

Senior Staff Engineer Test Data Management (f/m/div)*

Job description

Are you passionate about data formats, encryption, processing and transfer? Additionally, are you enthusiastic about the growing challenges when scaling the data volume and complexity in a world-wide corporate supply chain involving suppliers? Do you want to drive projects actively in an international environment? Then this is your chance! As a Senior Staff Engineer for Test Data Management you get the opportunity to gain insights in a global state-of-the-art semiconductor production chain. You manage the way that production data is generated by thousands of machines worldwide and is transferred between corporate systems. Apply now!

In your new role you will:

- Be **business application owner** for corporate manufacturing applications
- Across all factories world-wide, **define, harmonize, roll-out** and **maintain** Infineon's
 - **wafer map management** process
 - **product testing result management** process
- Support factories to **set up data paths** between production floors and internal server farms
- **Define** and **manage new requirements** and **drive the implementation** projects
- **Moderate user communities** for both toolchains and coordinate related activities

Profile

You take the initiative and act responsibly while you like to manage risks and make decisions. Furthermore, you live up to high quality standards and you think and act in a cooperative way.

You are best equipped for this task if you have:

- A **degree in Electrical Engineering, Computer Science** or a similar qualification
- At least **5 years work experience** in **corporate data management**
- Excellent knowledge in **data transaction** and **data protocols**
- Founded experience in **network architectures** and **security**
- Know-how in **software system testing**
- Excellent **communication** and **moderation skills** in an international environment

Why Us

Part of your life. Part of tomorrow.

We make life easier, safer and greener – with technology that achieves more, consumes less and is accessible to everyone. Microelectronics from Infineon is the key to a better future. Efficient use of energy, environmentally-friendly mobility and security in a connected world – we solve some of the most critical challenges that our society faces while taking a conscientious approach to the use of natural resources.

The **backend** segments enable the development of comprehensive innovation across the entire value chain: starting with chip manufacturing, to wafer testing, preassembly, package development and development of new materials. The backend cluster combines the competencies for planning, productivity, innovation and quality, assembly and testing.

** The term gender in the sense of the General Equal Treatment Act (GETA) or other national legislation refers to the biological assignment to a gender group. At Infineon we are proud to embrace (gender) diversity, including female, male and diverse.*
