

Driving decarbonization and digitalization. Together.

Lead Principal Application Engineer HV Automotive (f/m/div)

Job description

You love technology and working on new technologies with customers and you are able to learn quickly about new requirements? You find joy in pulling on one string with a team of like-minded people ranging from Development to Marketing and Sales? Then this is exactly the right job for you: as Lead Principal Application Engineer HV Automotive you will define target specifications for high voltage power products in automotive applications (e.g. OBC) including definition of critical product details and preparation of application tests. If we have sparked your interest, take the next step into the vibrant world of technology - apply now and join us at it's cutting edge.

In your new job you will:

- **Work with development, marketing and key-customers** in the design in phase, provide on-site technical support for selected key customers and our sales force
- **Drive future application specific product improvements** and suggestions for new products in collaboration with Product Marketing /Product Development
- **Define and create test boards and lab benches**
- **Conduct application specific lab testing** including documentation of results
- **Generate promotion material** based on value proposition
- **Conduct feasibility study** and review concept / product architecture
- **Support internal verification** and customer validation of prototypes
- **Provide and review technical content** for product roadmap
- **Provide training** and hand over to Application Engineers

Profile

You are eager to extend, but also share your knowledge and strive to understand both details and the big picture. You are an open-minded team player with the capacity of conveying information to public with deferring needs. Furthermore, you bring in good communication skills, foster an open exchange climate and know how to establish lasting relationships and networks with colleagues and worldwide clients.

You are best equipped for this task if you have:

- **A university / university of applied sciences degree** in Electrical Engineering or equivalent
- **5+ years of experience** in the design, development and/or test of power supplies

Why Us

Driving decarbonization and digitalization. Together.

Infineon designs, develops, manufactures, and markets a broad range of semiconductors and semiconductor-based solutions, focusing on key markets in the automotive, industrial, and consumer sectors. Its products range from standard components to special components for digital, analog, and mixed-signal applications to customer-specific solutions together with the appropriate software.

–Power & Sensor Systems (PSS) drives leading-edge power management, sensing, and data transfer capabilities –

The **PSS division** powers decarbonization and digitalization with a wide range of energy-efficient and digital solutions. PSS semiconductors help avoid carbon emissions, use resources sustainably, manage power effectively and intelligently, give ‘things’ smart senses, and process data quickly and reliably. The portfolio includes power, connectivity, RF, and sensor system technologies to develop smaller, lighter, smarter, and more efficient solutions for consumer devices, smart home/building applications, robotics, computing and data centers, charging devices, power tools, and much more.

The next generation of silicon and wide-bandgap (SiC and GaN) solutions provides unparalleled performance and reliability for 5G, big data, and renewable energy applications. These materials are paving the way for further energy and carbon savings. Highly precise XENSIV sensor solutions are enabling IoT devices to react intuitively to their surroundings for seamless user interactions while audio amplifiers bring exceptional sound experiences to smart speakers and other audio use cases.
