## Application Note

## BTF6070-2EKV use in parallel

## About this document

## Scope and purpose

In automotive systems high-side switches are very common. In this application note Infineon high-side protected switches (PROFET ${ }^{T M}$ ) are described, which are also developed for the 24 V boardnet truck application (PROFET ${ }^{T M}+24 \mathrm{~V}$ ). The PROFET ${ }^{T M}+24 \mathrm{~V}$ device was tested for 20 and 40 meter cable, which can be found in trailers and big construction machines.

The device under test BTF6070-2EKV is one of the family members of the PROFET ${ }^{T M}+24 \mathrm{~V}$ family. This fast switching device has two channels. Both channels of the device BTF6070-2EKV are not synchronized, especially in the switching-off phase, one channel is always faster and the other channel has to regulate the energy itself. The result of this application note is the testing of the two channels in parallel with 20 and 40 meter cable.

The reference standard for short circuit testing is AEC-Q100-012 which is defined for 12 V systems ( 24 V systems do not have an equivalent norm). The test was performed with 28 V which which resembles 24 V boardnets.

## Test setup

## 1 Test setup

In the AEC standard, the description of the short circuit system is detailled. For details on test setup, test procedure and statistical data analysis, please refer to the application note "Repetitive Short Circuit Operation", March 2006.
In Figure 2 the circuit with the device under test is depicted. The impedance on the left side represents the connection cable to the battery. The impedance; not only the connector to the load, as well as the return from the load with the cable, is presented with $L_{\text {short }}$ and $R_{\text {short }}$ The AEC_Q100-012 uses the maximum load cable length of 5 m however, the following tests were done with 20 and 40 m cable lengths since truck applications require longer cables than car applications.

Table 1 Extended cable length values

| Test setup | Cable length | $\mathbf{L}_{\text {short }}$ | $\mathbf{R}_{\text {short }}$ |
| :--- | :--- | :--- | :--- |
| TP3_20 $\mu \mathrm{H}$ | 20 m | $20 \mu \mathrm{H}$ | $135 \mathrm{~m} \Omega$ |
| TP3_40 $\mu \mathrm{H}$ | 40 m | $40 \mu \mathrm{H}$ | $270 \mathrm{~m} \Omega$ |

Figure 2 Device circuit

## Test setup

### 1.1 Application with suggested external components

A possible application schematic is illustrated in Figure 3, Figure 4 and Figure 5, when the short circuit occurs at the load.

## Test setup

### 1.2 Measurement during normal switching behaviour with short circuit

The measurement results include the resistor load, both channels activated in parallel without external protection (see Figure 3).
Measurement Condition: $T_{\mathrm{A}}=25^{\circ} \mathrm{C} ; V_{\mathrm{S}}=28 \mathrm{~V} ; R_{\mathrm{L}}=5 \Omega ; R_{\text {SENSE }}=1.2 \mathrm{k} \Omega ; \mathrm{DEN}=5 \mathrm{~V}$
Signals:

- Yellow: INO [V]
- Pink: $I_{\mathrm{DS}}[\mathrm{A}]$
- Blue: ISO ( $R_{\text {SENSE }}=1.2 \mathrm{k} \Omega$ )
- Green: $V_{\mathrm{DS}}[\mathrm{V}]$
- Red: Power dissipation on the output DMOS [calculated W]

## Test setup

### 1.3 Measurement results of short circuit testing

The results of the short circuit test for 20 and 40 meter cables with (Figure 5) and without TVS-diode (Figure 3) are shown in Table 2 and Table 3. The test is done with 28 V supply voltage.

Table 2 Repetitive short circuit results with external protection (TVS) - overview

| Test Procedure | Test Setup | Sample Size | $\boldsymbol{T}_{\text {AMB }}$ | Cycles to Non-Conformance |
| :---: | :---: | :---: | :---: | :---: |
| High current cold short test result | TP3_20رH | $\begin{aligned} & 16 \\ & 1^{1)} \text { Lot } \end{aligned}$ | $85^{\circ} \mathrm{C}$ | The test was discontinued after 1,000,000 cycles. See Table 4 to find the number of devices which were found to be non-conforming before the conclusion of testing. <br> First Non-Conformance: N/A <br> Additionally, no devices were found after the conclusion of testing to be outside of specification values. |
| High current cold short test result | TP3_40 ${ }^{\text {H }}$ | $\begin{aligned} & 16 \\ & 1^{1)} \text { Lot } \end{aligned}$ | $85^{\circ} \mathrm{C}$ | The test was discontinued after 1,000,000 cycles. See Table 4 to find the number of devices which were found to be non-conforming before the conclusion of testing. <br> First Non-Conformance: N/A <br> Additionally, no devices were found after the conclusion of testing to be outside of specification values. |

1) The AEC Q100-012 specification would require the usage of 3 lots. For this investigation only devices from 1 lot were used.

Table 3 Repetitive short circuit results without external protection- overview

| Test Procedure | Test Setup | Sample <br> Size | $\boldsymbol{T}_{\text {AMB }}$ | Cycles to Non-Conformance |
| :--- | :--- | :--- | :--- | :--- |

## Test setup

Table 4 Test results - Cold repetitive short (TP3_20 $\mu \mathrm{H}$ and TP3_40 $\mu \mathrm{H}$ )

| Grade | \#Cycles | Lot | \#Fails |
| :--- | :--- | :--- | :--- |
| A | $>1,000,000$ | 1 | 0 |
| B | $>300,000-1,000,000$ | 1 | 0 |
| C | $>100,000-300,000$ | 1 | 0 |
| D | $>30,000-100,000$ | 1 | 0 |
| E | $>10,000-30,000$ | 1 | 0 |
| F | $>3,000-10,000$ | 1 | 0 |
| G | $>1,000-3,000$ | 1 | 0 |
| H | $300-1,000$ | 1 | 0 |
| O | $<300$ | 1 | 0 |

## Conclusion

## 2 Conclusion

In spite of the lack of synchronization between the protection mechanism of the two channels, the test results show that the device can reach 1 million short circuit cycles with no defects.
In these tests it is not possible to show a trendline with ppm, because no non-conformance occured.
The results are obtained for a very limited number of typical devices, therefore, is not representative of the complete production spread. In case the application requires the usage of both channels in parallel, the following limitations should be observed:

- The EAR is the same as the specified EAR for one channel (P_4.1.24)
- The current limitation is the same as for one channel (P_6.6.4)

Please check datasheet limits of BTF6070-2EKV at www.infineon.com.
