

Staff Specialist Operations Complexity Management

Job description

Technical Process Chain assessments and Milestone Previews for technologies in development & transfer for the site Kulim.

Within this job, you are responsible for the complexity management for technology projects. You ensure that the interests of development and manufacturing are balanced regarding time to market and manufacturing complexity. You host a board of technical experts to identify re-use potential as value-add for the project. In addition, you co-host a technical management board which reviews technology development projects before critical milestones.

With your experience you are able to lead discussions and propose solutions on critical topics. Do you enjoy working in a world-wide team with the opportunity to shape improvements and drive changes? Do you have strong communication skills and like to collaborate with other teams and experts? If so, then apply now! We look forward to hearing from you!

In your new role you will:

- Organize and lead reviews with technical expert to identify re-use potentials for the project.
- Organize and lead technical milestone reviews for technology & transfer projects for the site Kulim
 - Create a trusted environment so that issues and risks can be communicated openly and discussed constructively;
 - Ensure that production and development interests are balanced (time to market, production stability and quality).
- Lead global technology projects involving wafer fabrication and assembly technology
- Continuously improve complexity management systematic to make it leaner and faster
- Define and deploy novel complexity management tools and methods

Profile

You are best equipped for those tasks if you have: -

- Successfully completed a university degree in physics, semiconductor technology, material science, chemistry or related technical or scientific field;
