

Lead Principal Engineer Systems Design

Job description

As a Senior member in WLAN systems team you will play a key role in shaping the technical roadmap and drive the wireless technology in WLAN. Your work will include putting necessary technical planning and drive development & implementation hardware accurate reference model for wireless LAN PHY baseband processing in pre-Silicon phase to PHY-Firmware bring-up in post Si phase.

As a Senior member in WLAN systems team you will play a key role in shaping the technical roadmap and drive the wireless technology in WLAN. Your work will include putting necessary technical planning and drive development & implementation hardware accurate reference model for wireless LAN PHY baseband processing in pre-Silicon phase to PHY-Firmware bring-up in post Si phase.

Your key responsibilities in Pre-Si design phase would be lead work in

- Design, analysis, development & maintenance of WLAN Physical layer reference model in C/C++, System C and Matlab
- Identify post-Si bring-up issues and articulate them into improvements in PHY layer design
- Use case definition and generation of reference vectors for pre-Si RTL verification of the PHY blocks and working with the PHY design team to complete design verification.
- Collaborating with RF and Analog design teams in creation of the specs of the RF and modelling it in the simulation environment.
- Working with various Cross functional teams like MAC systems, Firmware development, Hardware board design teams, RF design teams to define, document the interfaces to PHY layer and model them in reference design to enable verification

In Post- Silicon phase, your core responsibilities would involve leading a team to

- Functional validation of WLAN PHY and its interfaces on emulation platforms
- Hands on silicon bring-up and validation with characterization over PVT to meet KPI's in the datasheet in the test/productional environment.
- Debugging and solving cross layer customer issues – working across boundaries of WLAN PHY, MAC, RF and board – while staying focused on the underlying problem.

You role would also require you to work with team members to

- Identifying issues and proposing design and methodology improvements while driving compliance of existing design flow
- Mentoring and training other team members as necessary
- Creating collateral for internal and external use as necessary

Profile

Must have lead systems design activity in at-least 1 new design in a wireless standard from concept to implementation to commercialization with a team size of at least 7 or more members

At a glance

Location: **Bangalore (India)**
Job ID: **339644**
Start date: **as soon as possible**
Entry level: **5+ years**
Type: **Full time**
Contract: **Permanent**

Apply to this position online by following the URL and entering the Job ID in our job search:

Contact

Jyoti.Vimal@infineon.com

Should have demonstrated prior experience in putting together POCs for technology demonstration preferably with field work

Must possess ability to Interface with Sr management and aid business decisions by providing necessary technical inputs

Must have experience of working on a wireless standard UWB/802.11/802.15/802.16 /3GPP standards

Requires solid knowledge of Communication Theory /Signal processing concept /Wireless Communication and ability to apply these concepts to analyse and solve system level issues.

Must have knowledge of PHY layer blocks like Carrier detection, Timing and frequency synchronization, AGC, filters, demodulators, tracking loops, decoders and their practical implementations in a wireless/wireline modem

Good understanding of RF impairments and system level understanding of RF architectures

Hands on Post-silicon experience of bring-up of chips with familiarity of typical lab equipment like Spectrum analyzer, signal generators and general lab automation

Hands on experience of programming in Matlab/C fixed point models is essential

Good debugging skills in C, using gdb, analysing crashes using stack trace are essential

Knowledge of C++/Tcl/Python/System C and HLS tools would be plus

Ability to work with large, global, cross functional team

Good communication and presentation skills.

Benefits

- **Bangalore:** Coaching, mentoring & networking possibilities ; Wide range of training offers & planning of career development; Regional and local talent programs; International assignments; Career paths: Management career, Project management career, Technical ladder career, Individual contributor career, Professional career; Flexible work timing, Part time work, Work from home; Home office; Health & wellness reimbursement, Employee motivation forum, Spoorthi – Diversity club, Master health check up, Health promotion campaigns; Crèche facility; Annual success bonus; Medclaim (dependents & top up), Personal accident, Term life; National Pension Scheme; Health promotion programs; Statutory benefits; Access for wheelchairs; On-site canteen; Paid sick leave, long term illness leave; On site Yoga classes, Sports club

Why Us

Part of your life. Part of tomorrow.

We make life easier, safer and greener – with technology that achieves more, consumes less and is accessible to everyone. Microelectronics from Infineon is the key to a better future. Efficient use of energy, environmentally-friendly mobility and security in a connected world – we solve some of the most critical challenges that our society faces while taking a conscientious approach to the use of natural resources.
