

Lead Principal Applications Engineer

Job description

We are looking for a Lead Principal Application Engineer with the ability to drive strategy and realization plan within areas of focus for Wi-Fi features and newer standards relevant for IoT solution.

- Work with marketing to define the features applicable for specific verticals and drive that with cross functional team
- Define and drive performance analysis per customer use cases
- Own the data representation for key WiFi features across our solution including datasheet and other application notes
- Work with marketing and customers for use case analysis and bridge that with WPP collateral requirements
- Work with marketing and applications and R&D teams to respond to customer RFPs
- Be the mentor for junior engineers and work closely with the team to define the right collateral and features for customer use cases.

Profile

Qualifications/Requirements

- Bachelor's Degree in Computer Science or Electronics
- A minimum of 15 years of professional experience in WiFi (across different standard and features) and embedded development

Desired Characteristics

- Excellent communication skills and the ability to interface with senior leadership with confidence and clarity
- Experience of driving activities to influence code quality and process rigor
- Enthusiastically follow technology trends, software engineering best practice and technologies while enjoying the challenge of solving complex problems
- Ability to drive strategy and realization plan within areas of focus for WiFi features and newer standards relevant for IoT solution
- Interfacing with multiple cross functional teams as well as close interaction with customers
- Collaborate with product marketing and software, design and other teams to define the product scope
