

## Senior Engineer Process (Deposition)

### Job description

Monitor process performance indices on qualified processes and establish good controls to maintain process performance.

In your new role you will:

- Perform process engineering and production support in one selected assigned area of semiconductor process.
- Lead, develop evaluation plans & criteria for the continuous process improvement in process stability.
- Lead and support troubleshooting between Manufacturing/ Mnt/ UPS/ LBS/ Technology/ Quality to identify hypothesis and root causes of process and quality deviation.
- Monitor process performance indices on qualified processes and establish good controls to maintain process performance.
- Lead tools installations as well as process & technology transfers to meet company targets, following standard process & tool release business flow. Characterize process and equipment system to maintain and improve capability and process control
- Perform FMEA, risk assessment of process changes, with proper process change management.
- Ensure the robustness of processes with Advance Process Control (APC), Statistical Process Control (SPC) and other process control tools.
- Initiate, coordinate and lead excursion prevention, cost reduction, quality and productivity improvement projects.
- Organize and oversee training for Associate engineer or new engineer to upgrade their technical skills.

### Profile

You are best equipped for this task if you have:

- 4 year technical degree in an engineering discipline (Electrical, Mechanical, Computer Science, Materials Engineering, Industrial Engineering and other related areas).
- Strong knowledge of PVD Sputtering Processes or Deposition processes related.
- Evaluates situations with some level of complexity using information.
- Strong communication skills and ability to interact with all levels of employees.

### At a glance

Location: **Kulim (Malaysia)**  
Job ID: **344371**
