

Staff Applications Engineer

Job description

Ability to debug customer technical issues on embedded hardware, firmware and software and provide embedded hardware, firmware design and development services to realize Customer applications using Infineon products

In your new role you will:

- Ability to debug customer technical issues on embedded hardware, firmware and software.
- Provide embedded hardware, firmware design and development services to realize Customer applications using Infineon products
- Expert in leading edge technologies in the field of MEMS technologies (any MEMS based sensors)
- Provide expert technical guidance and support on designs for commercial, industrial, and consumer electronic productsBuild a team by mentoring junior engineers to develop expertise on MEMS based sensors.
- Perform product and system level testing on MEMS based sensors to resolve customer queries.
- Work with Field Application Engineer, Sales and Marketing closely to secure design-in / win on application level
- Apply your expertise and experience in designing in Infineon Technologies' MEMS products into customer systems

Profile

You are best equipped for this task if you have:

- 5+ years overall design and/or test experience with MEMS sensors and other sensing technologies
- Understanding of electrical circuits and systems including circuit analysis and op-amp theory
- Ability to conduct investigative research to identify and resolve customers technical issue
- Experience with schematic capture and PCB design
- Knowledge in MEMS, semiconductor process and package technologies
- Interest and ability to learn new technologies very quickly.
- Ability to work collaborative in a team and contributing guidance with your expertise
