

Lead Principal Engineer Process Integration

Job description

Solve complex technical issues using methodical problem-solving techniques focusing on Front End -Back End and Back End-Back End integration (Pre-assembly, assembly, test); as well as the interactions of 5M.

In your new role you will:

- Responsible for technical/ process governance and complexity management mainly with regards to new package/ product introduction, Process Block Catalogue, and Problematic & Good series of products (improvement of production stability through product/ package redesign).
- Able to originate new thoughts, set technical directions, and subsequently implement (continuous) improvements by installing, monitoring, and analyzing a set/sets of leading and lagging indicators; e.g. quality indexes.
- Responsible to proactively manage external customers'/ internal stakeholder's expectations and communicate effectively especially in pressing situations.
- Interface with suppliers and cluster functions especially Purchasing and Quality Management to set up and drive cost productivity and quality projects/ programs. Interface with QM, DEV, TEX, and Divisions (ATV/PMM/IPC) / Business Lines.
- Own/ Coach key projects (especially with respect to Quality & Productivity).
 Responsible for a pool of resources and develop enablers to achieve project KPIs.
- Responsible for timely staffing, developing, and evaluating staff. Responsible for the development and sustenance of technical engineering know-how of workforce.

Profile

You are best equipped for this task if you have:

- Degree/Master/Ph D. Degree in Chemical Engineering/ Mechanical Engineering/ Material Science/ Physics/ Chemistry/ Electrical/ Electronics.
- More than 10 years of working experience specifically in semiconductor backend processes and good knowledge of interaction effects. Good ability to integrate all phases of engineering for cost, quality, and problem-solving.
- Process and Equipment Engineering knowledge
- Analytical and Problem Solving Skills for complex technical issues
- Front End -Back End and Back End-Back End (Pre-assembly, assembly, test) integration knowledge
- Process-equipment-materials integration knowledge
