SPU
Signal Processing Unit

AURIX™ TC3xx Microcontroller Training
V1.0 2020-06

Please read the Important Notice and Warnings at the end of this document
SPU
Signal processing Unit

**Key Features**

- Pipeline processing tailored for radar applications
- 3D input DMA
- Radar sequencer

**Highlights**

- The SPU processes ADC data coming from the RIF. The SPU can also take input from the radar memory thus enabling recirculation of the data.
- Pipeline processing centered around the FFT engine with pre and post processing modules tailored for radar application.

**Customer Benefits**

- Fast Radar signal processing with no CPU intervention
- Fast and seamless Data Cube manipulation
- Limited CPU intervention to load and trigger new SPU configuration

SPU
Pipeline processing tailored for radar applications

- 2 alternative data sources:
  - ADC conversion results
  - Radar RAM \(\rightarrow\) 3D DMA

- Complex vector multiplication
- Complex windowing
- Multiple antenna support
- Support for modulation schemes

- FFT type (Real, Complex)
- FFT length (4 up to 2048)
- FFT precision (16 bits) or 32 bits

- Power domain / Complex domain
- Integration (NCI / DBF)
- Threshold (simple / CFAR)
- Local Max
- Statistics…

- Allows to select which Data are saved to radar memory
- Bin rejection (range cut off / CFAR)
- In place FFT option

Bypassable

The SPU is able to reload the data from the radar memory following the 3 radar dimensions: fast time, slow time, channels.

It implements inner loop, outer loop, sample loop:
- Fully configurable base address, inner loop increment and outer loop increment
- Configured by Radar sequencer
The dedicated configuration memory (CMEM) can hold multiple SPU configurations stored as linked list. Execution starts upon configured trigger, the configurations are pushed sequentially in the SPU registers. The system is notified at the end by an interrupt signal.

The CMEM can hold multiple linked lists.
SPU
System integration

› The SPU is directly connected to the RIF and the EMEM to enable the fastest data processing
› The SPU can be accessed through the BBB and generate signals to the Interrupt Router
In this example, data is processed following the configuration programmed in the CMEM. Result is retrieved by CPU directly in the radar memory.
IMPORTANT NOTICE
The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics (“Beschaffenheitsgarantie”).

With respect to any examples, hints or any typical values stated herein and/or any information regarding the application of the product, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

In addition, any information given in this document is subject to customer’s compliance with its obligations stated in this document and any applicable legal requirements, norms and standards concerning customer’s products and any use of the product of Infineon Technologies in customer’s applications.

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer’s technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

For further information on the product, technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies office (www.infineon.com).

WARNINGS
Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies’ products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.
