

Senior Specialist IT

Job description

In your new role you will:

- IT Systems engineer for IT service automation to provide stable and performant IT solutions for Software & Hardware Development at Infineon.
- Provide and automate IT systems for Continuous Integration and Continuous Deployment/Delivery to Infineon's Engineering & SW development teams that increase their productivity and measure their product quality.
- Contribute towards strategic initiatives, projects and taskforces against committed plans in collaborative multi-organizational and multi-geo team setup
- Contribute to expert exchanges and sustainable dialogs that improve Infineon's software development practice.
- Establish lasting relationships with your users and collaboration partners.
- Drive for synergies in practice & tooling. Build reusable assets for our Infineon SW development toolchains, our user documentation and training material

Profile

You are best equipped for this task if you have:

- Basic experience in writing clean, readable source code and applying object-oriented and script programming. Preferred programming languages skills: Python
- Experience in working in Windows, MacOS and Linux environments
- Experience in operating IT systems, application lifecycle management, SDLC
- Knowledge in CI/CD, version control and test automation applications
- Understanding of containerization technologies
- Basic SW engineering and IT technical skillset based on University Degree in Computer Science, Information Technology or equivalent
- 3+ years of comparable experience in SW development, Continuous Integration and Agile development. You have a strong agile mind-set
