by PSOC™ 6 MCU.

3.2.3 Clock system

Figure 3 shows that the clock system of this product line consists of the following:

- Internal main oscillator (IMO)
- Internal low-speed oscillator (ILO)
- Watch crystal oscillator (WCO)
- External MHz crystal oscillator (ECO)
- External clock input
- One phase locked-loop (PLL)
- One frequency-locked loop (FLL)

Clocks may be buffered and brought out to a pin on a Smart I/O port.

The default clocking when the application starts is CLK_HF[0] being driven by the IMO and the FLL. CLK_HF[0], clk_fast, clk_peri, and clk_slow are all either 50 MHz (LP mode) or 25 MHz (ULP mode). All other clocks, including all peripheral clocks, are off.

3.2.4 Internal main oscillator (IMO)

The IMO is the primary source of internal clocking. It is trimmed at the factory to achieve the specified accuracy. The IMO frequency is 8 MHz and tolerance is $\pm 2\%$.

The IMO can operate in system Deep Sleep mode to drive the LCD block for better contrast (and higher power) than is possible with the 32-kHz mode.

3.2.5 Internal low-speed oscillator (ILO)

The ILO is a very low power oscillator, nominally 32 kHz, which operates in all power modes. The ILO can be calibrated against a higher accuracy clock for better accuracy.

3 Functional description

Figure 3 Clocking diagram

3.2.6 External crystal oscillators

Figure 4 shows all of the external crystal oscillator circuits for this product line. The component values shown are typical; check the [ECO Specifications](#) for the crystal values, and the crystal datasheet for the load capacitor values. The ECO and WCO require balanced external load capacitors. For more information, see the [reference manuals](#) and [AN218241: PSOC™ 6 MCU hardware design considerations](#).

Figure 4 Oscillator circuits

If the ECO is used, note that its performance is affected by GPIO switching noise. GPIO ports should be used as [Table 5](#) shows. See also [Table 6](#) for additional restrictions for general analog subsystem use.

3 Functional description

Table 5 ECO Usage Guidelines

Ports	Max Frequency	Drive Strength for $V_{DD} \leq 2.7\text{ V}$	Drive Strength for $V_{DD} \leq 2.7\text{ V}$
Port 11	60 MHz for SMIF (QSPI)	DRIVE_SEL 2	DRIVE_SEL 3
Ports 12 and 13	Slow slew rate setting	No restrictions	No restrictions

3.2.7 Watchdog timers (WDT, MCWDT)

PSOC™ 6 MCU has one WDT and two multi-counter WDTs (MCWDT). The WDT has a 16-bit free-running counter. Each MCWDT has two 16-bit counters and one 32-bit counter, with multiple operating modes. All of the 16-bit counters can generate a watchdog device reset. All of the counters can generate an interrupt on a match event. The WDT is clocked by the ILO. It can generate interrupt/wakeup in system LP/ULP, Deep Sleep, and Hibernate power modes. The MCWDTs are clocked by LFCLK (ILO or WCO). It can generate periodic interrupt/wakeup in system LP/ULP and Deep Sleep power modes.

3.2.8 Clock dividers

Integer and fractional clock dividers are provided for peripheral use and timing purposes. There are:

- Four 8-bit clock dividers
- Eight 16-bit integer clock dividers
- Two 16.5-bit fractional clock dividers
- One 24.5-bit fractional clock divider

3.2.9 Trigger routing

PSOC™ 6 MCU contains a trigger multiplexer block. This is a collection of digital multiplexers and switches that are used for routing trigger signals between peripheral blocks and between GPIOs and peripheral blocks. There are two types of trigger routing. Trigger multiplexers have reconfigurability in the source and destination. There are also hardwired switches called “one-to-one triggers”, which connect a specific source to a destination. The user can enable or disable the route.

3.2.10 Reset

PSOC™ 6 MCU can be reset from a variety of sources:

- Power-on reset (POR) to hold the device in reset while the power supply ramps up to the level required for the device to function properly. POR activates automatically at power-up
- Brown-out detect (BOD) reset to monitor the digital voltage supply V_{DD} and generate a reset if V_{DD} falls below the minimum required logic operating voltage
- External reset dedicated pin (XRES) to reset the device using an external source. The XRES pin is active low. It can be connected either to a pull-up resistor to V_{DD} , or to an active drive circuit, as [Figure 5](#) shows. If a pull-up resistor is used, select its value to minimize current draw when the pin is pulled low; 4.7 kΩ is typical

3 Functional description

Figure 5 XRES connection diagram

- Watchdog timer (WDT or MCWDT) to reset the device if firmware fails to service it within a specified timeout period
- Software-initiated reset to reset the device on demand using firmware
- Logic-protection fault can trigger an interrupt or reset the device if unauthorized operating conditions occur; for example, reaching a debug breakpoint while executing privileged code
- Hibernate wakeup reset to bring the device out of the system Hibernate power mode

Reset events are asynchronous and guarantee reversion to a known state. Some of the reset sources are recorded in a register, which is retained through reset and allows software to determine the cause of the reset.

3.3 Programmable analog subsystems

3.3.1 12-bit SAR ADC

The 12-bit, 2-Msps SAR ADC can operate at a maximum clock rate of 36 MHz and requires a minimum of 18 clocks at that frequency to do a 12-bit conversion. One of three internal reference voltages may be used for the ADC reference voltage. The references are, V_{DD} , $V_{DD}/2$, and V_{REF} (nominally 1.2 V and trimmed to $\pm 1\%$). An external reference may also be used, by either driving the VREF pin or routing an external reference to GPIO pin P9.3. These reference options allow ratio-metric readings or absolute readings at the accuracy of the reference used. The input range of the ADC is the full supply voltage between V_{SS} and V_{DDA}/V_{DDIOA} . The SAR ADC may be configured with a mix of single-ended and differential signals in the same configuration.

The SAR ADC's sample-and-hold (S/H) aperture is programmable to allow sufficient time for signals with a high impedance to settle sufficiently, if required. System performance is 65 dB for true 12-bit precision provided appropriate references are used and system noise levels permit it. To improve performance in noisy conditions, an external bypass capacitor for the internal reference amplifier (through the fixed "VREF" pin), may be added.

The SAR is connected to a fixed set of pins through an input multiplexer. The multiplexer cycles through the selected channels autonomously (sequencer scan) and does so with zero switching overhead (that is, the aggregate sampling bandwidth is equal to 2 Msps whether it is for a single channel or distributed over several channels). The result of each channel is buffered, so that an interrupt may be triggered only when a full scan of all channels is complete. Also, a pair of range registers can be set to detect and cause an interrupt if an input exceeds a minimum and/or maximum value. This allows fast detection of out-of-range values without having to wait for a sequencer scan to be completed and the CPU to read the values and check for out-of-range values in software. The SAR can also be connected, under firmware control, to most other GPIO pins via the Analog Multiplexer Bus (AMUXBUS). The SAR is not available in system Deep Sleep and Hibernate modes as it requires a high-speed clock (up to 36 MHz). The SAR operating range is 1.71 to 3.6 V.

3 Functional description

3.3.2 Temperature sensor

An on-chip temperature sensor is part of the SAR and may be scanned by the SAR ADC. It consists of a diode, which is biased by a current source that can be disabled to save power. The temperature sensor may be connected directly to the SAR ADC as one of the measurement channels. The ADC digitizes the temperature sensor's output and a Infineon-supplied software function may be used to convert the reading to temperature which includes calibration and linearization.

3.3.3 Low-power comparators

Two low-power comparators are provided, which can operate in all power modes. This allows other analog system resources to be disabled while retaining the ability to monitor external voltage levels during system Deep Sleep and Hibernate modes. The comparator outputs are normally synchronized to avoid metastability unless operating in an asynchronous power mode (Hibernate) where the system wake-up circuit is activated by a comparator-switch event.

[Figure 6](#) shows an overview of the analog subsystem. This diagram is a high-level abstraction. See the [reference manual](#) for detailed connectivity information.

3 Functional description

Figure 6 Analog subsystem

3 Functional description

3.4 Programmable digital

3.4.1 Smart I/O

Smart I/O is a programmable logic fabric that enables Boolean operations on signals traveling from device internal resources to the GPIO pins or on signals traveling into the device from external sources. A Smart I/O block sits between the GPIO pins and the high-speed I/O matrix (HSIOM) and is dedicated to a single port.

There are two Smart I/O blocks: one on Port 8 and one on Port 9. When Smart I/O is not enabled, all signals on Port 8 and Port 9 bypass the Smart I/O hardware.

Smart I/O supports:

- System Deep Sleep operation
- Boolean operations without CPU intervention
- Asynchronous or synchronous (clocked) operation

Each Smart I/O block contains a data unit (DU) and eight lookup tables (LUTs).

The DU:

- Performs unique functions based on a selectable opcode
- Can source input signals from internal resources, the GPIO port, or a value in the DU register

Each LUT:

- Has three selectable input sources. The input signals may be sourced from another LUT, an internal resource, an external signal from a GPIO pin, or from the DU
- Acts as a programmable Boolean logic table
- Can be synchronous or asynchronous

3.5 Fixed-function digital

3.5.1 Timer/Counter/Pulse-width Modulator (TCPWM)

- The TCPWM supports the following operational modes:
 - Timer-counter with compare
 - Timer-counter with capture
 - Quadrature decoding
 - Pulse width modulation (PWM)
 - Pseudo-random PWM
 - PWM with dead time
- Up, down, and up/down counting modes
- Clock prescaling (division by 1, 2, 4, ... 64, 128)
- Double buffering of compare/capture and period values
- Underflow, overflow, and capture/compare output signals
- Supports interrupt on:
 - Terminal count – Depends on the mode; typically occurs on overflow or underflow
 - Capture/compare – The count is captured to the capture register or the counter value equals the value in the compare register

3 Functional description

- Complementary output for PWMs
- Selectable start, reload, stop, count, and capture event signals for each TCPWM; with rising edge, falling edge, both edges, and level trigger options. The TCPWM has a Kill input to force outputs to a predetermined state

In this device there are:

- Four 32-bit TCPWMs
- Eight 16-bit TCPWMs

3.5.2 Serial Communication Blocks (SCB)

This product line has seven SCBs:

- Six can implement either I²C, UART, or SPI
- One SCB (SCB #6) can operate in system Deep Sleep mode with an external clock; this SCB can be either SPI slave or I²C slave

I²C Mode: The SCB can implement a full multi-master and slave interface (it is capable of multimaster arbitration). This block can operate at speeds of up to 1 Mbps (Fast Mode Plus). It also supports EZI²C, which creates a mailbox address range and effectively reduces I²C communication to reading from and writing to an array in memory. The SCB supports a 256-byte FIFO for receive and transmit.

The I²C peripheral is compatible with I²C standard-mode, Fast Mode, and Fast Mode Plus devices as defined in the NXP I²C-bus specification and user manual (UM10204). The I²C bus I/O is implemented with GPIO in open-drain modes.

UART Mode: This is a full-feature UART operating at up to 8 Mbps. It supports automotive single-wire interface (LIN), infrared interface (IrDA), and SmartCard (ISO7816) protocols, all of which are minor variants of the basic UART protocol. In addition, it supports the 9-bit multiprocessor mode that allows the addressing of peripherals connected over common RX and TX lines. Common UART functions such as parity error, break detect, and frame error are supported. A 256-byte FIFO allows much greater CPU service latencies to be tolerated.

SPI Mode: The SPI mode supports full Motorola SPI, TI Secure Simple Pairing (SSP) (essentially adds a start pulse that is used to synchronize SPI Codecs), and National Microwire (half-duplex form of SPI). The SPI block supports an EZSPI mode in which the data interchange is reduced to reading and writing an array in memory. The SPI interface operates with a 25-MHz clock.

3.5.3 USB Full-Speed device interface

This product line incorporates a full-speed USB device interface. The device can have up to eight endpoints. A 512-byte SRAM buffer is provided and DMA is supported.

Note: *If the USB pins are not used, connect V_{DDUSB} to ground and leave the P14.0/USBDP and P14.1/USBDM pins unconnected.*

3.5.4 Quad-SPI/Serial Memory Interface (SMIF)

A serial memory interface is provided, running at up to 80 MHz. It supports single, dual, and quad SPI configurations, and supports up to four external memory devices. It supports two modes of operation:

- Memory-mapped I/O (MMIO), a command mode interface that provides data access via registers and FIFOs
- Execute in Place (XIP), in which AHB reads and writes are directly translated to SPI read and write transfers

In XIP mode, the external memory is mapped into the PSOC™ 6 MCU internal address space, enabling code execution directly from the external memory. To improve performance, a 4-KB cache is included. XIP mode also supports AES-128 on-the-fly encryption and decryption, enabling secured storage and access of code and data in the external memory.

3 Functional description

3.5.5 LCD

This block drives LCD commons and segments; routing is available to most of the GPIOs. One to eight of the GPIOs must be used for commons, the rest can be used for segments.

The LCD block has two modes of operation: high speed (8 MHz) and low speed (32 kHz). Both modes operate in system LP, ULP, and Deep Sleep modes, however the low-speed mode operates with reduced contrast in system Deep Sleep mode. The 8-MHz IMO is available in system Deep Sleep mode, and can be used to generate a clock for the LCD block. Review the number of common and segment lines, viewing angle requirements, and prototype performance, and then select the appropriate LCD clock frequency before using system Deep Sleep mode.

3.5.6 SD Host Controller

This product line contains one Secure Digital (SD) host controller. It provides communication with IoT connectivity devices such as Bluetooth, Bluetooth Low-Energy and WiFi radios, as well as combination devices. The controller also supports embedded MultiMediaCards (eMMC) and Secure Digital (SD) cards.

Several bus speed modes under the SD specification are supported:

- DS (default speed)
- HS (high speed)
- SDR12 (single data rate)
- SDR25
- SDR50
- DDR50 (double data rate)

For eMMC, the supported modes are:

- BWC (backward compatibility)
- SDR

Maximum clock restrictions and capacitive loads apply to some modes, and are also dependent on system power mode (LP/ULP). See the [SD Host Controller and eMMC Specifications](#) for details.

The SD Host Controller complies with the following standards. Refer to the specifications documents for more information on the protocol and operations.

- SD Specifications Part 1 Physical Layer Specification Version 6.00, supporting card capacities for SDSC (up to 2 GB), SDHC (up to 32 GB) and SDXC (up to 2 TB)
- SD Specifications Part A2 SD Host Controller Standard Specification Version 4.20
- SD Specifications Part E1 SDIO Specifications Version 4.10
- Embedded Multi-Media Card (eMMC) Electrical Standard 5.1

The SD host controller is configured as a master. To be fully compatible with features provided in the driver software for speed and efficiency, it supports advanced DMA version 3 (ADMA3), defined by the SDIO standard, and has a 1 KB RX/TX FIFO allowing double buffering of 512-byte blocks.

3.5.7 CAN FD block

This product line has one CAN FD block for industrial and automotive applications. The block includes Time-Stamp support and has a 4-KB message RAM. FD Data rates of up to 5 Mbps are supported. DMA transfers are supported.

3.6 GPIO

This product line has up to 64 GPIOs, which implement the following:

3 Functional description

- Eight drive strength modes:
 - Analog input mode (input and output buffers disabled)
 - Input only
 - Weak pull-up with strong pull-down
 - Strong pull-up with weak pull-down
 - Open drain with strong pull-down
 - Open drain with strong pull-up
 - Strong pull-up with strong pull-down
 - Weak pull-up with weak pull-down
- Input threshold select (CMOS or LVTTL)
- Hold mode for latching previous state (used for retaining the I/O state in system Hibernate mode)
- Selectable slew rates for dV/dt-related noise control to improve EMI

The pins are organized in logical entities called ports, which are up to 8 pins in width. Data output and pin state registers store, respectively, the values to be driven on the pins and the input states of the pins.

Every pin can generate an interrupt if enabled; each port has an interrupt request (IRQ) associated with it.

The port 3 pins are capable of overvoltage-tolerant (OVT) operation, where the input voltage may be higher than V_{DD} . OVT pins are commonly used with I²C, to allow powering the chip OFF while maintaining a physical connection to an operating I²C bus without affecting its functionality.

GPIO pins can be ganged to source or sink higher values of current. GPIO pins, including OVT pins, may not be pulled up higher than the absolute maximum; see [Electrical specifications](#).

During power-on and reset, the pins are forced to the analog input drive mode, with input and output buffers disabled, so as not to crowbar any inputs and/or cause excess turn-on current.

A multiplexing network known as the high-speed I/O matrix (HSIOM) is used to multiplex between various peripheral and analog signals that may connect to an I/O pin.

Analog performance is affected by GPIO switching noise. In order to get the best analog performance, the following frequency and drive mode constraints must be applied. The DRIVE_SEL values (see [Table 6](#)) represent drive strengths (please see the [architecture and register reference manuals](#) for further detail).

See also [Table 5](#) for additional restrictions for ECO use.

Table 6 DRIVE_SEL values

Ports	Max frequency	Drive Strength for $V_{DD} \leq 2.7\text{ V}$	Drive Strength for $V_{DD} > 2.7\text{ V}$
Ports 0, 1	8 MHz	DRIVE_SEL 2	DRIVE_SEL 3
Port 2	50 MHz	DRIVE_SEL 1	DRIVE_SEL 2
Ports 3 to 10	16 MHz; 25 MHz for SPI	DRIVE_SEL 2	DRIVE_SEL 3
Ports 11 to 12	80 MHz for SMIF (QSPI).	DRIVE_SEL 1	DRIVE_SEL 2
Ports 9 and 10	Slow slew rate setting for TQFP Packages for ADC performance	No restrictions	No restrictions

3 Functional description

3.7 Special-function peripherals

3.7.1 CAPSENSE™ subsystem

CAPSENSE™ is supported in PSOC™ 6 MCU through a capacitive sigma-delta (CSD) hardware block. It is designed for high-sensitivity self-capacitance and mutual-capacitance measurements, and is specifically built for user interface solutions.

In addition to CAPSENSE™, the CSD hardware block supports three general-purpose functions. These are available when CAPSENSE™ is not being used. Alternatively, two or more functions can be time-multiplexed in an application under firmware control. The four functions supported by the CSD hardware block are:

- CAPSENSE™
- 10-bit ADC
- Programmable current sources (IDAC)
- Comparator

3.7.1.1 CAPSENSE™

Capacitive touch sensors are designed for user interfaces that rely on human body capacitance to detect the presence of a finger on or near a sensor. CAPSENSE™ solutions bring elegant, reliable, and simple capacitive touch sensing functions to applications including IoT, industrial, automotive, and home appliances.

The Infineon-proprietary CAPSENSE™ technology offers the following features:

- Best-in-class signal-to-noise ratio (SNR) and robust sensing under harsh and noisy conditions
- Self-capacitance (CSD) and mutual-capacitance (CSX) sensing methods
- Support for various widgets, including buttons, matrix buttons, sliders, touchpads, and proximity sensors
- High-performance sensing across a variety of materials
- Best-in-class liquid tolerance
- SmartSense auto-tuning technology that helps avoid complex manual tuning processes
- Superior immunity against external noise
- Spread-spectrum clocks for low radiated emissions
- Gesture and built-in self-test libraries
- Ultra-low power consumption
- An integrated graphical CAPSENSE™ tuner for real-time tuning, testing, and debugging

3.7.1.2 ADC

The CAPSENSE™ subsystem slope ADC offers the following features:

- Selectable 8- or 10-bit resolution
- Selectable input range: GND to V_{REF} and GND to V_{DDA} on any GPIO input
- Measurement of V_{DDA} against an internal reference without the use of GPIO or external components

3.7.1.3 IDAC

The CSD block has two programmable current sources, which offer the following features:

- 7-bit resolution
- Sink and source current modes

3 Functional description

- A current source programmable from 37.5 nA to 609 μ A
- Two IDACs that can be used in parallel to form one 8-bit IDAC

3.7.1.4 Comparator

The CAPSENSE™ subsystem comparator operates in the system Low Power and Ultra-Low Power modes. The inverting input is connected to an internal programmable reference voltage and the non-inverting input can be connected to any GPIO via the AMUXBUS.

3.7.1.5 CAPSENSE™ hardware subsystem

[Figure 7](#) shows the high-level hardware overview of the CAPSENSE™ subsystem, which includes a delta sigma converter, internal clock dividers, a shield driver, and two programmable current sources.

The inputs are managed through analog multiplexed buses (AMUXBUS A/B). The input and output of all functions offered by the CSD block can be provided on any GPIO or on a group of GPIOs under software control, with the exception of the comparator output and external capacitors that use dedicated GPIOs.

Self-capacitance is supported by the CSD block using AMUXBUS A, an external modulator capacitor, and a GPIO for each sensor. There is a shield electrode (optional) for self-capacitance sensing. This is supported using AMUXBUS B and an optional external shield tank capacitor (to increase the drive capability of the shield driver) should this be required. Mutual-capacitance is supported by the CSD block using AMUXBUS A, two external integrated capacitors, and a GPIO for transmit and receive electrodes.

The ADC does not require an external component. Any GPIO that can be connected to AMUXBUS A can be an input to the ADC under software control. The ADC can accept V_{DDA} as an input without needing GPIOs (for applications such as battery voltage measurement).

The two programmable current sources (IDACs) in general-purpose mode can be connected to AMUXBUS A or B. They can therefore connect to any GPIO pin. The comparator resides in the delta-sigma converter. The comparator inverting input can be connected to the reference. Both comparator inputs can be connected to any GPIO using AMUXBUS B; see [Figure 7](#). The reference has a direct connection to a dedicated GPIO; see [Table 9](#).

The CSD block can operate in active and sleep CPU power modes, and seamlessly transition between system LP and ULP modes. It can be powered down in system Deep Sleep and Hibernate modes. Upon wakeup from Hibernate mode, the CSD block requires re-initialization. However, operation can be resumed without re-initialization upon exit from Deep Sleep mode, under firmware control.

3 Functional description

Figure 7 CAPSENSE™ hardware subsystem

Figure 8 shows the high-level software overview. Infineon provides middleware libraries for [CAPSENSE™](#), [ADC](#), and [IDAC](#) on GitHub to enable quick integration. The Board Support Package for any kit with CAPSENSE™ capabilities automatically includes the CAPSENSE™ library in any application that uses the BSP.

User applications interact only with middleware to implement functions of the CSD block. The middleware interacts with underlying drivers to access hardware as necessary. The CSD driver facilitates time-multiplexing of the CSD hardware if more than one piece of CSD-related middleware is present in a project. It prevents access conflicts in this case.

ModusToolbox™ software provides a CAPSENSE™ configurator to enable fast library configuration. It also provides a tuner for performance evaluation and real-time tuning of the system. The tuner requires an EZI2C

3 Functional description

communication interface in the application to enable real-time tuning capability. The tuner can update configuration parameters directly in the device as well as in the configurator.

CAPSENSE™ and ADC middleware use the CSD interrupt to implement non-blocking sensing and A-to-D conversion. Therefore, interrupt service routines are a defined part of the middleware, which must be initialized by the application. Middleware and drivers can operate on either CPU. Infineon recommends using the middleware only in one CPU. If both CPUs must access the CSD driver, memory access should be managed in the application.

Refer to [AN85951: PSOC™ 4 and PSOC™ 6 MCU CAPSENSE™ design guide](#) for more details on CSX sensing, CSD sensing, shield electrode usage and its benefits, and capacitive system design guidelines.

Refer to the API reference guides for [CAPSENSE™](#), [ADC](#), and [IDAC](#) available on GitHub.

4 Pinouts

4 Pinouts

Note: A consolidated list of pinouts and pin alternate functions with HSIOM mapping is provided in [Table 8](#) and [Table 9](#).

GPIO ports are powered by V_{DDx} pins as follows:

- P0: V_{BACKUP}
- P2, P3: V_{DDIO2}
- P5, P6, P7, P8: V_{DDIO1}
- P9, P10: V_{DDIOA} , V_{DDA} (V_{DDIOA} , when present, and V_{DDA} must be connected together on the PCB)
- P11, P12: V_{DDIO0}
- P14: V_{DDUSB}

4 Pinouts

Figure 9 Device pinout for 100-TQFP package

Figure 10 Device pinout for 68-QFN package¹⁾

¹ The center pad on the QFN package should be connected to PCB ground relative to device VDDx for best mechanical, thermal, and electrical performance. For more information, see [AN72845](#), Design Guidelines for QFN devices.

4 Pinouts

Note: *If the USB pins are not used, connect V_{DDUSB} to ground and leave the P14.0/USBDP and P14.1/USBDM pins unconnected.*

Each port pin has multiple alternate functions. These are defined in [Table 8](#). The columns ACT #x and DS #y denote active (System LP/ULP) and Deep Sleep mode signals respectively.

The notation for a signal is of the form IPName[x].signal_name[u]:y.

IPName = Name of the block (such as tcpwm), x = Unique instance of the IP, Signal_name = Name of the signal, u = Signal number where there is more than one signal for a particular signal name, y = Designates copies of the signal name.

For example, the name tcpwm[0].line_compl[3]:4 indicates that this is instance 0 of a tcpwm block, the signal is line_compl # 3 (complement of the line output) and this is the fourth occurrence (copy) of the signal. Signal copies are provided to allow flexibility in routing and to maximize use of on-chip resources.

5 Power supply considerations

5 Power supply considerations

The following power system diagrams show typical connections for power pins for all supported packages, and with and without usage of the buck regulator.

In these diagrams, the package pin is shown with the pin name, for example "V_{DDA}, 53". For V_{DDx} pins, the I/O port that is powered by that pin is also shown, for example "V_{BACKUP}, 6; I/O port P0".

Figure 11 100-TQFP power connection diagram

5 Power supply considerations

Figure 12 100-TQFP (No Buck) power connection diagram

In the QFN package, all internal grounds are routed to the metal pad (epad) in the package. This pad must be grounded on the PCB.

5 Power supply considerations

Figure 13 68-QFN power connection diagram

5 Power supply considerations

Figure 14 68-QFN (No Buck) power connection diagram

5 Power supply considerations

Figure 15 49-WLCSP power connection diagram

5 Power supply considerations

Figure 16 49-WLCSP (No Buck) power connection Diagram

There are as many as eight V_{DDx} supply pins, depending on the package, and multiple V_{SS} ground pins. The power pins are:

- V_{DD} : the main digital supply. It powers the LDO and switching regulators. It also powers I/O port 0 on packages where V_{BACKUP} is not available
- V_{CCD} : the main LDO output. It requires a 4.7-μF capacitor for regulation. The LDO can be turned off when V_{CCD} is driven from the switching regulator (see below). For more information, see the power system block diagram in the device [reference manual](#)
- V_{DDA} : the supply for the analog peripherals. Voltage must be applied to this pin for correct device initialization and boot up
- V_{DDIOA} : the supply for I/O ports 9 and 10. If it is present in the device package, it must be connected to V_{DDA}
- V_{DDIO0} : the supply for I/O ports 11 and 12
- V_{DDIO1} : the supply for I/O ports 5, 6, 7, and 8. Some of the ports are not available depending on package
- V_{DDIO2} : the supply for I/O ports 2 and 3
- V_{BACKUP} : the supply for the backup domain, which includes the 32-kHz WCO and the RTC. It can be a separate supply as low as 1.4 V, for battery or supercapacitor backup, as [Figure 17](#) shows, otherwise it is connected to V_{DD} . It powers I/O port 0²⁾

²⁾ It is not available in the 49-WLCSP package. V_{DD} powers port 0.

5 Power supply considerations

Figure 17 Separate battery connection to V_{BACKUP}

- V_{DDUSB} : the supply for the USB peripheral and the USBDP and USBDM pins. It must be 2.85 V to 3.6 V for USB operation. If USB is not used, it can be 1.7 V to 3.6 V, and the USB pins can be used as limited-capability GPIOs on I/O port 14

Table 10 shows a summary of the I/O port supplies:

Table 10 I/O power supplies

Port	Supply	Alternate Supply
0	V_{BACKUP}	V_{DDD}
2, 3	V_{DDIO2}	–
5, 6, 7, 8	V_{DDIO1}	–
9, 10	V_{DDIOA}	V_{DDA}
11, 12	V_{DDIO0}	–
14	V_{DDUSB}	–

Note: If the USB pins are not used, connect V_{DDUSB} to ground and leave the P14.0/USB DP and P14.1/USB DM pins unconnected.

Voltage must be applied to the V_{DDD} pin, and the V_{DDA} pin as noted above, for correct device initialization and operation. If an I/O port is not being used, applying voltage to the corresponding V_{DDx} pin is optional.

- V_{SS} : ground pins for the above supplies. All ground pins should be connected together to a common ground
- In addition to the LDO regulator, a switching regulator is included. The regulator pins are:

- $V_{\text{DD_NS}}$: the regulator supply
- V_{IND1} : the regulator output. It is typically used to drive V_{CCD} through an inductor

The V_{DD} power pins are not connected on chip. They can be connected off chip, in one or more separate nets. If separate power nets are used, they can be isolated from noise from the other nets using optional ferrite beads, as indicated in the diagrams.

No external load should be placed on V_{CCD} , or V_{IND1} , whether or not these pins are used.

5 Power supply considerations

There are no power pin sequencing requirements; power supplies may be brought up in any order. The power management system holds the device in reset until all power pins are at the voltage levels required for proper operation.

Note: *If a battery is installed on the PCB first, V_{DD} must be cycled for at least 50 μ s. This prevents premature drain of the battery during product manufacture and storage.*

Bypass capacitors must be connected to a common ground from the V_{DDX} and other pins, as indicated in the diagrams. Typical practice for systems in this frequency range is to use a 10- μ F or 1- μ F capacitor in parallel with a smaller capacitor (0.1 μ F, for example). Note that these are simply rules of thumb and that, for critical applications, the PCB layout, lead inductance, and bypass capacitor parasitic should be simulated for optimal bypassing.

All capacitors and inductors should be $\pm 20\%$ or better. The recommended inductor value is 2.2 μ H $\pm 20\%$ (for example, TDK MLP2012H2R2MT0S1).

It is good practice to check the datasheets for your bypass capacitors, specifically the working voltage and the DC bias specifications. With some capacitors, the actual capacitance can decrease considerably when the applied voltage is a significant percentage of the rated working voltage.

For more information on pad layout, refer to [PSOC™ 6 CAD libraries](#).

6 Electrical specifications

6 Electrical specifications

All specifications are valid for $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$ and for 1.71 V to 3.6 V except where noted.

6.1 Absolute maximum ratings

Table 11 Absolute maximum ratings³⁾

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID1	V _{DD_ABS}	Analog or digital supply relative to V _{SS} (V _{SSD} = V _{SSA})	-0.5	–	4	V	
SID2	V _{CCD_ABS}	Direct digital core voltage input relative to V _{SSD}	-0.5	–	1.2	V	
SID3	V _{GPIO_ABS}	GPIO voltage; V _{DDD} or V _{DDA}	-0.5	–	V _{DD} + 0.5	V	
SID4	I _{GPIO_ABS}	Current per GPIO	-25	–	25	mA	
SID5	I _{GPIO_injection}	GPIO injection current per pin	-0.5	–	0.5	mA	
SID3A	ESD_HBM	Electrostatic discharge Human Body Model	2200	–	–	V	
SID4A	ESD_CDM	Electrostatic discharge Charged Device Model	500	–	–	V	
SID5A	LU	Pin current for latchup-free operation	-100	–	100	mA	

6.2 Device-level specifications

Table 14 provides detailed specifications of CPU current. Table 12 summarizes these specifications, for rapid review of CPU currents under common conditions. Note that the max frequency for CM4 is 150 MHz, and for CM0+ is 100 MHz. IMO and FLL are used to generate the CPU clocks; FLL is not used when the CPU clock frequency is 8 MHz.

Table 12 CPU current specifications summary

Condition	Range	Typ range	Max range
LP Mode, V _{DDD} = 3.3 V, V _{CCD} = 1.1 V, with buck regulator			
CM4 active, CM0+ sleep	Across CPUs clock ranges: 8–150/100 MHz; Dhrystone with flash cache enabled	0.9–6.3 mA	1.5–7 mA
CM0+ active, CM4 sleep		0.8–3.8 mA	1.3–4.5 mA
CM4 sleep, CM0+ sleep		0.7–1.5 mA	1.3–2.2 mA
CM0+ sleep, CM4 off		0.7–1.3 mA	1.3–2 mA
Minimum regulator current mode	Across CM4/CM0+ CPU active/sleep modes	0.6–0.7 mA	1.1–1.1 mA

ULP Mode, V_{DDD} = 3.3 V, V_{CCD} = 0.9 V, with buck regulator

(table continues...)

³ Usage above the absolute maximum conditions listed in Table 11 may cause permanent damage to the device. Exposure to absolute maximum conditions for extended periods of time may affect device reliability. The maximum storage temperature is 150°C in compliance with JEDEC Standard JESD22-A103, High Temperature Storage Life. When used below absolute maximum conditions but above normal operating conditions, the device may not operate to specification.

6 Electrical specifications

Table 12 (continued) CPU current specifications summary

Condition	Range	Typ range	Max range
CM4 active, CM0+ sleep	Across CPUs clock ranges: 8 – 50/25 MHz; Dhrystone with flash cache enabled	0.65–1.6 mA	0.8–2.2mA
CM0+ active, CM4 sleep		0.51–0.91 mA	0.72–1.25 mA
CM4 sleep, CM0+ sleep		0.42–0.76 mA	0.65–1.1 mA
CM0+ sleep, CM4 off		0.41–0.62 mA	0.6–0.9 mA
Minimum regulator current mode	Across CM4/CM0+ CPU active/sleep modes	0.39–0.54 mA	0.6–0.76 mA
Deep Sleep	Across SRAM retention	7–9 μ A	-
Hibernate	Across V_{DDD}	300–800 nA	-

Figure 18 Typical device currents vs. CPU frequency; System Low Power (LP) mode

6.2.1 Power supplies

Table 13 Power supply DC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID6	V_{DDD}	Internal regulator	1.7	–	3.6	V	–
SID7	V_{DDA}	Analog power supply voltage. Shorted to V_{DDIOA} on PCB.	1.7	–	3.6	V	Internally unregulated supply
SID7A	V_{DDIO1}	GPIO supply for Ports 5 to 8 when present	1.7	–	3.6	V	Must be $\geq V_{DDA}$ if the CAPSENSE™ (CSD) block is used in the application

6 Electrical specifications

Table 14 (continued) CPU current and transition times

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SIDLPS1	I _{DD20}	CM4 Sleep 8 MHz, CM0+ Sleep 8 MHz. With IMO.	–	0.7	1.1	mA	V _{DDD} = 3.3 V, Buck ON, Max at 60°C.
			–	1	1.5	mA	V _{DDD} = 1.8 V, Buck ON, Max at 60°C.
			–	2.4	3.3	mA	V _{DDD} = 1.8 to 3.3 V, LDO, Max at 85°C.

Cortex®-M0+. Minimum Regulator Current Mode

SIDLPS3	I _{DD22}	CM4 Off, CM0+ Sleep 8 MHz. With IMO.	–	0.6	1.1	mA	V _{DDD} = 3.3 V, Buck ON, Max at 60°C.
			–	0.9	1.5	mA	V _{DDD} = 1.8 V, Buck ON, Max at 60°C.
			–	2.4	3.3	mA	V _{DDD} = 1.8 to 3.3 V, LDO, Max at 85°C.

ULP RANGE POWER SPECIFICATIONS (for V_{CCD} = 0.9 V using the Buck). ULP mode is valid from –20 to +85°C.

Cortex®-M4. Active Mode

Execute with Cache Disabled (Flash)

SIDF5	I _{DD3}	Execute from flash; CM4 Active 50 MHz, CM0+ Sleep 25 MHz. With IMO and FLL. While(1).	–	1.7	2.2	mA	V _{DDD} = 3.3 V, Buck ON, Max at 60°C.
			–	2.1	2.4	mA	V _{DDD} = 1.8 V, Buck ON, Max at 60°C.
SIDF6	I _{DD4}	Execute from flash; CM4 Active 8 MHz, CM0+ Sleep 8 MHz. With IMO. While (1).	–	0.56	0.8	mA	V _{DDD} = 3.3 V, Buck ON, Max at 60°C.
			–	0.75	1	mA	V _{DDD} = 1.8 V, Buck ON, Max at 60°C.

Execute with Cache Enabled

SIDC8	I _{DD10}	Execute from cache; CM4 Active 50 MHz, CM0+ Sleep 25 MHz. With IMO and FLL. Dhrystone.	–	1.6	2.2	mA	V _{DDD} = 3.3 V, Buck ON, Max at 60°C.
			–	2.4	2.7	mA	V _{DDD} = 1.8 V, Buck ON, Max at 60°C.
SIDC9	I _{DD11}	Execute from cache; CM4 Active 8 MHz, CM0+ Sleep 8 MHz. With IMO. Dhrystone.	–	0.65	0.8	mA	V _{DDD} = 3.3 V, Buck ON, Max at 60°C.
			–	0.8	1.1	mA	V _{DDD} = 1.8 V, Buck ON, Max at 60°C.

Cortex®-M0+. Active Mode

Execute with Cache Disabled (Flash)

6 Electrical specifications

Table 14 (continued) CPU current and transition times

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SIDHIB2	I _{DD34A}	V _{DD} = 3.3 V	–	800	–	nA	No clocks running

Power Mode Transition Times

SID12	T _{LPACT_ACT}	Minimum regulator current to LP transition time	–	–	35	ps	Including PLL lock time
SID13	T _{DS_LPACT}	Deep Sleep to LP transition time	–	–	15	ps	Guaranteed by design
SID14	T _{HIB_ACT}	Hibernate to LP transition time	–	2000	–	ps	Including PLL lock time

6.2.3 XRES

Table 15 XRES DC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID17	T _{XRES_IDD}	IDD when XRES asserted	–	300	–	nA	V _{DD} = 1.8 V
SID17A	T _{XRES_IDD_1}	IDD when XRES asserted	–	800	–	nA	V _{DD} = 3.3 V
SID77	V _{IH}	Input voltage HIGH threshold	0.7 * V _{DD}	–	–	V	CMOS input
SID78	V _{IL}	Input voltage LOW threshold	–	–	0.3 * V _{DD}	V	CMOS input
SID80	C _{IN}	Input capacitance	–	3	–	pF	–
SID81	V _{HYSXRES}	Input voltage hysteresis	–	100	–	mV	–
SID82	I _{DIODE}	Current through protection diode to V _{DD} /V _{SS}	–	–	100	pA	–

Table 16 XRES AC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID15	T _{XRES_ACT}	POR or XRES release to Active transition time	–	2000	–	ps	Normal mode, 50-MHz CM0+
SID16	T _{XRES_PW}	XRES pulse width	5	–	–	ps	–

6.2.4 GPIO

Table 17 GPIO DC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID57	V _{IH}	Input voltage HIGH threshold	0.7 * V _{DD}	–	–	V	CMOS Input
SID57A	I _{IHS}	Input current when Pad > V _{DDIO} for OVT inputs	–	–	10	pA	Per I ² C Spec

(table continues...)

6 Electrical specifications

Table 17 (continued) GPIO DC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID58	V_{IL}	Input voltage LOW threshold	–	–	$0.3 * V_{DD}$	V	CMOS Input
SID241	V_{IH}	LVTTL input, $V_{DD} < 2.7$ V	$0.7 * V_{DD}$	–	–	V	–
SID242	V_{IL}	LVTTL input, $V_{DD} < 2.7$ V	–	–	$0.3 * V_{DD}$	V	–
SID243	V_{IH}	LVTTL input, $V_{DD} \geq 2.7$ V	2.0	–	–	V	–
SID244	V_{IL}	LVTTL input, $V_{DD} \geq 2.7$ V	–	–	0.8	V	–
SID59	V_{OH}	Output voltage HIGH level	$V_{DD} - 0.5$	–	–	V	$I_{OH} = 8$ mA
SID62A	V_{OL}	Output voltage LOW level	–	–	0.4	V	$I_{OL} = 8$ mA
SID63	R_{PULLUP}	Pull-up resistor	3.5	5.6	8.5	k Ω	–
SID64	$R_{PULLDOWN}$	Pull-down resistor	3.5	5.6	8.5	k Ω	–
SID65	I_{IL}	Input leakage current (absolute value)	–	–	2	nA	25°C, $V_{DD} = 3.0$ V
SID66	C_{IN}	Input capacitance	–	–	5	pF	–
SID67	V_{HYSTTL}	Input hysteresis LVTTL $V_{DD} > 2.7$ V	100	0	–	mV	–
SID68	$V_{HYSCMOS}$	Input hysteresis CMOS	$0.05 * V_{DD}$	–	–	mV	–
SID69	I_{DIODE}	Current through protection diode to V_{DD}/V_{SS}	–	–	100	μ A	–
SID69A	I_{TOT_GPIO}	Maximum total source or sink chip current	–	–	200	mA	–

Table 18 GPIO AC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID70	T_{RISEF}	Rise time in Fast Strong Mode. 10% to 90% of V_{DD} .	–	–	2.5	ns	Clload = 15 pF, 8-mA drive strength
SID71	T_{FALLF}	Fall time in Fast Strong Mode. 10% to 90% of V_{DD} .	–	–	2.5	ns	Clload = 15 pF, 8-mA drive strength
SID72	T_{RISES_1}	Rise time in Slow Strong Mode. 10% to 90% of V_{DD} .	52	–	142	ns	Clload = 15 pF, 8-mA drive strength, $V_{DD} \leq 2.7$ V
SID72A	T_{RISES_2}	Rise time in Slow Strong Mode. 10% to 90% of V_{DD} .	48	–	102	ns	Clload = 15 pF, 8-mA drive strength, 2.7 V $< V_{DD} \leq 3.6$ V
SID73	T_{FALLS_1}	Fall time in Slow Strong Mode. 10% to 90% of V_{DD} .	44	–	211	ns	Clload = 15 pF, 8 mA drive strength, $V_{DD} \leq 2.7$ V

(table continues...)

6 Electrical specifications

Table 18 (continued) GPIO AC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID73A	T_{FALLS_2}	Fall time in Slow Strong Mode. 10% to 90% of V_{DD} .	42	–	93	ns	Clload = 15 pF, 8-mA drive strength, $2.7\text{ V} < V_{DD} \leq 3.6\text{ V}$
SID73G	T_{FALL_I2C}	Fall time (30% to 70% of V_{DD}) in Slow Strong mode.	$20 * V_{DDIO} / 5.5$	–	250	ns	Clload = 10 pF to 400 pF, 8-mA drive strength
SID74	$F_{GPIOUT1}$	GPIO Fout. Fast Strong mode.	–	–	100	MHz	90/10%, 15-pF load, 60/40 duty cycle
SID75	$F_{GPIOUT2}$	GPIO Fout; Slow Strong mode.	–	–	1.5	MHz	90/10%, 15-pF load, 60/40 duty cycle
SID76	$F_{GPIOUT3}$	GPIO Fout; Fast Strong mode.	–	–	100	MHz	90/10%, 25-pF load, 60/40 duty cycle
SID245	$F_{GPIOUT4}$	GPIO Fout; Slow Strong mode.	–	–	1.3	MHz	90/10%, 25-pF load, 60/40 duty cycle
SID246	F_{GPIOIN}	GPIO input operating frequency; $1.71\text{ V} \leq V_{DD} \leq 3.6\text{ V}$	–	–	100	MHz	90/10% V_{IO}

6.3 Analog peripherals

6.3.1 Low-power (LP) comparator

Table 19 LP comparator DC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID84	$V_{OFFSET1}$	Input offset voltage. Normal power mode.	–10	–	10	mV	–
SID85A	$V_{OFFSET2}$	Input offset voltage. Low-power mode.	–25	± 12	25	mV	–
SID85B	$V_{OFFSET3}$	Input offset voltage. Ultra low-power mode.	–25	± 12	25	mV	–
SID86	V_{HYST1}	Hysteresis when enabled in Normal mode	–	–	60	mV	–
SID86A	V_{HYST2}	Hysteresis when enabled in Low-power mode	–	–	80	mV	–
SID87	V_{ICM1}	Input common mode voltage in Normal mode	0	–	$V_{DDIO1} - 0.1$	V	–
SID247	V_{ICM2}	Input common mode voltage in Low power mode	0	–	$V_{DDIO1} - 0.1$	V	–

(table continues...)

6 Electrical specifications

Table 19 (continued) LP comparator DC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID247A	V_{ICM3}	Input common mode voltage in Ultra low power mode	0	–	$V_{DDIO1} - 0.1$	V	–
SID88	CMRR	Common mode rejection ratio in Normal power mode	50	–	–	dB	–
SID89	I_{CMP1}	Block current, Normal mode	–	–	150	μA	–
SID248	I_{CMP2}	Block current, Low-power mode	–	–	10	μA	–
SID259	I_{CMP3}	Block current in Ultra low-power mode	–	0.3	0.85	μA	–
SID90	ZCMP	DC input impedance of comparator	35	–	–	MΩ	–

Table 20 LP comparator AC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
----------	-----------	-------------	-----	-----	-----	-------	--------------------

LP Comparator AC Specifications

SID91	T_{RESP1}	Response time, Normal mode, 100 mV overdrive	–	–	100	ns	–
SID258	T_{RESP2}	Response time, Low power mode, 100 mV overdrive	–	–	1000	ns	–
SID92	T_{RESP3}	Response time, Ultra-low power mode, 100 mV overdrive	–	–	20	μs	–
SID92E	T_{CMP_EN1}	Time from Enabling to operation	–	–	10	μs	Normal and low-power modes
SID92F	T_{CMP_EN2}	Time from Enabling to operation	–	–	50	μs	Ultra-low-power mode

6.3.2 Temperature sensor

Table 21 Temperature sensor specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID93	$T_{SENSACC}$	Temperature sensor accuracy	–5	±1	5	°C	–40 to +85°C

6 Electrical specifications

6.3.3 Internal reference

Table 22 Internal reference specification

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID93R	V _{REFBG}	–	1.188	1.2	1.212	V	–

6.3.4 SAR ADC

Table 23 12-bit SAR ADC DC specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID94	A_RES	SAR ADC Resolution	–	–	12	bits	
SID95	A_CHNLS_S	Number of channels - single-ended	–	–	16		8 full speed.
SID96	A-CHNKS_D	Number of channels - differential	–	–	8		Diff inputs use neighboring I/O
SID97	A-MONO	Monotonicity	–	–	–		Yes.
SID98	A_GAINERR	Gain error	–	–	±0.2	%	With external reference.
SID99	A_OFFSET	Input offset voltage	–	–	2	mV	Measured with 1-V reference
SID100	A_ISAR_1	Current consumption at 1 Msps	–	–	1.05	mA	At 1 Msps. External reference mode
SID100A	A_ISAR_2	Current consumption at 1 Msps	–	–	1.3	mA	At 1 Msps. Internal reference mode
SID1002	A_ISAR_3	Current consumption at 2 Msps	–	–	1.65	mA	At 2 Msps. External reference mode
SID1003	A_ISAR_4	Current consumption at 2 Msps	–	–	2.15	mA	At 2 Msps. Internal reference mode
SID101	A_VINS	Input voltage range - single-ended	V _{SS}	–	V _{DDA}	V	
SID102	A_VIND	Input voltage range - differential	V _{SS}	–	V _{DDA}	V	
SID103	A_INRES	Input resistance	–	1	–	kΩ	
SID104	A_INCAP	Input capacitance	–	5	–	pF	

Table 24 12-bit SAR ADC AC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID106	A_PSRR	Power supply rejection ratio	70	–	–	dB	
SID107	A_CMRR	Common mode rejection ratio	66	–	–	dB	Measured at 1 V

(table continues...)

6 Electrical specifications

Table 24 (continued) 12-bit SAR ADC AC specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID1081	A_SAMP_1	Sample rate with external reference With bypass cap	–	–	2	Msp/s	V _{DDA} 2.7 - 3.6
SID1082	A_SAMP_1	Sample rate with external reference With bypass cap	–	–	1	Msp/s	V _{DDA} 1.7 - 3.6
SID108A1	A_SAMP_2	Sample rate with V _{DD} reference; No bypass cap	–	–	2	Msp/s	V _{DDA} 2.7 - 3.6
SID108A2	A_SAMP_2	Sample rate with V _{DD} reference; No bypass cap	–	–	1	Msp/s	V _{DDA} 1.7 - 3.6
SID108B	A_SAMP_3	Sample rate with internal reference; With bypass cap	–	–	1	Msp/s	-
SID108C	A_SAMP_4	Sample rate with Internal Reference. No bypass cap	–	–	200	ksps	-
SID109	A_SINAD	Signal-to-noise and distortion ratio (SINAD).	64	–	–	dB	Fin = 10 kHz
SID111A	A_INL	Integral non-linearity. Up to 1 Msp/s	–2	–	2	LSB	All Reference Mode
SID111B	A_INL	Integral non-linearity. 2 Msp/s.	–2.5	–	2.5	LSB	External Reference or V _{DDA} Reference Mode, V _{REF} ≥ 2 V. V _{DDA} = 2.7 V to 3.6 V
SID112A	A_DNL	Differential non-linearity. Up to 1 Msp/s	–1	–	1.5	LSB	All Reference Modes
SID112B	A_DNL	Differential non-linearity. 2 Msp/s.	–1	–	1.6	LSB	External Reference or V _{DDA} Reference Mode, V _{REF} ≥ 2V. V _{DDA} = 2.7 to 3.6 V
SID113	A_THD	Total harmonic distortion. 1 Msp/s.	–	–	–65	dB	Fin = 10 kHz. V _{DDA} = 2.7 to 3.6 V.

6.3.5 CSD

Table 25 Capacitive sigma-delta (CSD) specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
CSD V2 Specifications							
SYS.PER#3	V _{DD_RIPPLE}	Max allowed ripple on power supply, DC to 10 MHz	–	–	±50	mV	V _{DDA} > 2 V (with ripple), 25°C TA, Sensitivity = 0.1 pF

(table continues...)

6 Electrical specifications

Table 25 (continued) Capacitive sigma-delta (CSD) specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SYS.PER#16	V _{DD_RIPPLE_1.8}	Max allowed ripple on power supply, DC to 10 MHz	–	–	±25	mV	V _{DDA} > 1.75 V (with ripple), 25°C TA, Parasitic Capacitance (CP) < 20 pF, Sensitivity ≥ 0.4 pF
SID.CSD.BLK	I _{CSD}	Maximum block current	–	–	4500	µA	–
SID.CSD#15	V _{REF}	Voltage reference for CSD and Comparator	0.6	1.2	V _{DDA} – 0.6	V	V _{DDA} – V _{REF} ≥ 0.6 V
SID.CSD#15A	V _{REF_EXT}	External Voltage reference for CSD and Comparator	0.6	–	V _{DDA} – 0.6	V	V _{DDA} – V _{REF} ≥ 0.6 V
SID.CSD#16	I _{DAC1IDD}	IDAC1 (7-bits) block current	–	–	1900	µA	–

SIDA104	A_INCAP	Input capacitance	–	41	–	pF	–
SIDA106	A_PSRR	Power supply rejection ratio (DC)	–	60	–	dB	–
SIDA107	A_TACQ	Sample acquisition time	–	10	–	μs	Measured with 50- Ω source impedance. 10 μs is default software driver acquisition time setting. Settling to within 0.05%.
SIDA108	A_CONV8	Conversion time for 8-bit resolution at conversion rate = $F_{HCLK} / (2^N(N+2))$. Clock frequency = 50 MHz.	–	25	–	μs	Does not include acquisition time.
SIDA108A	A_CONV10	Conversion time for 10-bit resolution at conversion rate = $F_{HCLK} / (2^N(N+2))$. Clock frequency = 50 MHz.	–	60	–	μs	Does not include acquisition time.
SIDA109	A_SND_VRE	Signal-to-noise and distortion ratio (SINAD)	–	57	–	dB	Measured with 50- Ω source impedance
SIDA109A	A_SND_VDDA	Signal-to-noise and distortion ratio (SINAD)	–	52	–	dB	Measured with 50- Ω source impedance
SIDA111	A_INL_VREF	Integral non-linearity. 11.6 ksp	–	–	2	LSB	Measured with 50- Ω source impedance
SIDA111A	A_INL_VDDA	Integral non-linearity. 11.6 ksp	–	–	2	LSB	Measured with 50- Ω source impedance
SIDA112	A_DNL_VREF	Differential non-linearity. 11.6 ksp	–	–	1	LSB	Measured with 50- Ω source impedance
SIDA112A	A_DNL_VDDA	Differential non-linearity. 11.6 ksp	–	–	1	LSB	Measured with 50- Ω source impedance

6 Electrical specifications

6.4 Digital peripherals

6.4.1 Timer/Counter/PWM

Table 27 Timer/Counter/PWM (TCPWM) Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID.TCPWM.1	I_{TCPWM1}	Block current consumption at 8 MHz	–	–	70	μA	All modes (TCPWM)
SID.TCPWM.2	I_{TCPWM2}	Block current consumption at 24 MHz	–	–	180	μA	All modes (TCPWM)
SID.TCPWM.2A	I_{TCPWM3}	Block current consumption at 50 MHz	–	–	270	μA	All modes (TCPWM)
SID.TCPWM.2B	I_{TCPWM4}	Block current consumption at 100 MHz	–	–	540	μA	All modes (TCPWM)
SID.TCPWM.3	$TCPW_{MFREQ}$	Operating frequency	–	–	100	MHz	Maximum = 100 MHz
SID.TCPWM.4	$TPWM_{ENEXT}$	Input trigger pulse width for all trigger events	$2/F_c$	–	–	ns	Trigger events can be Stop, Start, Reload, Count, Capture, or Kill depending on which mode of operation is selected. F_c is counter operating frequency.
SID.TCPWM.5	$TPWM_{EXT}$	Output trigger pulse widths	$1.5/F_c$	–	–	ns	Minimum possible width of Overflow, Underflow, and CC (Counter equals Compare value) trigger outputs
SID.TCPWM.5A	TC_{RES}	Resolution of counter	$1/F_c$	–	–	ns	Minimum time between successive counts
SID.TCPWM.5B	PWM_{RES}	PWM resolution	$1/F_c$	–	–	ns	Minimum pulse width of PWM output
SID.TCPWM.5C	Q_{RES}	Quadrature inputs resolution	$2/F_c$	–	–	ns	Minimum pulse width between Quadrature phase inputs. Delays from pins should be similar.

6.4.2 Serial Communication Block (SCB)

SID150	I _{I2C2}	Block current consumption at 400 kHz	–	–	80	μA	–
SID151	I _{I2C3}	Block current consumption at 1 Mbps	–	–	180	μA	–
SID152	I _{I2C4}	I ² C enabled in Deep Sleep mode	–	–	1.7	μA	At 60°C.

Fixed I²C AC Specifications

SID153	F _{I2C1}	Bit Rate	–	–	1	Mbps	–
--------	-------------------	----------	---	---	---	------	---

Fixed UART DC Specifications

SID160	I _{UART1}	Block current consumption at 100 kbps	–	–	30	μA	–
SID161	I _{UART2}	Block current consumption at 1000 kbps	–	–	180	μA	–

Fixed UART AC Specifications

SID162A	F _{UART1}	Bit Rate	–	–	3	Mbps	ULP Mode
SID162B	F _{UART2}		–	–	8		LP Mode

Fixed SPI DC Specifications

SID163	I _{SPI1}	Block current consumption at 1 Mbps	–	–	220	μA	–
SID164	I _{SPI2}	Block current consumption at 4 Mbps	–	–	340	μA	–
SID165	I _{SPI3}	Block current consumption at 8 Mbps	–	–	360	μA	–
SID165A	I _{SP14}	Block current consumption at 25 Mbps	–	–	800	μA	–

Fixed SPI AC Specifications for LP Mode (1.1 V) unless noted otherwise.

SID166	F _{SPI}	SPI Operating frequency externally clocked slave	–	–	25	MHz	12-MHz max for ULP (0.9 V) mode
SID166B	F _{SPI_EXT}	SPI operating frequency master (F _{scb} is SPI clock).	–	–	F _{scb} /4	MHz	F _{scb} max is 100 MHz in LP (1.1 V) mode, 25 MHz in ULP mode.
SID166A	F _{SPI_IC}	SPI slave internally clocked	–	–	15	MHz	5 MHz max for ULP (0.9 V) mode

Fixed SPI Master mode AC Specifications for LP Mode (1.1 V) unless noted otherwise.

SID167	T _{DMO}	MOSI valid after SClock driving edge	–	–	12	ns	20 ns max for ULP (0.9 V) mode
--------	------------------	--------------------------------------	---	---	----	----	--------------------------------

(table continues...)

6 Electrical specifications

Table 28 (continued) Serial Communication Block (SCB) Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID168	T _{DSI}	MISO valid before SClock capturing edge	5	–	–	ns	Full clock, late MISO sampling
SID169	T _{HMO}	MOSI data hold time	0	–	–	ns	Referred to Slave capturing edge

Fixed SPI Slave mode AC Specifications for LP Mode (1.1 V) unless noted otherwise.

SID170	T _{DMI}	MOSI valid before Sclock capturing edge	5	–	–	ns	–
SID171A	T _{DSO_EXT}	MISO valid after Sclock driving edge in Ext. Clk. mode	–	–	20	ns	35 ns max. for ULP (0.9 V) mode
SID171	T _{DSO}	MISO valid after Sclock driving edge in Internally Clk. mode	–	–	TDSO_EXT + 3 * Tscb	ns	Tscb is Serial Comm. Block clock period.
SID171B	T _{DSO}	MISO Valid after Sclock driving edge in Internally Clk. Mode with median filter enabled.	–	–	TDSO_EXT + 4 * Tscb	ns	Tscb is Serial Comm. Block clock period.
SID172	T _{HSO}	Previous MISO data hold time	5	–	–	ns	–
SID172A	T _{SSELSCK1}	SSEL Valid to first SCK valid edge	65	–	–	ns	–
SID172B	T _{SSELSCK2}	SSEL Hold after Last SCK valid edge	65	–	–	ns	–

6.4.3 LCD specifications

Table 29 LCD Direct Drive DC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID154	I _{LCDLOW1}	Operating current with 100-kHz LCD block clock in ULP mode in Deep Sleep	–	90	–	μA	32×4 small display. 30-Hz. PWM mode. Slow slew rate. 460-k series resistors
SID154A	I _{LCDLOW2}	Operating current with 32-kHz LCD block clock in ULP mode in Deep Sleep	–	50	–	μA	32×4 small display. 30-Hz. PWM mode. Slow slew rate. 460-k series resistors
SID155	C _{LCDCAP}	LCD capacitance per segment/common driver	–	500	5000	pF	–

SWD and Trace Interface

SID214	F_SWDCCLK2	$1.7\text{ V} \leq V_{DD} \leq 3.6\text{ V}$	–	–	25	MHz	LP Mode. V _{CCD} = 1.1 V.
SID214L	F_SWDCCLK2L	$1.7\text{ V} \leq V_{DD} \leq 3.6\text{ V}$	–	–	12	MHz	ULP Mode. V _{CCD} = 0.9 V.
SID215	T_SWDI_SETUP	T = 1/f SWDCCLK	0.25 * T	–	–	ns	–
SID216	T_SWDI_HOLD	T = 1/f SWDCCLK	0.25 * T	–	–	ns	–
SID217	T_SWDO_VALID	T = 1/f SWDCCLK	–	–	0.5 * T	ns	–
SID217A	T_SWDO_HOLD	T = 1/f SWDCCLK	1	–	–	ns	–
SID214T	F_TRCLK_LP1	With Trace Data setup/hold times of 2/1 ns respectively	–	–	50	MHz	LP Mode. V _{DD} = 1.1 V.
SID215T	F_TRCLK_LP2	With Trace Data setup/hold times of 3/2 ns respectively	–	–	50	MHz	LP Mode. V _{DD} = 1.1 V.
SID216T	F_TRCLK_ULP	With Trace Data setup/hold times of 3/2 ns respectively	–	–	20	MHz	ULP Mode. V _{DD} = 0.9 V.

6.6.2 Internal main oscillator

Table 34 IMO DC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID218	I _{IMO1}	IMO operating current at 8 MHz	–	9	15	μA	–

6 Electrical specifications

Table 35 **IMO AC Specifications**

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID223	F _{IMOTOL1}	Frequency variation centered on 8 MHz	–	–	±2	%	–
SID227	T _{JITR}	Cycle-to-Cycle and Period jitter	–	250	–	ps	–

6.6.3 Internal low-speed oscillator

Table 36 **ILO DC Specification**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID231	I _{ILO2}	ILO operating current at 32 kHz	–	0.3	0.7	µA	–

Table 37 **ILO AC Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID234	T _{STARTILO1}	ILO startup time	–	–	7	µs	Startup time to 95% of final frequency
SID236	T _{LIODUTY}	ILO Duty cycle	45	50	55	%	–
SID237	F _{ILOTRIM1}	32 kHz trimmed frequency	28.8	32	35.2	kHz	±10% variation

6.6.4 Crystal oscillator specifications

Table 38 **ECO Specifications**

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
---------	-----------	-------------	-----	-----	-----	-------	--------------------

MHz ECO DC Specification

SID316	I _{DD_MHz}	Block operating current with Cload up to 18 pF	–	800	1600	pA	Max = 35 MHz, Typ = 16 MHz
--------	---------------------	--	---	-----	------	----	-------------------------------

MHz ECO AC Specification

SID317	F_MHz	Crystal frequency range	16	–	35	MHz	Some restrictions apply. Refer to the device reference manual .
--------	-------	-------------------------	----	---	----	-----	---

kHz ECO DC Specification

SID318	I _{DD_kHz}	Block operating current with 32-kHz crystal	–	0.38	1	pA	–
--------	---------------------	---	---	------	---	----	---

(table continues...)

6 Electrical specifications

Table 38 (continued) ECO Specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID321E	ESR32K	Equivalent series resistance	–	80	–	kΩ	–
SID322E	PD32K	Drive level	–	–	1	pW	–

kHz ECO AC Specification

SID319	F_kHz	32 kHz frequency	–	32.768	–	kHz	–
SID320	Ton_kHz	Startup time	–	–	500	ms	–
SID320E	F _{TOL32K}	Frequency tolerance	–	50	250	ppm	–

6.6.5 External clock specifications

Table 39 External Clock Specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID305	EXTCLK _{FREQ}	External clock input frequency	0	–	100	MHz	–
SID306	EXTCLK _{DUTY}	Duty cycle; measured at V _{DD} /2	45	–	55	%	–

6.6.6 PLL specifications

Table 40 PLL specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID304P	PLL_IN	Input frequency to PLL block	4	–	64	MHz	
SID305P	PLL_LOCK	Time to achieve PLL lock	–	16	35	ps	–
SID306P	PLL_OUT	Output frequency from PLL block	10.625	–	150	MHz	–
SID307P	PLL_IDD	PLL current	–	0.55	1.1	mA	Typ. at 100 MHz out.
SID308P	PLL_JTR	Period jitter	–	–	150	ps	100-MHz output frequency

6 Electrical specifications

Table 41 Clock Source Switching Time

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
SID262	TCLKSWITCH	Clock switching from clk1 to clk2 in clock periods; for example, from IMO (clk1) to FLL (clk2). [5]	–	–	4 clk1 + 3 clk2	periods	–

6.6.7 FLL specifications

Table 42 Frequency locked loop (FLL) specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
Frequency Locked Loop (FLL) Specifications							
SID450	FLL_RANGE	Input frequency range.	0.001	–	100	MHz	Lower limit allows lock to USB SOF signal (1 kHz). Upper limit is for External input.
SID451	FLL_OUT_DIV2	Output frequency range. $V_{CCD} = 1.1\text{ V}$	24.00	–	100.00	MHz	Output range of FLL divided-by-2 output
SID451A	FLL_OUT_DIV2	Output frequency range. $V_{CCD} = 0.9\text{ V}$	24.00	–	50.00	MHz	Output range of FLL divided-by-2 output
SID452	FLL_DUTY_DIV2	Divided-by-2 output; High or Low	47.00	–	53.00	%	–
SID454	FLL_WAKEUP	Time from stable input clock to 1% of final value on Deep Sleep wakeup	–	–	7.50	μs	With IMO input, less than 10°C change in temperature while in Deep Sleep, and Fout ≥ 50 MHz.
SID455	FLL_JITTER	Period jitter (1 sigma) at 100 MHz	–	–	35.00	ps	50 ps at 48 MHz, 35 ps at 100 MHz
SID456	FLL_CURRENT	CCO + Logic current	–	–	5.50	μA/MHz	–

6.6.8 USB

Table 43 Frequency locked loop (FLL) specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/Conditions
---------	-----------	-------------	-----	-----	-----	-------	--------------------

USB Block Specifications

(table continues...)

6 Electrical specifications

Table 43 (continued) Frequency locked loop (FLL) specifications

Spec ID	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID322U	VUSB_3.3	Device supply for USB operation	3.15	–	3.6	V	USB Configured
SID323U	VUSB_3	Device supply for USB operation (functional operation only)	2.85	–	3.6	V	USB Configured
SID325U	Iusb_config	Block supply current in Active mode	–	8	–	mA	V _{DDD} = 3.3 V
SID328	Iusb_suspend	Block supply current in suspend mode	–	0.5	–	mA	V _{DDD} = 3.3 V, Device connected
SID329	Iusb_suspend	Block supply current in suspend mode	–	0.3	–	mA	V _{DDD} = 3.3 V, Device disconnected
SID330U	USB_Drive_Res	USB driver impedance	28	–	44	Ω	Series resistors are on chip
SID332U	USB_Pullup_Idle	Idle mode range	900	–	1575	Ω	Bus idle
SID333U	USB_Pullup	Active mode	1425	–	3090	Ω	Upstream device transmitting

Table 44 QSPI Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SMIF QSPI Specifications. All specs with 15-pF load. Measured from 50% to 50% waveform transitions.							
SID390Q	Fsmifclock	SMIF QSPI output clock frequency	–	–	80	MHz	LP mode (1.1 V)
SID390QU	Fsmifclocku	SMIF QSPI output clock frequency	–	–	50	MHz	ULP mode (0.9 V). Guaranteed by Char.
SID399Q	Clk_dutycycle	Clock duty cycle (high or low time)	45	–	55	%	
SID397Q	Idd_qspi	Block current in LP mode (1.1 V)	–	–	1900	μA	LP mode (1.1 V)
SID398Q	Idd_qspi_u	Block current in ULP mode (0.9 V)	–	–	590	μA	ULP mode (0.9 V)
SID391Q	Tsetup	Input data set-up time with respect to clock capturing falling edge	4.5	–	–	ns	–

(table continues...)

6 Electrical specifications

Table 44 (continued) QSPI Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID392Q	Tdatahold	Input data hold time with respect to clock capturing falling edge	1	–	–	ns	–
SID393Q	Tdataoutvalid	Output data valid time with respect to clock falling edge	–	–	3.7	ns	7.5-ns max for ULP mode (0.9 V)
SID394Q	Tholdtime	Output data hold time with respect to clock rising edge	3	–	–	ns	–
SID395Q	Tseloutvalid	Output Select valid time with respect to clock rising edge	–	–	7.5	ns	15-ns max for ULP mode (0.9 V)
SID396Q	Tselouthold	Output Select hold time with respect to clock rising edge	Tsclk/2	–	–	ns	Tsclk = Fsmifclk cycle time

6.6.9 Smart I/O

Table 45 Smart I/O Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID420	SMIO_BYP	Smart I/O bypass delay	–	–	2	ns	–
SID421	SMIO_LUT	Smart I/O LUT prop delay	–	8	–	ns	–

6.6.10 SD Host Controller and eMMC

Table 46 SD Host Controller and eMMC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
----------	-----------	-------------	-----	-----	-----	-------	------------------------

SD Host Controller and eMMC Specifications (SD Host clock (see the Clocking Diagram) must be divided by 2 or more when used as source in DDR modes. Specs are Guaranteed by Design.)

SID_SD390	SD_DS	I/O drive select	4	–	4	mA	drive_sel = '01' for all modes
SID_SD391	SD_TR	Input transition time	0.7	–	3	ns	–

SD:DS Timing

SID_SD392	SD_CLK	Interface clock period (LP mode)	–	–	25	MHz	(40-ns period)
SID_SD393	SD_CLK	Interface clock period (ULP mode)	–	–	8	MHz	(125-ns period)

(table continues...)

6 Electrical specifications

Table 46 (continued) SD Host Controller and eMMC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID_SD394	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD395	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD396	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	5.1	–	–	ns	–
SID_SD397	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	5.1	–	–	ns	–
SID_SD398	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	24	–	–	ns	–
SID_SD399	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	109	–	–	ns	–
SID_SD400	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	0	–	–	ns	–

SD:HS Timing

SID_SD401	SD_CLK	Interface clock period (LP mode)	–	–	45	MHz	(22.5-ns period)
SID_SD402	SD_CLK	Interface clock period (ULP mode)	–	–	16	MHz	(62.5-ns period)
SID_SD403	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD404	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD405	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	6.1	–	–	ns	–
SID_SD406	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	2.1	–	–	ns	–
SID_SD407	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	8	–	–	ns	–
SID_SD408	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	48.3	–	–	ns	–
SID_SD409	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	2.5	–	–	ns	–

(table continues...)

6 Electrical specifications

Table 46 (continued) SD Host Controller and eMMC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SD:SDR-12 Timing							
SID_SD410	SD_CLK	Interface clock period (LP mode)	–	–	25	MHz	(40-ns period)
SID_SD411	SD_CLK	Interface clock period (ULP mode)	–	–	8	MHz	(125-ns period)
SID_SD412	SD_CLK_DC	Duty cycle of output CLK	30	–	70	%	–
SID_SD413	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD414	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD415	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	3.1	–	–	ns	–
SID_SD416	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	0.9	–	–	ns	–
SID_SD417	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	24	–	–	ns	–
SID_SD418	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	109	–	–	ns	–
SID_SD419	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	1.5	–	–	ns	–
SD:SDR-25 Timing							
SID_SD420	SD_CLK	Interface clock period (LP mode)	–	–	50	MHz	(20-ns period)
SID_SD421	SD_CLK	Interface clock period (ULP mode)	–	–	16	MHz	(62.5-ns period)
SID_SD422	SD_CLK_DC	Duty cycle of output CLK	30	–	70	%	–
SID_SD423	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD424	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD425	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	3.1	–	–	ns	–

(table continues...)

6 Electrical specifications

Table 46 (continued) SD Host Controller and eMMC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID_SD426	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	0.9	–	–	ns	–
SID_SD427	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	5.8	–	–	ns	–
SID_SD428	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	48.3	–	–	ns	–
SID_SD429	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	1.5	–	–	ns	–

SD:SDR-50 Timing

SID_SD430	SD_CLK	Interface clock period (LP mode)	–	–	80	MHz	(12.5-ns period)
SID_SD431	SD_CLK	Interface clock period (ULP mode)	–	–	32	MHz	(31.25-ns period)
SID_SD432	SD_CLK_DC	Duty cycle of output CLK	30	–	70	%	–
SID_SD433	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	20	–	pF	–
SID_SD434	SD_CLK_CL	I/O loading at CLK pins	–	20	–	pF	–
SID_SD435	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	3.1	–	–	ns	–
SID_SD436	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	0.9	–	–	ns	–
SID_SD437	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	5	–	–	ns	–
SID_SD438	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	23.6	–	–	ns	–
SID_SD439	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	1.5	–	–	ns	–

SD:DDR-50 Timing

SID_SD440	SD_CLK	Interface clock period (LP mode)	–	–	40	MHz	(25-ns period).
SID_SD441	SD_CLK	Interface clock period (ULP mode)	–	–	16	MHz	(62.5-ns period)

(table continues...)

6 Electrical specifications

Table 46 (continued) SD Host Controller and eMMC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID_SD442	SD_CLK_DC	Duty cycle of output CLK	45	–	55	%	–
SID_SD443	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD444	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD445	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	3.1	–	–	ns	–
SID_SD446	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	0.9	–	–	ns	–
SID_SD447	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	5.7	–	–	ns	–
SID_SD448	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	24	–	–	ns	–
SID_SD449	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	1.5	–	–	ns	–

eMMC:BWC Timing

SID_SD450	SD_CLK	Interface clock period (LP mode)	–	–	26	MHz	(38.4-ns period)
SID_SD451	SD_CLK	Interface clock period (ULP mode)	–	–	8	MHz	(125-ns period)
SID_SD452	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD453	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD454	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	3.1	–	–	ns	–
SID_SD455	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	3.1	–	–	ns	–
SID_SD456	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	9.7	–	–	ns	–
SID_SD457	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	96.3	–	–	ns	–

(table continues...)

6 Electrical specifications

Table 46 (continued) SD Host Controller and eMMC Specifications

Spec ID#	Parameter	Description	Min	Typ	Max	Units	Details/ Conditions
SID_SD458	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	8.3	–	–	ns	–

eMMC:SDR Timing

SID_SD459	SD_CLK	Interface clock period (LP mode)	–	–	52	MHz	(19.2-ns period)
SID_SD460	SD_CLK	Interface clock period (ULP mode)	–	–	16	MHz	(62.5-ns period)
SID_SD461	SD_DCMD_CL	I/O loading at DATA/CMD pins	–	30	–	pF	–
SID_SD462	SD_CLK_CL	I/O loading at CLK pins	–	30	–	pF	–
SID_SD463	SD_TS_OUT	Output: Setup time of CMD/DAT prior to CLK	3.1	–	–	ns	–
SID_SD464	SD_HLD_OUT	Output: Hold time of CMD/DAT after CLK	3.1	–	–	ns	–
SID_SD465	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (LP mode)	5.3	–	–	ns	–
SID_SD466	SD_TS_IN	Input: Setup time of CMD/DAT prior to CLK (ULP mode)	48.6	–	–	ns	–
SID_SD467	SD_HLD_IN	Input: Hold time of CMD/DAT after CLK	2.5	–	–	ns	–

SD Host Block Current Specs

SID400SD	IDD_SD_1	SD Host block current consumption at 100 MHz	–	4.65	5	mA	SDR-50
SID401SD	IDD_SD_2	SD Host block current consumption at 50 MHz	–	3.75	4.3	mA	SDR-25

7.1 PSOC™ 6 MPN decoder

CY XX 6 A B C DD E - FF G H I J J K L

Field	Description	Values	Meaning
CY	Cypress	CY	Cypress - An Infineon Technologies company
XX	Firmware	8C	Standard PSOC™ part
6	Architecture	6	PSOC™ 6
A	Line	1	Programmable
		2	Performance
		3	Bluetooth® LE Connectivity
B	Internal Feature Code	1/2/3/4	Internal Feature Code (unused)
C	Memory Size (Flash/ SRAM)	0-3	Reserved
		4	256K/128K
		5	512K/256K
		6	512K/128K
		7	1024K/288K
		8	1024K/512K
		9	Reserved
		A	2048K/1024K
DD	Package	AZ, AX	TQFP
		LQ	QFN
		BZ	BGA
		FM	M-CSP
		FN, FD, FT	WLCSP

7 Ordering information

Field	Description	Values	Meaning
E	Temperature Range	C	Consumer
		I	Industrial
		Q	Extended Industrial
FF	Feature Code		Cypress internal
		S2-S6	
		BL	Integrated Bluetooth® LE
G	CPU Core	F	Single Core (Arm® Cortex® -M4F)
		D	Dual Core (Arm® Cortex® -M4F, Arm® Cortex® -M0+)
H	Attributes Code	0–9	Feature set
I	GPIO count	1	31-50
		2	51-70
		3	71-90
		4	91-110
JJ	Engineering sample (optional)	ES	Engineering samples or not
K	Die Revision (optional)		Base
		A1-A9	Die revision
L	Tape/Reel Shipment (optional)	T	Tape and Reel shipment

Base Features (available in all the part numbers)

Arm® Cortex®-M4F (CM4) and Arm® Cortex®-M0+ (CM0+), 3x DMA controllers, Quad-SPI Memory I/F, Segment LCD Drive, 1x 12-bit 2 MSPS SAR ADC, 2x LP-Comparators, 6x SCB (I2C / SPI / UART), 1x DeepSleep-SCB (I2C/SPI), 12x TCPWMs, 1x SD Host Controller

8 Packaging

8 Packaging

This product line is offered in 100 TQFP, 68 QFN, and 49 WLCSP packages.

Table 49 Package Dimensions

Spec ID#	Package	Description	Package Dwg #
PKG_1	100-TQFP	100 TQFP package	51-85048
PKG_2	68 QFN	68 QFN package	001-96836
PKG_3	49 WLCSP	49 WLCSP package	002-26627

Table 50 Package Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Units
T _A	Operating ambient temperature	–	–40	25	85	°C
T _J	Operating junction temperature	–	–40	–	100	°C
T _{JA}	Package θ_{JA} (100 TQFP)	–	–	37.2	–	°C/watt
T _{JC}	Package θ_{JC} (100 TQFP)	–	–	20.7	–	°C/watt
T _{JA}	Package θ_{JA} (68 QFN)	–	–	15.4	–	°C/watt
T _{JC}	Package θ_{JC} (68 QFN)	–	–	2	–	°C/watt
T _{JA}	Package θ_{JA} (49 WLCSP)	–	–	21.5	–	°C/watt
T _{JC}	Package θ_{JC} (49 WLCSP)	–	–	0.21	–	°C/watt

Table 51 Solder Reflow Peak Temperature

Package	Maximum peak temperature	Maximum time at peak temperature
All packages	260°C	30 seconds

Table 52 Package moisture sensitivity level (MSL), IPC/JEDEC J-STD-2

Package	MSL
100 TQFP and 68 QFN	MSL 3
49 WLCSP	MSL 1

Top View Dimensions:

- Total width: 16.00 ± 0.20
- Pin pitch: 0.39 ± 0.05
- Pin length: 7.6
- Inner width: 14.00 ± 0.10
- Lead thickness: 0.39 ± 0.05
- Lead height: 0.22 ± 0.05
- Stand-off: 0.05 MIN., 0.15 MAX.
- Seating plane offset: 0.08
- Lead angle: $12^\circ \pm 1^\circ$ (8X)
- Bottom lead length: 1.40 ± 0.05
- Bottom lead thickness: 0.20 MAX.

Side View Dimensions:

- Package height: 16.00 ± 0.20
- Inner height: 14.00 ± 0.10
- Lead height: 0.39 ± 0.05
- Lead thickness: 0.39 ± 0.05
- Lead angle: $0^\circ - 7^\circ$
- Radius: $R\ 0.08$ MIN., 0.20 MAX.
- Gauge plane offset: 0.25
- Reference dimension: 1.00 REF.

Corner Views:

- TOP LEFT CORNER CHAMFER
- OR
- 4 CORNERS CHAMFER

NOTE:

- JEDEC STD REF MS-026
- BODY LENGTH DIMENSION DOES NOT INCLUDE MOLD PROTRUSION/END FLASH
MOLD PROTRUSION/END FLASH SHALL NOT EXCEED 0.0098 IN (<0.25 mm) PER SIDE
BODY LENGTH DIMENSIONS ARE MAX PLASTIC BODY SIZE INCLUDING MOLD MISMATCH
- DIMENSIONS IN MILLIMETERS

9 Acronyms

9 Acronyms

Acronym	Description
3DES	triple DES (data encryption standard)
ADC	analog-to-digital converter
ADMA3	advanced DMA version 3, a Secure Digital data transfer mode
AES	advanced encryption standard
AHB	AMBA (advanced microcontroller bus architecture) high-performance bus, an Arm® data transfer bus
AMUX	analog multiplexer
AMUXBUS	analog multiplexer bus
API	application programming interface
Arm®	advanced RISC machine, a CPU architecture
BGA	ball grid array
BOD	brown-out detect
BREG	backup registers
BWC	backward compatibility (eMMC data transfer mode)
CAD	computer aided design
CCO	current controlled oscillator
ChaCha	a stream cipher
CM0+	Cortex®-M0+, an Arm® CPU
CM4	Cortex®-M4, an Arm® CPU
CMAC	cypher-based message authentication code
CMOS	complementary metal-oxide-semiconductor, a process technology for IC fabrication
CMRR	common-mode rejection ratio
CPU	central processing unit
CRC	cyclic redundancy check, an error-checking protocol
CSD	capacitive sigma-delta
CSV	clock supervisor
CSX	mutual capacitance sensing method. See also CSD
CTI	cross trigger interface
DAC	digital-to-analog converter, see also IDAC, VDAC
DAP	debug access port
DDR	double data rate
DES	data encryption standard
DFT	design for test
DMA	direct memory access, see also TD
DNL	differential nonlinearity, see also INL

9 Acronyms

Acronym	Description
DSI	digital system interconnect
DU	data unit
DW	data wire, a DMA implementation
ECC	error correcting code
ECC	elliptic curve cryptography
ECO	external crystal oscillator
EEPROM	electrically erasable programmable read-only memory
EMI	electromagnetic interference
eMMC	embedded MultiMediaCard
ESD	electrostatic discharge
ETM	embedded trace macrocell
FIFO	first-in, first-out
FLL	frequency locked loop
FPU	floating-point unit
FS	full-speed
GND	Ground
GPIO	general-purpose input/output, applies to a PSOC™ pin
HMAC	Hash-based message authentication code
HSIOM	high-speed I/O matrix
I/O	input/output, see also GPIO, DIO, SIO, USBIO
I ² C, or IIC	Inter-Integrated Circuit, a communications protocol
I ² S	inter-IC sound
IC	integrated circuit
IDAC	current DAC, see also DAC, VDAC
IDE	integrated development environment
ILO	internal low-speed oscillator, see also IMO
IMO	internal main oscillator, see also ILO
INL	integral nonlinearity, see also DNL
IOSS	input output subsystem
IoT	internet of things
IPC	inter-processor communication
IRQ	interrupt request
ISR	interrupt service routine
ITM	instrumentation trace macrocell
JTAG	Joint Test Action Group

9 Acronyms

Acronym	Description
LCD	liquid crystal display
LIN	Local Interconnect Network, a communications protocol
LP	low power
LS	low-speed
LUT	lookup table
LVD	low-voltage detect, see also LVI
LVI	low-voltage interrupt
LVTTL	low-voltage transistor-transistor logic
MAC	multiply-accumulate
MCU	microcontroller unit
MISO	master-in slave-out
MMIO	memory-mapped input output
MOSI	master-out slave-in
MPU	memory protection unit
MSL	moisture sensitivity level
Msp/s	million samples per second
MTB	micro trace buffer
MUL	multiplier
NC	no connect
NMI	nonmaskable interrupt
NVIC	nested vectored interrupt controller
NVL	nonvolatile latch, see also WOL
OTP	one-time programmable
OVP	over voltage protection
OVT	overvoltage tolerant
PASS	programmable analog subsystem
PCB	printed circuit board
PCM	pulse code modulation
PDM	pulse density modulation
PHY	physical layer
PICU	port interrupt control unit
PLL	phase-locked loop
PMIC	power management integrated circuit
POR	power-on reset
PPU	peripheral protection unit

9 Acronyms

Acronym	Description
PRNG	pseudo random number generator
PSOC™	programmable system-on-chip
PSRR	power supply rejection ratio
PWM	pulse-width modulator
QD	quadrature decoder
QSPI	quad serial peripheral interface
RAM	random-access memory
RISC	reduced-instruction-set computing
RMS	root-mean-square
ROM	read-only memory
RSA	Rivest–Shamir–Adleman, a public-key cryptography algorithm
RTC	real-time clock
RWW	read-while-write
RX	receive
S/H	sample and hold
SAR	successive approximation register
SARMUX	SAR ADC multiplexer bus
SC/CT	switched capacitor/continuous time
SCB	serial communication block
SCL	I ² C serial clock
SD	Secure Digital
SDA	I ² C serial data
SDHC	Secure Digital host controller
SDR	single data rate
Sflash	supervisory flash
SHA	secure hash algorithm
SINAD	signal to noise and distortion ratio
SMPU	shared memory protection unit
SNR	signal-to-noise ration
SOF	start of frame
SONOS	silicon-oxide-nitride-oxide-silicon, a flash memory technology
SPI	Serial Peripheral Interface, a communications protocol
SRAM	static random access memory
SROM	supervisory read-only memory
SRSS	system resources subsystem

9 Acronyms

Acronym	Description
SWD	serial wire debug, a test protocol
SWJ	serial wire JTAG
SWO	single wire output
SWV	single-wire viewer
TCPWM	timer, counter, pulse-width modulator
TDM	time division multiplexed
THD	total harmonic distortion
TQFP	thin quad flat package
TRM	technical reference manual
TRNG	true random number generator
TX	transmit
UART	Universal Asynchronous Transmitter Receiver, a communications protocol
ULP	ultra-low power
USB	Universal Serial Bus
WCO	watch crystal oscillator
WDT	watchdog timer
WIC	wakeup interrupt controller
WLCSP	wafer level chip scale package
XIP	execute-in-place
XRES	external reset input pin

10.1 Units of measure

Table 53 Units of measure

Symbol	Unit of measure
°C	degrees Celsius
dB	decibel
fF	femto farad
Hz	hertz
KB	1024 bytes
kbps	kilobits per second
hr	hour
kHz	kilohertz
kΩ	kilo ohm
ksps	kilosamples per second
LSB	least significant bit
Mbps	megabits per second
MHz	megahertz
MΩ	mega-ohm
Msps	megasamples per second
μA	microampere
μF	microfarad
μH	microhenry
μs	microsecond
μV	microvolt
μW	microwatt
mA	milliampere
ms	millisecond
mV	millivolt
nA	nanoampere
ns	nanosecond
nV	nanovolt
W	ohm
pF	picofarad
ppm	parts per million

(table continues...)

10 Document conventions

Table 53 (continued) Units of measure

Symbol	Unit of measure
ps	picosecond
s	second
sps	samples per second
sqrHz	square root of hertz
V	volt

Revision history
Revision history

Document revision	Date	Description of changes
**	2020-07-29	New datasheet
*A	2020-11-16	Updated Flexible clocking options, Block diagram, and CPUs. Updated list of application notes and links in 6 MCU resources. Removed Secure Boot information. Updated ModusToolbox™ IDE and the 6 SDK. Updated Quad-SPI/Serial Memory Interface (SMIF). Added InterProcessor Communication (IPC). Updated Analog subsystem diagram. Updated Direct Memory Access (DMA) controllers. Updated VDDA bullet in Power Supply Considerations. Updated the XRES bullet in Reset, SID15 Description and Conditions, and System resources (Power-On-Reset specifications) Updated SID7A conditions, SID7D description, and SID8 conditions. Integrated ECO erratum into External crystal oscillators. Added ECO Usage Guidelines table.
*B	2021-05-17	Updated Security terminology to Infineon standards. Changed BLE references to Bluetooth LE. Added Table 14 and Figure 18 in Electrical Specifications.
*C	2021-06-12	Updated Figure 6. Added note regarding unused USB pins in USB Full-Speed device interface, Power Supply Considerations, and Table 8. Updated SIDC1 description. Updated details/conditions for SID7A. Updated SID325U, SID328, and SID329 description.
*D	2022-04-12	Updated eFuse description in the Memory section.
*E	2022-05-05	Corrected typo in Figure 11 , Figure 12 , Figure 13 , and Figure 14 .
*F	2022-10-26	Added device identification and revision information in Features. Added spec SID304P. Updated PLL specifications and Clock system. Updated Protection units.

Revision history

Document revision	Date	Description of changes
*G	2025-11-28	Template update. Updated footnote numbers. Updated all PSoC™ to PSOC™ Updated cross references/hyperlinks in the following sections: • PSOC™ 6 MCU resources • ModusToolbox™ software • Functional description • Memory • Boot code • External crystal oscillators • CAPSENSE™ hardware subsystem • Pinouts

Important notice

The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics ("Beschaffenhheitsgarantie").

With respect to any examples, hints or any typical values stated herein and/or any information regarding the application of the product, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

In addition, any information given in this document is subject to customer's compliance with its obligations stated in this document and any applicable legal requirements, norms and standards concerning customer's products and any use of the product of Infineon Technologies in customer's applications.

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer's technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

Warnings

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.
