

Engineer Process (Plasma Etch)

Job description

Production line sustaining (lot disposition, process control, line issue troubleshooting, process release).

In your new role you will:

- Production line sustaining (lot disposition, process control, line issue troubleshooting, process release).
- Improvement projects (process margin/ Cpk/ yield improvement, cost reduction, capacity improvement).
- Technology/ process transfer.
- New tool startup.
- Working experience as process engineer/ process development in semiconductor industry.
- Knowledge of Statistical Process Control, Failure Mode Effect Analysis, Design Of Experiment.
- Working experience with LAM/ AMAT etch tools, ashers, metrology equipment (CDSEM, optiprobe).

Profile

You are best equipped for this task if you have:

- University education (Bachelor, Masters) in Chemistry, Electrical & Electronic Engineering, Material Science, Mechanical Engineering, Microelectronics, Physics, Process Engineering.
- Preferably with at least 2 years of plasma etch experience in wafer fab. Fresh graduate may also apply.
- Good command of English language.
- Preferably with process engineering experience in production environment.
- Candidate with experience of plasma etch in wafer fab will be considered for more senior position.

Benefits

- **Kulim:** Coaching, mentoring networking possibilities; Wide range of training offers & planning of career development; International assignments; Different career paths: Project Management, Technical Ladder, Management & Individual Contributor; Flexible working conditions; Holiday child care; Medical coverage;
