

Driving decarbonization and digitalization. Together.

Test Engineer Internship

Job description

The student, as part of the Product Engineering team and under the guidance of an assigned mentor, will automate backend systems to achieve streamlined workflow. By understanding the backend final test process, they will also introduce tools to improve efficiency of daily tools and assist in breaking down datasets using data visualization tools.

In your new role you will:

- Understand various test evaluation methods and assess evaluation results
- Calculate key index(es) that will assist in evaluating test performance in a production line
- Introduce a tool with key word recognition capabilities and generate reports based on data input

Profile

You are best equipped for this task if you have:

- On track to attain bachelor's in electrical & Electronic Engineering
- Knowledgeable in Python and VBA
- Interest in semiconductor product and testing

Why Us

Driving decarbonization and digitalization. Together.

Infineon designs, develops, manufactures, and markets a broad range of semiconductors and semiconductor-based solutions, focusing on key markets in the automotive, industrial, and consumer sectors. Its products range from standard components to special components for digital, analog, and mixed-signal applications to customer-specific solutions together with the appropriate software.

We are on a journey to create the best Infineon for everyone.

This means we embrace diversity and inclusion and welcome everyone for who they are. At Infineon, we offer a working environment characterized by trust, openness, respect and tolerance and are committed to give all applicants and employees equal opportunities. We base our recruiting decisions on the applicant's experience and skills.
