

Senior Project Manager Automotive Products (f/m /div)*

Job description

You want to run projects in an international environment? You want to lead the development of new and innovative mixed-signal ICs in power management solutions with professional project management methods? As Senior Project Manager you have the chance to do exactly that. You will lead product development projects for power management ICs with noticeable impact to the business success. In this respect, you will work with diverse, cross-functional and international project teams as well as with all levels of management up to senior executive level. Seize the chance to become part of a highly motivated team and apply now!

As a **Senior Project Manager** for **power management ICs** you are responsible for **planning, managing, organizing** and **controlling projects** for automotive power management applications. You take over the **lead role** for an assigned project and are responsible for assuring its progress and success.

In your new job you will:

- **Lead product development projects** with significant complexity, high ambition, large reach and noticeable impact for Infineon's Automotive business segment. **Actively manage** your key **stakeholders** in an **international environment**; this regularly involves negotiating as well as convincing others to identify the optimum trade-off for the projects
- **Manage** and **control** the **entire project life-cycle** and ensure **hand-over** to sustaining function as main contact person for all questions regarding the project. **Form, guide** and **motivate** diverse, cross-functional project **teams**
- Maintain the overview and **understanding** of **technical interdependencies** to proactively identify most complex challenges, leading others to think also beyond existing solutions to solve them
- Conduct a **forward-looking risk management** in close cooperation with your stakeholders
- Assume full **responsibility** for your **projects** by continuously **assessing progress** and **adjusting** the **project plan** within the given boundary conditions; this also involves anticipating and proactively managing significant changes to the existing project agreement
- **Manage and control projects** at any stage of project life cycle in **compliance** with internal **rules** and **regulations**
- **Balance product roadmap** pipeline by maintaining a project pipeline analysis for resource/skills planning and **financial forecast** (including material)
- Contribute to the **project management ecosystem** to optimize **execution excellence** (processes, methodologies, etc.)
