

MOTEON Head of Engineer Software Development (f/m/div)*

Job description

MOTEON develops state-of-the-art motor controls for electric motors using model-based methods and helps customers in the automotive sector and industrial environment to achieve rapid and sustainable success. In this market, MotorControl applications are in demand as prototypes, series products or test benches.

In your new role you will:

- **Lead a group** of highly skilled software engineers
- **Manage clients and stakeholders** and coordinate with other departments and management, including the definition of goals, project scopes, resource allocations and achieving KPIs
- Manage the **transition from start-up to standardised processes** and ensuring knowledge retention and development of the team, which requires flexible leadership, soft skills, outstanding communication and excellent problem solving skills
- **Re-create effects** on motor control test setups and **solve mechatronic problems** in a team
- Contribute to the **implementation of embedded software** in a team, preferably with competencies in one of the four functional groups: motor control, diagnostics, communication or framework

Profile

You are best equipped for this task if you have:

- Completed a university degree in the field of **computer science, engineering computer science** or in a comparable field of study
- More than 5 years of experience in **software design and development**
- **Programming skills in C**; programming experience with **Python / C++** is a plus
- Several years of experience in **leading development teams**: preferably in the automotive sector
- Motivation to work in a **company with a start-up character**, to face numerous new challenges, to use creative freedom and at the same time have an open ear and sensitivity for the concerns of the associated employees
- Great **social skills**, the ability to convince with your **presentation skills** and harmonise the **company's objectives** with the interests of the team and the team members
