

## Senior Expert Artificial Intelligence Algorithms for Automotive Applications (f/m/div)\*

### Job description

The automotive industry is undergoing the most profound transformation in its history. New drive technologies and artificial intelligence are enabling previously unimagined improvements in areas such as vehicle dynamics, driver assistance and autonomy. As Senior Expert Artificial Intelligence Algorithms for Automotive Applications, you will be at the center of this revolution, developing new algorithms which enable next generation Automotive systems with embedded AI that combine classical automotive needs as real time, safety & security with artificial intelligence in the Development Center Dresden.

In detail you will be responsible for topics like:

- **Select and/or define efficient AI algorithms for different automotive application use-cases**, e.g. e-mobility, automated driving, sensor systems etc.
- **Ensure that those algorithms fulfil their application purpose, real-time needs, safety constraints & limited calculation power on AI on the edge devices**
- **Be part of development of prototypes** including new artificial intelligence methods to enhance applications in the area of vehicle dynamics, eMobility, ADAS, autonomous driving or similar areas
- **Participate in application focused performance studies** with regards to execution time, power consumption, real-time behavior and other relevant aspects for AI on the edge
- Support **project documentation & reporting from technical side**
- **Collaborate closely in your field with different departments, sites and universities around the globe**

### Profile

These qualifications make you our top-candidate:

- A minimum of **5 years of relevant experience or a PhD in Mathematics, Physics, Information Technology or Electrical Engineering**
- Good knowledge in **machine learning, neural networks, deep learning, Embedded AI, AI on the edge** or equivalent areas
- **Good knowledge in tools & programming languages** like TensorFlow, KERAS, Matlab, Python, Embedded C/C++

### At a glance

Location:

Job ID: **351975**

Start date: **Oct 01, 2022**

Entry level: **5+ years**

Type: **Full time**

Contract: **Permanent**

Apply to this position online by following the URL and entering the Job ID in our job search. Alternatively, you can also scan the QR code with your smartphone:

### Contact

**Elisa Stasch**

Talent Attraction Manager

- **Knowledge of hardware architecture** like ARM, MIPS or Tricore will be an advantage
- **Excellent team player**
- **Fluent German and English skills**

## Why Us

### Part of your life. Part of tomorrow.

We make life easier, safer and greener – with technology that achieves more, consumes less and is accessible to everyone. Microelectronics from Infineon is the key to a better future. Efficient use of energy, environmentally-friendly mobility and security in a connected world – we solve some of the most critical challenges that our society faces while taking a conscientious approach to the use of natural resources.

**– Automotive (ATV) shapes the future of mobility with microelectronics enabling clean, safe, and smart cars –**

Our semiconductors are essential for supporting the automotive megatrends: electromobility, automated driving, connectivity, and advanced security. They link the real and the digital world, driving the ever-advancing pace of automotive digitalization. Infineon **ATV** is the number one semiconductor partner in the fast-changing automotive world, based on our system knowledge and our passion for innovation and quality.

The **Development Center Dresden** was launched in 2019 and is growing successfully. Today, a total of 80 top-class experts and young talents from 14 nations are working on research and development of new products and solutions for automotive and power electronics, chip design and verification, characterization of complex systems as well as development of products and solutions with artificial intelligence. In the long term, the Development Centre will employ around 250 people. State-of-the-art research and characterization labs facilitate R&D activities for automotive applications, electromobility and AI chips of the next but one generation. The Development Center covers the complete development value chain from product and system definition to qualification.

This is the right place for you, if you want to work in a high-tech environment, master challenges of advanced product development, be part of a multicultural team with great spirit and experience a startup-like culture.
