

Senior Engineer Information Technology - Production Data Warehouse

Job description

In your new role you will:

- **Lead or participate in project / enhancements** and support activities in Local / Global Production Data Warehouse (PDWH).
- Act as **key contact point for Local/Global PDWH requests** for preliminary demand management or request expedition and ad-hoc requests and manage escalations from business users, management and team members in alignment with lines and site management
- **Manage the overall application support of incident and change management** of PDWH as per SLA and agreed prioritization including preparing regular operations and management report
- Ensure the **Local/Global Production Data Warehouse are running** in a stable and high performance level as per SLA
- Ensure that **systems, processes and methodologies as specified are followed** to ensure effective monitoring, control and support of service delivery.
- Drive **continuous improvement initiatives** within operations support area (e.g. automation of monitoring and internal controls) and control costs as per budget.
- Identify **new systems opportunities** to improve the application of existing and new processes.
- **Prepare technical documents** for internal and external presentations.
- **Assist other team members** with technical aspects of customer interactions
- Manage the **delivery of global support of PDWH services**.
- **Lead a team of System Engineers** who perform 2nd level operations support and front-end development services for PDWH.
- **Partner up with management, application owner, key business customer and team members** for the delivery of regional / global services.

Profile

You are best equipped for this task if you have:

- A **bachelor degree of Information Technology / Computer Science** or any equivalent course.
- A **minimum of 3 to 5 years of related working experience**.
- **Team lead experience** is preferable.
