

MOTEON Software Engineer - System Modeling and Control (f/m/div)*

Job description

We are looking for support in our development team in the area of model-based and simulation-driven software development to develop the next generation motor control software for our customers in an agile team environment.

In your new role you will:

- Support our development team in the area of **model-based and simulation-driven software development** for embedded systems
- Develop **software functions for electric drives with MATLAB / Simulink**
- Execute and **evaluate of simulations** and model-based tests
- Collaborate in **interdisciplinary mechatronic application projects**
- **Programming analysis and evaluation routines** with MATLAB / Python (Scientific Computing)

Profile

You are best equipped for this task if you have:

- Completed a university degree in the field of **mechatronics, electrical engineering, engineering informatics, technical cybernetics** or a comparable course of study
- Some experience in **software design and software development** for embedded systems and be familiar with **microcontrollers** and their functional range
- Experience in working with **MATLAB / Simulink** and automatic code generation already
- **Programming knowledge in C**, first programming experience with Python is a plus
- The ability to **work in a team** and a passion for developing new and **creative ideas**
- **Good command of** written and spoken **German and English**

Why Us

Part of your life. Part of tomorrow.

Infineon is a world leader in semiconductor solutions that make life easier, safer, and greener. Our solutions for efficient energy management, smart mobility, and secure,
