Senior Engineer Customer Support Application Engineering (f/m/div)*

Job description

We are looking for a proactive, solution-oriented and customer-focused person who is passionate about working in a global, dynamic and interdisciplinary team. We are offering a great opportunity as Senior Engineer Customer Support Application Engineering who provides embedded hardware, firmware design and development services in order to increase the customer application usage of Infineon products.

In your new role you will:

- Take the responsibility for **debugging customer technical issues on embedded hardware, firmware and software**
- Provide **embedded hardware, firmware design and development services** to realize customer applications using Infineon products
- Analyze and debug **analog, digital and micro-controller circuits**
- **Write and debug software in C and/or assemble**
- **Be Sparring partner and work closely with cross-functional teams** (e.g. Marketing, hardware design, chip design and software and content development teams)

Profile

You are a self-motivated individual who is personally committed to the concerns of our internal and external customers. Other than that, you see potential obstacles as an incentive and opportunity for constant improvement. Additionally, you contribute to a culture of open dialogue and feedback.

You are best equipped for this task if you have:

- A degree in **Electrical Engineering** or similar
- **At least 1- 3 years of work experience in Applications, Software or Firmware development as an Embedded System Designer**
- Experience as **systems engineer, product development engineer in a systems company or as an application engineer in a semiconductor company** would be highly desired
- Ability to **learn new technologies quickly** and to **conduct investigative research** to identify and resolve customers technical issues
- First experience in using tools like **oscilloscope, logic analyzer and spectrum analyzer**
