

Project Manager Software

Job description

Infineon Technologies is seeking a Project Manager with experience in wireless embedded systems development to join our team in Bangalore working on building the next generation of IoT software and silicon. Your responsibilities would include managing new development projects consisting of over 20 engineers working around the globe. You will monitor and report on overall project status by summarizing key project metrics both across the team and to upper management. You will be responsible for ensuring that work is delivered on time and budget. The right candidate will focus on early detection of risks and recommend mitigation actions to prevent impact to the project.

You will be expected to understand technical details and a background in software or silicon development with experience across the full product development cycle is desired.

Responsibilities

- Manage global matrix product teams of 20+ engineers
- Detect and escalate issues before they impact the project
- Collect and present high level accurate status reports to executive management
- Understand technical issues and risks and ensure appropriate tradeoffs are made
- Monitor and enforce compliance to business processes

Profile

- 5+ years total experience as a software or silicon developer with at least 2+ years Project Management experience
- Experience with any agile software development (scrum, kanban, lean, etc.)
- JIRA or equivalent work tracking software experience
- Excellent verbal and written English communication skills
