

Senior Manager Design For Manufacturing

Job description

In your new role you will:

- Working in a proactive mode for defining strategic solutions for design for manufacturing (DfM) at technology development
- Leading DfM projects x-sites and x-functional
- To drive fixing of products/technologies with DfM deficiencies in manufacturing
- To feedback on known issues from manufacturing to technology/product development and design systems
- Support the division to facilitate their development portfolio
- Interact with remote development to achieve the required target performance of the technologies in development.
- Ensure quality & reliability of delivered products meeting IFX quality standards and ensure adherence to development to manufacturing guidelines.
- Provide expert feedback on technology-related problems, planned measures, and quality-related topics and has a measurable impact on working results within the global organizational area.
- Creates and supports innovative ideas in his/her field of knowledge collaboratively and supports development by use of simulation tools.

Profile

You are best equipped for this task if you have:

- A Master degree or Ph.D. in microelectronics, microsystems, electrical engineering, physics, or similar (Bachelor's with good relevant experience can also be considered)
- Minimum 7- 9 years of experience in the field of process technology development or integration in a semiconductor mass production environment, preferably a wafer fab.
- Knowledge of technology, design packages, and device modeling is an advantage
- A strong background in semiconductor physics and technology experience would be highly appreciated.
- A strong analytical problem-solving mindset.
- Advanced project management skills and interpersonal skills, and an ability to work in a highly dynamic and demanding situation.
- Willingness to travel on a regular basis to expand your network within Infineon
- Creative ideas, open for knowledge upgrading and presentation abilities.
