

Product Brief

PROFET™+2

High-side switches for energy efficiency and miniaturization

The PROFET™+2 family of protected high-side power switches (8 mΩ to 200 mΩ) in TSDSO-14 exposed pad package provides state of the art diagnostics and protection features. The family offers benchmark form factor, the lowest $R_{DS(ON)}$ (2x 8 mΩ) and smallest package (TSDSO-14) pin pitch of 0.65 mm.

The whole family is compatible with the most severe reverse battery requirement on the market due to incorporating Reversave™ functionality for the 1st time in the market on a single chip product. The family offers outstanding energy efficiency with reduced current consumption, state of the art current sense accuracy (k_{ILIS}), benchmark low cranking voltage capability and faster switching/slew rate with no impact on EMC.

Key features

- › Operating voltage range 3.1–28 V with 3.3 V and 5 V compatible logic input
- › Protection: current tripping, over-temperature, overvoltage, load dump, reverse polarity, short-circuit
- › Diagnosis: load current sense output

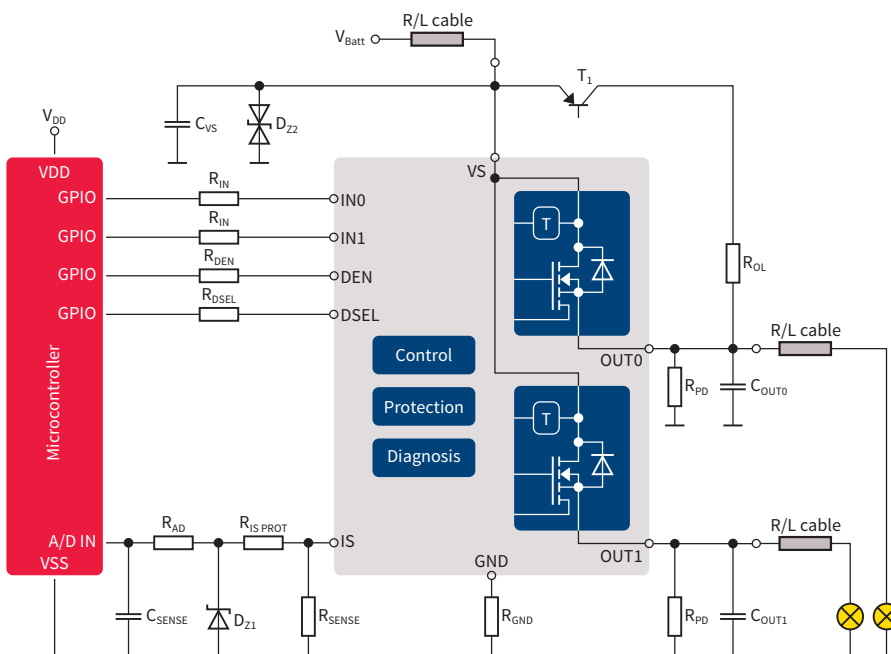

Key benefits

- › 50% reduced internal operating current consumption
- › Simplified & cost efficient ground network
- › Outstanding current sense accuracy ($k_{ILIS} \leq 5\%$ @ nominal load current)
- › Benchmark cranking voltage capability able to work down to 3.1 V
- › Smaller package size for area savings
- › Optimized for design flexibility across the family by pin to pin compatibility
- › Very low output leakage current ($\leq 0.5 \mu A$ up to 85°C)

Key applications

- › Automotive 12 V lighting load applications capacitive loads e.g. halogen bulbs and LED modules
- › Resistive loads e.g. small seat heating applications requiring below 8A nominal currents
