

Objective

This code example implements a standard USB HID mouse with a single button. The mouse cursor will move in the shape of a box on the screen.

Overview

This project demonstrates the use of the USBFS Component to implement a HID mouse. Using the standard HID mouse descriptor, the PSoC® device enumerates as a mouse on the PC. When the enumeration is complete, PSoC sends the data about the relative movement of the mouse to the PC. A single button is also implemented in the project to emulate the left button, or button 1, on a standard mouse. You can hold down the button on the kit and watch the cursor highlight text or select items on a desktop while it draws the box.

Requirements

Tool: PSoC Creator™ 4.2

Programming Language: C (Arm® GCC 5.4.1)

Associated Parts: PSoC 3 and PSoC 5LP parts

Related Hardware: CY8CKIT-059, CY8CKIT-001, CY8CKIT-050, CY8CKIT-030

Hardware Setup

Plug in a USB cable to the USB connector on your kit.

This code example is targeted at the CY8CKIT-059 PSoC 5LP Prototyping Kit. If you are using this kit, then no external hardware connections are needed.

If you are not using CY8CKIT-059, you may also need to target a different PSoC device. To do so, right-click the project in **Workspace Explorer** and select **Device Selector**. Select the appropriate PSoC device for your hardware platform.

Software Setup

There is no special software setup to use this project. HID drivers come standard on most operating systems, a benefit of creating a HID device.

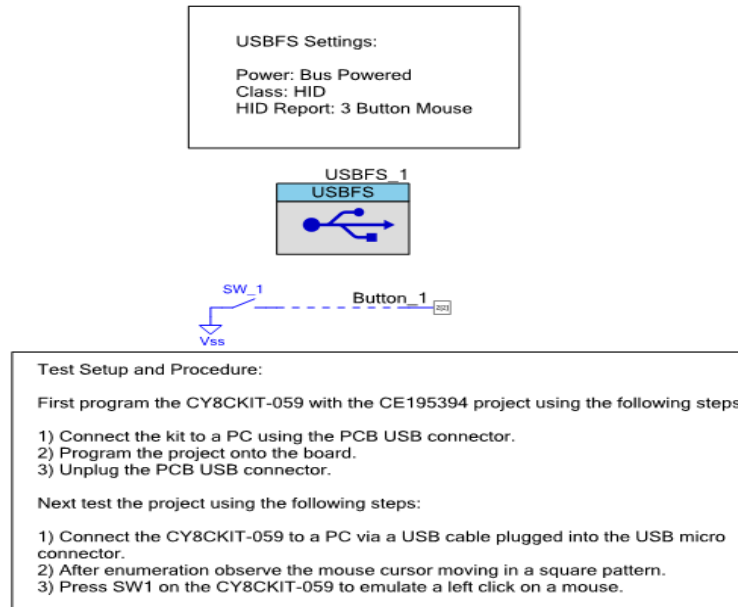

Operation

Program your kit with the code example and plug in a USB cable from your PC to the USB connection on the kit (not the programming connection). Press the associated button to emulate a left click on the mouse.

Design and Implementation

Figure 1 shows the PSoC Creator™ schematic for the code example.

Figure 1. USB HID Mouse Code Example Schematic

The code example uses the USBFS Component to implement the HID mouse and a digital input pin configured in resistive pull-up mode to implement the mouse button.

The firmware for the code example is implemented in *main.c*. The firmware performs the following functions:

- Enumerates the PSoC device as a HID mouse.
- Sends a packet of data with the mouse movement and button status to the PC.
- Waits for the last packet to be acknowledged by the PC.
- Updates the position data and button data after a brief delay.
- Loads the new mouse data into the USB end to be sent to the PC.

The design can be extended to implement a functional mouse by adding real user input to load the X and Y position data with. This can be a joystick or a trackball fed into the ADC.

Components and Settings

Table 1 lists the PSoC Creator Components used in this example, as well as the hardware resources used by each.

Table 1. List of PSoC Creator Components

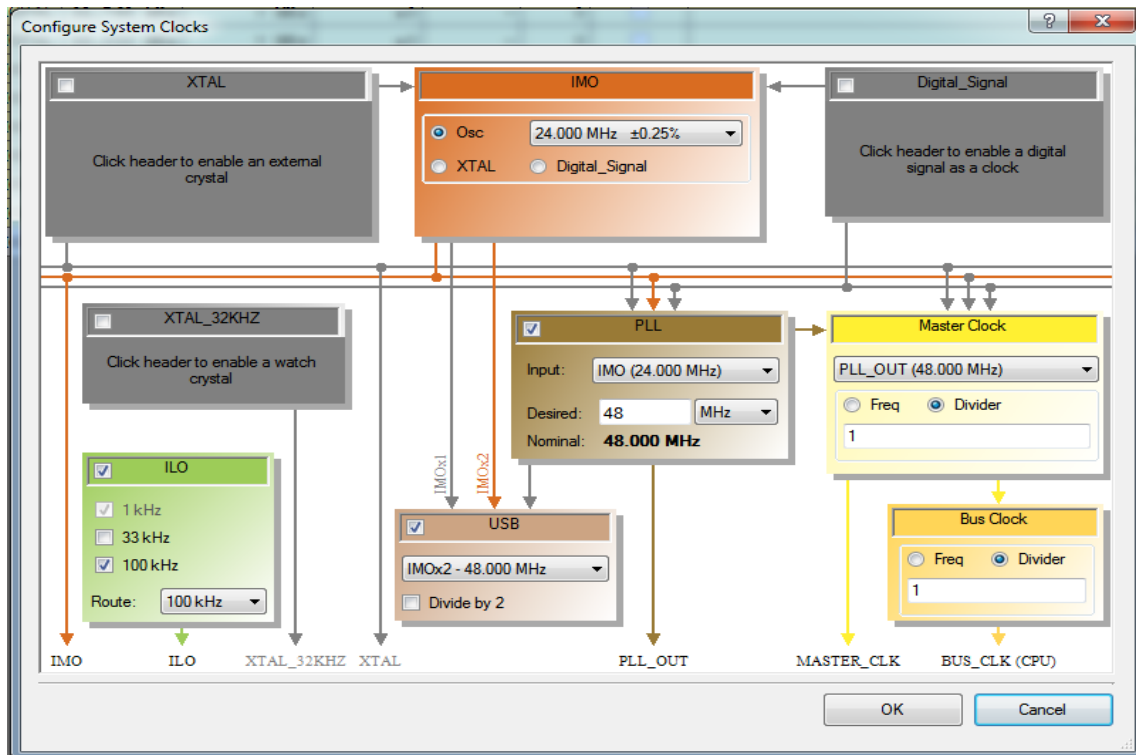

| Component | Instance Name | Purpose | Non-default Settings |
|-------------------|---------------|---|--|
| USBFS | USBFS_1 | Implements the 3-Button mouse functionality | Product ID: 0xE011 Manufacturing String: Cypress Semiconductor Product String: Square Mouse Max Power (mA): 20 Class: HID HID Report: 3 Button Mouse Direction: IN Transfer Type: INT Enable SOF interrupt |
| Digital Input Pin | Button_1 | Used to emulate the left click on the mouse | External Terminal Hardware Connection (Unchecked) Initial drive state: High (1) |

Table 2 and Figure 2 show the pin selections and the required clock settings for USB operation.

Table 2. Pin Selections

| Pin Name | Location |
|---------------|----------|
| \USBFS_1: Dm\ | P15[7] |
| \USBFS_1: Dp\ | P15[6] |
| Button_1 | P2[2] |

Figure 2. Clock Settings for USB Operation

Reusing This Example

This code example is designed to run on CY8CKIT-059. To port the design to a different PSoC device and/or kit, change the target device in **Device Selector**, and update the pin assignments in the **Design Wide Resources Pins** settings as needed.

PSoC Resources

Cypress provides a wealth of data at www.cypress.com to help you select the right PSoC device for your design and quickly and effectively integrate it into your design. For a comprehensive list of resources, see [KBA86521 – How to Design with PSoC 3, PSoC 4, and PSoC 5LP](#). The following is an abbreviated list:

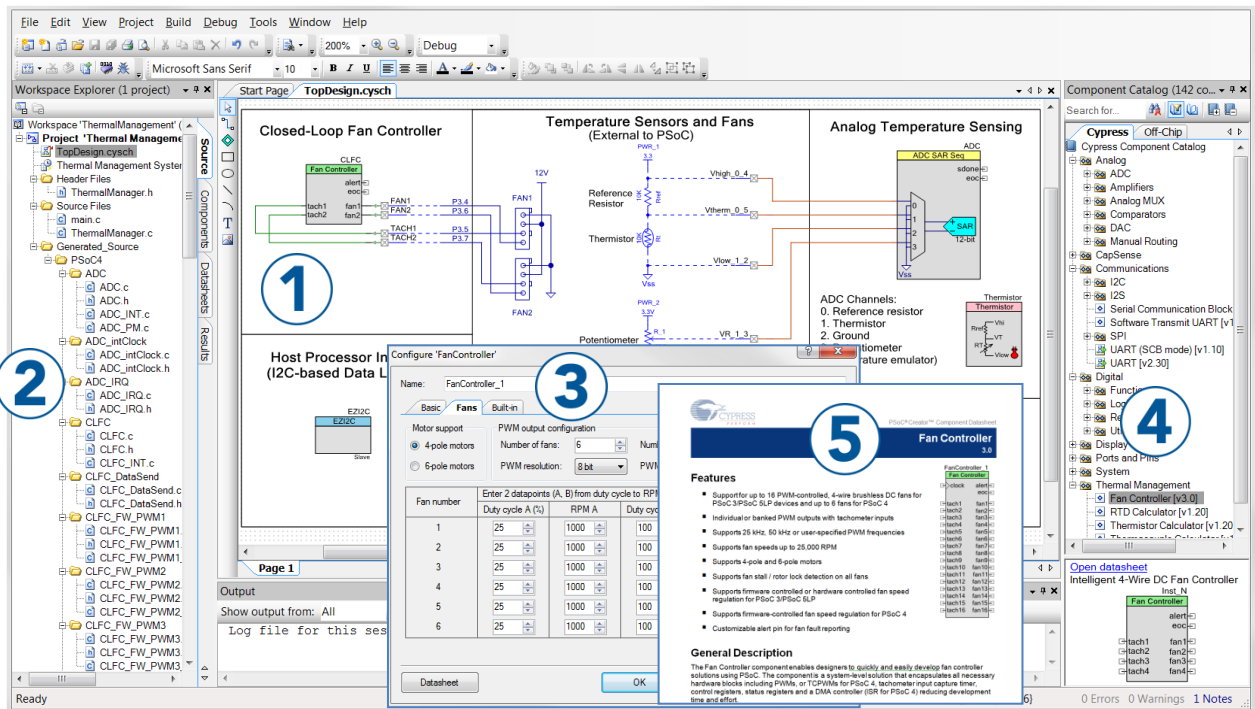

- **Overview:** [PSoC Portfolio](#), [PSoC Roadmap](#)
- **Product Selectors:** [PSoC 1](#), [PSoC 3](#), [PSoC 4](#), [PSoC 5LP](#), or [PSoC 6](#). In addition, [PSoC Creator](#) includes a device selection tool.
- **Datasheets:** Describe and provide electrical specifications for the PSoC device families.
- **CapSense Design Guides:** Learn how to design capacitive touch-sensing applications.
- **Application Notes:** Cover a broad range of topics, from basic to advanced level.
- **Code Examples:** for [PSoC 3](#), [PSoC 4](#), and [PSoC 5LP](#); or for [PSoC 6](#).
- **PSoC Technical Reference Manuals (TRM):** Provide detailed descriptions of the architecture and registers for PSoC device family.
- **Training Videos:** These videos provide guidance on getting started with various Cypress product families and tools.
- **Development Kits:** Some examples include:
 - [PSoC 6 BLE Pioneer Kit](#) is a low-cost hardware platform that enables design and debug of the PSoC 63 series. It comes with an E-Ink display shield board.
 - [CY8CKIT-042](#) and [CY8CKIT-040](#), Pioneer kits, are easy-to-use and inexpensive development platforms. These kits include connectors for Arduino™ compatible shields and Digilent® Pmod™ daughter cards.
 - [CY8CKIT-049](#) is a series of very low-cost prototyping platform for sampling PSoC 4 devices.
 - [CY8CKIT-030](#) and [CY8CKIT-050](#) are designed for analog performance. They enable you to evaluate, develop, and prototype high-precision analog, low-power, and low-voltage applications powered by PSoC 3 and PSoC 5LP, respectively.
 - [CY8CKIT-001](#) is a common development platform for all PSoC family devices.
 - [CY8CKIT-059](#) is a rapid prototyping kit for PSoC 5LP.
- The [MiniProg3](#) device provides an interface for flash programming and debug.

PSoC Creator

PSoC Creator is a free, Windows based Integrated Design Environment (IDE). It enables you to design system hardware and firmware concurrently based on PSoC 3, PSoC 4, PSoC 5LP, and PSoC 6 MCU (see [Figure 3](#)). With PSoC Creator, you can do the following:

1. Drag and drop Components to build your hardware system design in the main design workspace.
2. Codesign your application firmware with the PSoC hardware.
3. Configure Components using configuration tools.
4. Explore the library of 100+ Components.
5. Review Component datasheets.
