A world leader in semiconductor solutions

Our vision
We are the link between the real and the digital world.

Our values
We commit
We partner
We innovate
We perform

Our mission
We make life easier, safer, and greener.

Part of your life. Part of tomorrow.
Global megatrends underline the increasing importance of microelectronics

Demographic and social change

Climate change and resource scarcity

Urbanization

Digital transformation
Business growth in the semiconductor market is driven by four areas:

- **Energy efficiency**
- **Mobility**
- **Security**
- **IoT and big data**
Energy efficiency

Growth area: Energy efficiency

Rising demand for energy, growing depletion of fossil resources, and climate change challenge our world to find smarter, more efficient ways of generating, transmitting, storing, and using energy. The mandatory CO2 reduction and the desire to connect more and more devices and equip them with functions that make our lives and work easier are important trends in all industries. Electrification and digitalization will shape the decade.

The efficiency potential of technology and, in particular, semiconductors along the entire energy conversion chain can significantly contribute to achieving long-term, global savings goals. A strong commitment to energy efficiency has been part of Infineon’s DNA for over 40 years. As the global leader in power semiconductors, our products and solutions allow energy to be generated more efficiently.

Growth drivers and major product categories

› **Power generation from renewable energy sources:** High-power IGBT and SiC modules

› **Energy transmission and distribution:** High-power IGBT modules

› **Energy storage:** IGBT modules, SiC modules

› **Energy usage:** Discrete power devices, IGBT modules, driver ICs, MCUs, SiC modules, SiC MOSFETs, SiC diodes, GaN transistors, sensors, security solutions, connectivity solutions
Growth area: Mobility

Megatrends like demographic shifts, social change, urbanization, and technological progress are exerting a massive impact on the mobility and transportation landscape. Today, we are facing a new era of mobility. Decarbonization and digitalization of mobility are key to protect our environment and contribute to quality of life.

Semiconductors are at the heart of the transformation towards green, safe, and user-centric mobility services ranging from eBikes and eScooters through hybrid and fully electric vehicles to underground and high-speed trains.

Growth drivers and major product categories

› Electromobility: Power semiconductors, SiC modules, MCUs, sensors

› Charging infrastructure for electromobility: Power semiconductors, SiC modules, MCUs, security solutions

› Automated driving: Sensors, radar, MCUs, power semiconductors, memories, connectivity and security solutions

› Passenger and freight transport: High-power IGBT modules

› Infotainment: Display instrument cluster MCUs, touch control, in-cabin Wi-Fi controller, USB Type-C PD controllers
Growth area: Security

In an increasingly digital world with more and more connected devices, people want to interact and communicate in a secure way that protects their data against theft and misuse. Securing electronic devices and infrastructures is a number one priority.

Addressing this need for security is one of Infineon’s key competencies. We provide our customers with robust, future-oriented embedded security solutions for electronic devices, computer systems, network components, and industrial facilities.
Growth area: IoT and big data

The IoT is reaching a breakthrough point as technologies and components work together more seamlessly. Smart and connected objects link the real with the digital world, helping us to tackle the major challenges of our time, such as climate change and the growing world population.

It is impossible to imagine the world of IoT and big data without microchips, which is why Infineon is the backbone of the IoT. Our capabilities in sensing, computing, actuating, connecting, and securing unlock new markets and applications. They make the IoT smart, easy, and energy-efficient. As a leader in semiconductor system solutions, we make the IoT what it needs to be: secure, easy, and real. We make the IoT work.

Growth drivers and major product categories

- **Human-machine interaction**: Sensors, MCUs
- **Consumer IoT**: Sensors, MCUs, connectivity solutions, power semiconductors, security solutions, software
- **Industrial IoT**: Sensors, MCUs, special memories, connectivity solutions, power semiconductors, security solutions, software
- **Data and communication infrastructure**: Special memories, power semiconductors, SiC diodes, GaN HEMTs
- **Edge computing**: Sensors, MCUs, special memories, connectivity solutions, power semiconductors, security solutions, software
Infineon offers a unique portfolio that links the real and the digital world

**Real-world applications**
- Battery-powered devices
- Power supplies
- Industrial IoT
- Drives
- Smart Home
- Smart City
- Consumer IoT
- Smartphones
- Health care products
- Automotive

**Coin cell-powered devices**

**Connectivity**
- Information and data about the real world
- Value addition and optimized use of resources

**Software / Ecosystem**

**Sense**

**Compute & connect**
- Microcontrollers, memories, Wi-Fi, Bluetooth, BLE, USB

**Actuate**
- Power semiconductors

**Digital world**

¹ as of 30 September 2021
Responsible action, sustainable profitable growth

Infineon ranks among the 10 percent\(^1\) most sustainable companies in the world

› Sustainability at Infineon includes **social, ecological, and economic values**
› Infineon was one of the first semiconductor companies to voluntarily commit to the **Ten Principles of the UN Global Compact**
› Infineon meets **global societal challenges** such as climate protection, energy efficiency, and resource management with innovative products
› Infineon’s climate target is to become **carbon-neutral by 2030\(^2\)**. Emissions are to be cut by 70 percent over the 2019 calendar year\(^3\) levels by 2025

› **External evaluation of the commitment:**
  – MSCI ESG Research rates Infineon with AA for the third consecutive year
  – Included in the Dow Jones Sustainability™ World Index for the seventh time in a row
  – Received "Gold Status" of the rating agency EcoVadis six times and has been awarded a Platinum EcoVadis Medal in 2022.

---

\(^1\) Based on the results of The Sustainability Yearbook 2022 by S&P Global in cooperation with RobecoSam.
\(^2\) In terms of Infineon’s direct and indirect energy- and heat-related emissions (Scope 1 and 2).
\(^3\) Including Cypress.

For further information: [Infineon Sustainability Report 2021](#)
Infineon is committed to binding CO₂ reduction targets

1. CO₂ neutrality by 2030 – primarily by avoiding emissions

2. Realization of 70 percent of the required savings and compensations by 2025
Corporate Social Responsibility
We create a net ecological benefit

Our products and solutions enable a net ecological benefit, equal to the average annual CO₂ emissions from electricity consumption of more than 119 million people living in Europe.¹

CO₂ burden² of 2.18 million tons CO₂ equivalents

CO₂ savings³ of 72.45 million tons CO₂ equivalents

Ratio around 1:33

Net ecological benefit: CO₂ emissions reduction of more than 70 million tons

¹ Based on the average electricity consumption of private households in Germany and official energy conversion factors.
² This figure takes into account manufacturing, transportation, own vehicles, travel, raw materials and consumables, chemicals, water/waste water, direct emissions, energy consumption, waste, etc. as well as direct and indirect energy-related emissions by manufacturing service providers. It is based on data collected internally and publicly available conversion factors and relates to the 2021 fiscal year.
³ This figure is based on internally established criteria, which are described in the explanatory notes. The figure relates to the 2020 calendar year and takes into account the following application areas: automotive, LED, induction cookers, servers, renewable energy (wind, photovoltaic) and cell phone chargers as well as drives. CO₂ savings are calculated based on the potential savings generated by technologies in which semiconductors are used. The CO₂ savings are allocated based on Infineon's market share, semiconductor share, and the lifetime of the technologies concerned, based on internal and external experts' estimations. Despite the fact that carbon footprint calculations are subject to imprecision due to the complex issues involved, the results are nevertheless clear.
Infineon's employees create a better future together

"It's amazing how we use advanced data analytics and AI techniques to create intelligent systems for solving complex business problems and driving manufacturing efficiency."

Dr. Pamela Lin
Senior Engineer Advanced Analytics, in Singapore

"It's motivating to work with our customers to transform our mobility through innovation, safety and security."

Preethi Baran
Director, Field Sales, in Livonia

"We maintenance technicians keep production moving. I appreciate the teamwork: when everyone pulls together to find the error and to get the equipment running again."

Thomas Wrzesinsky
Maintenance Technician, in Dresden

"The acquisition of Cypress enables Infineon now to offer complete best in class system solutions for new automotive applications."

Marcel Kuba
Director, Field Application Engineering, in Munich

"It's amazing how we use advanced data analytics and AI techniques to create intelligent systems for solving complex business problems and driving manufacturing efficiency."

Dr. Pamela Lin
Senior Engineer Advanced Analytics, in Singapore

At Infineon, **50,280**¹ people from over **100** countries work together around the world toward one mission: to make life **easier**, **safer**, and **greener**.
