

Full System Solution: Light Electric Vehicles

One Stop Shop for Your Light Electric Vehicle Application

Infineon's extensive product portfolio enables highest power density and system efficiency for your Light Electric Vehicle Application such as Pedelecs, eScooters and eBikes. Evaluation boards for fast prototyping and testing as well as in-depth system support enable the reduction of development time and cost.

Key enabling products of Infineon's complete system solution:

- Low Voltage Power MOSFETs – OptiMOS™
- Gate Drivers – EiceDRIVER™ Compact
- Microcontrollers – XMC
- Magnetic Sensors
