

Project Director PLM Deployments (f/m/div)*

Job description

Product Lifecycle Management (PLM) is a systematic approach to store, manage and access up-to-date product, process and project information in an integrated framework. It will influence key processes and tools across the value chain and is a powerful enabler for R&D. As Project Director for PLM Deployments, you will play an important role to bring PLM to several thousand employees across the globe.

In your new role you will:

- Be responsible for defining, planning and controlling deployments of PLM components into the global Infineon organization in collaboration with Divisions and Corporate Functions
- Coordinate internal and external resources with supported and affected organizations
- Identify information and training needs of the affected teams and coordinate the setup and execution of communication and training plans together with the PLM project managers and the PLM Change, Communication and Training team
- Ensure transparency and synchronization with related activities within PLM and other projects

Profile

As someone who takes personal ownership, you are focused on the target yet remain open to identify potential concerns or risks. You cooperate across boundaries and appreciate the contributions of other people. Your desire to develop your knowledge and skills and learn from previous deployments what ensures we are successful as a team.

You are best equipped for this task if you have:

- A degree in Industrial or Electrical Engineering, Physics or similar
- A minimum of 8 years professional experience in high-tech R&D, ideally in the field of semiconductors, thereof 4 years in project management, handling cross-functional and complex projects
- Experience in Change management
- Excellent communication and interpersonal skills, fluent in English and German as an added plus
