

Senior Engineer Process (Lithography/Analytical)

Job description

Lead, develop evaluation plans & criteria for the continuous process improvement in process stability.

In your new role you will:

- Perform process engineering and production support in one selected assigned area of semiconductor process (Photolithography).
- Lead, develop evaluation plans & criteria for the continuous process improvement in process stability.
- Lead and support troubleshooting between Manufacturing/ Mnt/ UPS/ LBS/ Technology/ Quality to identify hypothesis and root causes of process and quality deviation.
- Monitor process performance indices on qualified processes and establish good controls to maintain process performance.
- Lead tools installations as well as process & technology transfers to meet company targets, following standard process & tool release business flow.
- Characterize process and equipment system to maintain and improve capability and process control.
- Perform FMEA, risk assessment of process changes, with proper process change management.
- Ensure the robustness of processes with Advance Process Control (APC), Statistical Process Control (SPC) and other process control tools.
- Initiate, coordinate and lead excursion prevention, cost reduction, quality and productivity improvement projects.
- Organize and oversee training for Associate engineer or new engineer to upgrade their technical skills.

Profile

You are best equipped for this task if you have:

- (Bachelor, Master) in Electrical, Electronics / Physics / Mechanical Engineering / Chemistry / Material Science.
- 0-3 years experienced in semiconductor / wafer fabrication / wafer level packaging.
- Good communication skill in English and strong analytical skill.

Benefits
