

Senior Engineer IT Operational Services

Job description

Installation, configuration and operation of the complex Linux/Unix infrastructure within our global data centers (Redhat, Centos, Ubuntu, Solaris, HPUX)

In your new role you will:

- Installation, configuration, and operation of the high availability solutions used within our global data centers (HP Serviceguard, Oracle Cluster)
- Creation and design of reliable IT infrastructures according to given SLA specifications
- Automation and continuous optimization of all technical processes (Shell, Python, Ansible, Puppet, Foreman, GIT, Bitbucket)
- Availability and performance monitoring including creation and customization of dashboards and alerts (Kibana, Zabbix)
- Error analysis and problem-solving as part of 2nd and 3rd level support in cooperation with our internal customers
- Support for IT security to implement the hardening/protection of the server systems and the services running on them
- Close cooperation with colleagues from other areas of the international infrastructure team to optimize the landscape
- Technology consulting for our internal customers, as well as the creation of concepts and their implementation
- Independent takeover of (partial) projects from the design phase through development to productive use
- Creation of technical documentation, education and training material (Confluence)
- Experienced with the following tools: Ansible, Rundeck, Foreman, Puppet, Linux, HPUX, Solaris, Service Guard

Profile

You are best equipped for this task if you have:

- Experience of minimum 3 years working in DevOps model managing Enterprise IT Infrastructure
- Education: studies in computer science or similar (physics/math would also be feasible with computing background)
