General Remarks

This voluntary report highlights key principles and processes for defining our corporate responsibility in the area of human rights due diligence in our own operations and global supply chains. The report provides insights into the requirements of the German Supply Chain Act (known in German as the Lieferkettensorgfaltspflichtengesetz - LkSG), and how these requirements are implemented at Infineon.

We are committed to respecting human rights in our own operations and across our global supply chains and drive this together with our partners.

We support and respect international standards and principles, such as the International Bill of Human Rights and its Universal Declaration of Human Rights, the Fundamental Principles of the International Labor Organization (ILO), the principles of the UN Global Compact, and the UN Guiding Principles on Business and Human Rights.

This declaration also serves as da foundation for ongoing dialog with internal and external stakeholders.

Furthermore, this standalone report provides detailed insights that complement the 2025 Sustainability Report. It applies to Infineon Technologies AG and all affiliated companies, collectively referred to in the following as “Infineon.”

Introduction

A Message from Corinna Wolf, Head of Global Sustainability and Human Rights Officer

Sustainable and legally compliant conduct is a fundamental part of Infineon's guiding principles and firmly anchored in our corporate strategy. At Infineon, human rights are non-negotiable. That is why internationally applicable human rights standards and principles form the basis for all our activities. This applies to work within our company, to cooperation with our business partners and to our global supply chain. Infineon takes responsibility and respects human rights.

We want to be a role model in translating the company's responsibility to respect human rights into global, effective and competitive business processes.

Respect for human rights is a task that affects all of us on a daily basis. We can only live up to our responsibility if we work together globally and fulfil our duties. Accordingly, it is imperative that we forge collaborative partnerships, adopt industry standards, and contribute our most innovative solutions to drive significant, collective outcomes.

June 2026

Corinna Wolf
Head of Global Sustainability and Human Rights Officer

Highlights

We are strengthening our support for foreign migrant workers through a new program. This includes upcoming internal guidelines on management and ethical recruitment, which will be formalized in a Foreign Migrant Worker Policy.

Our collaboration with NGOs and labor representatives provide essential insights into the conditions and circumstances of migrant workers, our prioritized vulnerable group.

For our globally positioned Human Rights Coordinators, a specific and risk-based training plan was offered and carried out by the Global Sustainability Team during the fiscal year.

As part of our commitment to due diligence in raw material supply chains, we have strengthened our responsible sourcing efforts and started expanding our scope of high-risk raw materials.

A - Strategy & Embedding

A1 - Risk management monitoring and accountability

Responsibilities for monitoring risk management in the reporting period

The responsibilities for monitoring risk management are defined in accordance with Section §4 (3) LkSG, and Infineon's group-wide risk and internal control system. On August 1st, 2024, Corinna Wolf was appointed by the Management Board as Human Rights Officer with all respective duties and responsibilities. The Human Rights Officer regularly updates the CSR[1] Board[2] on human rights related risks, impacts and opportunities, and their related policies, actions and targets in the value chain.

The CSR Board regularly reviews all topics relevant to sustainability considering the views and interests of our stakeholders by discussing topics from various areas of the organization. To ensure compliance with due diligence obligations under the LkSG, the Human Rights Officer monitors risk management and regularly informs the Management Board about the company's progress in this area.

The Human Rights Council, comprising representatives from relevant departments such as Procurement, Communications, Human Resources, Compliance and Legal, supports the Human Rights Officer in fulfilling her responsibilities. In addition to these efforts, the CSR Supply Chain Committee, which includes the Human Rights Officer, the Human Rights Office, and the Supplier Sustainability Team from the Procurement department, has the responsibility to review and monitor risk management for the supply chain.

Risk Management Reporting process

Infineon's central sustainability department – Global Sustainability (GS) – conducts regular risk management and reporting on human rights risks and violations for own operations and supply chain, in accordance with Infineon's Human Rights Due Diligence Management System (HRDDMS) and ensures regular reporting to the Human Rights Officer and other relevant stakeholders. For this, GS partners with various specialist departments such as the Procurement Supplier Sustainability Team, Compliance and Legal.

1 Corporate Social Responsibility
2 Two management board members and representatives from relevant departments such as Global Sustainability, Communication, Finance, Legal, Human Resources and Procurement

A2 - Policies and Human Rights Strategy implementation

Policies for respective relevant target groups and provision of the document

Infineon's CSR Policy reflects the company's commitment to sustainable business practices. The CSR framework is defined by the following key pillars: Human Resources Management, Diversity & Inclusion, Human Rights, and Occupational Safety & Health. The CSR Policy is supplemented by the company's Human Rights Policy Statement. With this statement, we commit to upholding and promoting human rights in own operations and along with the supply chain. A third key document is Infineon's Business Conduct Guidelines which outline the ethical and legal standards expected from all our employees and business partners. In addition, Infineon's Supplier Code of Conduct further outlines the company's expectations that business practices across the entire supply chain align with its principles on sustainability and human rights. The above-mentioned guidelines are made available online for all stakeholder groups and are regularly reviewed.

A3 - Anchoring the Human Rights Strategy within Infineon

Responsibility for implementation of the Human Rights Strategy within the different departments/business processes

Infineon's Global Sustainability Team is responsible for implementing the company's Human Rights Policy, Strategy and due diligence obligations in accordance with the LkSG. GS serves as a key hub for strategy, strategic policies and projects, subject matter and procedural advice, external reporting and stakeholder management. The GS department head is also the company's Human Rights Officer. In this role, the Human Rights Officer has the responsibility for regular reporting on the implementation of Infineon's Human Rights Strategy to the CSR Board.

The following section discusses the distribution of responsibility for implementing the strategy within the various specialist departments and the integration of the strategy into operational processes and procedures.

Human Resources

In the HR department, a dedicated contact person is responsible for operational implementation. This is based on already established processes for the support of Infineon employees.
The HR department is responsible for the implementation of human rights in areas such as recruiting, development and payment and in the event of reports and investigations it coordinates with the Compliance department as part of the company's own complaints procedure. For example, they also ensure employees take their full paid annual leave entitlements and in case of operational layoffs, they provide minimum consultation or notice periods well in advance. 75% of our workforce are covered by a collective bargaining agreement, which helps uphold key human rights principles. Through global initiatives and their activities in the context of Diversity & Inclusion, the department also contributes to the implementation of the strategy.

Site development & Management
Human Rights Coordinators have been appointed and trained at Infineon sites to implement the strategy. They are part of Infineon's Human Rights Due Diligence Management System. Their main responsibilities are, for example, to conduct internal investigations, risk assessments and preventive and remedial measures at their own site following the company standards. Human Rights Coordinators regularly exchange information and best practices across all sites.

Environmental Management, Occupational Safety & Health Management
Infineon's existing Integrated Management Program for Environment, Energy, Safety and Health (IMPRES), which is certified in environmental protection, occupational safety and health protection, aims to implement and document the legal requirements and the additional voluntary commitments in the areas of environmental protection, occupational safety and health protection. The management system is based on the ISO 45001, 14001 and 50001 standards. The so-called Environment, Safety and Health (ESH) managers are responsible for implementation on the Infineon sites. Responsibility is borne by the respective site management/management of the site or legal entity.

Communication & Corporate Affairs
Special contacts in the communication department also deal with the implementation of the strategy. They manage interview and press inquiries, interactions with politicians and create content for internal and external communication. The communications department coordinates closely with the relevant specialist departments. It is also involved in the publication of the policy statement.

Procurement & Supplier Management
A global team of specialists is responsible for implementing the strategy in Infineon's supply chain. In particular, they are responsible for risk analysis, prevention and mitigation measures for direct and indirect suppliers and all related processes.

In close collaboration with the GS department, the team drives the integration of sustainability requirements in procurement processes and strategies, based on the expectations outlined in Infineon's Supplier Code of Conduct. In addition to the global category management teams, local procurement teams at the main production sites support the implementation of requirements for on-site suppliers and contractors.

Legal & Compliance
Specific individuals have also been appointed in the Legal and Compliance departments to implement the strategy. They advise the Management Board, the Human Rights Officer and the specialist departments involved in implementation. In addition, the Compliance department is responsible for the complaint's procedure and the coordination of the resulting remedial measures in own operations.

Mergers & Acquisitions
The strategy was also integrated into the existing processes in the area of corporate transactions.

B - Risk analysis and preventive measures

B1 - Implementation, procedure and results of the risk analysis

Areas where a regular (annual) risk analysis was conducted during the reporting period to identify, weight and prioritize human rights and environmental risks according to the LkSG

– Own operations
– Supply Chain

Risk analysis procedure

The risk analysis, in line with the LkSG, consists of the process steps of risk identification, risk assessment, risk prioritization and documentation and is conducted annually (and if necessary, on an ad-hoc basis). In principle, the human rights and environmental risks in our own operations and in the supply chain are first analyzed abstractly and then concretely in the next step. As part of the abstract risk analysis, a deductive approach is taken in which general criteria such as country/industry specific risk indicators are used to gain an initial understanding of the risk situation and the probability of occurrence of potential violations in Infineon's supply chains and its own operations. The subsequent risk assessment and risk prioritization considers the criteria of appropriateness within the meaning of Section §3 (2) LkSG. As part of the concrete risk analysis, the abstract risks identified are reviewed using additional instruments (such as self-assessments and audits), weighted and prioritized. The findings from the risk analysis are incorporated into the improvement of the Human Rights Due Diligence Management System.

In addition, an ad-hoc risk analysis is conducted on a risk-based and incident-driven basis when further information reveals specific risks within our own operations and supply chains. Specific preventive and remedial actions are taken in case risks are substantiated after thorough assessment. For suppliers, these actions may include the following (in addition to Chapter B2):

– Supplier training
– Individual supplier coaching, including best practice sharing
– Targeted improvement measures (e.g., modification to policies or processes)
– Sustainability audits
– Evaluation of the business relationship (termination of the relationship as a last resort)

Reasons and specific occasions for the ad-hoc risk analysis

– Suspicion of retention of personal/travel documents
– Suspicion of payment of recruitment fees for migrant workers
– Suspicion of improper wage deductions
– Suspicion of harassment and discrimination
– Suspicion of environmental pollution in mining operations
– Suspicion of forced labor and child labor in mining operations
– Suspicion of freedom of association
– Suspicion of excessive working hours

Result annual Risk Management: Salient risks

Human Rights

– Disregard for occupational safety and health and work-related health issues
– Prohibition of forced labor and all forms of slavery
– Destruction of natural livelihoods due to environmental pollution
– Disregard of freedom of association and right to collective bargaining
– Unlawful violation of land rights
– Prohibition of unequal treatment in employment
– Prohibition of child labor
– Prohibition of withholding a fair wage
– Other prohibitions (e.g., wages and benefits)

Environment

– Prohibited production, use and/or disposal of mercury (Minamata Convention)
– Prohibited production and/or use of substances within the scope of the Stockholm Convention (Persistent Organic Pollutants - POPs) and non-environmentally sound handling of waste containing POPs
– Prohibited import/export of hazardous waste as defined by the Basel Convention

Result annual Risk Management: Prioritized risks and country hotspots

Human Rights

– Disregard for occupational safety and health and work-related health issues: Germany, Hungary, Malaysia, Singapore, China, USA, Mexico, Indonesia

– Prohibition of forced labor and all forms of slavery: Malaysia, Singapore, China, Taiwan

Environment

– Prohibited production and/or use of substances within the scope of the Stockholm Convention (POPs) and non-environmentally sound handling of waste containing POPs: Germany, Thailand, Hungary, Mexico, Malaysia, USA

B2 - Preventive measures

Stakeholder engagement process related to the annual risk analysis

Stakeholder collaboration and feedback is an important component of our Human Rights Strategy and annual risk analysis. Stakeholder input helps us identify human rights risks and assess potential impacts, improve our proposed preventive measures, and gauge satisfaction with our grievance mechanism. We conducted a stakeholder analysis following five steps, to identify specific groups who are or could be negatively impacted by our operations. In the 2025 fiscal year, we prioritized migrant workers as a vulnerable group to promote a collaboration project between Infineon and experts from a local NGO working to address working conditions and grievance mechanisms.

Throughout the fiscal year, we engage both formally and informally with investors, customers, shareholders, suppliers, representatives of vulnerable groups (e.g., via worker interviews during audits), NGOs, industry coalitions, trade unions, and international organizations, including:

– Automotive Industry Action Group (AIAG)
– European Semiconductor Industry Association (ESIA)
– Responsible Business Alliance (RBA)
– Responsible Minerals Initiative (RMI)
– Responsible Labor Initiative (RLI)
– Semiconductor Industry Association (SIA)
– Semiconductor PFAS Consortium
– UN Global Compact
– World Semiconductor Organization
– ZVEI (German Electro and Digital Industry Association)

Preventive measures to address, prevent and minimize human rights risks

Own operations

Risk-based control measures for forced labor and all forms of slavery include due diligence and monitoring of the recruitment process for migrant workers at high-risk manufacturing sites, ensuring migrant workers do not pay for recruitment, fees, or transportation, providing written contracts, that clearly state the voluntary nature of work and freedom to terminate employment with reasonable notice, verification of identification documents upon hiring, ensuring workers are free to enter/exit company-provided facilities (e.g., dormitories) without unreasonable restrictions, ensuring no illegal, punitive, or unauthorized deductions are made from wages, such as for safety deposits, and ensuring wages are paid directly to the worker in a timely manner. Infineon sites with higher risks are audited both internally and externally.

Infineon has an online human rights training program worldwide, which is mandatory for all employees and must be repeated at regular intervals. Among other things, this training covers Infineon's human rights and environmental expectations as well as LkSG protected legal positions. In addition, Infineon has specifically trained its human rights coordinators on risk-relevant topics. Infineon also provides a mandatory online environment, safety and health training at all its sites on general safety, environmental protection areas, occupational safety risks and behavior expectations.

A policy statement (Infineon Human Rights Policy) is published and anchored as described above. This forms the basis for all of the company’s human rights and environmental due diligence obligations and

updated annually. It is available in different languages, e.g., Malay language, to address employees located Malaysia, a country in which the risk of debt-bonded labor due to recruitment fees is considered higher than in other countries. In addition to that, a Foreign Migrant Worker Policy as corporate guideline, especially addressing foreign migrant workers, is planned.

Supply Chain

Infineon has adopted appropriate procurement strategies and purchasing practices to minimize our contribution to negative impacts on direct suppliers. These practices align with industry standards and support the development of long-term, trusted relationships with suppliers. Infineon continuously reviews its procurement strategy, aligns it with new findings regarding human rights and environmental risks and monitors improvements. In addition, Infineon counters the challenges resulting from the nature and scope of its business activities, such as a strong presence in Asia, with a globally positioned procurement team.

By clearly communicating Infineon's sustainability requirements to direct suppliers and embedding these requirements in both supplier selection and contractual agreements, we emphasize Infineon's refusal to tolerate human rights and environmental violations within its supply chain. Significant direct suppliers commit to Infineon's Supplier Code of Conduct – which is based on internationally recognized guidelines, such as the principles of the UN Global Compact and the International Labor Organization as well as the Responsible Business Alliance (RBA) industry standard – by signing a contract.

Web-based and on-site training is offered to suppliers free of charge to support them with implementing their own due diligence obligations. In addition, all procurement staff are required to complete our mandatory in-house Human Rights Introduction training and are educated to explain Infineon's requirements to suppliers via specialized trainings and eLearning.

Supplier audits and on-site vendor inspections are part of the basic requirements and are common and reasonable means of control that are known to suppliers. Specifically related to the prohibition of forced labor and all forms of slavery, inspections of local service providers (on-site suppliers and contractors) at Infineon production sites are carried out in accordance with contractual due diligence obligations.

All direct suppliers are continuously screened for risk indicators via an AI-driven media monitoring of an external service provider who also supports the annual risk analysis for suppliers. Based on this continuous monitoring carried on at the direct supplier level, we may also be informed about their connection to indirect suppliers. Next to our Infineon Integrity Line, this functions as an early warning system and supports proactive risk management. Moreover, Infineon works in collaboration with the Responsible Business Alliance (RBA), other industry peers, and direct suppliers to address potential negative impacts in its supply chain collectively.

To support our direct suppliers in managing risks within their own supply chains, Infineon communicates prioritized risks – where possible – while highlighting their potential adverse impacts.

Within Infineon's Conflict Minerals Program, we assess and require suppliers of conflict minerals (3TGs) and cobalt to comply with the Responsible Minerals Initiative's (RMI) Responsible Minerals Assurance Process (RMAP) or an equivalent audit program. This Audit program addresses the risks associated with the extraction, trade and processing in conflict-affected regions (e.g., the DRC[1]), aiming to prevent the financing of armed groups, reduce negative social impact, and ensure a conflict-free, transparent supply chain. Suppliers must report smelter data via standardized reporting templates (CMRT/EMRT[2]).

Our publicly available Conflict Minerals Policy describes how Infineon sources these metals, defines supply chain requirements, and includes the obligation to pass these requirements on to indirect suppliers.

Looking ahead, Infineon is expanding its due diligence scope beyond 3TGs and cobalt to include other high-risk raw materials. Aligned with the OECD Guidelines for Due Diligence in Mineral Supply Chains from Conflict-Affected and High-Risk Areas, we are developing a comprehensive system to manage raw material supply chains. This includes a multi-level approach to implement preventive measures for our prioritized high-risk raw materials. Consequently, and among other things, we are revising our Conflict Minerals Policy to establish a new, more comprehensive Responsible Raw Materials Policy..

1 Democratic Republic Congo
2 Conflict Minerals Reporting Template/Extended Minerals Reporting Template

C - Identification of violations and remedial measures

C1 - Identification of violations, remedial and corrective measures

Process description to detect violations

Own operations

Violations can be identified as part of the annual risk analysis, such as through self-assessment questionnaires at the sites, control measures (internal and external audits), information from the management at the respective site or the Human Rights Coordinators. In addition, information on violations can be submitted via the online whistleblower portal (Infineon Integrity Line). In addition, the Workers Council can point out potential violations and employees can draw the attention of the Human Rights Officer to violations at any time.

Supply Chain

Violations can be identified as part of the annual risk analysis, such as through supplier self-assessment questionnaires and supplier audits. Information on violations can be submitted via the online whistleblower portal (Infineon Integrity Line). Another way of identifying violations at direct suppliers is through information received from third parties, for example via the RBA organization, customers and/or media reports.

Violations during the reporting period and corrective actions implemented

Supply Chain

We identified an actual human rights violation in our supply chain involving forced labor. The violation concerned the unauthorized retention of personal documents (passports) of migrant workers by an on-site supplier. Following an investigation, several immediate corrective actions were taken, including the return of documents and a focused audit and contract review for the respective on-site supplier. The violation was remediated, and corrective actions were completed. We also used the actual violation to intensify our prevention of forced labor-related risks among migrant workers in the supply chain.

D - Complaints procedure

D1 - Establishment of our participation in a complaints procedure

Description of the complaints procedure process description, coverage and responsibilities

In-house complaints procedure

Employees can report violations directly to their line manager at any time. In addition, several reporting channels are available for employees and third parties, especially in the event of human rights and environmental risks or violations within the company's own operations and supply chain.

Integrity Line

Infineon's offers an multilingual (11 languages) own online whistleblower portal. Only selected employees of the Infineon Compliance department are authorized to work with the whistleblower portal. Stakeholders can report suspected human rights violations via phone, email, post to the Human Rights Officer, the Compliance department or anonymously via the portal. All reports are handled confidentially with protection against retaliation. If there are human rights concerns, the Human Rights Officer's team investigates them in order to implement early corrective actions and prevent serious consequences for the individuals concerned.

Reports can also be made via the following channels:
- By email: Compliance@infineon.com
- By telephone: +49 89 234-83199
- By post: Infineon Technologies AG, IFAG CO, Am Campeon 1-15, 85579 Neubiberg, Germany

The Integrity Line is publicly accessible for all people (including own employees, communities close to own sites, employees at suppliers and external stakeholders such as NGOs, trade unions, etc.) and can be found on the relevant websites and intranet pages. A reference to the Infineon Integrity Line is also included in the Supplier Code of Conduct.

Infineon's complaint's procedure, which are available in eight languages, describe which reporting channels (reporting to the line manager, online whistleblower portal, email, telephone, post) are available in the event of a violation of laws or guidelines. In addition, the handling of notifications or reports is clearly defined, and the handling process is presented transparently in various steps.

Compliance with applicable laws and internal guidelines is a top priority for Infineon and is an integral part of responsible corporate governance. Therefore, all Infineon employees are encouraged to report violations of laws or policies. The goal of the reporting procedures is to prevent

violations of laws or policies by identifying existing risks as early as possible, eliminating potential violations and, if necessary, providing access to further appropriate remediation.

Infineon's Code of Conduct (Business Conduct Guidelines) enforces a zero-tolerance policy for compliance violations across key areas: human rights, corruption, bribery, misuse of company assets, anti-competitive behavior, and data protection. It also strictly prohibits operational breaches, including violations of environmental or safety regulations, export controls, money laundering, financial crimes, conflicts of interest, and misconduct such as harassment or discrimination

The relevant Compliance Officer is responsible for processing reports. The Human Rights Officer is always consulted when violations of the Infineon Human Rights Policy are reported.

Reports are processed by the Compliance department. Processing is conducted by the Compliance Officer responsible. In certain countries, this task is assigned to a local compliance office. The Human Rights Officer is involved if and to the extent that violations of Infineon’s Human Rights Policy are reported.

Based on the annual risk analysis conducted by the GS department, the whistleblower portal was further developed and expanded to include three additional languages. The goal is to further improve the system to address existing risks related to foreign migrant workers within our own operations and supply chain.

D2 - Implementation of the complaints procedure

Types of complaints and information received during the reporting period

In the reporting period, thirty-three (33) reports were received via the Infineon Integrity Line under the heading of human rights. As a first step, these reports were promptly checked for plausibility and categorized. In addition, nineteen (19) further reports were received via other reporting channels:

– Prohibition of forced labor and all forms of slavery
– Prohibition of unequal treatment in employment
– Prohibition of withholding a fair wage.
– Disregard of occupational safety and health and work-related health issues.
– Destruction of natural livelihoods through environmental pollution
– Freedom of association and right to collective bargaining
– Other prohibitions

E - Review of risk management

Area and description of the risk management assessment in terms of appropriateness and effectiveness

Risk analysis and risk prioritization process

To measure the effectiveness of the risk analysis, KPIs such as the completion rate of the supplier self-assessments and a target number of supplier audits have been applied. These KPIs allow Infineon to derive insights into the success of the risks analysis process and ensure that high-risk suppliers are adequately prioritized and addressed.

Preventive measures

Training courses are reviewed on the basis of the number of participants and participant evaluations. This allows information to be gathered on training optimization and the effective communication of content. Furthermore, the agreement rate with our Supplier Code of Conduct is tracked for strategic and high-risk suppliers to ensure suppliers' awareness of expected requirements.

Complaints procedure

The effectiveness of the whistleblower system is reviewed on the basis of the number and characteristics of reports received.

Other

An internal human rights awareness survey was conducted to assess if Infineon employees know the content of the Human Rights Policy and how to report a human rights violation. Suppliers were surveyed for their awareness of the Supplier Code of Conduct and Infineon's Integrity Line.

Conclusion and outlook

This Report serves to highlight our commitment to respect human rights and to communicate our progress in embedding due diligence in our own business area and supply chains. While we are proud of the progress made so far, we remain dedicated to enhancing our internal processes, strengthening our grievance mechanisms, and engaging with stakeholders to address systemic human rights challenges identified. It is also a supplement to existing other reports and policies:

– Sustainability Report
– Human Rights Policy
– Supplier Code of Conduct
– Responsible Raw Materials Policy
– CSR Policy
– Business Conduct Guidelines
– IMPRES Policy

To learn more about our approach and in terms of questions, please visit Infineon Human Rights or Sustainable Supply Chain websites.
