Senior Staff Engineer Process Integration (Discretes Product Matrix-1)

Job description

To formulate and drive process improvement plan based on systematic analysis of inline/PCM/Yield data to meet quality and yield plan/target.

In your new role you will:

- To own processes and manage independently on process/Inline/PCM/yield issues to meet line yield/FCT yield/PCM yield target performance.
- To provide production and design support related to process integration by improving yield, discussing design problems if any.
- To formulate and drive process improvement plan based on systematic analysis of inline/PCM/Yield data to meet quality and yield plan/target.
- To execute systematic technology transfers from reference fab for mass production ramping, to improve process robustness and manufacturability.
- To work closely with modules engineers on high DD and inline excursions and find root causes and provide working solutions.

Profile

You are best equipped for this task if you have:

- Min 5+ years working experiences semiconductor- frontend in fab preferred.
- Fluent in English and good in English writing.
- Min Degree holder with min second upper.
- Good working attitude.
