

## Engineer Process

### Job description

#### Job Description

- 1.Perform process engineering and production support in one selected assigned area of semiconductor process.
- 2.Work as a team between Manufacturing/ Mnt/ UPE/ LBS/ Technology/ Quality to resolve production and quality issues and reduce production line disruptions
- 3.Support tools installations as well as process & technology transfers to meet company targets, following standard process ramp; tool release business flow
- 4.Perform FMEA, risk assessment of process changes, with proper process change management
- 5.Ensure the robustness of processes with Advance Process Control (APC), Statistical Process Control (SPC) and other process control tools.
- 6.Manage recipe and procedural control. Develop and maintain process ramp; operation specifications as well as Out of Control Action Plan (OCAP)
- 7.Initiate, coordinate and support excursion prevention, cost reduction and quality improvement projects

#### Support Group (Inline Analytics)

- 1.To operate all Analytical Tools, ICPMS, AAS, TXRF, GCMS, IC, CE at trace level analysis
- 2.To support routine analysis on semiconductor samples (e.g. wafers, chemicals, UPW, parts in a clean room environment)
- 3.Method Optimization and New Set-up for new request
- 4.Able to handle basic maintenance on these Analytical Tools
- 5.ISO audit for Lab Management

### Profile

#### Job Specification

- 1.Fresh graduate or approximately 0-3years of relevant experience in semiconductor industry.
- 2.Bachelor or Master degree in an engineering discipline (Chemical, Mechanical, Nuclear Science).
- 3.Good communication skills in English and ability to interact with all levels of employees
- 4.Must able to work in shift pattern inside clean room environment
- 5.Business knowledge is more strategic for the organization
- 6.Ability to identify and resolve problems
