

Please note that Cypress is an Infineon Technologies Company.

The document following this cover page is marked as “Cypress” document as this is the company that originally developed the product. Please note that Infineon will continue to offer the product to new and existing customers as part of the Infineon product portfolio.

Continuity of document content

The fact that Infineon offers the following product as part of the Infineon product portfolio does not lead to any changes to this document. Future revisions will occur when appropriate, and any changes will be set out on the document history page.

Continuity of ordering part numbers

Infineon continues to support existing part numbers. Please continue to use the ordering part numbers listed in the datasheet for ordering.

Preface

Thank you for purchasing the evaluation board (Part number:MB2146-401) for the F²MC -8FX family.

The MB 2146-401 is a development support tool for developing and evaluating applied products based on the F²MC-8FX* family of the 8-bit microcontroller manufactured by Cypress.

This manual is intended for engineers who use the MB2146-401(hereafter called the evaluation board)to develop applied products based on Cypress F²MC-8FX family of the 8-bit microcontroller.

The manual describes how to handle the evaluation board and its function and setting procedures.

Be sure to read it before using the evaluation board.

Consult the Sales representatives or the Support representatives of Cypress Limited for mass-produced MCUs and evaluation MCUs.

*: Henceforth, Evaluation MCU is called.

■ Using the product Safety

This manual contains important information required for using the MB2146-401 safely. Be sure to read through the manual before using the product and follow the instructions contained therein to use it correctly.

In particular, carefully read “Caution of the products described in this document” at the beginning of this manual to understand the requirements for safe use of the product before using it.

After reading the manual, keep it handy for future reference.

■ Warranty and Liability Disclaimers

The specifications of the product are subject to change without notice.

In no event shall Cypress be liable for any loss or damages whatsoever directly or indirectly arising out of the use of the product.

■ Product Operating Environment

Use the product at an operating temperature between 5°C to 35°C and at an operating humidity between 20% to 80%. Avoid using it in a hot or humid environment and prevent condensation.

The product is a frameless PC board unit with all electronic components exposed. Therefore, neither put anything on the product nor touch or let an electrically charged material contact a metal part of it. Once the product has been powered, try to keep those objects away from it which can short-circuit it or easily catch fire and burn. Use the product as horizontal as possible and avoid operating it at a place exposed to strong vibration, dust, or explosive gas.

Note that using the product not in the above operating environment may unexpectedly cause personal injury to the user (or another person if present near the product) or physical damage to properties around the product.

You should also keep the packaging materials used for shipping the product. They work well as they are when you transport the product again, for example, if it becomes out of order and needs to be repaired.

■ Caution of the product described in this manual

The following precautions apply to the product described in this manual.

 WARNING	Indicates a potentially hazardous situation which, if not avoided appropriately, could result in death or serious injury and/or a fault in the user's system..
--	--

Electric shock, Damage	Before performing any operation described in this manual, turn off all the power supplies to the system. Performing such an operation with the power on may cause an electric shock or device fault.
Electric shock, Damage	Once the product has been turned on, do not touch any metal part of it. Doing so may cause an electric shock or device fault.

 CAUTION	Indicates a potentially hazardous situation which, if not avoided appropriately, may result in minor or moderate injury and/or damage to the product or the equipment to which the product is connected, to software resources such as data, or to other properties.
---	--

Cuts, Damage	Before moving the product, be sure to turn off all the power supplies and unplug the cables. Watch your step when carrying the product. Do not use the product in an unstable location such as a place exposed to strong vibration or a sloping surface. Doing so may cause the product to fall, resulting in an injury or fault.
Cuts	The product has some sharp-pointed or edged parts inevitably exposed, such as jumper plugs. Use meticulous care in handling the product not to get injured with such pointed parts.
Damage	Neither put anything on or apply shock to the product. Once the product has been powered, do not carry it. Doing either may cause a fault due to a load or shock.
Damage	Since the product contains many electronic components, keep it away from direct sunlight, high temperature, and high humidity to prevent condensation. Do not use or store the product where it is exposed to much dust or a strong magnetic or electric field for an extended period of time. An adverse operating or storage environment can cause a fault.
Damage	Use the product within the ranges given in the specifications. Operation over the specified ranges may cause a fault.
Damage	To prevent electrostatic breakdown, do not let your finger or an object touch any metal part of the connector. Before handling the product, touch a metal object (such as a door knob) to discharge static electricity from your body.

Damage	<p>When turning the power on or off, follow the relevant procedure described in this document. Before turning the power on, in particular, be sure to finish making all the required connections. To set up and use the product, follow the instructions given in this document.</p> <p>Using the product incorrectly or inappropriately may cause a fault.</p>
Damage	<p>Before plugging or unplugging any cable for this product, be sure to turn the power supply off. When unplugging the cable, remove it while holding the connector without pulling the cable itself. Pulling the cable itself or bending it may expose or disconnect the cable core, resulting in a fault.</p>
Damage	<p>Although the MCU socket is structured not to accept an evaluation MCU in a wrong orientation or position, pay due attention to the mounting orientation when mounting the evaluation MCU. Forcing the evaluation MCU to be inserted in a wrong orientation can damage the pins of the evaluation MCU and the accidental insertion prevention mechanism of the socket, resulting in a fault.</p>
Damage	<p>When stored, the product should be kept in its packaging box as it has no housing. Re-transporting the product may damage it to cause a fault. Keep the packaging materials used for shipment of the product and use them when re-transporting it.</p>

1. Product outline

This product is a development support tool for performing the development and evaluation of an application product which used F²MC-8FX family of Cypress 8 bit microcontroller.

By connecting the MCU board (Part number : MB 2146-3xx) on which evaluation MCU was mounted, it is the evaluation board which enables verification of the evaluation MCU before user systems development of operation, and development evaluation of a firmware (This board is called henceforth).

To build an F²MC-8FX family evaluation environment, combine three products : This board, MCU board and BGM adapter (Part number : MB2146-09) .

For more information please visit our following websites:

Figure 1-1. System configuration figure

1.1 Product composition

The product composition of this board is shown in Table 1-1, and an option (sold separately) is shown in Table 1-2.

Table 1-1. Product composition

Name	Part number	Description	Remarks
F ² MC-8FX Evaluation board	MB2146-401	Evaluation MCU not built in	—
AC adapter (Denshi Tsusho.co)	3A-211DA-05	Input power supply : AC100 V-240 V, 50/60 Hz Output power supply : DC5V 4A	Include

Table 1-2. Option(Sold separately)

Name	Part number	Description	Remarks
MCU board	MB2146-3xx	MB95FV100-xxx built in	F ² MC-8FX *

*: Please refer to a data sheet and a hardware manual about Evaluation MCU.

1.2 Appearance and part name

The name and dimensions of the appearance of this board and each part are shown.

Figure 1-2. Functional name and dimensions

TP2 - TP8	: External power supply input terminal
JP1/JP2	: LED connection change jumper plug
JP3/JP4	: 5 V/3.3 V power supply selection jumper plug
JP5	: AVCC VCC supply jumper plug
JP6	: AVR VCC supply jumper plug
JP7	: AVSS - VSS connection jumper plug
JP8	: MOD selector jumper plug
CN1/CN2	: MCU board I/F connector
CN3	: C pin socket
CN4	: For extension I/F connector
CN5	: Incorrect insertion prevention socket
LED1 - LED16	: LED port
LED17	: POWER LED (The light is switched on by VCC power supply supply.)
U1	: Evaluation MCU all the through holes for a terminal check
U7	: Series regulator (5 V -> 3.3 V)
SW1	: Reset switch (This board/Evaluation MCU reset)
SW2	: AC adapter power supply switch
PJ1	: AC adapter pin jack
L1	: AC adapter side coil
H1	: AC adapter side poly switch

2. Checking the Delivered Product

Before using the Evaluation board, confirm that the following components are included in the box:

Evaluation board : 1

AC adapter * : 1

Operation manual (Japanese, English (this manual)) : 1 (part each)

*: 3A-211DA-05 (Denshi Tsusho Co., LTD)

3. Connecting

3.1 Attachment of a MCU board / AC adapter

Please connect CN1/CN2 of the connection of a MCU board with this board, and this board, and CN1/CN2 of a MCU board. Since the incorrect insertion prevention socket of two pins is mounted in this board and the MCU board by each, please become a diagonal position (refer to Figure 3-1) .

The power supply of this board has the method of supplying from attached AC adapter, and the method of supplying from the terminal for an external power supply input. Please connect AC adapter to PJ1 of this board the case where a power supply is supplied, from AC adapter (refer to Figure 3-2) . When you supply from the terminal for an external power supply input, please refer to "4. Board setup/function Power supply from the external power supply input terminal".

Note : Please do not use AC adapter except accessories.

Figure 3-1. MCU board connection

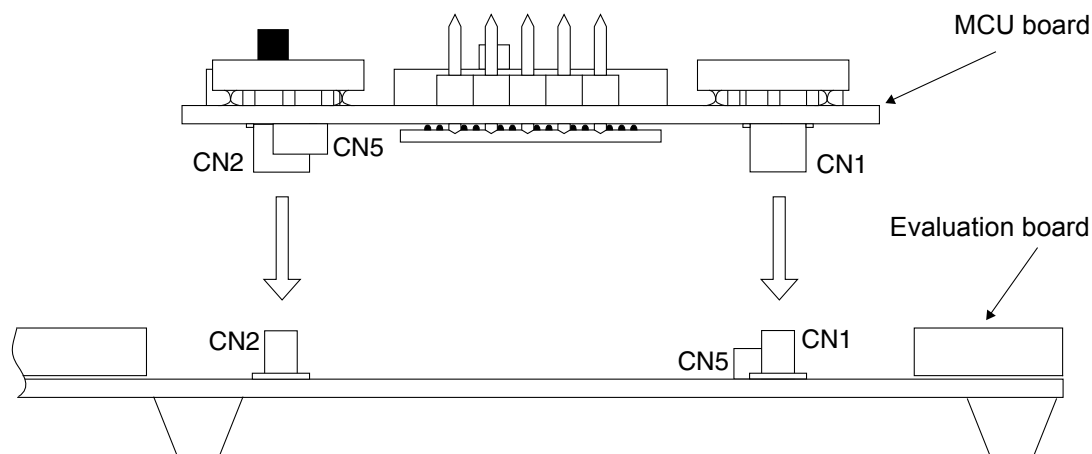

Figure 3-2. AC adapter connection

3.2 Note on use

Be careful of the following thing the time of using this board.

- Please do not use AC adapter except accessories.
- When you supply a power supply from AC adapter, terminals TP2 (VCC) and TP3 (VSS) for an external power supply input should presuppose that it is open, and should not supply an external power supply.
- Terminal for an external power supply input When you supply a power supply from TP2 (VCC) and TP3 (VSS), please set SW2 (AC adapter power supply switch) to OFF by setting 5 V/3.3 V power supply selection jumper plug (JP3/JP4) as opening, and use AC adapter side power supply, separating it completely.
- Be sure to use 5 V/3.3 V power supply selection jumper plug (JP3/JP4) by the same setup. When a different setup is performed, 5 V power supply and 3.3 V power supply may short-circuit, and it may become the cause of incorrect operation.

4. Board Setup/Function

4.1 Power supply from AC adapter

When supplying the power supply from AC adapter, TP2 (VCC) and TP3 (VSS) of the terminal for an external power supply input should presuppose that it is open of it. Moreover, they must not supply an external power supply.

4.2 Power supply from the external power supply input terminal

The details in the case of supplying a power supply from the terminal of an external power supply input (TP2-TP8) are shown in Table 4-1.

When you supply the power supply from the terminals TP2 (VCC) and TP3 (VSS) for an external power supply input, please set the jumper plug (JP3/JP4) of the power supply selection of 5V/3.3V to opening, set SW2 (AC adapter power supply switch) to OFF, separate it completely, and use AC adapter side power supply supply.

Table 4-1. Terminal for external power supply input

Position	Description
TP2	VCC Power supply supply terminal
TP3	VSS Power supply supply terminal
TP4	AVCC Power supply supply terminal
TP5	AVR Power supply supply terminal
TP6	AVSS Power supply supply terminal
TP7	LVCC Power supply supply terminal
TP8	LVSS Power supply supply terminal

4.3 LED port selection

It is decided whether a light emitting diode connection change jumper plug (JP1/JP2) connects the light emitting diode port on this board to each port of the evaluation MCU carried on the MCU board, or it does not carry out.

When using a Light Emitting Diode port, an attached jumper plug is connected to this board. A jumper plug is not connected when not using a light emitting diode port.

About the switch of the state of the terminal of the evaluation MCU port corresponding to each light emitting diode, lighting is deleted on L level. Moreover, lighting has H level given.

Correspondence of a Light Emitting Diode port is shown in Table 4-2.

Table 4-2. Correspondence of LED port

Position		Evaluation MCU port	Light Emitting Diode port
JP1/JP2	Terminal		
JP1	1 - 2	P00C	LED1
JP1	3 - 4	P01C	LED2
JP1	5 - 6	P02C	LED3
JP1	7 - 8	P03C	LED4
JP1	9 - 10	P04C	LED5
JP1	11 - 12	P05C	LED6
JP1	13 - 14	P06C	LED7
JP1	15 - 16	P07C	LED8
JP2	1 - 2	P60	LED9
JP2	3 - 4	P61	LED10
JP2	5 - 6	P62	LED11
JP2	7 - 8	P63	LED12
JP2	9 - 10	P64	LED13
JP2	11 - 12	P65	LED14
JP2	13 - 14	P66	LED15
JP2	15 - 16	P67	LED16

4.4 Selection of 5 V/3.3 V power supply

The details of a setup of 5 V/3.3 V power supply jumper plug selection (JP3/JP4) are shown in Table 4-3. When you supply the power supply from the external power supply input terminals TP2 (VCC) and TP3 (VSS), please open the power supply selection jumper plug (JP3/JP4) of 5 V/3.3 V.

Note : Be sure to give a setup of JP3/JP4 as the same. When a different setup is performed, the power supply which is 5 V/3.3 V short-circuits, and has a possibility of becoming the cause of the operation which is not right, or failure.

Table 4-3. 5 V/3.3 V power supply selection jumper plug

VCC Power supply supply origin	Supply voltage	Setup	
		JP3	JP4
AC adapter	+ 3.3 V	3 - 2	3 - 2
AC adapter	+ 5.0 V	1 - 2	1 - 2
External power supply input terminal	+ 3.3 V	Open	Open
External power supply input terminal	+ 5.0 V	Open	Open

4.5 How to supply VCC of this board to the AVCC terminal of evaluation MCU

When you supply VCC of this board to the analog power supply terminal (AVCC) of Evaluation MCU built in the MCU board, please connect an attached jumper plug to this board at an AVCC -VCC supply jumper plug (JP5). However, when you supply the AVCC power supply from an external power supply input terminal (AVCC), please give as open.

4.6 How to supply VCC of this board to the AVR terminal of evaluation MCU

When you supply VCC of this board to the analog standard voltage terminal (AVR) of Evaluation MCU built in the MCU board, please connect an attached jumper plug to this board at an AVR -VCC supply jumper plug (JP6). However, when you supply the AVR standard voltage from an external power supply input terminal (AVR), please give as open.

4.7 How to supply VCC of this board to the AVCC terminal and AVR terminal of evaluation MCU

When you supply VCC of this board to the analog power supply terminal (AVCC) and analog standard voltage terminal (AVR) of Evaluation MCU built in the MCU board, please connect an attached jumper plug to this board at an AVSS - VSS connection jumper plug (JP7). However, when you supply an AVCC power supply from the terminal (AVCC) for an external power supply input, or when you supply AVR standard voltage from the terminal (AVR) for an external power supply input, be sure to give as open.

4.8 Selection of the supply level to the MOD terminal of evaluation MCU

The supply level to the mode terminal (MOD) of Evaluation MCU carried in the MCU board is chosen with an MOD selection jumper plug (JP8). Details are shown in Table 4-4. Be referred to as "short" of a jumper plug, and give an MOD terminal state as an "L level".

Table 4-4. MOD selection jumper plug

Jumper plug	MOD terminal state	Remarks
Open	H Level	VCC pull-up : Prohibition of a setup
Short	L Level	VSS

4.9 Connection of the capacitor between the Cpin terminal and the VSS terminal of evaluation MCU

Between the Cpin terminal of the evaluation MCU built on the MCU board, and a VSS terminal, when you connect a capacitor, please mount the capacitor to the socket for C terminals (CN3).

- Mounting capacitor : 2.54 mm Pitch Lead type.

4.10 Reset of this board and evaluation MCU

By pushing a reset switch (SW1), a RSTX signal (L) is outputted and this board and Evaluation MCU are reset.

4.11 POWER LED (LED17)

It is not concerned with AC adapter power supply supply and the terminal for an external power supply input, but the light is switched on when a VCC power supply is supplied.

4.12 Series regulator 5V -> 3.3V (U7)

+3.3 V power supply is generated from +5 V power supply supplied from AC adapter.

- Rating current : 3A (max.)

5. Specification

5.1 General specification

The general specification of this board is shown in Table 5-1.

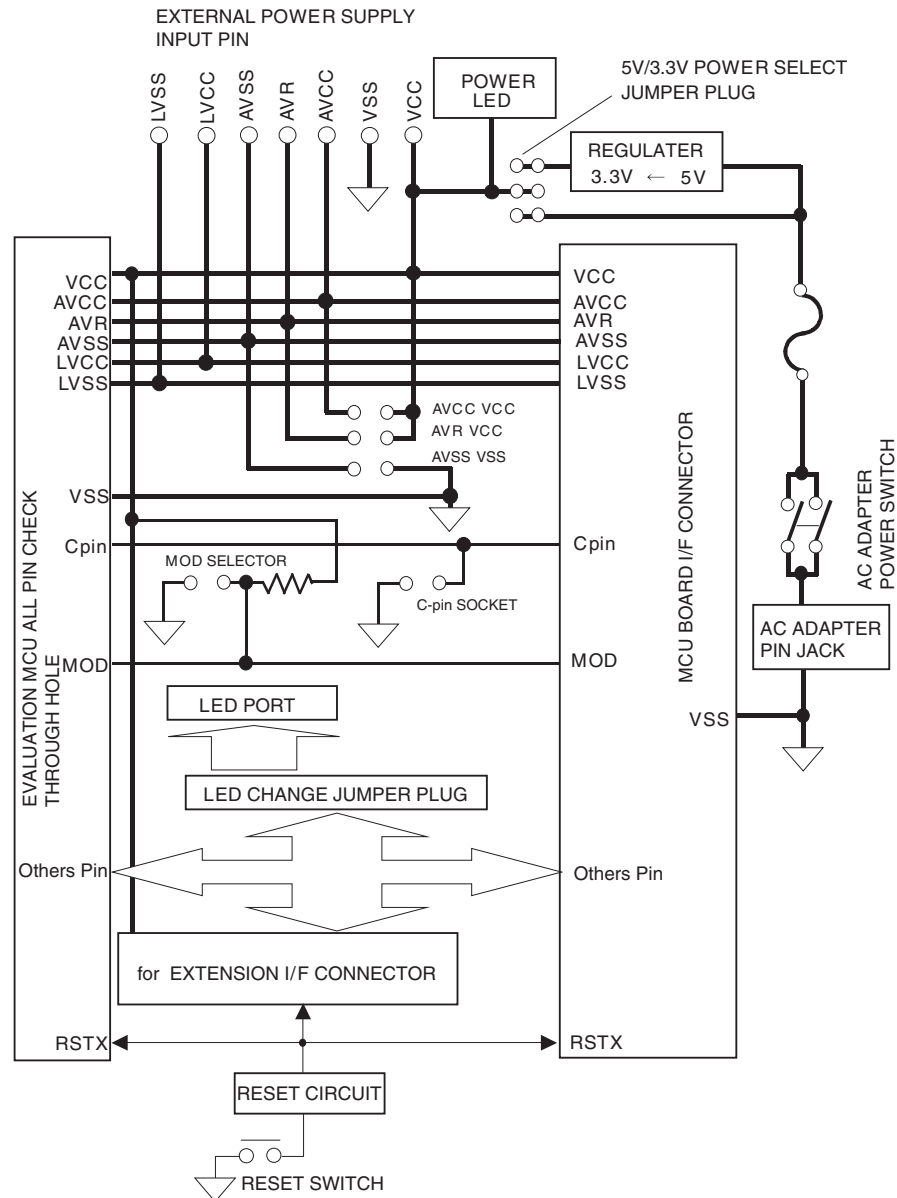

Table 5-1. General specification

Item	Description
Operating/storage temperature	5°C to 35°C (at operating) , 0°C to 70°C (at storage)
Operating/storage humidity	20 % to 80 % (at operating) , 20 % to 80 % (at storage)
Dimensions	About 100 mm × 150 mm × 20 mm
Weight	This board : about 90 g AC adapter : about 190 g

5.2 Functional block diagram

A functional block diagram is shown in Figure. 5-1.

Figure 5-1. Functional block diagram

5.3 Main component material

The main component material of this board is shown in Table 5-2.

Table 5-2. Main component material

Item	Part number	Description	Manufacture
AC adapter	3A-211DA-05	Input power supply : AC100 V - 240 V, 50/60 Hz output power supply : DC5 V, 4 A Plug : Outer diameter = ϕ 5.5 mm, Inner diameter = ϕ 2.1 mm, Plug length = 9.5 mm Center plus	Denshi Tsusyo Co.
AC adapter pin jack	HEC0470-01-630	The above-mentioned AC adapter correspondence Rating current 3 A	Hoshiden.co
AC adapter side coil	CDRH125-100NC	10 μ H Rating current 4 A	Sumida.co
