General Information

Overview – PMSM FOC Sensorless SW

- › This document provides information about usage of PMSM FOC Sensorless example software on Infineon's XMC1300 series micro-controllers platform.
- › PMSM FOC Sensorless control example software is offered as "simple main project in DAVE™ IDE".
- › PMSM FOC Sensorless control example project consists of Single Shunt/three shunt Field Oriented control algorithm software, targeted end applications are fans, pumps, and e-bike segment.
- › This example project will provide high level of configurability and modularity to address different segments.
- › This project can be easily configured as per requirements with the help of configuration files.

Software Overview – Software Blocks

Software Blocks	Supported Options
Control Scheme	V/F control, V/F to closed loop control, direct constant speed control, direct constant torque control, direct constant Vq control
PWM Modulation (Modulator)	7 Segment SVM, Over-modulation,
Current/Voltage Measurement	DC voltage compensation, DC bus voltage clamping during fast braking

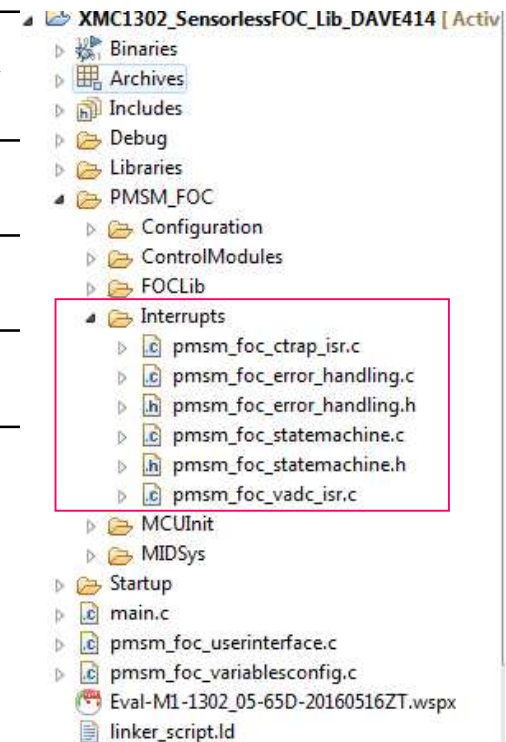

Software Overview – Key Features

Supported Features	Description
DC bus voltage clamping	Prevent over-voltage during fast braking
Ramping	S-curve Speed ramping, Linear Speed Ramping
PI Controller	Speed PI anti-windup (local and system), Torque PI controller, Flux PI controller
Startup Algorithm	Rotor alignment (Direct FOC), Open loop to MET
Protection	Over-current Short circuit Under/Over voltage C-trap with MCU hardware features

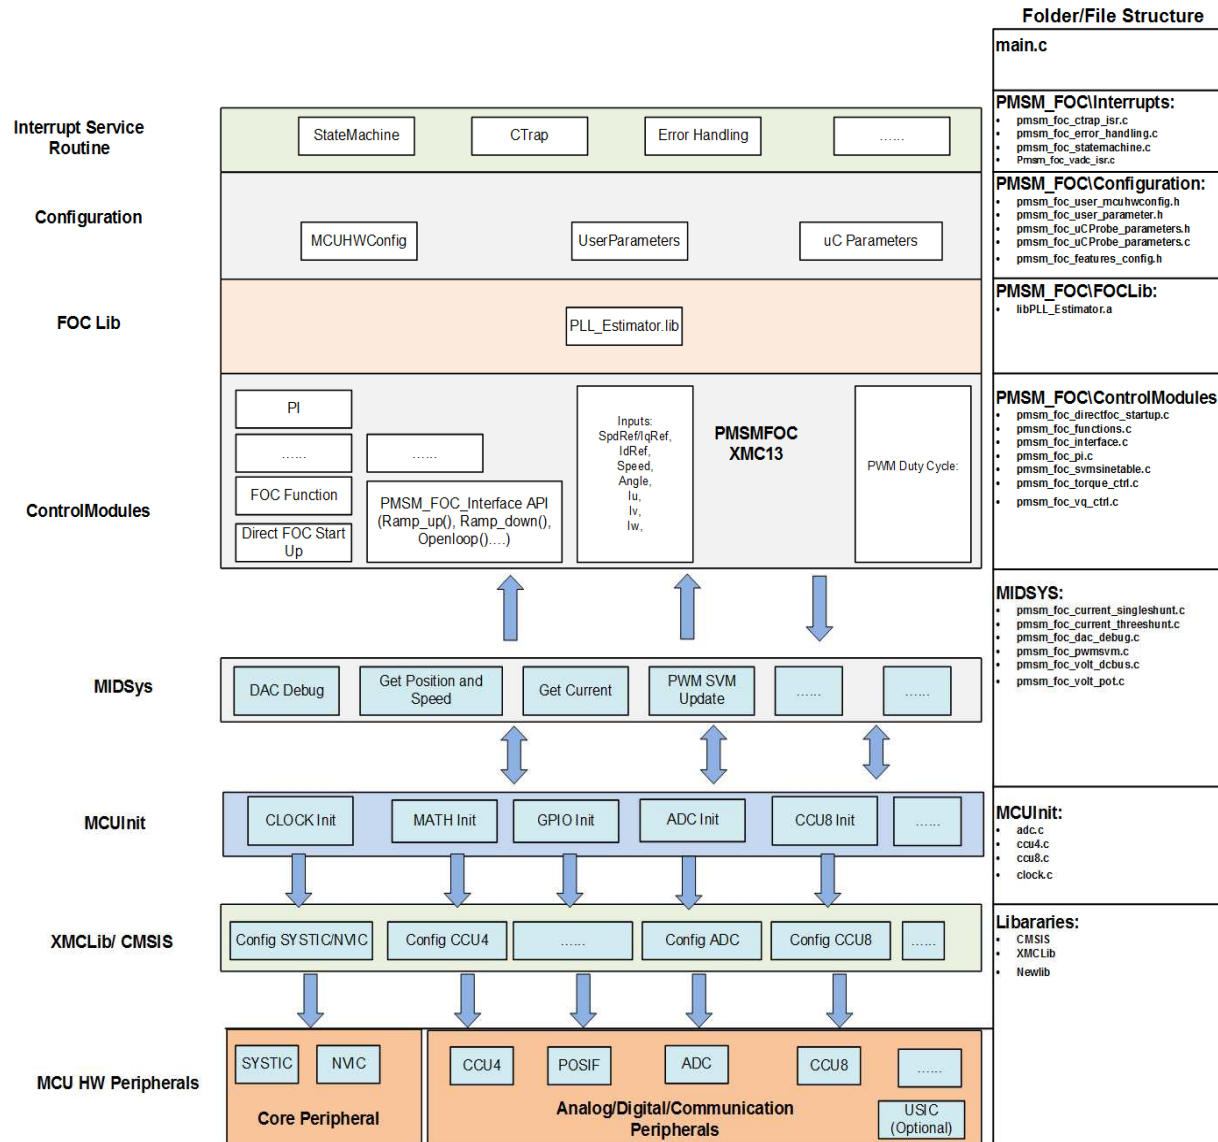

Software Overview - Interrupt Service Routines

Folder: Interrupts

Peripheral	Interrupt Subroutines (ISR)	NVIC node	Interval	Priority
VADC	VADC_Source_IRQHandler	18	Asynchronous	0
CCU8	CTRAP	26	Asynchronous	0
CCU8	One match event (Phase U)	25	1/ PWM frequency	2

Software Overview - Files Structure

Software Overview – Example Configuration

Example Name	PMSM_FOC_XMC13
Kit Description	Drive 3-phase Maxon's motor using XMC1000 motor control application kit
Part Number	KIT_XMC1X_AK_MOTOR_001
Schemes	Default Configuration in Example Software
Control Scheme	VF_MET_FOC
PWM frequency (Hz)	20000
Speed (rpm)	4200
Ramp up/down rate	500
Protection	VDC under/over voltage protection, over current protection

Hardware Overview - XMC Peripheral usage (1/2)

No	Category	Description	XMC1302 Pins	Remark
1	Motor Phase U	High side driver Phase U MOSFET	P0.0 / CCU80.OUT00	Active level - LOW
2		Low side driver Phase U MOSFET	P0.1 / CCU80.OUT01	
3	Motor Phase V	High side driver Phase V MOSFET	P0.7 / CCU80.OUT10	
4		Low side driver Phase V MOSFET	P0.6 / CCU80.OUT11	
5	Motor Phase W	High side driver Phase W MOSFET	P0.8 / CCU80.OUT20	
6		Low side driver Phase W MOSFET	P0.9 / CCU80.OUT21	
7	Inverter Enable	Enable gate driver I/O functionality	P0.11	Active LOW
8	DC Link Current	Amplifier output for DC link single shunt	P2.7 / G1.CH1	
9	DC Link Voltage	Voltage of DC link (with voltage divider)	P2.3 / G1.CH5	Divider resistors 5.1K/(5.1K + 47K)
10	POT	ADC for potentiometer	P2.5 / G1/CH7	

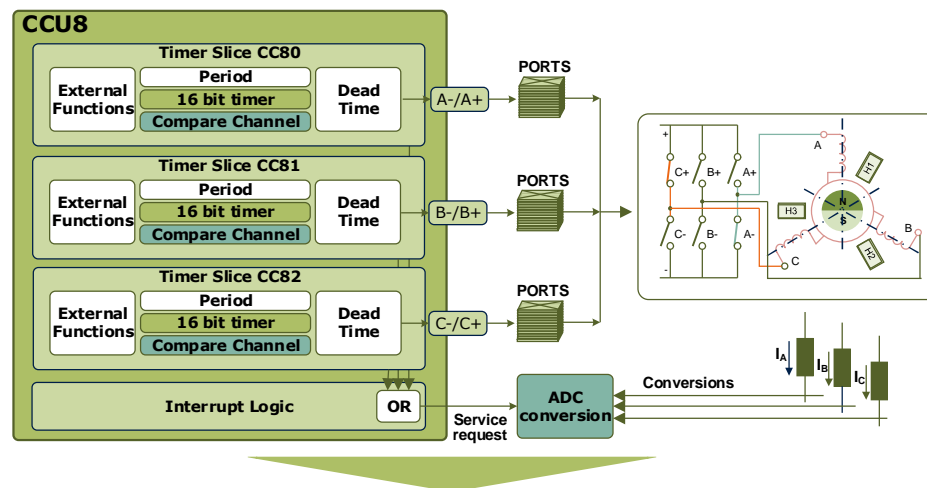

Hardware Overview - XMC Peripheral usage (2/2)

No	Category	Description	XMC1302 Pins	Remark
11	3-Shunt Phase Current	Amplifier output for Phase U shunt	P2.9 / (G0.CH2/G1.CH4)	3-shunt 50 mΩ, with Op-Amp gain
12		Amplifier output for Phase V shunt	P2.10 / (G0.CH3/G1.CH2)	
13		Amplifier output for Phase W shunt	P2.11 / (G0.CH4/G1.CH3)	

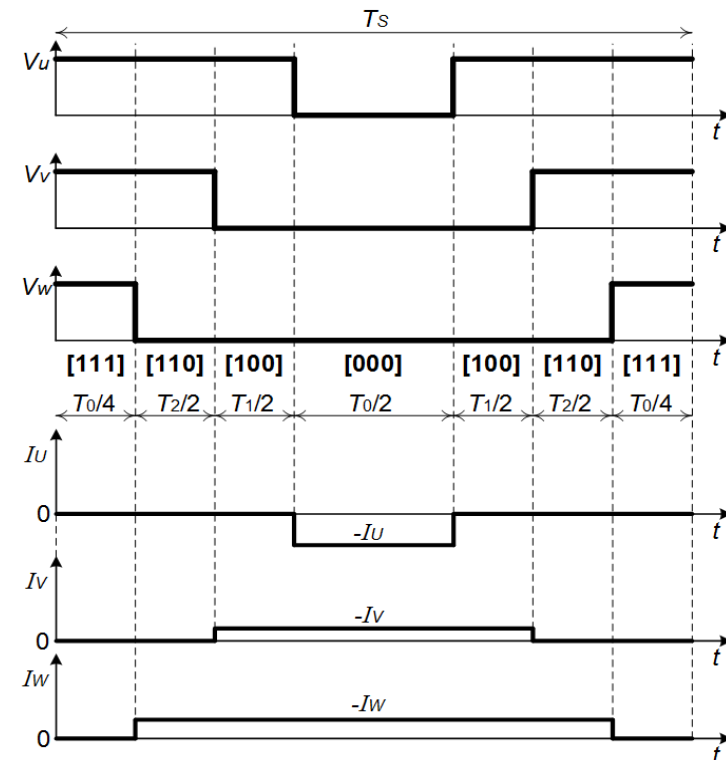

Hardware Overview - Interconnection

Interconnection between CCU8 (SVM PWM generation) with VADC

- To measure shunt currents in each PWM cycle
- CCU8 interrupt logic provides flexibility to group several triggers to one SR line

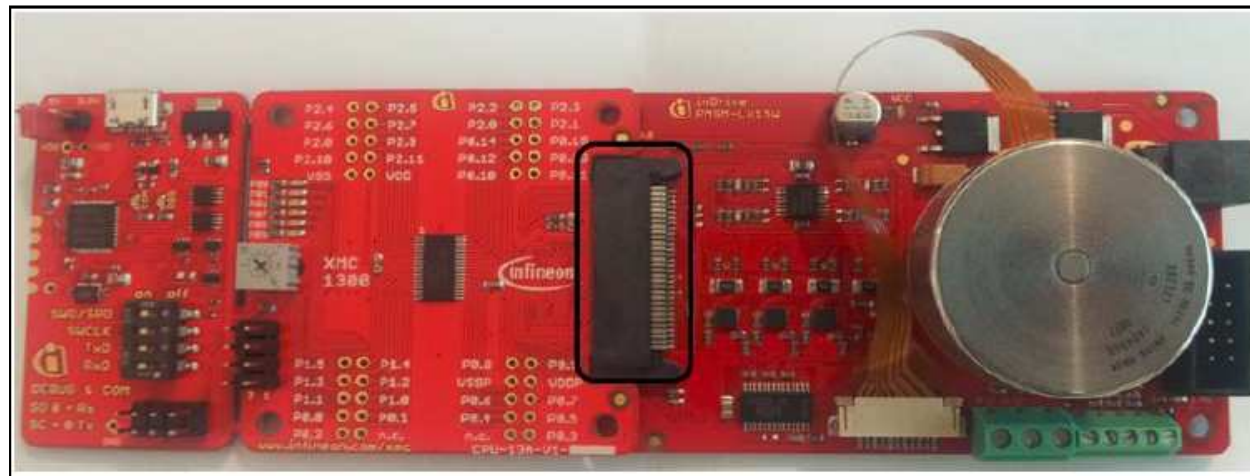

Generate **ADC conversion triggers** synchronized with PWM signal

Hardware Overview – Application Kit Package

› Infineon's XMC1000 Motor Control Application Kit

Item	Description
XMC1300 CPU Card	MCU board with XMC1300 and detachable SEGGER J-Link debug interface
PMSM Low Voltage 15W Motor Card	12 – 24V Up to 3A On board 3-phase motor (24V, 15W) with hall sensors
Accessories	Power Supply Adaptor (24V, 1A) Micro USB connector (1x)

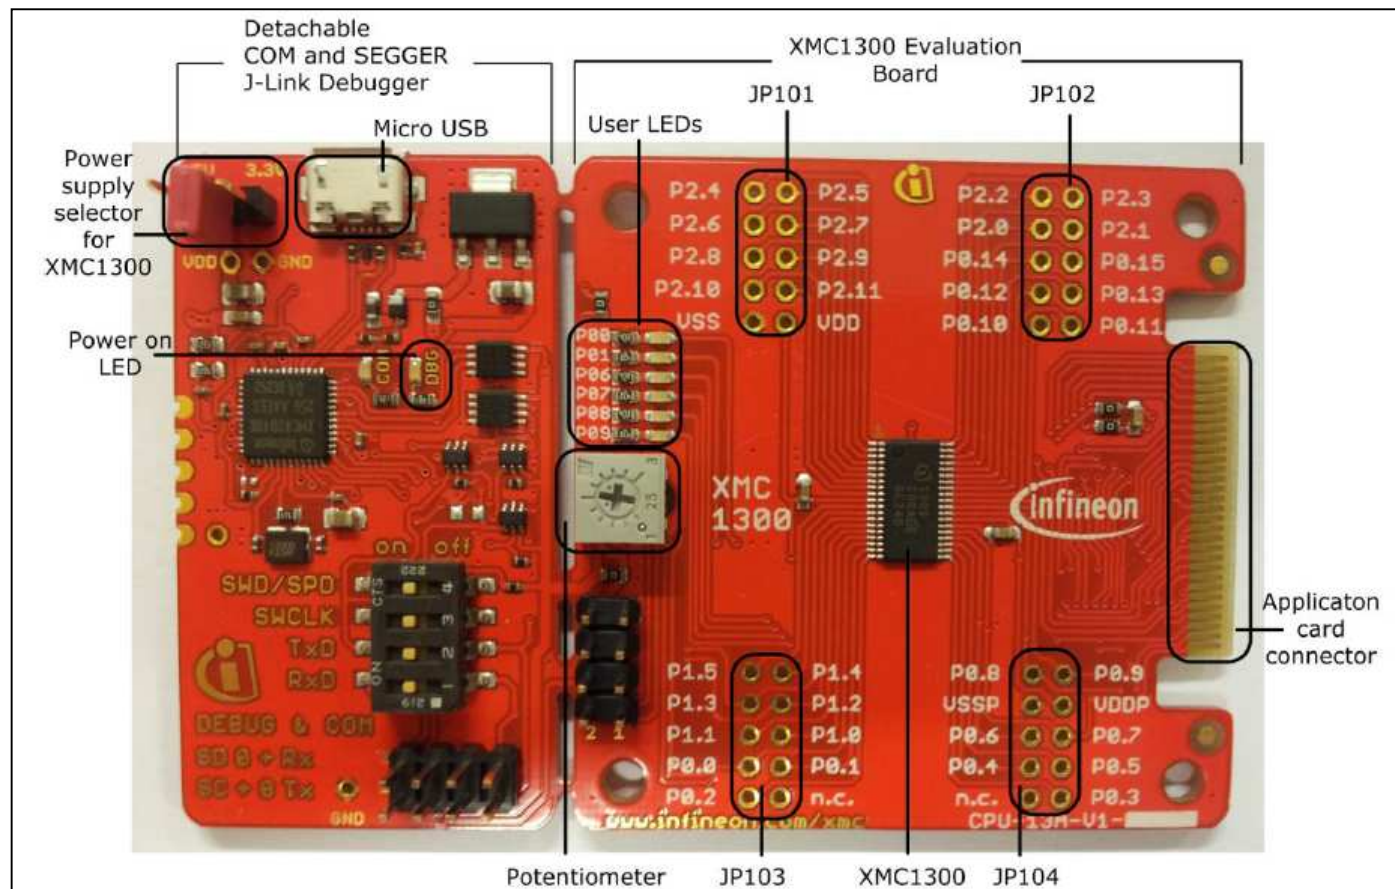

XMC1300 CPU Card

PMSM Low Voltage 15W Motor Card

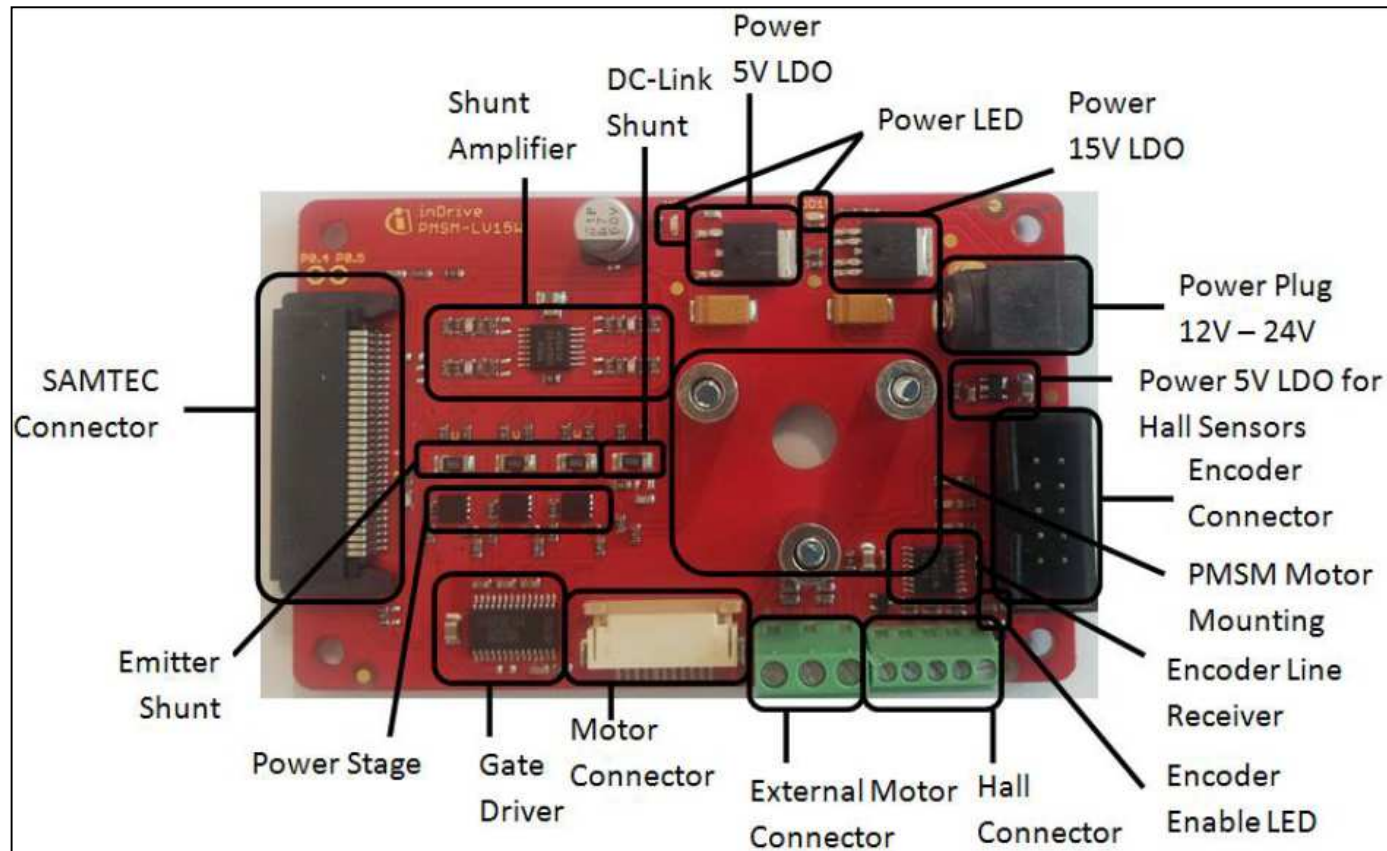

Hardware Overview – XMC1300 CPU Card

› XMC1300 CPU Card

Hardware Overview – Motor Card

› PMSM Low Voltage 15W Motor Card

Hardware Overview – Kit Order information

No.	Kit Name	Kit Description	Order Number
1	KIT_XMC1x_AK_Motor_001	XMC1000 Motor Control Application Kit	KIT_XMC1x_AK_Motor_001

Infineon Tools Overview

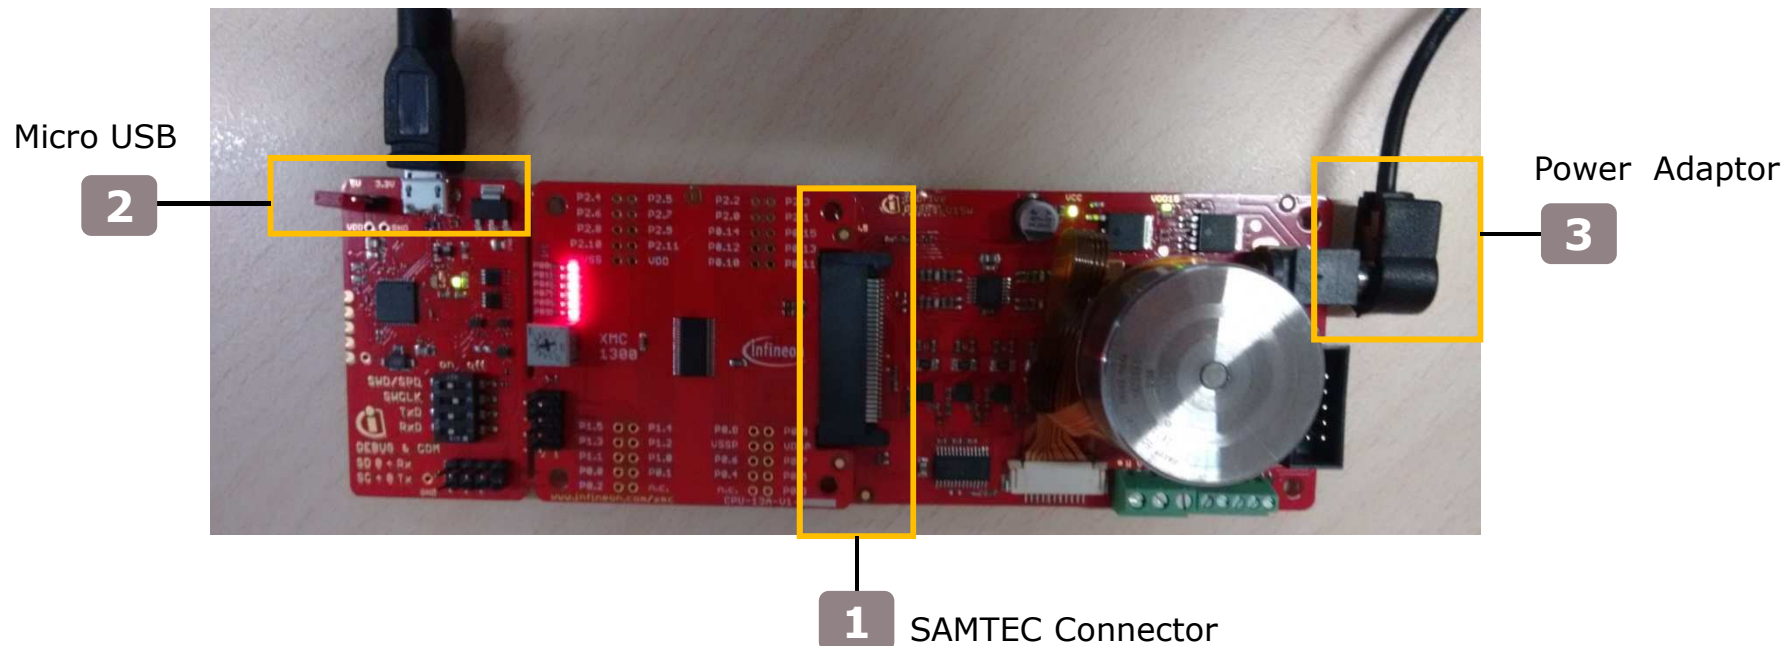

- › DAVE™ (V4.2.6 onwards)
 - Download DAVE™ installer package from <http://www.infineon.com/dave>
 - Download and unzip the installer package

	 Download	<p>Free Eclipse based integrated development environment (IDE) including GNU C-compiler, debugger, comprehensive code repository, hardware resource management, and code generation plug-in.</p> <p><i>A complete download package is provided, including IDE, XMC™ Lib, DAVE™ APPs, EXAMPLES, and DAVE™ SDK.</i></p> <p>DAVE™ Release Note</p>
---	---	---

Getting Started – Connecting the Board

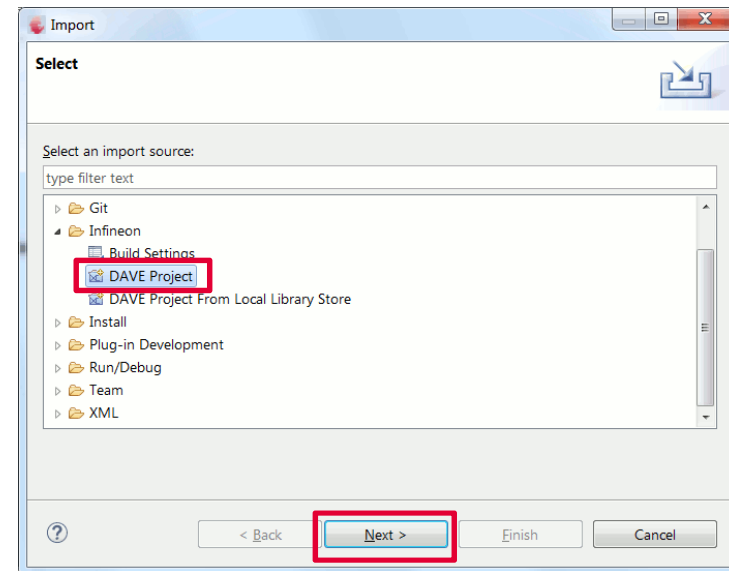

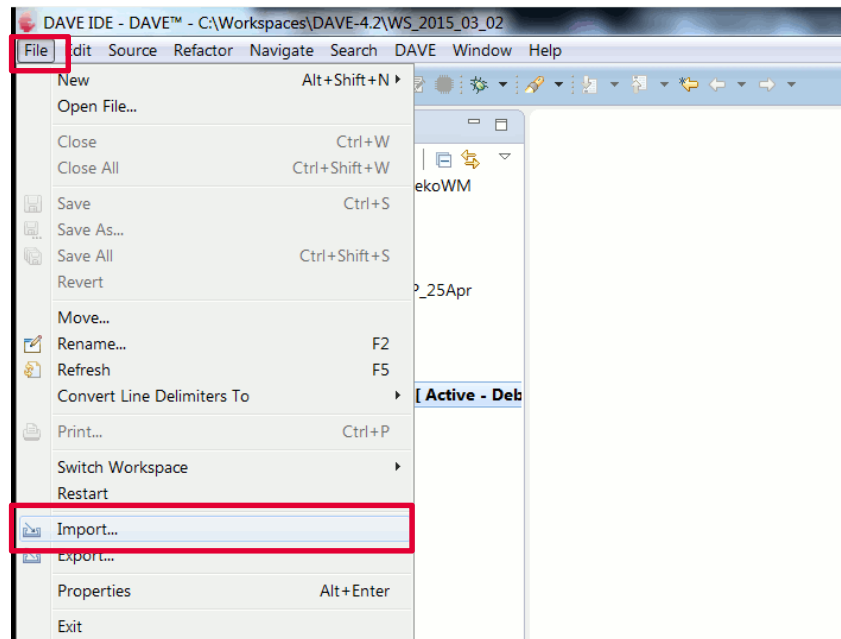

1. Connect XMC1300 CPU Card to PMSM Low Voltage 15W Motor Card using SAMTEC connector interface
2. Connect XMC1300 CPU Card to PC via Micro USB cable
3. Connect power adaptor to PMSM Low Voltage 15W Motor Card

Getting Started – Download Project from DAVE [1/2]

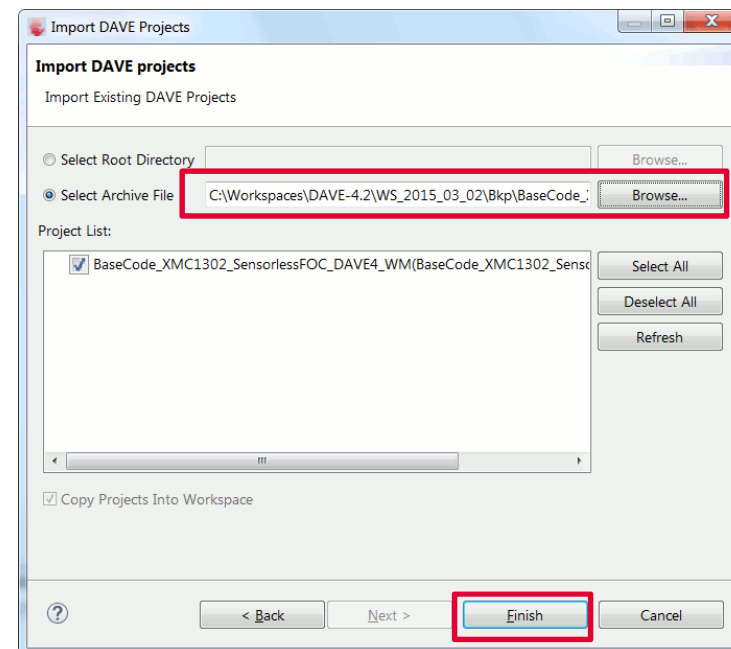

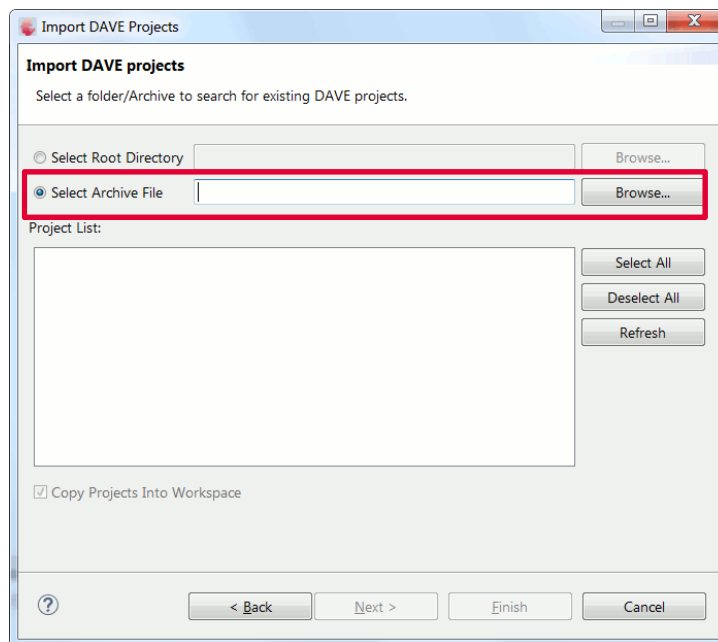

1. Open DAVE™ 
2. Click on **File > Import** to import sample code
3. Select **Infineon > DAVE project** and click “**Next**”

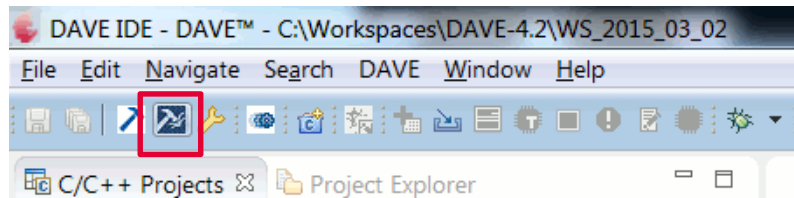

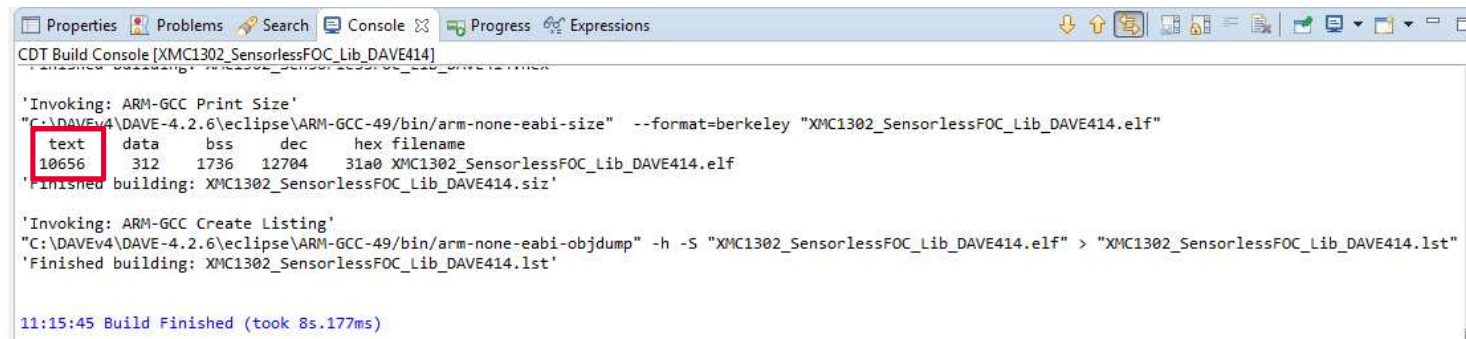

Import FOC example SW to DAVE™ 4 (2/2)

- › Next click on **Select Archive File > Browse**.
- › Select the folder containing the sample code and click **“OK”**.
- › Click on **“Finish”** to import the code into DAVE™ 4.

Build FOC example SW in DAVE™ 4

- › Click **“Rebuild Active Project”**

The screenshot shows the CDT Build Console window with the title bar 'CDT Build Console [XMC1302_SensorlessFOC_Lib_DAVE414]'. The console output shows the following commands and results:

```

'Invoking: ARM-GCC Print Size'
"C:\DAVEv4\DAVE-4.2.6\eclipse\ARM-GCC-49\bin\arm-none-eabi-size" --format=berkeley "XMC1302_SensorlessFOC_Lib_DAVE414.elf"
text    data    bss     dec     hex filename
10656    312     1736   12704   31a0 XMC1302_SensorlessFOC_Lib_DAVE414.elf
'Finished building: XMC1302_SensorlessFOC_Lib_DAVE414.siz'

'Invoking: ARM-GCC Create Listing'
"C:\DAVEv4\DAVE-4.2.6\eclipse\ARM-GCC-49\bin\arm-none-eabi-objdump" -h -S "XMC1302_SensorlessFOC_Lib_DAVE414.elf" > "XMC1302_SensorlessFOC_Lib_DAVE414.lst"
'Finished building: XMC1302_SensorlessFOC_Lib_DAVE414.lst'

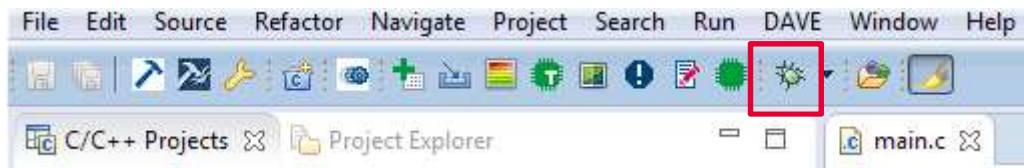

11:15:45 Build Finished (took 8s.177ms)
  
```

The word 'text' in the output table is highlighted with a red box.

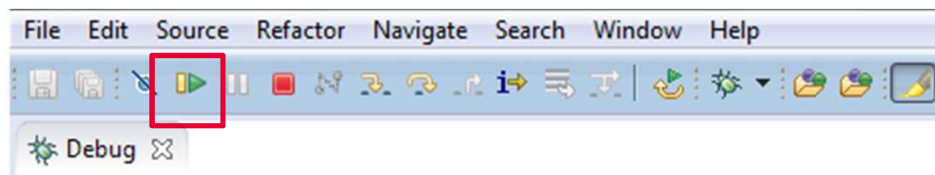

- › “text” in red box indicates that code size, e.g.: about 11 Kbytes with UART feature disabled

Download FOC example SW in DAVE™ 4

- › Click "**Debug Configuration**" to download the code

- › Click "**Resume**" to start the motor control application

Getting Started – Configure the Project [1/9]

Folder: Configuration

File name: pmsm_foc_user_parameter.h

1. Select the KIT_XMC1X_AK_MOTOR_001 and MAXON motor

```
#ifndef CONFIGURATION_PMSM_FOC_USER_PARAMETER_H_
#define CONFIGURATION_PMSM_FOC_USER_PARAMETER_H_

#include "pmsm_foc_features_config.h"
```

```
/* ----- Inverter Hardware Type Selection ----- */
#define PMSM_FOC_HARDWARE_BOARD      KIT_XMC1X_AK_MOTOR_001      /*1. KIT_XMC1X_AK_MOTOR_001
                                                                    2. KIT_XMC750WATT_MC_AK_V1
                                                                    3. IFX_XMC_LVPB_R2
                                                                    4. IFI_EVAL_24V_250W
                                                                    5. IFX_XMC_LVPB_R3
                                                                    6. IFX_XMC_PINUS_V2*/

/* ----- Motor Type Selection ----- */
#define MOTOR_TYPE                    MAXON_MOTOR                /*1. MCI_DRONE_MOTOR
                                                                    2. DJI_DRONE_MOTOR
                                                                    3. VORNADO_FAN_MOTOR
                                                                    4. NANOTEC_MOTOR
                                                                    5. MAXON_MOTOR
                                                                    6. BEKO_WM_MOTOR
                                                                    7. EBM_PAPST_VENTI_FAN_MOTOR
```

Getting Started – Configure the Project [2/9]

Folder: Configuration

File name: pmsm_foc_user_parameter.h

2. Select the Control Scheme and PWM Modulation Scheme

```
86 /* ----- Current feedback Sensing Mechanism ----- */
87 #define CURRENT_SENSING          USER_THREE_SHUNT_SYNC_CONV          /*1. USER_SINGLE_SHUNT_CONV
88                                     2. USER_THREE_SHUNT_ASSYNC_CONV
89                                     3. USER_THREE_SHUNT_SYNC_CONV*/
90 /* ----- FOC Control and Startup Scheme (Only Select 1 Scheme at one time) ----- */
91 #define MY_FOC_CONTROL_SCHEME     CONSTANT_SPEED_VF_MET_FOC          /* 1. CONSTANT_SPEED_VF_ONLY,
92                                     2. CONSTANT_SPEED_VF_MET_FOC
93                                     3. CONSTANT_SPEED_DIRECT_FOC
94                                     4. CONSTANT_TORQUE_DIRECT_FOC
95                                     5. CONSTANT_VQ_DIRECT_FOC */
```

- By enabling different marco control scheme will enable different type of statemachine.

```
603
604 #if (MY_FOC_CONTROL_SCHEME == CONSTANT_SPEED_VF_ONLY)
605     #define VF_ONLY_CC80_0_IRQHandler    CC80_0_IRQHandler
606 #elif (MY_FOC_CONTROL_SCHEME == CONSTANT_SPEED_VF_MET_FOC)
607     #define VF_FOC_CC80_0_IRQHandler    CC80_0_IRQHandler
608 #elif ((MY_FOC_CONTROL_SCHEME == CONSTANT_SPEED_DIRECT_FOC) || (MY_FOC_CONTROL_SCHEME == CONSTANT_TORQUE_DIRECT_FOC) || \
609        (MY_FOC_CONTROL_SCHEME == CONSTANT_VQ_DIRECT_FOC) )
610     #define DirectFOCStartUp_CC80_0_IRQHandler    CC80_0_IRQHandler
611 #endif
612
613 #endif /* PMSM_FOC_CONFIGURATION_PMSM_FOC_USER_PARAMETER_H */
```

Getting Started – Configure the Project [3/9]

3. Configure Inverter Hardware

Folder: Configuration

File name: pmsm_foc_user_parameter.h

```
#elif(PMSM_FOC_HARDWARE_BOARD == KIT_XMC1X_AK_MOTOR_001)

```

➤ **USER_DEFAULT_IQID_KP** and **USER_DEFAULT_IQID_KI** for Torque and Flux PI Controllers are calculated from the physical motor and system parameters, and typically **don't need to be tuned** in the first iteration

➤ The Speed PI and PLL PI controller parameters should start to be modified if the motor **cannot transit** from V/F open-loop to FOC closed-loop smoothly

Getting Started – Configure the Project [9/9]

9. Tuning Kp, Ki Speed & PLL Controller

Folder: ControlModules

File name: pmsm_foc_pi.h

```

```

↑ this value by 1 will ↓
gain of Speed controller
by half

- ↑ the SCALEKPKI of PLL Control and check the motor behaviour.
- If motor start to move slowly, ↑ the SCALEKPKI further. Else, ↓ the SCALEKPKI
- Apply similar tactic for the tuning of Speed Control

↑ this value by 1 will ↓
gain of PLL Estimator
Controller by half

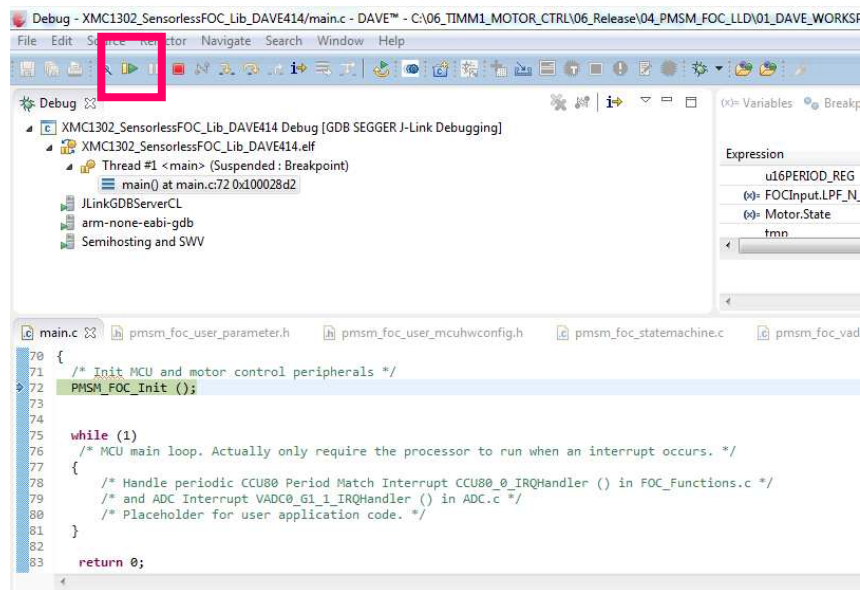

$$PI \text{ gains: } K_p = \frac{P \text{ setting}}{2^{SCALEKPKI}}$$

$$K_i = \frac{I \text{ setting}}{2^{SCALEKPKI}}$$

Getting Started – Compile and Verify the project

1. Click “Build Active Project” 
2. Click “Debug Configuration” to download the code 
3. Click “Resume” to start the application

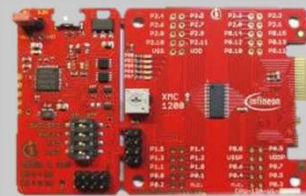

Observation:

- › Motor should ramp to 4200RPM with ramp rate of 500RPM/s.

General Information (1/2)

› Where to buy kits:

Development Boards	Order Number
XMC1300 Boot Kit	KIT XMC13 BOOT 001
PMSM Low Voltage 15W Card	KIT XMC1x AK Motor 001

General Information (2/2)
