

Company Profile

Infineon Technologies Austria AG

Infineon Technologies Austria AG, headquartered in Villach and with further research and development centers in Graz and Linz, is an affiliated company of Infineon Technologies AG Munich, Germany:

Infineon Austria develops and produces semiconductors and system solutions for applications in the market segments

- **Automotive and Industrial (AI):**
Airbags, ABS, power switches, engine management, sensors
- **Secure Mobile Solutions (SMS):**
Electronic ID cards, healthcare cards, encrypted computer links, radio controllers, new UMTS and GPRS mobile radio generations, base stations
- **Wireline Communications (COM):**
Telephony via Internet, ADSL and VDSL (fastest form of Internet communication)

With development and production concentrated at one site, and specializing in automotive electronics, Villach was the natural choice as the Competence Center for Power Electronics for the whole of Infineon Technologies. Chips branded "Made in Villach" are in use all over the world.

AI Headquarters Villach:

The Villach facility already dedicates 80% of its production capacity to the Automotive and Industrial Group. Austria is home for approx. 20% of AI's global research and development activities. The relocation of AI Headquarters and substantial parts of AI's Power Management & Supply and Technology & Innovation Divisions to Villach shortens the decision routes and makes competencies more densely concentrated.

Production:

Highly qualified personnel and rigorous quality assurance (ISO certified) ensure maximum customer satisfaction. This has been a consistent thread since the facility was founded in 1970. Together with the Infineon production facilities at Munich Perlach and Regensburg in Germany, Villach forms a manufacturing cluster, known as the "PowerFab". Within this PowerFab, Villach provides the greatest production capacity for power technologies – the factory ships in the region of 10 billion chips each year.

Research and Development

Infineon Technologies Austria AG owns the largest microelectronics development unit in Austria. The development centers in Villach and Graz and the Infineon subsidiaries DICE and COMNEON in Linz employ around 600 specialists, all dedicated to developing further innovative concepts for future chip generations and system solutions. With its R&D expenditure and investment in pre-production development cooperation projects, Infineon Technologies Austria AG ranks second among industrial enterprises in Austria in terms of development spend.

Sales and Marketing

Vienna is the customer support headquarters for Austria and the EU accession countries from South Eastern Europe.

Facts and Figures (at end of September 2003):

Total surface area:	158,000 m ²
Workforce (at end of November 2003):	2,600 (including 600 employed in research and development)
Sales/year:	EUR 533 million (incl. DICE and COMNEON)
Production volumes:	10.4 billion chips/year
R&D expenditures:	EUR 132 million

Managing Board:

Dr. Reinhard Ploss	Senior Vice President & General Manager Automotive & Industrial and CEO IFAT
Mag. Monika Kircher-Kohl	CFO and Public Affairs
Dr. Werner Reczek	COO and Site Management Villach
