

## Engineer Process Development Thinning (Unit Process Development)

### Job description

Perform process transfer, process development, optimization and qualification for technology transfer and/or used tool transfer.

In your new role you will:

- Perform process transfer, process development, optimization and qualification for technology transfer and/or used tool transfer.
- Development of innovative processes and process characterization methodologies for existing and new technologies.
- Partnering with production module/department, technology integration, planning, business divisions and global process development counterparts in mapping and enabling future technologies.
- Perform process stability, sustaining and improvement to meet overall company targets.
- Perform integration block re-use and tool extendibility to maximize re-use strategy
- Perform FMEA, risk assessment of process changes and process change management.
- Initiate, coordinate and support excursion prevention, productivity and quality improvement projects.
- Interface between production module/department, technology integration & quality engineering on daily routines.

### Profile

You are best equipped for this task if you have:

- Bachelor/Master/PhD degree in Engineering, Material Science or Applied Science
- At least 3 years working and hands-on experience in wafer fab substrate thinning processes (grinding, tape & detape, mounting & demounting, glass carrier systems), and related equipment engineering.
- Experience and have good methodical technique in technology synchronization and process harmonization
- Good knowledge in semiconductor unit processes, process integration, device physics and products will be of added advantage
- Good hands-on experience on wafer fabrication processes, equipment and metrology

### At a glance

Location: **Kulim (Malaysia)**  
Job ID: **344505**  
Start date: **as soon as possible**  
Entry level: **0-1 year**  
Type: **Full time**  
Contract: **Temporary**
