

Senior Staff Engineer - .NET lead

Job description

Infineon developed a strategy to harmonize software development methodology and have common automation framework that enables development and release of software being developed by different teams using different technologies. Infineon searches a senior person that develop and drive this new methodology forward:

- Understand SDLC (software development life cycle)
- Develop with design engineers, methods that could enable them to build and release their software easily
- Drive harmonization efforts in terms of different tools/frameworks that are used for different stages of SDLC
- Develop demonstrators for the tools/frameworks selected
- Use and integrate different industry standard tools/frameworks that fit the different parts of SDLC
- Develop an infrastructure which can be rolled out to all software teams

Infineon developed a strategy to harmonize software development methodology and have common automation framework that enables development and release of software being developed by different teams using different technologies. Infineon searches a senior person that develop and drive this new methodology forward:

- Understand SDLC (software development life cycle)
- Develop with design engineers, methods that could enable them to build and release their software easily
- Drive harmonization efforts in terms of different tools/frameworks that are used for different stages of SDLC
- Develop demonstrators for the tools/frameworks selected
