

Staff Specialist Process Integration (f/m/div)*

Job description

Your customer orientation and relationship management skills are key to establish successful cooperation with different stakeholders. You like to act as an interface between production, quality department, business unit and backend. We have the perfect opportunity for you! Join our team in Villach and help us contributing to a more sustainable future!

In your new role you will:

- Step in **GaN technology Ramp projects** and define and drive stability related issues for next generation technologies
- **Support activities of unit process experts** in providing innovative, leading-edge epitaxy processes and control concepts
- **Develop failure mechanism models** with defect density analysis, failure analysis methods and electrical correlations
- **Develop new control concepts** and fast feedback loops for new process blocks
- **Define and drive measures** to improve stability, yield, reliability and production costs across a global process chain
- **Use advanced statistical methods** to identify yield detractors and drive countermeasures
- **Sustain volume production** by bringing in know-how about process and equipment capabilities

Profile

You are a proactive, self-motivated and result-oriented person, able to contribute and lead technical discussions in an efficient way. You possess a strong communication ability, aligned with a good set of presentation and training skills.

You are best equipped for this task if you have:

- A degree from University (of Applied Sciences) in **Electrical Engineering, Physics, Crystallography, Material Science, Chemistry**, or similar educational background
- Profound **knowledge in solid state physics and crystallography**
- Experience with **crystallographic analysis methods**
- **1-3 years of experience** in semiconductor industry
- Experienced in **using methods and tools for evaluation and data processing**
- Very good **MS-Office knowledge**
- **Advanced English skills** and German as a plus
