600V CoolMOS™ SJ S7 Power Device

IPT60T022S7 enables the best price performance for low-frequency switching applications. CoolMOS™ S7 boasts the lowest $R_{DS(on)}$ values for an HV SJ MOSFET, with a distinctive increase in energy efficiency. The embedded Temperature sensor increases junction temperature sensing accuracy and robustness while keeping an easy and seamless implementation. CoolMOS™ S7 is optimized for “static switching” and high current applications. It is an ideal fit for solid-state relay, circuit breaker designs, and line rectification in SMPS and inverter topologies. The new temperature sensor enhances S7 features, allowing the best possible utilization of the power transistor.

Features

- CoolMOS™ S7 technology enables lowest $R_{DS(on)}$ in the smallest footprint
- Optimized price performance in low-frequency switching applications
- High pulse current capability
- Seamless diagnostics at the lowest system
- Temperature sense feature for protection and optimized thermal device utilization cost

Benefits

- Minimized conduction losses (eliminate/reduce heat sink)
- Increased system performance
- More compact and more straightforward design
- Lower BOM or/and TCO over a prolonged lifetime
- Reduction of external sensing elements

Compared to electromechanical devices:

- Faster switching times
- More reliability and longer system lifetime
- Shock & Vibration resistance
- No contact arcing or bouncing

Potential applications

- Solid state relays and circuit breakers
- Line rectification in high power/performance applications e.g. Computing, Telecom, UPS and Solar
