

How to get the DAVe Tool (v2.1) to find the downloaded DIP files on my server?

Start the DavE tool

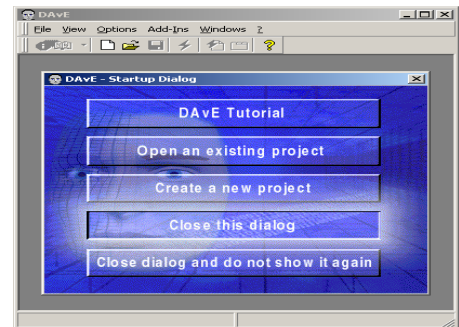

Figure 1: DAVe Start-up Screen

In the „DAvE – Startup Dialog“ select „Close this dialog“. Then select the “View” option from the Main Menu and Select “Setup Wizard” as shown in Figure 2.

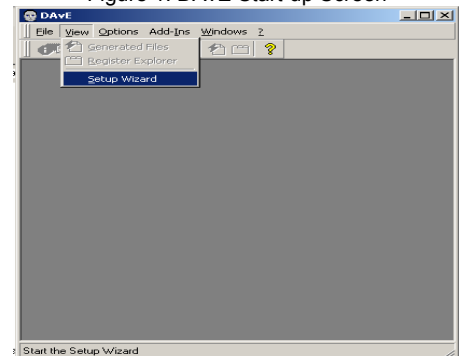

Figure 2: Select the Setup Wizard

Having selected the “Setup Wizard” option now select the “Installation” option, see Figure 3.

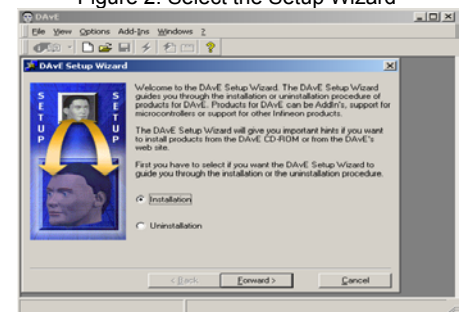

Figure 3: Section the Installation option

Now select the option “I want to install products from the DAVe’s web site”. This will now allow you to select the correct local on your local drive or servers where you have downloaded the DAVe DIP files to.
