

Getting Started with Traveo Family S6J3300 Series MCUs

About this document

Scope and purpose

AN203898 provides an overview of the development environment and tools for Traveo™ family S6J3300 series MCUs to help you get started with designing with the device family.

Introduction

1 Introduction

AN203898 provides a summary of development environment and tools for the Traveo family S6J3300 series MCUs.

S6J3300 has an Arm® Cortex®-R5 CPU core with Secure Hardware Extension (SHE), CAN FD, memory, and analog and digital peripheral functions on a single chip. The product lineup of the S6J3300 series includes 208-pin, 176-pin, and 144-pin packages with different memory sizes. See the [Technical Reference Manuals](#) and [Datasheet](#) for details.

Development environment and tools

2 Development environment and tools

2.1 Evaluation board

Cypress provides several evaluation boards to help you start using S6J3300 series MCUs. Two types of evaluation boards are available: 208-pin Evaluation Board and 176-pin Evaluation Board. [Table 1](#) lists the part numbers of these evaluation boards.

Table 1 Traveo Family, S6J3300 series MCU evaluation boards

Parts number	Description
S6T3J200311A208A2	S6J3310 Series, 208-pin, Evaluation Board with secure hardware extension enabled (SHE=ON)
S6T3J200311A176A2	S6J3310 Series, 176-pin, Starter Kit with secure hardware extension enabled (SHE=ON)

2.2 Debugging tools

Cypress recommends the third-party debugging tools listed in [Table 2](#). For these tools, Cypress provides sample software (template project and sample driver). The template project includes I/O header files, startup settings, and several sample source files. The sample driver software includes source files for the peripheral features of the Traveo family S6J3300 series. Contact Cypress to obtain the sample software.

Table 2 Traveo Family, S6J3300 series debugging tools

Vendor	Software (IDE)	Hardware (Debugging tools)
Green Hills Software	MULTI (Ver. 6.1.4 or later version)	Green Hills Probe
IAR Systems	IAR Embedded Workbench (Ver. 7.30.4 or later version)	I-jet™

Basic connection diagram and operation mode

3 Basic connection diagram and operation mode

The Traveo family S6J3300 series MCUs have JTAG ports to connect with a debugging tool. Note that the JTAG nSRST port is not supported in this product series; therefore, you should connect the nSRST port to the RSTX port of this product if needed. In addition, TRST port should not be pulled up. For details, refer to [KBA219205](#). **Figure 1** shows the basic connection diagram for S6J3300.

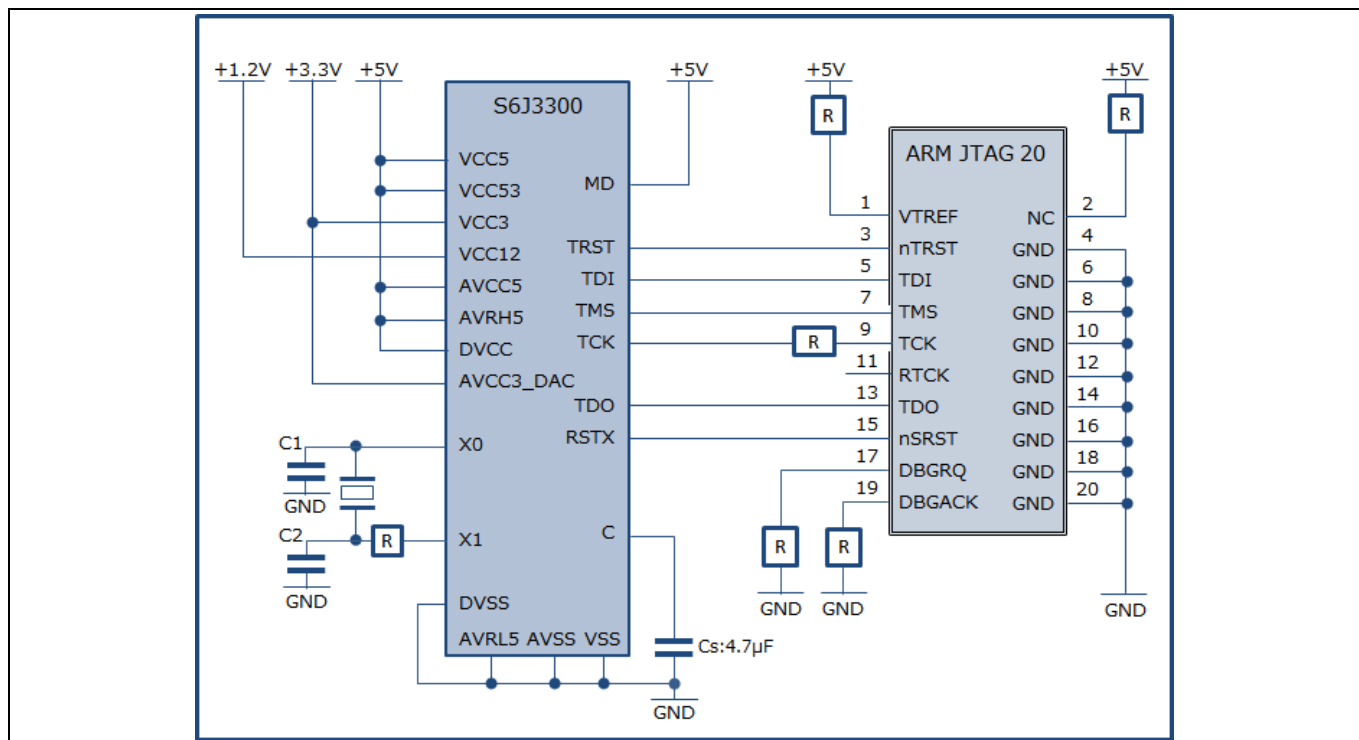

Figure 1 S6J3300 basic connection diagram with Arm JTAG 20

These devices have user mode and serial write modes. **Figure 1** shows the user-mode connection. Serial write modes use P1_05 and P1_03 with the MD port. **Table 3** lists the operation modes. This shows operation mode combination with MD port, P1_05, port and P1_03 port.

The Serial Write mode (Sync, Async) supports writing a user program to a flash memory in the MCU through a UART connection. The PC and the target MCU are connected via a serial cable. Cypress provides a PC software for programming the flash. Contact Cypress to use the flash program software.

In addition, the flash memory programmer provided by DTS INSIGHT (formerly known as YDC) supports S6J3300 series for writing a user program to the flash memory through a serial port.

Table 3 Operation mode

Operation mode	MD	P1_05	P1_03
User mode	1	–	–
Serial write mode (Sync)	0	1	0
Serial write mode (Async)	0	1	1

Revision history

Revision history

Document version	Date of release	Description of changes
**	2015-10-23	New application note.
*A	2017-04-28	Updated Cypress Logo and Copyright.
*B	2017-07-20	Updated Development environment and tools: Updated Evaluation board: Updated description. Updated Table 1. Traveo Family, S6J3300 series MCU evaluation boards. Updated Basic connection diagram and operation mode: Updated description. Updated Related documents: Updated description.
*C	2018-10-25	Updated to new template. Completing Sunset Review.
*D	2021-06-15	Updated to Infineon template.

IMPORTANT NOTICE

The information contained in this application note is given as a hint for the implementation of the product only and shall in no event be regarded as a description or warranty of a certain functionality, condition or quality of the product. Before implementation of the product, the recipient of this application note must verify any function and other technical information given herein in the real application. Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind (including without limitation warranties of non-infringement of intellectual property rights of any third party) with respect to any and all information given in this application note.

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer's technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

For further information on the product, technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies office (www.infineon.com).

WARNINGS

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.
