21 SPC Interface Registers

This section discusses the SPC Interface (SPCIF) registers. It lists all the registers in mapping tables, in address order.

21.1 Register Details

| Register Name | Address |
|-----------------------------------|------------|
| SPCIF_GEOMETRY | 0x40110000 |
| SPCIF_INTR | 0x401107F0 |
| SPCIF_INTR_SET | 0x401107F4 |
| SPCIF_INTR_MASK | 0x401107F8 |
| SPCIF_INTR_MASKED | 0x401107FC |

21.1.1 SPCIF_GEOMETRY

Flash/NVL geometry information

Address: 0x40110000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------------|-------------|-------------------|----|----------------|----|----|----|
| SW Access | R | | | | | | | |
| HW Access | W | | | | | | | |
| Name | FLASH [7:0] | | | | | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | R | | | | | | | |
| HW Access | W | | | | | | | |
| Name | FLASH [15:8] | | | | | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | R | | R | | R | | | |
| HW Access | W | | W | | W | | | |
| Name | FLASH_ROW [23:22] | | NUM_FLASH [21:20] | | SFLASH [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | RW | R | | | | | | |
| HW Access | None | W | | | | | | |
| Name | DE_CPD_LP | NVL [30:24] | | | | | | |

| Bits | Name | Description |
|---------|-----------|--|
| 31 | DE_CPD_LP | 0': SRAM busy wait loop has not been copied. '1': Busy wait loop has been written into SRAM. Default Value: 0 |
| 30 : 24 | NVL | NVLatch size in Byte multiples (chip dependent): "0": 0 Bytes "1": 1 Byte ... "127": 127 Bytes Default Value: Undefined |

21.1.1 SPCIF_GEOMETRY (continued)

| | | |
|---------|-----------|--|
| 23 : 22 | FLASH_ROW | <p>Page size in 64 Byte multiples (chip dependent):</p> <p>"0": 64 byte</p> <p>"1": 128 byte</p> <p>"2": 192 byte</p> <p>"3": 256 byte</p> <p>The page size is used to determine the number of Bytes in a page for Flash page based operations (e.g. PGM_PAGE).</p> <p>Note: the field name FLASH_ROW is misleading, as this field specifies the number of Bytes in a page, rather than the number of Bytes in a row. In a single plane flash macro architecture, a page consists of a single row. However, in a multi plane flash macro architecture, a page consists of multiple rows from different planes.</p> <p>Default Value: Undefined</p> |
| 21 : 20 | NUM_FLASH | <p>Number of flash macros (chip dependent):</p> <p>"0": 1 flash macro</p> <p>"1": 2 flash macros</p> <p>"2": 3 flash macros</p> <p>"3": 4 flash macros</p> <p>Default Value: Undefined</p> |
| 19 : 16 | SFLASH | <p>Supervisory flash capacity in 256 Byte multiples (chip dependent). If multiple flash macros are present, this field provides the supervisory flash capacity of all flash macros together:</p> <p>"0": 256 Bytes.</p> <p>"1": 2*256 Bytes.</p> <p>...</p> <p>"15": 16*256 Bytes.</p> <p>Default Value: Undefined</p> |
| 15 : 0 | FLASH | <p>Regular flash capacity in 256 Byte multiples (chip dependent). If multiple flash macros are present, this field provides the flash capacity of all flash macros together:</p> <p>"0": 256 Bytes.</p> <p>"1": 2*256 Bytes.</p> <p>...</p> <p>"65535": 65536*256 Bytes.</p> <p>Default Value: Undefined</p> |

21.1.2 SPCIF_INTR

SPCIF interrupt request register

Address: 0x401107F0

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|-------|
| SW Access | None | | | | | | | RW1C |
| HW Access | None | | | | | | | RW1S |
| Name | None [7:1] | | | | | | | TIMER |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|-------|--|
| 0 | TIMER | Timer counter value reaches "0". Set to '1', when event is detected. Write INTR field with '1', to clear bit. Write INTR_SET field with '1', to set bit. Default Value: 0 |

21.1.3 SPCIF_INTR_SET

SPCIF interrupt set request register

Address: 0x401107F4

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|-------|
| SW Access | None | | | | | | | RW1S |
| HW Access | None | | | | | | | A |
| Name | None [7:1] | | | | | | | TIMER |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|-------|--|
| 0 | TIMER | Write INTR_SET field with '1' to set corresponding INTR field. Default Value: 0 |

21.1.4 SPCIF_INTR_MASK

SPCIF interrupt mask register

Address: 0x401107F8

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|-------|
| SW Access | None | | | | | | | RW |
| HW Access | None | | | | | | | R |
| Name | None [7:1] | | | | | | | TIMER |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|-------|--|
| 0 | TIMER | Mask for corresponding field in INTR register. Default Value: 0 |

21.1.5 SPCIF_INTR_MASKED

SPCIF interrupt masked request register

Address: 0x401107FC

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|-------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | W |
| Name | None [7:1] | | | | | | | TIMER |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|-------|---|
| 0 | TIMER | Logical and of corresponding request and mask fields. Default Value: 0 |

22 System Resources Sub-System Registers

This section discusses the System Resources Sub-System (SRSS) registers. It lists all the registers in mapping tables, in address order.

22.1 Register Details

| Register Name | Address |
|-----------------|------------|
| PWR_CONTROL | 0x400B0000 |
| PWR_INTR | 0x400B0004 |
| PWR_INTR_MASK | 0x400B0008 |
| PWR_KEY_DELAY | 0x400B000C |
| PWR_BG_CONFIG | 0x400B0014 |
| PWR_VMON_CONFIG | 0x400B0018 |
| PWR_BOD_KEY | 0x400B0028 |
| PWR_STOP | 0x400B002C |
| CLK_SELECT | 0x400B0100 |
| CLK_ILO_CONFIG | 0x400B0104 |
| CLK_IMO_CONFIG | 0x400B0108 |
| CLK_IMO_SPREAD | 0x400B010C |
| WDT_CTRLOW | 0x400B0200 |
| WDT_CTRHIGH | 0x400B0204 |
| WDT_MATCH | 0x400B0208 |
| WDT_CONFIG | 0x400B020C |
| WDT_CONTROL | 0x400B0210 |
| RES_CAUSE | 0x400B0300 |
| PWR_BG_TRIM3 | 0x400BFF18 |
| PWR_BG_TRIM4 | 0x400BFF1C |
| PWR_BG_TRIM5 | 0x400BFF20 |
| CLK_ILO_TRIM | 0x400BFF24 |
| CLK_IMO_TRIM1 | 0x400BFF28 |
| CLK_IMO_TRIM2 | 0x400BFF2C |
| CLK_IMO_TRIM4 | 0x400BFF34 |
| PWR_RSVD_TRIM | 0x400BFF38 |

22.1.1 PWR_CONTROL

Power Mode Control

Address: 0x400B0000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---------------|-------------------|------------------|---|---|---|
| SW Access | None | | R | R | R | | | |
| HW Access | None | | RW | RW | RW | | | |
| Name | None [7:6] | | LPM_READ Y | DEBUG_SE SSION | POWER_MODE [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|----------|--------------|----|----|----|----|----|----|
| SW Access | RW | None | | | | | | |
| HW Access | R | None | | | | | | |
| Name | EXT_VCCD | None [22:16] | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|----------------|------|-----------------|-----------------------|------------------|------|------------------|------------------|
| SW Access | RW | None | RW | RW1S | RW | None | RW1S | RW |
| HW Access | R | None | R | R | A | None | RW0C | R |
| Name | HIBER- NATE | None | LFCLK_SH ORT | HIBERNAT E_DISABLE | FIMO_DISA BLE | None | HVMON_R ELOAD | HVMON_E NABLE |

| Bits | Name | Description |
|------|-------------|--|
| 31 | HIBERNATE | <p>Selects between HIBERNATE/DEEPSLEEP modes when Cortex-M0 enters low power mode (SleepDeep). Note: this bit is ignored when HIBERNATE_DISABLE=1. Default Value: 1</p> <p>0x0: DEEP_SLEEP: Enter DeepSleep mode when CPU asserts SLEEPDEEP signal</p> <p>0x1: HIBERNATE: Enter Hibernate mode when CPU asserts SLEEPDEEP signal</p> |
| 29 | LFCLK_SHORT | <p>Short Vccfclk and Vccdsp power rails in DeepSleep power mode. This mode selection affects the accuracy specifications of the ILO oscillator due to supply noise. See Data Sheet for more details.</p> <p>0: Do not short power domains 1: Short power domains Default Value: 0</p> |

22.1.1 PWR_CONTROL (continued)

| | | |
|-------|-------------------|---|
| 28 | HIBERNATE_DISABLE | <p>0: Normal operation, HIBERNATE works as described 1: HIBERNATE bit is ignored, Hibernate mode is permanently disabled (part will go to DeepSleep instead). Note: This bit is a write-once bit until the next reset. Default Value: 0</p> |
| 27 | FIMO_DISABLE | <p>This bit is asserted during the boot process 0: Forces IMO to operate at 12MHz, ignore its frequency and trim settings and operate independent on its external references. 1: Turns IMO into normal operational mode Default Value: 0</p> |
| 25 | HVMON_RELOAD | <p>Firmware writes 1 to reload HV State in hibernate shadow copy. Hardware clears this bit after reload was successful. Wait at least 9 cycles after writing/recalling NVL before reloading the HVMON. Default Value: 0</p> |
| 24 | HVMON_ENABLE | <p>0: HV State Monitoring is disabled 1: HV State Monitoring is automatically enable by sleep controller Default Value: 1</p> |
| 23 | EXT_VCCD | <p>Should be set by firmware if Vccd is provided externally (on Vccd pin). Setting this bit turns off the active regulator and will lead to system reset (PBOD) unless both Vddd and Vccd pins are supplied externally. Default Value: 0</p> |
| 5 | LPM_READY | <p>Indicates whether the low power mode regulators are ready to enter DEEPSLEEP or HIBERNATE mode. 0: If DEEPSLEEP or HIBERNATE mode is requested, device will enter SLEEP mode. When low power regulators are ready, device will automatically enter the originally requested mode. 1: Normal operation. DEEPSLEEP and HIBERNATE work as described. Default Value: 0</p> |
| 4 | DEBUG_SESSION | <p>Indicates whether a debug session is active (CDBGPWRUPREQ signal is 1) Default Value: 0</p> <p>0x0: NO_SESSION: No debug session active</p> <p>0x1: SESSION_ACTIVE: Debug session is active</p> |
| 3 : 0 | POWER_MODE | <p>Current power mode of the device. Note that this field cannot be read in all power modes on actual silicon. Default Value: 0</p> <p>0x0: RESET: RESET state</p> <p>0x1: ACTIVE: ACTIVE state</p> <p>0x2: SLEEP: SLEEP state</p> <p>0x3: DEEP_SLEEP: DEEP_SLEEP state</p> <p>0x4: HIBERNATE: HIBERNATE state</p> |

22.1.2 PWR_INTR

Power System Interrupt Register

Address: 0x400B0004

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|------|------|
| SW Access | None | | | | | | RW1C | None |
| HW Access | None | | | | | | A | None |
| Name | None [7:2] | | | | | | LVD | None |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|------|---|
| 1 | LVD | Indicates an Low Voltage Detect interrupt Default Value: 0 |

22.1.3 PWR_INTR_MASK

Power System Interrupt Mask Register

Address: 0x400B0008

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|-----|------|
| SW Access | None | | | | | | RW | None |
| HW Access | None | | | | | | R | None |
| Name | None [7:2] | | | | | | LVD | None |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|------|---|
| 1 | LVD | 1: Propagate interrupt to CPU Default Value: 0 |

22.1.4 PWR_KEY_DELAY

Power System Key Register

Address: 0x400B000C

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | WAKEUP_HOLDOFF [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|----------------------|---|
| SW Access | None | | | | | | RW | |
| HW Access | None | | | | | | R | |
| Name | None [15:10] | | | | | | WAKEUP_HOLDOFF [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 9 : 0 | WAKEUP_HOLDOFF | Delay (in 12MHz IMO clock cycles) to wait for references to settle on wakeup from hibernate/deepsleep. PBOD is ignored and system does not resume until this delay expires. Note that the same delay on POR is hard-coded. Default Value: 780 |

22.1.5 PWR_BG_CONFIG

Bandgap Trim and Configuration

Address: 0x400B0014

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------------|---|-----------------|-----------------------|---|---|---|-----------|
| SW Access | RW | | RW | RW | | | | RW |
| HW Access | R | | R | R | | | | R |
| Name | BG_DFT_ICORE_SEL [7:6] | | BG_DFT_CORE_SEL | BG_DFT_VREF_SEL [4:1] | | | | BG_DFT_EN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|------------------|
| SW Access | None | | | | | | | RW |
| HW Access | None | | | | | | | R |
| Name | None [15:9] | | | | | | | BG_DFT_VCORE_SEL |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|-----------------|----|----|
| SW Access | None | | | | | RW | | |
| HW Access | None | | | | | R | | |
| Name | None [23:19] | | | | | VREF_EN [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------------|--|
| 18 : 16 | VREF_EN | Reference voltage enable. Each bit enables a reference voltage used by a peripheral: vref[0] = 1 enables VREF[0] to 1.024V vref[1] = 1 enables VREF[1] to 1.024V vref[2] = 1 enables VREF[2] to 1.2V These references require 40us to settle after enabling them and 30us to settle after waking from DeepSleep. Default Value: 0 |
| 8 | BG_DFT_VCORE_SEL | Reserved. Keep this bit at default value. Default Value: 0 |
| 7 : 6 | BG_DFT_ICORE_SEL | Reserved. Keep this field at default value. Default Value: 0 |
| 5 | BG_DFT_CORE_SEL | Reserved. Keep this bit at default value. Default Value: 0 |
| 4 : 1 | BG_DFT_VREF_SEL | Reserved. Keep this field at default value. Default Value: 0 |

22.1.5 PWR_BG_CONFIG (continued)

| | | |
|---|-----------|---|
| 0 | BG_DFT_EN | Reserved. Keep this bit at default value. Default Value: 0 |
|---|-----------|---|

22.1.6 PWR_VMON_CONFIG

Voltage Monitoring Trim and Configuration

Address: 0x400B0018

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|---------------------|---|---|---------------|---|---|--------|---|
| SW Access | RW | | | RW | | | RW | |
| HW Access | R | | | R | | | R | |
| Name | VMON_DDFT_SEL [7:5] | | | LVD_SEL [4:1] | | | LVD_EN | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---------------------|---|
| SW Access | None | | | | | | RW | |
| HW Access | None | | | | | | R | |
| Name | None [15:10] | | | | | | VMON_ADFT_SEL [9:8] | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|---------------|---|
| 9 : 8 | VMON_ADFT_SEL | Reserved. Keep this field at default value. Default Value: 0 |
| 7 : 5 | VMON_DDFT_SEL | Reserved. Keep this field at default value. Default Value: 0 |

22.1.6 PWR_VMON_CONFIG (continued)

| | | |
|-------|---------|--|
| 4 : 1 | LVD_SEL | <p>Threshold selection for Low Voltage Detect circuit. Disable the LVD (LVD_EN=0) before changing the threshold. Threshold variation is +/- 2.5% from these typical voltage choices:</p> <p>0: 1.7500 V 1: 1.8000 V 2: 1.9000 V 3: 2.0000 V 4: 2.1000 V 5: 2.2000 V 6: 2.3000 V 7: 2.4000 V 8: 2.5000 V 9: 2.6000 V 10: 2.7000 V 11: 2.8000 V 12: 2.9000 V 13: 3.0000 V 14: 3.2000 V 15: 4.5000 V Default Value: 0</p> |
| 0 | LVD_EN | <p>Enable Low Voltage Detect circuit. Default Value: 0</p> |

22.1.7 PWR_BOD_KEY

BOD Detection Key

Address: 0x400B0028

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | A | | | | | | | |
| Name | KEY16 [7:0] | | | | | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | | | | |
| HW Access | A | | | | | | | |
| Name | KEY16 [15:8] | | | | | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|--------|-------|---|
| 15 : 0 | KEY16 | <p>To detect brown-outs firmware should do this on boot:</p> <ol style="list-style-type: none"> 1. Set key= KEY16 2. Set KEY16= 0x3A71 3. If key==0x3A71 this was a brown-out event. <p>Default Value: X</p> |

22.1.8 PWR_STOP

STOP Mode Register

Address: 0x400B002C

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|---------------|--------------|----|----|----|----|--------|----------|
| SW Access | RW | | | | | | | |
| HW Access | A | | | | | | | |

| SW Access | None | | | | | | RW | RW |
| HW Access | None | | | | | | A | A |
| Name | None [23:18] | | | | | | FREEZE | POLARITY |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | RW | None | | | | | | |
| HW Access | A | None | | | | | | |
| Name | STOP | None [30:24] | | | | | | |

| Bits | Name | Description |
|------|----------|--|
| 31 | STOP | Firmware sets this bit to enter STOP mode. Both UNLOCK and FREEZE must have been set correctly in a previous write operation. Otherwise, writes to this bit will affect the freeze override but will not actually set the STOP bit. The system will enter STOP mode immediately after writing to this bit and will wakeup only in response to XRES or WAKEUP event. Default Value: 0 |
| 17 | FREEZE | Firmware sets this bit to freeze the configuration, mode and state of all GPIOs and SIOs in the system. Two identical write cycles are required to freeze the IO explicitly. The first cycle instructs DEEPSLEEP and HIBERNATE peripherals whether they can override upcoming freeze command(s). UNLOCK setting does not affect this. If firmware writes FREEZE=1 and STOP=0, peripherals can override the freeze and remain functional according to their configuration. If firmware writes FREEZE=1 and STOP=1, peripherals cannot override the next freeze command. The second write cycle freezes the IO if UNLOCK is set and the peripheral does not override the freeze. While FREEZE=1, peripherals will automatically freeze according to the override directive when entering DEEPSLEEP or HIBERNATE, regardless of the UNLOCK setting. Default Value: 0 |
| 16 | POLARITY | 0: WAKEUP=0 will wakeup the part from STOP 1: WAKEUP=1 will wakeup the part from STOP Default Value: 0 |

22.1.8 PWR_STOP (continued)

| | | |
|--------|--------|--|
| 15 : 8 | UNLOCK | This byte must be set to 0x3A for FREEZE or STOP fields to operate. Any other value in this register will cause FREEZE/STOP to have no effect, except as noted in the FREEZE description. Default Value: 0 |
| 7 : 0 | TOKEN | Contains a 8-bit token that is retained through a STOP/WAKEUP sequence that can be used by firmware to differentiate WAKEUP from a general RESET event. Note that waking up from STOP using XRES will reset this register. Default Value: 0 |

22.1.9 CLK_SELECT

22.1.9 CLK_SELECT (continued)

| | | |
|---------|-------------|---|
| | | 0x7: DIV_BY_128: SYSCLK= HFCLK/128 |
| 18 | HALF_EN | This bit impact products using CPUSSv1 only. It has no effect on products using CPUSSv2. FLASH Wait-state selection. This must be set to 1 when clk_sys is set to a frequency greater than 24MHz. 0: Access FLASH using 0 wait-states. Only use this setting when HFCLK is <=24MHz. 1: Access FLASH using 1 wait-state. Safe to use this setting for any clock frequency. Default Value: 0 |
| 17 : 16 | HFCLK_SEL | Selects the source for HFCLK. Default Value: 0 0x0: DIRECT_SEL: Source selected by DIRECT_SEL 0x1: DBL: Output of DBL (Doublor) - Selects output of EXCO PLL1 if supported. Note that not all products support all clock sources. Selecting a clock source that is not supported will result in undefined behavior. Note: this is called DBL for legacy reasons, and cannot be changed without breaking collateral for multiple existing products. 0x2: PLL: Output of PLL - Selects output of EXCO PLL0 if supported. Note that not all products support all clock sources. Selecting a clock source that is not supported will result in undefined behavior. Note: this is called PLL for legacy reasons, and cannot be changed without breaking collateral for multiple existing products. |
| 15 : 14 | WDT_LOCK | Prohibits writing to WDT_* registers and CLK_ILO register when not equal 0. Requires at least two different writes to unlock. Note that this field is 2 bits to force multiple writes only. It represents only a single write protect signal protecting all WATCHDOG registers at the same time. Default Value: 0 0x0: NO_CHG: No effect 0x1: CLR0: Clears bit 0 0x2: CLR1: Clears bit 1 0x3: SET01: Sets both bits 0 and 1 |
| 13 : 12 | DPLLREF_SEL | Selects a source for the reference (tracking) input of DPLL: 0: DSI_OUT[0] 1: DSI_OUT[1] 2: DSI_OUT[2] 3: DSI_OUT[3] Default Value: 0 0x0: DSI0: DSI_OUT[0] 0x1: DSI1: DSI_OUT[1] 0x2: DSI2: DSI_OUT[2] |

22.1.9 CLK_SELECT (continued)

| 29 : 28 | SS_RANGE | Spread spectrum range (downspread when SS_VALUE=16). 3: reserved, do not use Default Value: 0 0x0: M1: 0 .. -1% |

22.1.12 CLK_IMO_SPREAD (continued)

0x1: M2:

0 .. -2%

0x2: M4:

0 .. -4%

12 : 8 SS_MAX

Maximum counter value for spread spectrum. Counter will count from 0..SS_MAX..0 and keep repeating this indefinitely. Only works when SS_MODE=1.
Default Value: 0

4 : 0 SS_VALUE

Current offset value for spread spectrum modulation. IMO supports values 0..16. Step size is determined by SS_RANGE. Value is encoded in proper thermometric format for IMO in hardware. Value can be modified in firmware only when SS_MODE=0.
Default Value: 0

| | | 0x0: NOTHING: Free running counter with no interrupt requests |
| | | 0x1: INT: Free running counter with interrupt request when a specified bit in CTR2 toggles (see WDT_BITS2) |
| 11 | WDT_CASCADE1_2 | Cascade Watchdog Counters 1,2. Counter 2 increments the cycle after WDT_CTR1=WDT_MATCH1. It is allowed to cascade all three WDT counters. 0: Independent counters 1: Cascaded counters Default Value: 0 |
| 10 | WDT_CLEAR1 | Clear Watchdog Counter when WDT_CTR1=WDT_MATCH1. In other words WDT_CTR1 divides LFCLK by (WDT_MATCH1+1). 0: Free running counter 1: Clear on match Default Value: 0 |
| 9 : 8 | WDT_MODE1 | Watchdog Counter Action on Match (WDT_CTR1=WDT_MATCH1). Default Value: 0 |
| | | 0x0: NOTHING: Do nothing |
| | | 0x1: INT: Assert WDT_INTx |
| | | 0x2: RESET: Assert WDT Reset |
| | | 0x3: INT_THEN_RESET: Assert WDT_INTx, assert WDT Reset after 3rd unhandled interrupt |
| 3 | WDT_CASCADE0_1 | Cascade Watchdog Counters 0,1. Counter 1 increments the cycle after WDT_CTR0=WDT_MATCH0. 0: Independent counters 1: Cascaded counters Default Value: 0 |
| 2 | WDT_CLEAR0 | Clear Watchdog Counter when WDT_CTR0=WDT_MATCH0. In other words WDT_CTR0 divides LFCLK by (WDT_MATCH0+1). 0: Free running counter 1: Clear on match Default Value: 0 |
| 1 : 0 | WDT_MODE0 | Watchdog Counter Action on Match (WDT_CTR0=WDT_MATCH0). Default Value: 0 |
| | | 0x0: NOTHING: Do nothing |
| | | 0x1: INT: Assert WDT_INTx |
| | | 0x2: RESET: Assert WDT Reset |
| | | 0x3: INT_THEN_RESET: Assert WDT_INTx, assert WDT Reset after 3rd unhandled interrupt |

22.1.17 WDT_CONTROL

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|--------------|---|
| 19 | WDT_RESET2 | Resets counter 2 back to 0000_0000. Hardware will reset this bit after counter was reset. This will take several LFCLK cycles to take effect. Wait until the reset completes before enabling the WDT. Default Value: 0 |
| 18 | WDT_INT2 | WDT Interrupt Request. This bit is set by hardware as configured by this registers. This bit must be cleared by firmware. Clearing this bit also prevents Reset from happening when WDT_MODEx=3. After W1C, WDT_CONTROL must be read for the hardware to internally remove the clear flag. Failure to do this may result in missing the next interrupt. Default Value: 0 |
| 17 | WDT_ENABLED2 | Indicates actual state of counter. May lag WDT_ENABLE2 by up to 3 LFCLK cycles. After changing WDT_ENABLE2, do not enter DEEPSLEEP mode until this field acknowledges the change. Default Value: 0 |

22.1.17 WDT_CONTROL (continued)

| | | |
|----|--------------|--|
| 16 | WDT_ENABLE2 | <p>Enable Counter 2</p> <p>0: Counter is disabled (not clocked)</p> <p>1: Counter is enabled (counting up)</p> <p>Note: This field takes considerable time (up to 3 LFCLK cycles) to take effect. It must not be changed more than once in that period.</p> <p>Default Value: 0</p> |
| 11 | WDT_RESET1 | <p>Resets counter 1 back to 0000. Hardware will reset this bit after counter was reset. This will take several LFCLK cycles to take effect. Wait until the reset completes before enabling the WDT.</p> <p>Default Value: 0</p> |
| 10 | WDT_INT1 | <p>WDT Interrupt Request. This bit is set by hardware as configured by this registers. This bit must be cleared by firmware. Clearing this bit also prevents Reset from happening when WDT_MODEx=3. After W1C, WDT_CONTROL must be read for the hardware to internally remove the clear flag. Failure to do this may result in missing the next interrupt.</p> <p>Default Value: 0</p> |

23 SRSS External Clock Registers

This section discusses the SRSS External Clock registers. It lists all the registers in mapping tables, in address order.

23.1 Register Details

| Register Name | Address |
|---------------------------------|------------|
| CLK_ECO_CONFIG | 0x400C0008 |
| CLK_ECO_STATUS | 0x400C000C |
| CLK_PLL0_CONFIG | 0x400C0014 |
| CLK_PLL0_STATUS | 0x400C0018 |
| CLK_PLL0_TEST | 0x400C001C |
| CLK_PLL1_CONFIG | 0x400C0020 |
| CLK_PLL1_STATUS | 0x400C0024 |
| CLK_PLL1_TEST | 0x400C0028 |
| CLK_OSCINTF_CTL | 0x400C0050 |
| CLK_PLL0_TRIM | 0x400CFF04 |
| CLK_PLL1_TRIM | 0x400CFF08 |
| CLK_ECO_TRIM0 | 0x400CFF0C |
| CLK_ECO_TRIM1 | 0x400CFF10 |

23.1.1 CLK_ECO_CONFIG

ECO Configuration Register

Address: 0x400C0008

| SW Access | RW | None | | | | | | |
| HW Access | R | None | | | | | | |
| Name | ENABLE | None [30:24] | | | | | | |

| Bits | Name | Description |
|------|--------|---|
| 31 | ENABLE | Master enable for ECO oscillator. Refer to CLK_EN for sequencing. Default Value: 0 |
| 1 | AGC_EN | Automatic Gain Control (AGC) enable. When set, the oscillation amplitude is controlled to the level selected by ECO_TRIM0.ATRIM. When low, the amplitude is not explicitly controlled and will grow until it saturates to the supply rail (1.8V nom). WARNING: use care when disabling AGC because driving a crystal beyond its rated limit can permanently damage the crystal. Default Value: 1 |
| 0 | CLK_EN | Clock Enable. When enabling the clock, first write ENABLE=1, wait at least 10us, and then write CLK_EN=1. When disabling, clearing both CLK_EN=0 and ENABLE=0 can be done in the same AHB write Default Value: 0 |

23.1.2 CLK_ECO_STATUS

ECO Status Register

Address: 0x400C000C

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|----------------|

24 SRSS Peripheral Clock Registers

This section discusses the SRSS Peripheral Clock registers. It lists all the registers in mapping tables, in address order.

24.1 Register Details

| Register Name | Address |
|------------------|------------|
| PERI_DIV_CMD | 0x40010000 |
| PERI_PCLK_CTL0 | 0x40010100 |
| PERI_PCLK_CTL1 | 0x40010104 |
| PERI_PCLK_CTL2 | 0x40010108 |
| PERI_PCLK_CTL3 | 0x4001010C |
| PERI_PCLK_CTL4 | 0x40010110 |
| PERI_PCLK_CTL5 | 0x40010114 |
| PERI_PCLK_CTL6 | 0x40010118 |
| PERI_PCLK_CTL7 | 0x4001011C |
| PERI_PCLK_CTL8 | 0x40010120 |
| PERI_PCLK_CTL9 | 0x40010124 |
| PERI_PCLK_CTL10 | 0x40010128 |
| PERI_PCLK_CTL11 | 0x4001012C |
| PERI_PCLK_CTL12 | 0x40010130 |
| PERI_PCLK_CTL13 | 0x40010134 |
| PERI_PCLK_CTL14 | 0x40010138 |
| PERI_PCLK_CTL15 | 0x4001013C |
| PERI_PCLK_CTL16 | 0x40010140 |
| PERI_PCLK_CTL17 | 0x40010144 |
| PERI_PCLK_CTL18 | 0x40010148 |
| PERI_PCLK_CTL19 | 0x4001014C |
| PERI_PCLK_CTL20 | 0x40010150 |
| PERI_PCLK_CTL21 | 0x40010154 |
| PERI_PCLK_CTL22 | 0x40010158 |
| PERI_PCLK_CTL23 | 0x4001015C |
| PERI_PCLK_CTL24 | 0x40010160 |
| PERI_DIV_16_CTL0 | 0x40010300 |

| Register Name | Address |
|------------------------------------|------------|
| PERI_DIV_16_CTL1 | 0x40010304 |
| PERI_DIV_16_CTL2 | 0x40010308 |
| PERI_DIV_16_CTL3 | 0x4001030C |
| PERI_DIV_16_CTL4 | 0x40010310 |
| PERI_DIV_16_CTL5 | 0x40010314 |
| PERI_DIV_16_CTL6 | 0x40010318 |
| PERI_DIV_16_CTL7 | 0x4001031C |
| PERI_DIV_16_CTL8 | 0x40010320 |
| PERI_DIV_16_CTL9 | 0x40010324 |
| PERI_DIV_16_CTL10 | 0x40010328 |
| PERI_DIV_16_CTL11 | 0x4001032C |
| PERI_DIV_16_CTL12 | 0x40010330 |
| PERI_DIV_16_CTL13 | 0x40010334 |
| PERI_DIV_16_CTL14 | 0x40010338 |
| PERI_DIV_16_CTL15 | 0x4001033C |
| PERI_DIV_16_5_CTL0 | 0x40010400 |
| PERI_DIV_16_5_CTL1 | 0x40010404 |
| PERI_DIV_16_5_CTL2 | 0x40010408 |
| PERI_DIV_16_5_CTL3 | 0x4001040C |
| PERI_DIV_24_5_CTL | 0x40010500 |
| PERI_TR_CTL | 0x40010600 |

24.1.1 PERI_DIV_CMD

Divider command register

Address: 0x40010000

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------------|---|---------------|---|---|---|---|---|
| SW Access | RW | | RW | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------|---------|--------------|----|----|----|----|----|
| SW Access | RW | RW | None | | | | | |
| HW Access | RW1C | RW1C | None | | | | | |
| Name | ENABLE | DISABLE | None [29:24] | | | | | |

| Bits | Name | Description |
|------|------|-------------|
|------|------|-------------|

24.1.1 PERI_DIV_CMD (continued)

| | | |
|---------|-------------|---|
| 31 | ENABLE | <p>Clock divider enable command (mutually exclusive with DISABLE). Typically, SW sets this field to '1' to enable a divider and HW sets this field to '0' to indicate that divider enabling has completed. When a divider is enabled, its integer and fractional (if present) counters are initialized to "0". If a divider is to be re-enabled using different integer and fractional divider values, the SW should follow these steps:</p> <ul style="list-style-type: none"> 0: Disable the divider using the DIV_CMD.DISABLE field. 1: Configure the divider's DIV_XXX_CTL register. 2: Enable the divider using the DIV_CMD_ENABLE field. <p>The SEL_DIV and SEL_TYPE fields specify which divider is to be enabled. The enabled divider may be phase aligned to either "clk_hf" (typical usage) or to ANY enabled divider.</p> <p>The PA_SEL_DIV and P_SEL_TYPE fields specify the reference divider.</p> <p>The HW sets the ENABLE field to '0' when the enabling is performed and the HW set the DIV_XXX_CTL.EN field of the divider to '1' when the enabling is performed. Note that enabling with phase alignment to a low frequency divider takes time. E.g. To align to a divider that generates a clock of "clk_hf"/n (with n being the integer divider value INT_DIV+1), up to n cycles may be required to perform alignment. Phase alignment to "clk_hf" takes affect immediately. SW can set this field to '0' during phase alignment to abort the enabling process.</p> <p>Default Value: 0</p> |
| 30 | DISABLE | <p>Clock divider disable command (mutually exclusive with ENABLE). SW sets this field to '1' and HW sets this field to '0'.</p> <p>The SEL_DIV and SEL_TYPE fields specify which divider is to be disabled.</p> <p>The HW sets the DISABLE field to '0' immediately and the HW sets the DIV_XXX_CTL.EN field of the divider to '0' immediately.</p> <p>Default Value: 0</p> |
| 15 : 14 | PA_SEL_TYPE | <p>Specifies the divider type of the divider to which phase alignment is performed for the clock enable command:</p> <ul style="list-style-type: none"> 0: 8.0 (integer) clock dividers. 1: 16.0 (integer) clock dividers. 2: 16.5 (fractional) clock dividers. 3: 24.5 (fractional) clock dividers. <p>Default Value: 3</p> |
| 13 : 8 | PA_SEL_DIV | <p>(PA_SEL_TYPE, PA_SEL_DIV) pecifies the divider to which phase alignment is performed for the clock enable command. Any enabled divider can be used as reference. This allows all dividers to be aligned with each other, even when they are enabled at different times.</p> <p>If PA_SEL_DIV is "63" and "PA_SEL_TYPE" is "3", "clk_hf" is used as reference.</p> <p>Default Value: 63</p> |
| 7 : 6 | SEL_TYPE | <p>Specifies the divider type of the divider on which the command is performed:</p> <ul style="list-style-type: none"> 0: 8.0 (integer) clock dividers. 1: 16.0 (integer) clock dividers. 2: 16.5 (fractional) clock dividers. 3: 24.5 (fractional) clock dividers. <p>Default Value: 3</p> |
| 5 : 0 | SEL_DIV | <p>(SEL_TYPE, SEL_DIV) specifies the divider on which the command (DISABLE/ENABLE) is performed.</p> <p>If SEL_DIV is "63" and "SEL_TYPE" is "3" (default/reset value), no divider is specified and no clock signal(s) are generated.</p> <p>Default Value: 63</p> |

24.1.2 PERI_PCLK_CTL0

Programmable clock control register

Address: 0x40010100

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------------|---|------------|---|---------------|---|---|---|

|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | SEL_TYPE | Specifies divider type: 0: 8.0 (integer) clock dividers. 1: 16.0 (integer) clock dividers. 2: 16.5 (fractional) clock dividers. 3: 24.5 (fractional) clock dividers. Default Value: 3 |
| 3 : 0 | SEL_DIV | Specifies one of the dividers of the divider type specified by SEL_TYPE. If SEL_DIV is "63" and "SEL_TYPE" is "3" (default/reset value), no divider is specified and no clock control signal(s) are generated. When transitioning a clock between two out of phase dividers, spurious clock control signals may be generated for one clk_hf cycle during this transition. These clock control signals may cause a single clock period that is smaller than any of the two divider periods. To prevent these spurious clock signals, the clock multiplexer can be disconnected (SEL_DIV is "63" and "SEL_TYPE" is "3") for a transition time that is larger than the smaller of the two divider periods. Default Value: 15 |

24.1.3 PERI_PCLK_CTL1

Programmable clock control register

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | SEL_TYPE | Specifies divider type: 0: 8.0 (integer) clock dividers. 1: 16.0 (integer) clock dividers. 2: 16.5 (fractional) clock dividers. 3: 24.5 (fractional) clock dividers. Default Value: 3 |
| 3 : 0 | SEL_DIV | Specifies one of the dividers of the divider type specified by SEL_TYPE. If SEL_DIV is "63" and "SEL_TYPE" is "3" (default/reset value), no divider is specified and no clock control signal(s) are generated. When transitioning a clock between two out of phase dividers, spurious clock control signals may be generated for one clk_hf cycle during this transition. These clock control signals may cause a single clock period that is smaller than any of the two divider periods. To prevent these spurious clock signals, the clock multiplexer can be disconnected (SEL_DIV is "63" and "SEL_TYPE" is "3") for a transition time that is larger than the smaller of the two divider periods. Default Value: 15 |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | SEL_TYPE | Specifies divider type: 0: 8.0 (integer) clock dividers. 1: 16.0 (integer) clock dividers. 2: 16.5 (fractional) clock dividers. 3: 24.5 (fractional) clock dividers. Default Value: 3 |
| 3 : 0 | SEL_DIV | Specifies one of the dividers of the divider type specified by SEL_TYPE. If SEL_DIV is "63" and "SEL_TYPE" is "3" (default/reset value), no divider is specified and no clock control signal(s) are generated. When transitioning a clock between two out of phase dividers, spurious clock control signals may be generated for one clk_hf cycle during this transition. These clock control signals may cause a single clock period that is smaller than any of the two divider periods. To prevent these spurious clock signals, the clock multiplexer can be disconnected (SEL_DIV is "63" and "SEL_TYPE" is "3") for a transition time that is larger than the smaller of the two divider periods. Default Value: 15 |

| HW Access | None | | | | R | | | |
| Name | None [15:12] | | | | TR_GROUP [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|------------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | TR_COUNT [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------|--------|--------------|----|----|----|----|----|
| SW Access | RW | RW | None | | | | | |
| HW Access | RW1C | R | None | | | | | |
| Name | TR_ACT | TR_OUT | None [29:24] | | | | | |

| Bits | Name | Description |
|---------|----------|--|
| 31 | TR_ACT | SW sets this field to '1' by to activate (set to '1') a trigger as identified by TR_SEL and TR_OUT for TR_COUNT cycles. HW sets this field to '0' when the cycle counter is decremented to "0". Note: a TR_COUNT value of 255 is a special case and trigger activation is under direct control of the TR_ACT field (the counter is not decremented). Default Value: 0 |
| 30 | TR_OUT | Specifies whether trigger activation is for a specific input or output trigger of the trigger multiplexer. Activation of a specific input trigger, will result in activation of all output triggers that have the specific input trigger selected through their TR_OUT_CTL.SEL field. Activation of a specific output trigger, will result in activation of the specified TR_SEL output trigger only. '0': TR_SEL selection and trigger activation is for an input trigger to the trigger multiplexer. '1': TR_SEL selection and trigger activation is for an output trigger from the trigger multiplexer. Default Value: 0 |
| 23 : 16 | TR_COUNT | Amount of cycles a specific trigger is activated. During activation (TR_ACT is '1'), HW decrements this field to "0" using a cycle counter. During activation, SW should not modify this register field. A value of 255 is a special case: HW does NOT decrement this field to "0" and trigger activation is under direct control of TR_ACT: when TR_ACT is '1' the trigger is activated and when TR_ACT is '0' the trigger is deactivated. Default Value: 0 |

24.1.48 PERI_TR_CTL (continued)

| | | |
|--------|----------|--|
| 11 : 8 | TR_GROUP | Specifies the trigger group. Default Value: 0 |
| 6 : 0 | TR_SEL | Specifies the activated trigger when TR_ACT is '1'. TR_OUT specifies whether the activated trigger is an input trigger or output trigger to the trigger multiplexer. During activation (TR_ACT is '1'), SW should not modify this register field. If the specified trigger is not present, the trigger activation has no effect. Default Value: 0 |

25 SRSS Watch Crystal Oscillator Registers

This section discusses the SRSS Watch Crystal Oscillator registers. It lists all the registers in mapping tables, in address order.

25.1 Register Details

| Register Name | Address |
|----------------------------|------------|
| WCO_CONFIG | 0x40220000 |
| WCO_STATUS | 0x40220004 |
| WCO_DPLL | 0x40220008 |
| WCO_TRIM | 0x40220F00 |

25.1.1 WCO_CONFIG

WCO Configuration Register

Address: 0x40220000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|--------------|----------|--------|
| SW Access | None | | | | | RW | RW | RW |
| HW Access | None | | | | | R | R | R |
| Name | None [7:3] | | | | | EXT_INPUT_EN | LPM_AUTO | LPM_EN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|---------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | ENBUS [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|-----------|-------------|--------------|----|----|----|----|----|
| SW Access | RW | RW | None | | | | | |
| HW Access | R | R | None | | | | | |
| Name | IP_ENABLE | DPLL_ENABLE | None [29:24] | | | | | |

| Bits | Name | Description |
|---------|--------------|--|
| 31 | IP_ENABLE | Master enable for IP - disables both WCO and DPLL Default Value: 0 |
| 30 | DPLL_ENABLE | Enable DPLL operation. The Oscillator is specified to be stable after 500 ms thus the DPLL should be asserted no sooner than that after IP_ENABLE is set. Default Value: 0 |
| 23 : 16 | ENBUS | Test Mode Control bits enbus[7] - N/A enbus[6] - 1=enable both primary Beta Multipliers enbus[5] - N/A enbus[4] - N/A enbus[3] - Load Resistor Control enbus[2] - Load Resistor Control enbus[1] - Load Resistor Control enbus[0] - Load Resistor Control Default Value: 71 |
| 2 | EXT_INPUT_EN | Disables the load resistor and allows external clock input for pad_xin Default Value: 0 |

25.1.1 WCO_CONFIG (continued)

| | | |
|---|----------|--|
| 1 | LPM_AUTO | <p>Automatically control low power mode (only relevant when LPM_EN=0):</p> <p>0: Do not enter low power mode (LPM) in DeepSleep</p> <p>1: Enter low power mode (LPM) in DeepSleep. The logic monitors !act_power_en to determine the device has entered DeepSleep.</p> <p>Default Value: 1</p> |
| 0 | LPM_EN | <p>Force block into Low Power Mode:</p> <p>0: Do not force low power mode (LPM) on</p> <p>1: Force low power mode (LPM) on</p> <p>Default Value: 0</p> |

25.1.2 WCO_STATUS

WCO Status Register

Address: 0x40220004

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | OUT_BLNK_A |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|------------|---|
| 0 | OUT_BLNK_A | Indicates that output has transitioned - This bit is intended for Test Mode Only and is not a reliable indicator. Default Value: 0 |

25.1.3 WCO_DPLL

WCO DPLL Register

Address: 0x40220008

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | DPLL_MULT [7:0] | | | | | | | |

| Name | DPLL_LF_LIMIT [23:22] | | DPLL_LF_PGAIN [21:19] | | | DPLL_LF_IGAIN [18:16] | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|-----------------------|----|----|----|----|----|
| SW Access | None | | RW | | | | | |
| HW Access | None | | R | | | | | |
| Name | None [31:30] | | DPLL_LF_LIMIT [29:24] | | | | | |

| Bits | Name | Description |
|---------|---------------|--|
| 29 : 22 | DPLL_LF_LIMIT | Maximum IMO offset allowed (used to prevent DPLL dynamics from selecting an IMO frequency that the logic cannot support) Default Value: 255 |
| 21 : 19 | DPLL_LF_PGAIN | DPLL Loop Filter Proportional Gain Setting 0x0 - 0.0625 0x1 - 0.125 0x2 - 0.25 0x3 - 0.5 0x4 - 1.0 0x5 - 2.0 0x6 - 4.0 0x7 - 8.0 Default Value: 0 |

25.1.3 WCO_DPLL (continued)

| | | |
|---------|---------------|--|
| 18 : 16 | DPLL_LF_IGAIN | DPLL Loop Filter Integral Gain Setting 0x0 - 0.0625 0x1 - 0.125 0x2 - 0.25 0x3 - 0.5 0x4 - 1.0 0x5 - 2.0 0x6 - 4.0 0x7 - 8.0 Default Value: 0 |
| 10 : 0 | DPLL_MULT | Multiplier to determine IMO frequency in multiples of the WCO frequency $F_{imo} = (DPLL_MULT + 1) * F_{wco}$ Default Value: 0 |

25.1.4 WCO_TRIM

WCO Trim Register

Address: 0x40220F00

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|--------------|---|------|-----------|---|---|
| SW Access | None | | RW | | None | RW | | |
| HW Access | None | | R | | None | R | | |
| Name | None [7:6] | | LPM_GM [5:4] | | None | XGM [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

| SW Access | None | | RW | | None | RW | | |
| HW Access | None | | R | | None | R | | |
| Name | None [15:14] | | LPM_GM_FOR_LPM_AUTO [13:12] | | None | XGM_FOR_LPM_AUTO [10:8] | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|---------------------|---|
| 13 : 12 | LPM_GM_FOR_LPM_AUTO | GM setting for LPM (bandwidth = DC/ms) - Used when WCO.LPM_AUTO=1 and in DeepSleep mode Default Value: 2 |
| 10 : 8 | XGM_FOR_LPM_AUTO | Amplifier GM setting - Used when WCO.LPM_AUTO=1 and in DeepSleep mode 0x0 - 3370 nA 0x1 - 2620 nA 0x2 - 2250 nA 0x3 - 1500 nA 0x4 - 1870 nA 0x5 - 1120 nA 0x6 - 750 nA 0x7 - 0 nA Default Value: 2 |
| 5 : 4 | LPM_GM | GM setting for LPM (bandwidth = DC/ms) - Used when WCO.LPM_AUTO=0 or when LPM_AUTO=1 and not in DeepSleep mode. Default Value: 1 |

25.1.4 WCO_TRIM (continued)

| | | |
|-------|-----|---|
| 2 : 0 | XGM | <p>Amplifier GM setting - Used when WCO.LPM_AUTO=0 or when LPM_AUTO=1 and not in Deep-Sleep mode.</p> <p>0x0 - 3370 nA</p> <p>0x1 - 2620 nA</p> <p>0x2 - 2250 nA</p> <p>0x3 - 1500 nA</p> <p>0x4 - 1870 nA</p> <p>0x5 - 1120 nA</p> <p>0x6 - 750 nA</p> <p>0x7 - 0 nA</p> <p>Default Value: 1</p> |
|-------|-----|---|

26 TCPWM Control and Status Registers

This section discusses the TCPWM Control and Status registers. It lists all the registers in mapping tables, in address order.

26.1 Register Details

| Register Name | Address |
|----------------------------------|------------|
| TCPWM_CTRL | 0x40200000 |
| TCPWM_CMD | 0x40200008 |
| TCPWM_INTR_CAUSE | 0x4020000C |

26.1.1 TCPWM_CTRL

TCPWM control register 0.

Address: 0x40200000

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | COUNTER_ENABLED [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|-----------------|---|
| 7 : 0 | COUNTER_ENABLED | <p>Counter enables for counters 0 up to CNT_NR-1.</p> <p>'0': counter disabled.</p> <p>'1': counter enabled.</p> <p>Counter static configuration information (e.g. CTRL.MODE, all TR_CTRL0, TR_CTRL1, and TR_CTRL2 register fields) should only be modified when the counter is disabled. When a counter is disabled, command and status information associated to the counter is cleared by HW, this includes:</p> <ul style="list-style-type: none"> - the associated counter triggers in the CMD register are set to '0'. - the counter's interrupt cause fields in counter's INTR register. - the counter's status fields in counter's STATUS register.. - the counter's trigger outputs ("tr_overflow", "tr_underflow" and "tr_compare_match"). - the counter's line outputs ("line_out" and "line_compl_out"). <p>Default Value: 0</p> |

26.1.2 TCPWM_CMD

TCPWM command register.

Address: 0x40200008

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------------|----|----|----|----|----|----|----|
| SW Access | RW1S | | | | | | | |
| HW Access | RW1C | | | | | | | |
| Name | COUNTER_CAPTURE [7:0] | | | | | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW1S | | | | | | | |
| HW Access | RW1C | | | | | | | |
| Name | COUNTER_RELOAD [15:8] | | | | | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | RW1S | | | | | | | |
| HW Access | RW1C | | | | | | | |
| Name | COUNTER_STOP [23:16] | | | | | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | RW1S | | | | | | | |
| HW Access | RW1C | | | | | | | |
| Name | COUNTER_START [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|-----------------|---|
| 31 : 24 | COUNTER_START | Counters SW start trigger. For HW behavior, see COUNTER_CAPTURE field. Default Value: 0 |
| 23 : 16 | COUNTER_STOP | Counters SW stop trigger. For HW behavior, see COUNTER_CAPTURE field. Default Value: 0 |
| 15 : 8 | COUNTER_RELOAD | Counters SW reload trigger. For HW behavior, see COUNTER_CAPTURE field. Default Value: 0 |
| 7 : 0 | COUNTER_CAPTURE | Counters SW capture trigger. When written with '1', a capture trigger is generated and the HW sets the field to '0' when the SW trigger has taken effect. It should be noted that the HW operates on the counter frequency. If the counter is disabled through CTRL.COUNTER_ENABLED, the field is immediately set to '0'. Default Value: 0 |

26.1.3 TCPWM_INTR_CAUSE

TCPWM Counter interrupt cause register.

Address: 0x4020000C

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------------|----|----|----|----|----|----|----|
| SW Access | R | | | | | | | |
| HW Access | W | | | | | | | |
| Name | COUNTER_INT [7:0] | | | | | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|-------------|--|
| 7 : 0 | COUNTER_INT | Counters interrupt signal active. If the counter is disabled through CTRL.COUNTER_ENABLED, the associated interrupt field is immediately set to '0'. Default Value: 0 |

27 TCPWM Counter Registers

This section discusses the TCPWM Counter registers. It lists all the registers in mapping tables, in address order.

27.1 Register Details

| Register Name | Address |
|------------------------|------------|
| TCPWM_CNT0_CTRL | 0x40200100 |
| TCPWM_CNT0_STATUS | 0x40200104 |
| TCPWM_CNT0_COUNTER | 0x40200108 |
| TCPWM_CNT0_CC | 0x4020010C |
| TCPWM_CNT0_CC_BUFF | 0x40200110 |
| TCPWM_CNT0_PERIOD | 0x40200114 |
| TCPWM_CNT0_PERIOD_BUFF | 0x40200118 |
| TCPWM_CNT0_TR_CTRL0 | 0x40200120 |
| TCPWM_CNT0_TR_CTRL1 | 0x40200124 |
| TCPWM_CNT0_TR_CTRL2 | 0x40200128 |
| TCPWM_CNT0_INTR | 0x40200130 |
| TCPWM_CNT0_INTR_SET | 0x40200134 |
| TCPWM_CNT0_INTR_MASK | 0x40200138 |
| TCPWM_CNT0_INTR_MASKED | 0x4020013C |
| TCPWM_CNT1_CTRL | 0x40200140 |
| TCPWM_CNT1_STATUS | 0x40200144 |
| TCPWM_CNT1_COUNTER | 0x40200148 |
| TCPWM_CNT1_CC | 0x4020014C |
| TCPWM_CNT1_CC_BUFF | 0x40200150 |
| TCPWM_CNT1_PERIOD | 0x40200154 |
| TCPWM_CNT1_PERIOD_BUFF | 0x40200158 |
| TCPWM_CNT1_TR_CTRL0 | 0x40200160 |
| TCPWM_CNT1_TR_CTRL1 | 0x40200164 |
| TCPWM_CNT1_TR_CTRL2 | 0x40200168 |
| TCPWM_CNT1_INTR | 0x40200170 |
| TCPWM_CNT1_INTR_SET | 0x40200174 |
| TCPWM_CNT1_INTR_MASK | 0x40200178 |

| Register Name | Address |
|------------------------|------------|
| TCPWM_CNT1_INTR_MASKED | 0x4020017C |
| TCPWM_CNT2_CTRL | 0x40200180 |
| TCPWM_CNT2_STATUS | 0x40200184 |
| TCPWM_CNT2_COUNTER | 0x40200188 |
| TCPWM_CNT2_CC | 0x4020018C |
| TCPWM_CNT2_CC_BUFF | 0x40200190 |
| TCPWM_CNT2_PERIOD | 0x40200194 |
| TCPWM_CNT2_PERIOD_BUFF | 0x40200198 |
| TCPWM_CNT2_TR_CTRL0 | 0x402001A0 |
| TCPWM_CNT2_TR_CTRL1 | 0x402001A4 |
| TCPWM_CNT2_TR_CTRL2 | 0x402001A8 |
| TCPWM_CNT2_INTR | 0x402001B0 |
| TCPWM_CNT2_INTR_SET | 0x402001B4 |
| TCPWM_CNT2_INTR_MASK | 0x402001B8 |
| TCPWM_CNT2_INTR_MASKED | 0x402001BC |
| TCPWM_CNT3_CTRL | 0x402001C0 |
| TCPWM_CNT3_STATUS | 0x402001C4 |
| TCPWM_CNT3_COUNTER | 0x402001C8 |
| TCPWM_CNT3_CC | 0x402001CC |
| TCPWM_CNT3_CC_BUFF | 0x402001D0 |
| TCPWM_CNT3_PERIOD | 0x402001D4 |
| TCPWM_CNT3_PERIOD_BUFF | 0x402001D8 |
| TCPWM_CNT3_TR_CTRL0 | 0x402001E0 |
| TCPWM_CNT3_TR_CTRL1 | 0x402001E4 |
| TCPWM_CNT3_TR_CTRL2 | 0x402001E8 |
| TCPWM_CNT3_INTR | 0x402001F0 |
| TCPWM_CNT3_INTR_SET | 0x402001F4 |
| TCPWM_CNT3_INTR_MASK | 0x402001F8 |
| TCPWM_CNT3_INTR_MASKED | 0x402001FC |
| TCPWM_CNT4_CTRL | 0x40200200 |
| TCPWM_CNT4_STATUS | 0x40200204 |
| TCPWM_CNT4_COUNTER | 0x40200208 |

| Name | None [31:27] | | | | | MODE [26:24] | | |

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.1 TCPWM_CNT0_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.1 TCPWM_CNT0_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.2 TCPWM_CNT0_STATUS

Counter status register

Address: 0x40200104

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | DOWN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|----------------|----|----|----|----|----|---|---|
| SW Access | R | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | GENERIC [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|---------|--------------|----|----|----|----|----|----|
| SW Access | R | None | | | | | | |
| HW Access | RW | None | | | | | | |
| Name | RUNNING | None [30:24] | | | | | | |

| Bits | Name | Description |
|--------|---------|--|
| 31 | RUNNING | When '0', the counter is NOT running. When '1', the counter is running. Default Value: 0 |
| 15 : 8 | GENERIC | Generic 8-bit counter field. In PWM_DT mode, this counter is used for dead time insertion. In all other modes, this counter is used for pre-scaling the selected counter clock. PWM_DT mode can NOT use prescaled clock functionality. Default Value: 0 |
| 0 | DOWN | When '0', counter is counting up. When '1', counter is counting down. In QUAD mode, this field indicates the direction of the latest counter change: '0' when last incremented and '1' when last decremented. Default Value: 0 |

27.1.3 TCPWM_CNT0_COUNTER

Counter count register

Address: 0x40200108

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | COUNTER [7:0] | | | | | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|--------|--------|--|
| 15 : 0 | PERIOD | Additional buffer for counter PERIOD register. Default Value: 65535 |

27.1.8 TCPWM_CNT0_TR_CTRL0

Counter trigger control register 0

Address: 0x40200120

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|----|----|----|-------------------|----|----|----|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | COUNT_SEL [7:4] | | | | CAPTURE_SEL [3:0] | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | STOP_SEL [15:12] | | | | RELOAD_SEL [11:8] | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | RW | | | |
| HW Access | None | | | | R | | | |
| Name | None [23:20] | | | | START_SEL [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.8 TCPWM_CNT0_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.9 TCPWM_CNT0_TR_CTRL1

Counter trigger control register 1

Address: 0x40200124

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------|---|-------------------|---|------------------|---|--------------------|---|
| SW Access | RW | | RW | | RW | | RW | |

|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------------|---|
| 9 : 8 | START_EDGE | <p>A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> <p>0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event.</p> <p>0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event.</p> <p>0x3: NO_EDGE_DET: No edge detection, use trigger as is.</p> |
| 7 : 6 | STOP_EDGE | <p>A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> |

27.1.9 TCPWM_CNT0_TR_CTRL1 (continued)

| | | |
|-------|--------------|--|
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 5 : 4 | RELOAD_EDGE | A reload event will initialize the counter. When counting up, the counter is initialized to "0". When counting down, the counter is initialized with PERIOD. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 3 : 2 | COUNT_EDGE | A counter event will increase or decrease the counter by '1'. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 1 : 0 | CAPTURE_EDGE | A capture event will copy the counter value into the CC register. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |

27.1.10 TCPWM_CNT0_TR_CTRL2

Counter trigger control register 2

Address: 0x40200128

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|----------------------|---|---------------------|---|---------------------|---|
| SW Access | None | | RW | | RW | | RW | |
| HW Access | None | | R | | R | | R | |
| Name | None [7:6] | | UNDERFLOW_MODE [5:4] | | OVERFLOW_MODE [3:2] | | CC_MATCH_MODE [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |

|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 5 : 4 | UNDERFLOW_MODE | Determines the effect of a counter underflow event (COUNTER reaches "0") on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' 0x1: CLEAR: Set to '0' 0x2: INVERT: Invert 0x3: NO_CHANGE: No Change |
| 3 : 2 | OVERFLOW_MODE | Determines the effect of a counter overflow event (COUNTER reaches PERIOD) on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' |

27.1.10 TCPWM_CNT0_TR_CTRL2 (continued)

| | | |
|-------|---------------|---|
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |
| 1 : 0 | CC_MATCH_MODE | <p>Determines the effect of a compare match event (COUNTER equals CC register) on the "line_out" output signals. Note that INVERT is especially useful for center aligned pulse width modulation.</p> <p>To generate a duty cycle of 0%, the counter CC register should be set to "0". For a 100% duty cycle, the counter CC register should be set to larger than the counter PERIOD register.</p> <p>Default Value: 3</p> |
| | | 0x0: SET: Set to '1' |
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |

27.1.11 TCPWM_CNT0_INTR

Interrupt request register.

Address: 0x40200130

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|----------|------|
| SW Access | None | | | | | | RW1C | RW1C |
| HW Access | None | | | | | | RW1S | RW1S |
| Name | None [7:2] | | | | | | CC_MATCH | TC |

| SW Access | None | | RW | | None | RW | RW | |
| HW Access | None | | R | | None | R | R | |
| Name | None [23:22] | | QUADRATURE_MODE [21:20] | | None | ONE_SHOT | UP_DOWN_MODE [17:16] | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|--------------|----|----|
| SW Access | None | | | | | RW | | |
| HW Access | None | | | | | R | | |
| Name | None [31:27] | | | | | MODE [26:24] | | |

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.15 TCPWM_CNT1_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.15 TCPWM_CNT1_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.16 TCPWM_CNT1_STATUS

Counter status register

Address: 0x40200144

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | DOWN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|----------------|----|----|----|----|----|---|---|
| SW Access | R | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | GENERIC [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|---------|--------------|----|----|----|----|----|----|
| SW Access | R | None | | | | | | |
| HW Access | RW | None | | | | | | |
| Name | RUNNING | None [30:24] | | | | | | |

| Bits | Name | Description |
|--------|---------|--|
| 31 | RUNNING | When '0', the counter is NOT running. When '1', the counter is running. Default Value: 0 |
| 15 : 8 | GENERIC | Generic 8-bit counter field. In PWM_DT mode, this counter is used for dead time insertion. In all other modes, this counter is used for pre-scaling the selected counter clock. PWM_DT mode can NOT use prescaled clock functionality. Default Value: 0 |
| 0 | DOWN | When '0', counter is counting up. When '1', counter is counting down. In QUAD mode, this field indicates the direction of the latest counter change: '0' when last incremented and '1' when last decremented. Default Value: 0 |

27.1.17 TCPWM_CNT1_COUNTER

Counter count register

Address: 0x40200148

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.22 TCPWM_CNT1_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.23 TCPWM_CNT1_TR_CTRL1

Counter trigger control register 1

|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.29 TCPWM_CNT2_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.29 TCPWM_CNT2_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.30 TCPWM_CNT2_STATUS

Counter status register

Address: 0x40200184

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|--------|--------|--|
| 15 : 0 | PERIOD | Additional buffer for counter PERIOD register. Default Value: 65535 |

27.1.36 TCPWM_CNT2_TR_CTRL0

Counter trigger control register 0

Address: 0x402001A0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|----|----|----|-------------------|----|----|----|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | COUNT_SEL [7:4] | | | | CAPTURE_SEL [3:0] | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | STOP_SEL [15:12] | | | | RELOAD_SEL [11:8] | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | RW | | | |
| HW Access | None | | | | R | | | |
| Name | None [23:20] | | | | START_SEL [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.36 TCPWM_CNT2_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.37 TCPWM_CNT2_TR_CTRL1

Counter trigger control register 1

Address: 0x402001A4

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------|---|-------------------|---|------------------|---|--------------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | STOP_EDGE [7:6] | | RELOAD_EDGE [5:4] | | COUNT_EDGE [3:2] | | CAPTURE_EDGE [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|------------------|---|
| SW Access | None | | | | | | RW | |

| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------------|---|
| 9 : 8 | START_EDGE | <p>A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> <p>0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event.</p> <p>0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event.</p> <p>0x3: NO_EDGE_DET: No edge detection, use trigger as is.</p> |
| 7 : 6 | STOP_EDGE | <p>A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> |

27.1.37 TCPWM_CNT2_TR_CTRL1 (continued)

| | | |
|-------|--------------|--|
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 5 : 4 | RELOAD_EDGE | A reload event will initialize the counter. When counting up, the counter is initialized to "0". When counting down, the counter is initialized with PERIOD. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 3 : 2 | COUNT_EDGE | A counter event will increase or decrease the counter by '1'. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 1 : 0 | CAPTURE_EDGE | A capture event will copy the counter value into the CC register. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |

27.1.38 TCPWM_CNT2_TR_CTRL2

Counter trigger control register 2

Address: 0x402001A8

Retention: Retained

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.43 TCPWM_CNT3_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.43 TCPWM_CNT3_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.44 TCPWM_CNT3_STATUS

Counter status register

Address: 0x402001C4

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | DOWN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|----------------|----|----|----|----|----|---|---|

| 15 : 0 | PERIOD | Additional buffer for counter PERIOD register. Default Value: 65535 |

27.1.50 TCPWM_CNT3_TR_CTRL0

Counter trigger control register 0

Address: 0x402001E0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|----|----|----|-------------------|----|----|----|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | COUNT_SEL [7:4] | | | | CAPTURE_SEL [3:0] | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | STOP_SEL [15:12] | | | | RELOAD_SEL [11:8] | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | RW | | | |
| HW Access | None | | | | R | | | |
| Name | None [23:20] | | | | START_SEL [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.50 TCPWM_CNT3_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.51 TCPWM_CNT3_TR_CTRL1

Counter trigger control register 1

Address: 0x402001E4

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------|---|-------------------|---|------------------|---|--------------------|---|

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------------|---|
| 9 : 8 | START_EDGE | <p>A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> <p>0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event.</p> <p>0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event.</p> <p>0x3: NO_EDGE_DET: No edge detection, use trigger as is.</p> |
| 7 : 6 | STOP_EDGE | <p>A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> |

27.1.51 TCPWM_CNT3_TR_CTRL1 (continued)

| | | |
|-------|--------------|--|
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 5 : 4 | RELOAD_EDGE | A reload event will initialize the counter. When counting up, the counter is initialized to "0". When counting down, the counter is initialized with PERIOD. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 3 : 2 | COUNT_EDGE | A counter event will increase or decrease the counter by '1'. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 1 : 0 | CAPTURE_EDGE | A capture event will copy the counter value into the CC register. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |

|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 5 : 4 | UNDERFLOW_MODE | Determines the effect of a counter underflow event (COUNTER reaches "0") on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' 0x1: CLEAR: Set to '0' 0x2: INVERT: Invert 0x3: NO_CHANGE: No Change |
| 3 : 2 | OVERFLOW_MODE | Determines the effect of a counter overflow event (COUNTER reaches PERIOD) on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' |

27.1.52 TCPWM_CNT3_TR_CTRL2 (continued)

| | | |
|-------|---------------|--|
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |
| 1 : 0 | CC_MATCH_MODE | Determines the effect of a compare match event (COUNTER equals CC register) on the "line_out" output signals. Note that INVERT is especially useful for center aligned pulse width modulation. To generate a duty cycle of 0%, the counter CC register should be set to "0". For a 100% duty cycle, the counter CC register should be set to larger than the counter PERIOD register. Default Value: 3 |
| | | 0x0: SET: Set to '1' |
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |

27.1.53 TCPWM_CNT3_INTR

Interrupt request register.

| SW Access | None | | | | | RW | | |
| HW Access | None | | | | | R | | |
| Name | None [31:27] | | | | | MODE [26:24] | | |

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.57 TCPWM_CNT4_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.57 TCPWM_CNT4_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.58 TCPWM_CNT4_STATUS

Counter status register

Address: 0x40200204

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | DOWN |

| Bits | Name | Description |
|--------|--------|--|
| 15 : 0 | PERIOD | Additional buffer for counter PERIOD register. Default Value: 65535 |

27.1.64 TCPWM_CNT4_TR_CTRL0

Counter trigger control register 0

Address: 0x40200220

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|----|----|----|-------------------|----|----|----|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | COUNT_SEL [7:4] | | | | CAPTURE_SEL [3:0] | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | STOP_SEL [15:12] | | | | RELOAD_SEL [11:8] | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | RW | | | |
| HW Access | None | | | | R | | | |
| Name | None [23:20] | | | | START_SEL [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.64 TCPWM_CNT4_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.65 TCPWM_CNT4_TR_CTRL1

Counter trigger control register 1

Address: 0x40200224

Retention: Retained

|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------------|---|
| 9 : 8 | START_EDGE | <p>A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> <p>0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event.</p> <p>0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event.</p> <p>0x3: NO_EDGE_DET: No edge detection, use trigger as is.</p> |
| 7 : 6 | STOP_EDGE | <p>A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> |

27.1.65 TCPWM_CNT4_TR_CTRL1 (continued)

| | | |
|-------|--------------|--|
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 5 : 4 | RELOAD_EDGE | A reload event will initialize the counter. When counting up, the counter is initialized to "0". When counting down, the counter is initialized with PERIOD. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 3 : 2 | COUNT_EDGE | A counter event will increase or decrease the counter by '1'. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 1 : 0 | CAPTURE_EDGE | A capture event will copy the counter value into the CC register. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |

27.1.66 TCPWM_CNT4_TR_CTRL2

| Name | None [31:27] | | | | | MODE [26:24] | | |

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.71 TCPWM_CNT5_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.71 TCPWM_CNT5_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.72 TCPWM_CNT5_STATUS

Counter status register

Address: 0x40200244

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | DOWN |

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.78 TCPWM_CNT5_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.79 TCPWM_CNT5_TR_CTRL1

Counter trigger control register 1

Address: 0x40200264

Retention: Retained

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------------|---|
| 9 : 8 | START_EDGE | <p>A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> <p>0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event.</p> <p>0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event.</p> <p>0x3: NO_EDGE_DET: No edge detection, use trigger as is.</p> |
| 7 : 6 | STOP_EDGE | <p>A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> |

27.1.79 TCPWM_CNT5_TR_CTRL1 (continued)

| | | |
|-------|--------------|--|
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 5 : 4 | RELOAD_EDGE | A reload event will initialize the counter. When counting up, the counter is initialized to "0". When counting down, the counter is initialized with PERIOD. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 3 : 2 | COUNT_EDGE | A counter event will increase or decrease the counter by '1'. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 1 : 0 | CAPTURE_EDGE | A capture event will copy the counter value into the CC register. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.85 TCPWM_CNT6_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.85 TCPWM_CNT6_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.86 TCPWM_CNT6_STATUS

Counter status register

Address: 0x40200284

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | R |
| HW Access | None | | | | | | | RW |
| Name | None [7:1] | | | | | | | DOWN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|----------------|----|----|----|----|----|---|---|
| SW Access | R | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | GENERIC [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |

| Bits | Name | Description |
|--------|--------|--|
| 15 : 0 | PERIOD | Additional buffer for counter PERIOD register. Default Value: 65535 |

27.1.92 TCPWM_CNT6_TR_CTRL0

Counter trigger control register 0

Address: 0x402002A0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|----|----|----|-------------------|----|----|----|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | COUNT_SEL [7:4] | | | | CAPTURE_SEL [3:0] | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | STOP_SEL [15:12] | | | | RELOAD_SEL [11:8] | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | RW | | | |
| HW Access | None | | | | R | | | |
| Name | None [23:20] | | | | START_SEL [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.92 TCPWM_CNT6_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.93 TCPWM_CNT6_TR_CTRL1

Counter trigger control register 1

Address: 0x402002A4

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------------|---|-------------------|---|------------------|---|--------------------|---|

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------------|---|
| 9 : 8 | START_EDGE | <p>A start event will start the counter; i.e. the counter will become running. Starting does NOT enable the counter. A start event will not initialize the counter whereas the reload event does. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> <p>0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event.</p> <p>0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event.</p> <p>0x3: NO_EDGE_DET: No edge detection, use trigger as is.</p> |
| 7 : 6 | STOP_EDGE | <p>A stop event, will stop the counter; i.e. it will no longer be running. Stopping will NOT disable the counter. Default Value: 3</p> <p>0x0: RISING_EDGE: Rising edge. Any rising edge generates an event.</p> |

27.1.93 TCPWM_CNT6_TR_CTRL1 (continued)

| | | |
|-------|--------------|--|
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 5 : 4 | RELOAD_EDGE | A reload event will initialize the counter. When counting up, the counter is initialized to "0". When counting down, the counter is initialized with PERIOD. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 3 : 2 | COUNT_EDGE | A counter event will increase or decrease the counter by '1'. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |
| 1 : 0 | CAPTURE_EDGE | A capture event will copy the counter value into the CC register. Default Value: 3 |
| | | 0x0: RISING_EDGE: Rising edge. Any rising edge generates an event. |
| | | 0x1: FALLING_EDGE: Falling edge. Any falling edge generates an event. |
| | | 0x2: BOTH_EDGES: Rising AND falling edge. Any odd amount of edges generates an event. |
| | | 0x3: NO_EDGE_DET: No edge detection, use trigger as is. |

27.1.94 TCPWM_CNT6_TR_CTRL2

Counter trigger control register 2

Address: 0x402002A8

Retention: Retained

|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 5 : 4 | UNDERFLOW_MODE | Determines the effect of a counter underflow event (COUNTER reaches "0") on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' 0x1: CLEAR: Set to '0' 0x2: INVERT: Invert 0x3: NO_CHANGE: No Change |
| 3 : 2 | OVERFLOW_MODE | Determines the effect of a counter overflow event (COUNTER reaches PERIOD) on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' |

27.1.94 TCPWM_CNT6_TR_CTRL2 (continued)

| | | |
|-------|---------------|--|
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |
| 1 : 0 | CC_MATCH_MODE | Determines the effect of a compare match event (COUNTER equals CC register) on the "line_out" output signals. Note that INVERT is especially useful for center aligned pulse width modulation. To generate a duty cycle of 0%, the counter CC register should be set to "0". For a 100% duty cycle, the counter CC register should be set to larger than the counter PERIOD register. Default Value: 3 |
| | | 0x0: SET: Set to '1' |
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |

27.1.95 TCPWM_CNT6_INTR

Interrupt request register.

| Bits | Name | Description |
|---------|------|---|
| 26 : 24 | MODE | Counter mode. Default Value: 0 0x0: TIMER: Timer mode 0x2: CAPTURE: Capture mode 0x3: QUAD: Quadrature encoding mode 0x4: PWM: Pulse width modulation (PWM) mode 0x5: PWM_DT: PWM with deadtime insertion mode 0x6: PWM_PR: Pseudo random pulse width modulation |

27.1.99 TCPWM_CNT7_CTRL (continued)

| | | |
|---------|-----------------|---|
| 21 : 20 | QUADRATURE_MODE | <p>In QUAD mode selects quadrature encoding mode (X1/X2/X4). In PWM, PWM_DT and PWM_PR modes, these two bits can be used to invert "dt_line_out" and "dt_line_compl_out". Inversion is the last step in generation of "dt_line_out" and "dt_line_compl_out"; i.e. a disabled output line "dt_line_out" has the value QUADRATURE_MODE[0] and a disabled output line "dt_line_compl_out" has the value QUADRATURE_MODE[1]. Default Value: 0</p> <p>0x0: X1: X1 encoding (QUAD mode)</p> <p>0x1: X2: X2 encoding (QUAD mode)</p> <p>0x1: INV_OUT: When bit 0 is '1', QUADRATURE_MODE[0] inverts "dt_line_out" (PWM/PWM_DT modes)</p> <p>0x2: X4: X4 encoding (QUAD mode)</p> <p>0x2: INV_COMPL_OUT: When bit 1 is '1', QUADRATURE_MODE[1] inverts "dt_line_compl_out" (PWM/PWM_DT modes)</p> |
| 18 | ONE_SHOT | <p>When '0', counter runs continuous. When '1', counter is turned off by hardware when a terminal count event is generated. Default Value: 0</p> |
| 17 : 16 | UP_DOWN_MODE | <p>Determines counter direction. Default Value: 0</p> <p>0x0: COUNT_UP: Count up (to PERIOD). An overflow event is generated when the counter reaches PERIOD. A terminal count event is generated when the counter reaches PERIOD.</p> <p>0x1: COUNT_DOWN: Count down (to "0"). An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x2: COUNT_UPDN1: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0".</p> <p>0x3: COUNT_UPDN2: Count up (to PERIOD), then count down (to "0"). An overflow event is generated when the counter reaches PERIOD. An underflow event is generated when the counter reaches "0". A terminal count event is generated when the counter reaches "0" AND when the counter reaches PERIOD (this counter direction can be used for PWM functionality with asymmetrical updates).</p> |
| 15 : 8 | GENERIC | <p>Generic 8-bit control field. In PWM_DT mode, this field is used to determine the dead time: amount of dead time cycles in the counter clock domain. In all other modes, the lower 3 bits of this field determine pre-scaling of the selected counter clock. Default Value: 0</p> <p>0x0: DIVBY1: Divide by 1 (other-than-PWM_DT mode)</p> <p>0x1: DIVBY2: Divide by 2 (other-than-PWM_DT mode)</p> <p>0x2: DIVBY4: Divide by 4 (other-than-PWM_DT mode)</p> |

27.1.99 TCPWM_CNT7_CTRL (continued)

| | | |
|---|--------------------|--|
| | | 0x3: DIVBY8: Divide by 8 (other-than-PWM_DT mode) |
| | | 0x4: DIVBY16: Divide by 16 (other-than-PWM_DT mode) |
| | | 0x5: DIVBY32: Divide by 32 (other-than-PWM_DT mode) |
| | | 0x6: DIVBY64: Divide by 64 (other-than-PWM_DT mode) |
| | | 0x7: DIVBY128: Divide by 128 (other-than-PWM_DT mode) |
| 3 | PWM_STOP_ON_KILL | Specifies whether the counter stops on a kill events: '0': kill event does NOT stop counter. '1': kill event stops counter. This field has a function in PWM, PWM_DT and PWM_PR modes only. Default Value: 0 |
| 2 | PWM_SYNC_KILL | Specifies asynchronous/synchronous kill behavior: '1': synchronous kill mode: the kill event disables the "dt_line_out" and "dt_line_compl_out" signals till the next terminal count event (synchronous kill). In synchronous kill mode, STOP_EDGE should be RISING_EDGE. '0': asynchronous kill mode: the kill event only disables the "dt_line_out" and "dt_line_compl_out" signals when present. In asynchronous kill mode, STOP_EDGE should be NO_EDGE_DET. This field has a function in PWM and PWM_DT modes only. This field is only used when PWM_STOP_ON_KILL is '0'. Default Value: 0 |
| 1 | AUTO_RELOAD_PERIOD | Specifies switching of the PERIOD and buffered PERIOD values. This field has a function in PWM, PWM_DT and PWM_PR modes. '0': never switch. '1': switch on a terminal count event with and actively pending siwtch event. Default Value: 0 |
| 0 | AUTO_RELOAD_CC | Specifies switching of the CC and buffered CC values. This field has a function in TIMER, PWM, PWM_DT and PWM_PR modes. Timer mode: '0': never switch. '1': switch on a compare match event. PWM, PWM_DT, PWM_PR modes: '0': never switch. '1': switch on a terminal count event with an actively pending switch event. Default Value: 0 |

27.1.100 TCPWM_CNT7_STATUS

Counter status register

Address: 0x402002C4

Retention: Not Retained

| 15 : 0 | PERIOD | Additional buffer for counter PERIOD register. Default Value: 65535 |

27.1.106 TCPWM_CNT7_TR_CTRL0

Counter trigger control register 0

Address: 0x402002E0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|----|----|----|-------------------|----|----|----|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | COUNT_SEL [7:4] | | | | CAPTURE_SEL [3:0] | | | |
| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | STOP_SEL [15:12] | | | | RELOAD_SEL [11:8] | | | |
| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| SW Access | None | | | | RW | | | |
| HW Access | None | | | | R | | | |
| Name | None [23:20] | | | | START_SEL [19:16] | | | |
| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|---------|------------|---|
| 19 : 16 | START_SEL | Selects one of the 16 input triggers as a start trigger. In QUAD mode, this is the second phase (phi B). Default Value: 0 |
| 15 : 12 | STOP_SEL | Selects one of the 16 input triggers as a stop trigger. In PWM, PWM_DT and PWM_PR modes, this is the kill trigger. In these modes, the kill trigger is used to either temporarily block the PWM outputs (PWM_STOP_ON_KILL is '0') or stop the functionality (PWM_STOP_ON_KILL is '1'). For the PWM and PWM_DT modes, the blocking of the output signals can be asynchronous (STOP_EDGE should be NO_EDGE_DET) in which case the blocking is as long as the trigger is '1' or synchronous (STOP_EDGE should be RISING_EDGE) in which case it extends till the next terminal count event. Default Value: 0 |
| 11 : 8 | RELOAD_SEL | Selects one of the 16 input triggers as a reload trigger. In QUAD mode, this is the index or revolution pulse. In this mode, it will update the counter with the value in the TCPWM_CNTn_PERIOD register. Default Value: 0 |
| 7 : 4 | COUNT_SEL | Selects one of the 16 input triggers as a count trigger. In QUAD mode, this is the first phase (phi A). Default setting selects input trigger 1, which is always '1'. Default Value: 1 |

27.1.106 TCPWM_CNT7_TR_CTRL0 (continued)

| | | |
|-------|-------------|---|
| 3 : 0 | CAPTURE_SEL | Selects one of the 16 input triggers as a capture trigger. Input trigger 0 is always '0' and input trigger is always '1'. In the PWM, PWM_DT and PWM_PR modes this trigger is used to switch the values if the compare and period registers with their buffer counterparts. Default Value: 0 |
|-------|-------------|---|

27.1.107 TCPWM_CNT7_TR_CTRL1

Counter trigger control register 1

Address: 0x402002E4

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 5 : 4 | UNDERFLOW_MODE | Determines the effect of a counter underflow event (COUNTER reaches "0") on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' 0x1: CLEAR: Set to '0' 0x2: INVERT: Invert 0x3: NO_CHANGE: No Change |
| 3 : 2 | OVERFLOW_MODE | Determines the effect of a counter overflow event (COUNTER reaches PERIOD) on the "line_out" output signals. Default Value: 3 0x0: SET: Set to '1' |

27.1.108 TCPWM_CNT7_TR_CTRL2 (continued)

| | | |
|-------|---------------|---|
| | | 0x1: CLEAR: Set to '0' |
| | | 0x2: INVERT: Invert |
| | | 0x3: NO_CHANGE: No Change |
| 1 : 0 | CC_MATCH_MODE | <p>Determines the effect of a compare match event (COUNTER equals CC register) on the "line_out" output signals. Note that INVERT is especially useful for center aligned pulse width modulation.</p> <p>To generate a duty cycle of 0%, the counter CC register should be set to "0". For a 100% duty cycle, the counter CC register should be set to larger than the counter PERIOD register.</p> <p>Default Value: 3</p> <p>0x0: SET: Set to '1'</p> <p>0x1: CLEAR: Set to '0'</p> <p>0x2: INVERT: Invert</p> <p>0x3: NO_CHANGE: No Change</p> |

27.1.109 TCPWM_CNT7_INTR

Interrupt request register.

Address: 0x402002F0

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|----------|------|
| SW Access | None | | | | | | RW1C | RW1C |
| HW Access | None | | | | | | RW1S | RW1S |

| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|----------|---|
| 1 | CC_MATCH | Logical and of corresponding request and mask bits. Default Value: 0 |
| 0 | TC | Logical and of corresponding request and mask bits. Default Value: 0 |

28 Peripheral Trigger Registers

This section discusses the Peripheral Trigger registers. It lists all the registers in mapping tables, in address order.

28.1 Register Details

| Register Name | Address |
|---|------------|
| PERI_TR_GROUP0_TR_OUT_CTL0 | 0x40012000 |
| PERI_TR_GROUP0_TR_OUT_CTL1 | 0x40012004 |
| PERI_TR_GROUP0_TR_OUT_CTL2 | 0x40012008 |
| PERI_TR_GROUP0_TR_OUT_CTL3 | 0x4001200C |
| PERI_TR_GROUP0_TR_OUT_CTL4 | 0x40012010 |
| PERI_TR_GROUP0_TR_OUT_CTL5 | 0x40012014 |
| PERI_TR_GROUP0_TR_OUT_CTL6 | 0x40012018 |
| PERI_TR_GROUP0_TR_OUT_CTL7 | 0x4001201C |
| PERI_TR_GROUP1_TR_OUT_CTL0 | 0x40012200 |
| PERI_TR_GROUP1_TR_OUT_CTL1 | 0x40012204 |
| PERI_TR_GROUP1_TR_OUT_CTL2 | 0x40012208 |
| PERI_TR_GROUP1_TR_OUT_CTL3 | 0x4001220C |
| PERI_TR_GROUP1_TR_OUT_CTL4 | 0x40012210 |
| PERI_TR_GROUP1_TR_OUT_CTL5 | 0x40012214 |
| PERI_TR_GROUP1_TR_OUT_CTL6 | 0x40012218 |
| PERI_TR_GROUP1_TR_OUT_CTL7 | 0x4001221C |
| PERI_TR_GROUP2_TR_OUT_CTL0 | 0x40012400 |
| PERI_TR_GROUP2_TR_OUT_CTL1 | 0x40012404 |
| PERI_TR_GROUP2_TR_OUT_CTL2 | 0x40012408 |
| PERI_TR_GROUP2_TR_OUT_CTL3 | 0x4001240C |
| PERI_TR_GROUP2_TR_OUT_CTL4 | 0x40012410 |
| PERI_TR_GROUP2_TR_OUT_CTL5 | 0x40012414 |
| PERI_TR_GROUP2_TR_OUT_CTL6 | 0x40012418 |
| PERI_TR_GROUP2_TR_OUT_CTL7 | 0x4001241C |
| PERI_TR_GROUP2_TR_OUT_CTL8 | 0x40012420 |
| PERI_TR_GROUP2_TR_OUT_CTL9 | 0x40012424 |
| PERI_TR_GROUP2_TR_OUT_CTL10 | 0x40012428 |

| Register Name | Address |
|---|------------|
| PERI_TR_GROUP2_TR_OUT_CTL11 | 0x4001242C |
| PERI_TR_GROUP2_TR_OUT_CTL12 | 0x40012430 |
| PERI_TR_GROUP2_TR_OUT_CTL13 | 0x40012434 |
| PERI_TR_GROUP2_TR_OUT_CTL14 | 0x40012438 |
| PERI_TR_GROUP2_TR_OUT_CTL15 | 0x4001243C |
| PERI_TR_GROUP3_TR_OUT_CTL0 | 0x40012600 |
| PERI_TR_GROUP3_TR_OUT_CTL1 | 0x40012604 |
| PERI_TR_GROUP3_TR_OUT_CTL2 | 0x40012608 |
| PERI_TR_GROUP3_TR_OUT_CTL3 | 0x4001260C |
| PERI_TR_GROUP3_TR_OUT_CTL4 | 0x40012610 |
| PERI_TR_GROUP3_TR_OUT_CTL5 | 0x40012614 |
| PERI_TR_GROUP3_TR_OUT_CTL6 | 0x40012618 |
| PERI_TR_GROUP3_TR_OUT_CTL7 | 0x4001261C |

28.1.1 PERI_TR_GROUP0_TR_OUT_CTL0

Trigger control register

Address: 0x40012000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|-----------|---|---|---|---|---|
| SW Access | None | | RW | | | | | |
| HW Access | None | | R | | | | | |
| Name | None [7:6] | | SEL [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------|---|
| 5 : 0 | SEL | Specifies input trigger. This field is typically set during the setup of a chip use case scenario. Changing this field while activated triggers are present on the input triggers may result in unpredictable behavior. Note that input trigger 0 (default value) is typically connected to a constant signal level of '0', and as a result will not cause HW activation of the output trigger. Default Value: 0 |

28.1.2 PERI_TR_GROUP0_TR_OUT_CTL1

Trigger control register

Address: 0x40012004

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|-----------|---|---|---|---|---|
| SW Access | None | | RW | | | | | |
| HW Access | None | | R | | | | | |
| Name | None [7:6] | | SEL [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------|---|
| 5 : 0 | SEL | Specifies input trigger. This field is typically set during the setup of a chip use case scenario. Changing this field while activated triggers are present on the input triggers may result in unpredictable behavior. Note that input trigger 0 (default value) is typically connected to a constant signal level of '0', and as a result will not cause HW activation of the output trigger. Default Value: 0 |

28.1.3 PERI_TR_GROUP0_TR_OUT_CTL2

Trigger control register

Address: 0x40012008

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|-----------|---|---|---|---|---|
| SW Access | None | | RW | | | | | |
| HW Access | None | | R | | | | | |
| Name | None [7:6] | | SEL [5:0] | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

| Bits | Name | Description |
|-------|------|---|
| 5 : 0 | SEL | Specifies input trigger. This field is typically set during the setup of a chip use case scenario. Changing this field while activated triggers are present on the input triggers may result in unpredictable behavior. Note that input trigger 0 (default value) is typically connected to a constant signal level of '0', and as a result will not cause HW activation of the output trigger. Default Value: 0 |

Changing this field while activated triggers are present on the input triggers may result in unpredictable behavior. Note that input trigger 0 (default value) is typically connected to a constant signal level of '0', and as a result will not cause HW activation of the output trigger. Default Value: 0 |

29 Universal Digital Block (UDB) Registers

This section discusses the Universal Digital Block (UDB) registers. It lists all the registers in mapping tables, in address order.

29.1 Register Details

| Register Name | Address |
|-----------------------------|------------|
| UDB_INT_CFG | 0x400F8000 |

29.1.1 UDB_INT_CFG

UDB Subsystem Interrupt Configuration

Address: 0x400F8000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|--------------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | INT_MODE_CFG [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|---------------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | INT_MODE_CFG [15:8] | | | | | | | |

| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|--------|--------------|---|
| 16 : 0 | INT_MODE_CFG | Interrupt Mode; bit position corresponds to interrupt Default Value: 0 0x0: LEVEL: Level 0x1: PULSE: Pulse |

30 UDB Array Bank Control Registers

This section discusses the UDB Array Bank Control registers. It lists all the registers in mapping tables, in address order.

30.1 Register Details

| Register Name | Address |
|------------------------------------|------------|
| UDB_BCTL0_DRV | 0x400F6000 |
| UDB_BCTL0_MDCLK_EN | 0x400F6001 |
| UDB_BCTL0_MBCLK_EN | 0x400F6002 |
| UDB_BCTL0_BOTSEL_L | 0x400F6008 |
| UDB_BCTL0_BOTSEL_U | 0x400F6009 |
| UDB_BCTL0_TOPSEL_L | 0x400F600A |
| UDB_BCTL0_TOPSEL_U | 0x400F600B |
| UDB_BCTL0_QCLK_EN0 | 0x400F6010 |
| UDB_BCTL0_QCLK_EN1 | 0x400F6012 |
| UDB_BCTL0_QCLK_EN2 | 0x400F6014 |
| UDB_BCTL0_QCLK_EN3 | 0x400F6016 |

30.1.1 UDB_BCTL0_DRV

Master Digital Clock Drive Register

Address: 0x400F6000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | DRV [7:0] | | | | | | | |

| Bits | Name | Description |
|-------|------|--|
| 7 : 0 | DRV | <p>Master digital clock drive enable for the digital clock that matches the index. Default Value: 0</p> <p>0x0: DISABLE: Enabled drive from array bottom, top drive disabled.</p> <p>0x1: ENABLE: Disabled drive from array bottom, top drive enabled.</p> |

30.1.2 UDB_BCTL0_MDCLK_EN

Master Digital Clock Enable Register

Address: 0x400F6001

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | DCEN [7:0] | | | | | | | |

| Bits | Name | Description |
|-------|------|---|
| 7 : 0 | DCEN | Master digital clock enable for the digital clock that matches the index. Default Value: 0 0x0: DISABLE: Disabled 0x1: ENABLE: Enabled |

30.1.3 UDB_BCTL0_MBCLK_EN

Master Bus Clock Enable Register

Address: 0x400F6002

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|------|
| SW Access | None | | | | | | | RW |
| HW Access | None | | | | | | | R |
| Name | None [7:1] | | | | | | | BCEN |

| Bits | Name | Description |
|------|------|---|
| 0 | BCEN | Bank Clock Enable Control Default Value: 0 0x0: DISABLE: Disabled 0x1: ENABLE: Enabled |

30.1.4 UDB_BCTL0_BOTSEL_L

Lower Nibble Bottom Digital Clock Select Register

Address: 0x400F6008

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------------|---|----------------|---|----------------|---|----------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | CLK_SEL3 [7:6] | | CLK_SEL2 [5:4] | | CLK_SEL1 [3:2] | | CLK_SEL0 [1:0] | |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | CLK_SEL3 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 5 : 4 | CLK_SEL2 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 3 : 2 | CLK_SEL1 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 1 : 0 | CLK_SEL0 | Clock selection control for digital clock Default Value: 0 |

30.1.4 UDB_BCTL0_BOTSEL_L (continued)

0x0: EDGE_ENABLES:

clock generated from edge enables from clock distribution block

0x1: PORT_INPUT:

Port input

0x2: DSI_OUTPUT:

DSI output

0x3: SYNC_DSI_OUTPUT:

synchronized DSI output

30.1.5 UDB_BCTL0_BOTSEL_U

Upper Nibble Bottom Digital Clock Select Register

Address: 0x400F6009

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------------|---|----------------|---|----------------|---|----------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | CLK_SEL7 [7:6] | | CLK_SEL6 [5:4] | | CLK_SEL5 [3:2] | | CLK_SEL4 [1:0] | |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | CLK_SEL7 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 5 : 4 | CLK_SEL6 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 3 : 2 | CLK_SEL5 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 1 : 0 | CLK_SEL4 | Clock selection control for digital clock Default Value: 0 |

30.1.5 UDB_BCTL0_BOTSEL_U (continued)

0x0: EDGE_ENABLES:

clock generated from edge enables from clock distribution block

0x1: PORT_INPUT:

Port input

0x2: DSI_OUTPUT:

DSI output

0x3: SYNC_DSI_OUTPUT:

synchronized DSI output

30.1.6 UDB_BCTL0_TOPSEL_L

Lower Nibble Top Digital Clock Select Register

Address: 0x400F600A

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------------|---|----------------|---|----------------|---|----------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | CLK_SEL3 [7:6] | | CLK_SEL2 [5:4] | | CLK_SEL1 [3:2] | | CLK_SEL0 [1:0] | |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | CLK_SEL3 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 5 : 4 | CLK_SEL2 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 3 : 2 | CLK_SEL1 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 1 : 0 | CLK_SEL0 | Clock selection control for digital clock Default Value: 0 |

30.1.6 UDB_BCTL0_TOPSEL_L (continued)

0x0: EDGE_ENABLES:

clock generated from edge enables from clock distribution block

0x1: PORT_INPUT:

Port input

0x2: DSI_OUTPUT:

DSI output

0x3: SYNC_DSI_OUTPUT:

synchronized DSI output

30.1.7 UDB_BCTL0_TOPSEL_U

Upper Nibble Top Digital Clock Select Register

Address: 0x400F600B

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------------|---|----------------|---|----------------|---|----------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | CLK_SEL7 [7:6] | | CLK_SEL6 [5:4] | | CLK_SEL5 [3:2] | | CLK_SEL4 [1:0] | |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | CLK_SEL7 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 5 : 4 | CLK_SEL6 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 3 : 2 | CLK_SEL5 | Clock selection control for digital clock Default Value: 0 0x0: EDGE_ENABLES: clock generated from edge enables from clock distribution block 0x1: PORT_INPUT: Port input 0x2: DSI_OUTPUT: DSI output 0x3: SYNC_DSI_OUTPUT: synchronized DSI output |
| 1 : 0 | CLK_SEL4 | Clock selection control for digital clock Default Value: 0 |

30.1.7 UDB_BCTL0_TOPSEL_U (continued)

0x0: EDGE_ENABLES:

clock generated from edge enables from clock distribution block

0x1: PORT_INPUT:

Port input

0x2: DSI_OUTPUT:

DSI output

0x3: SYNC_DSI_OUTPUT:

synchronized DSI output

30.1.8 UDB_BCTL0_QCLK_EN0

Quadrant Digital Clock Enable Registers

Address: 0x400F6010

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|--------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | DCEN_Q [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|------------|-----|------------|------------|----------------|-----------|-----------|--------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | SLEEP_TEST | NC0 | WR_CFG_OPT | GLB_DSI_WR | DISABLE_R_OUTE | GCH_WR_HI | GCH_WR_LO | BCEN_Q |

| Bits | Name | Description |
|------|------------|---|
| 15 | SLEEP_TEST | <p>Assertion of this bit drives sleep into the UDB array for internal UDB test purposes. Assertion does not affect the power switches. This signal drives pulldowns on the write strobes for all configuration memory, inhibiting writes when set. Sleep or sleep_test does not inhibit writes to this bit, allowing it to be cleared once it has been set. Control is split top and bottom.</p> <p>BCTL0_QCLK_EN0[15:8] controls Bank 0 UDB pairs 0-3 and lower half DSI blocks.</p> <p>BCTL0_QCLK_EN3[15:8] controls Bank 0 UDB pairs 4-7 and upper half DSI blocks. The SLEEP_TEST bits in the other BCTLx_QCLK_ENy registers are not used. Sleep assertion drives bus_rdata to zero so bus read transactions will not return data during assertion of certain sleep_test bits. This is only true for assertion of sleep_test in BCTL0_QCLK_EN0 for Bank 0.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: sleep_test is not asserted.</p> <p>0x1: ENABLE: sleep_test is asserted.</p> |
| 14 | NC0 | <p>Spare register bit</p> <p>Default Value: 0</p> |
| 13 | WR_CFG_OPT | <p>Select 1/2 clock cycle or full clock cycle generation for bus_last_strobe used in generating write strobes for latches within the UDB. Only one QCLK_ENx register per bank has an active bit.</p> <p>BCTL0_QCLK_EN0[15:8] controls this bit for Bank 0. The WR_CFG_OPT bits in the other BCTLx_QCLK_ENy[15:8] registers are not used.</p> <p>Default Value: 0</p> <p>0x0: FULL_CYCLE_STB: bus_last_strobe is generated for the full final bus_clk cycle of a bus transaction.</p> <p>0x1: HALF_CYCLE_STB: bus_last_strobe is generated during the last 1/2 clock cycle of a bus transaction on the negative edge of bus_clk.</p> |

30.1.8 UDB_BCTL0_QCLK_EN0 (continued)

| | | |
|-------|---------------|--|
| 12 | GLB_DSI_WR | <p>Enable global write operation for the DSI routing channels. When this bit is set, the DSI ID select decoding is bypassed and therefore multiple channels can be written to simultaneously. This is designed to support test modes. Control is split top and bottom. BCTL0_QCLK_EN0[15:8] controls lower half DSI blocks. BCTL0_QCLK_EN3[15:8] controls upper half DSI blocks. The GLB_DSI_WR bits in the other BCTLx_QCLK_ENy[15:8] registers are not used.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Global DSI channel configuration write is disabled.</p> <p>0x1: ENABLE: Global DSI channel configuration write is enabled.</p> |
| 11 | DISABLE_ROUTE | <p>By default, when this bit is set to '0', the quadrant routing (for 2 channels in the quadrant) are enabled when the global route enable for the bank is set. However, when this bit is set to '1', the routing in the associated quadrant is disabled and is not enabled by the global route enable bit. The routing will remain in a benign state until it is subsequently configured and then enabled by clearing this bit.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: The routing in this quadrant can be enabled with the bank route enable bit. (default)</p> <p>0x1: ENABLE: The routing in this quadrant is disabled and held in a benign state.</p> |
| 10 | GCH_WR_HI | <p>Enable global write operation for the routing channel with the higher address in the associated quadrant. When enabled, the UDB ID select decoding is bypassed and therefore multiple channels can be written to simultaneously. This is designed to support test modes.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Global UDB channel configuration write for higher order address is disabled.</p> <p>0x1: ENABLE: Global UDB channel configuration write for higher order address is enabled.</p> |
| 9 | GCH_WR_LO | <p>Enable global write operation for the routing channel with the lower address in the associated quadrant. When enabled, the UDB ID select decoding is bypassed and therefore multiple channels can be written to simultaneously. This is designed to support test modes.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Global UDB channel configuration write for lower order address is disabled.</p> <p>0x1: ENABLE: Global UDB channel configuration write for lower order address is enabled.</p> |
| 8 | BCEN_Q | <p>Bank Clock Enable Control</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Digital Global clock is disabled.</p> <p>0x1: ENABLE: Digital Global clock is enabled.</p> |
| 7 : 0 | DCEN_Q | <p>Digital clock enable for indexed digital clock for the associated quadrant.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Disabled</p> <p>0x1: ENABLE: Enabled</p> |

Sleep or sleep_test does not inhibit writes to this bit, allowing it to be cleared once it has been set. Control is split top and bottom.</p> <p>BCTL0_QCLK_EN0[15:8] controls Bank 0 UDB pairs 0-3 and lower half DSI blocks.</p> <p>BCTL0_QCLK_EN3[15:8] controls Bank 0 UDB pairs 4-7 and upper half DSI blocks. The SLEEP_TEST bits in the other BCTLx_QCLK_ENy registers are not used. Sleep assertion drives bus_rdata to zero so bus read transactions will not return data during assertion of certain sleep_test bits. This is only true for assertion of sleep_test in BCTL0_QCLK_EN0 for Bank 0.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: sleep_test is not asserted.</p> <p>0x1: ENABLE: sleep_test is asserted.</p> |
| 14 | NC0 | <p>Spare register bit</p> <p>Default Value: 0</p> |
| 13 | WR_CFG_OPT | <p>Select 1/2 clock cycle or full clock cycle generation for bus_last_strobe used in generating write strobes for latches within the UDB. Only one QCLK_ENx register per bank has an active bit.</p> <p>BCTL0_QCLK_EN0[15:8] controls this bit for Bank 0. The WR_CFG_OPT bits in the other BCTLx_QCLK_ENy[15:8] registers are not used.</p> <p>Default Value: 0</p> <p>0x0: FULL_CYCLE_STB: bus_last_strobe is generated for the full final bus_clk cycle of a bus transaction.</p> <p>0x1: HALF_CYCLE_STB: bus_last_strobe is generated during the last 1/2 clock cycle of a bus transaction on the negative edge of bus_clk.</p> |

30.1.9 UDB_BCTL0_QCLK_EN1 (continued)

| | | |
|-------|---------------|--|
| 12 | GLB_DSI_WR | <p>Enable global write operation for the DSI routing channels. When this bit is set, the DSI ID select decoding is bypassed and therefore multiple channels can be written to simultaneously. This is designed to support test modes. Control is split top and bottom. BCTL0_QCLK_EN0[15:8] controls lower half DSI blocks. BCTL0_QCLK_EN3[15:8] controls upper half DSI blocks. The GLB_DSI_WR bits in the other BCTLx_QCLK_ENy[15:8] registers are not used.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Global DSI channel configuration write is disabled.</p> <p>0x1: ENABLE: Global DSI channel configuration write is enabled.</p> |
| 11 | DISABLE_ROUTE | <p>By default, when this bit is set to '0', the quadrant routing (for 2 channels in the quadrant) are enabled when the global route enable for the bank is set. However, when this bit is set to '1', the routing in the associated quadrant is disabled and is not enabled by the global route enable bit. The routing will remain in a benign state until it is subsequently configured and then enabled by clearing this bit.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: The routing in this quadrant can be enabled with the bank route enable bit. (default)</p> <p>0x1: ENABLE: The routing in this quadrant is disabled and held in a benign state.</p> |
| 10 | GCH_WR_HI | <p>Enable global write operation for the routing channel with the higher address in the associated quadrant. When enabled, the UDB ID select decoding is bypassed and therefore multiple channels can be written to simultaneously. This is designed to support test modes.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Global UDB channel configuration write for higher order address is disabled.</p> <p>0x1: ENABLE: Global UDB channel configuration write for higher order address is enabled.</p> |
| 9 | GCH_WR_LO | <p>Enable global write operation for the routing channel with the lower address in the associated quadrant. When enabled, the UDB ID select decoding is bypassed and therefore multiple channels can be written to simultaneously. This is designed to support test modes.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Global UDB channel configuration write for lower order address is disabled.</p> <p>0x1: ENABLE: Global UDB channel configuration write for lower order address is enabled.</p> |
| 8 | BCEN_Q | <p>Bank Clock Enable Control</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Digital Global clock is disabled.</p> <p>0x1: ENABLE: Digital Global clock is enabled.</p> |
| 7 : 0 | DCEN_Q | <p>Digital clock enable for indexed digital clock for the associated quadrant.</p> <p>Default Value: 0</p> <p>0x0: DISABLE: Disabled</p> <p>0x1: ENABLE: Enabled</p> |

31 UDB Digital System Interconnect Registers

This section discusses the UDB Digital System Interconnect registers. It lists all the registers in mapping tables, in address order.

31.1 Register Details

| Register Name | Address |
|-------------------------------|------------|
| UDB_DSI0_HC0 | 0x400F4000 |
| UDB_DSI0_HC1 | 0x400F4001 |
| UDB_DSI0_HC2 | 0x400F4002 |
| UDB_DSI0_HC3 | 0x400F4003 |
| UDB_DSI0_HC4 | 0x400F4004 |
| UDB_DSI0_HC5 | 0x400F4005 |
| UDB_DSI0_HC6 | 0x400F4006 |
| UDB_DSI0_HC7 | 0x400F4007 |
| UDB_DSI0_HC8 | 0x400F4008 |
| UDB_DSI0_HC9 | 0x400F4009 |
| UDB_DSI0_HC10 | 0x400F400A |
| UDB_DSI0_HC11 | 0x400F400B |
| UDB_DSI0_HC12 | 0x400F400C |
| UDB_DSI0_HC13 | 0x400F400D |
| UDB_DSI0_HC14 | 0x400F400E |
| UDB_DSI0_HC15 | 0x400F400F |
| UDB_DSI0_HC16 | 0x400F4010 |
| UDB_DSI0_HC17 | 0x400F4011 |
| UDB_DSI0_HC18 | 0x400F4012 |
| UDB_DSI0_HC19 | 0x400F4013 |
| UDB_DSI0_HC20 | 0x400F4014 |
| UDB_DSI0_HC21 | 0x400F4015 |
| UDB_DSI0_HC22 | 0x400F4016 |
| UDB_DSI0_HC23 | 0x400F4017 |
| UDB_DSI0_HC24 | 0x400F4018 |
| UDB_DSI0_HC25 | 0x400F4019 |

32 UDB Port Adapter Registers

This section discusses the UDB Port Adapter registers. It lists all the registers in mapping tables, in address order.

32.1 Register Details

| Register Name | Address |
|-------------------------------|------------|
| UDB_PA0_CFG0 | 0x400F5000 |
| UDB_PA0_CFG1 | 0x400F5001 |
| UDB_PA0_CFG2 | 0x400F5002 |
| UDB_PA0_CFG3 | 0x400F5003 |
| UDB_PA0_CFG4 | 0x400F5004 |
| UDB_PA0_CFG5 | 0x400F5005 |
| UDB_PA0_CFG6 | 0x400F5006 |
| UDB_PA0_CFG7 | 0x400F5007 |
| UDB_PA0_CFG8 | 0x400F5008 |
| UDB_PA0_CFG9 | 0x400F5009 |
| UDB_PA0_CFG10 | 0x400F500A |
| UDB_PA0_CFG11 | 0x400F500B |
| UDB_PA0_CFG12 | 0x400F500C |
| UDB_PA0_CFG13 | 0x400F500D |
| UDB_PA0_CFG14 | 0x400F500E |
| UDB_PA1_CFG0 | 0x400F5010 |
| UDB_PA1_CFG1 | 0x400F5011 |
| UDB_PA1_CFG2 | 0x400F5012 |
| UDB_PA1_CFG3 | 0x400F5013 |
| UDB_PA1_CFG4 | 0x400F5014 |
| UDB_PA1_CFG5 | 0x400F5015 |
| UDB_PA1_CFG6 | 0x400F5016 |
| UDB_PA1_CFG7 | 0x400F5017 |
| UDB_PA1_CFG8 | 0x400F5018 |
| UDB_PA1_CFG9 | 0x400F5019 |
| UDB_PA1_CFG10 | 0x400F501A |
| UDB_PA1_CFG11 | 0x400F501B |

| Register Name | Address |
|---------------|------------|
| UDB_PA1_CFG12 | 0x400F501C |
| UDB_PA1_CFG13 | 0x400F501D |
| UDB_PA1_CFG14 | 0x400F501E |
| UDB_PA2_CFG0 | 0x400F5020 |
| UDB_PA2_CFG1 | 0x400F5021 |
| UDB_PA2_CFG2 | 0x400F5022 |
| UDB_PA2_CFG3 | 0x400F5023 |
| UDB_PA2_CFG4 | 0x400F5024 |
| UDB_PA2_CFG5 | 0x400F5025 |
| UDB_PA2_CFG6 | 0x400F5026 |
| UDB_PA2_CFG7 | 0x400F5027 |
| UDB_PA2_CFG8 | 0x400F5028 |
| UDB_PA2_CFG9 | 0x400F5029 |
| UDB_PA2_CFG10 | 0x400F502A |
| UDB_PA2_CFG11 | 0x400F502B |
| UDB_PA2_CFG12 | 0x400F502C |
| UDB_PA2_CFG13 | 0x400F502D |
| UDB_PA2_CFG14 | 0x400F502E |
| UDB_PA3_CFG0 | 0x400F5030 |
| UDB_PA3_CFG1 | 0x400F5031 |
| UDB_PA3_CFG2 | 0x400F5032 |
| UDB_PA3_CFG3 | 0x400F5033 |
| UDB_PA3_CFG4 | 0x400F5034 |
| UDB_PA3_CFG5 | 0x400F5035 |
| UDB_PA3_CFG6 | 0x400F5036 |
| UDB_PA3_CFG7 | 0x400F5037 |
| UDB_PA3_CFG8 | 0x400F5038 |
| UDB_PA3_CFG9 | 0x400F5039 |
| UDB_PA3_CFG10 | 0x400F503A |
| UDB_PA3_CFG11 | 0x400F503B |
| UDB_PA3_CFG12 | 0x400F503C |
| UDB_PA3_CFG13 | 0x400F503D |
| UDB_PA3_CFG14 | 0x400F503E |
| UDB_PA4_CFG0 | 0x400F5040 |
| UDB_PA4_CFG1 | 0x400F5041 |
| UDB_PA4_CFG2 | 0x400F5042 |
| UDB_PA4_CFG3 | 0x400F5043 |
| UDB_PA4_CFG4 | 0x400F5044 |
| UDB_PA4_CFG5 | 0x400F5045 |
| UDB_PA4_CFG6 | 0x400F5046 |
| UDB_PA4_CFG7 | 0x400F5047 |
| UDB_PA4_CFG8 | 0x400F5048 |

| Register Name | Address |
|---------------|------------|
| UDB_PA4_CFG9 | 0x400F5049 |
| UDB_PA4_CFG10 | 0x400F504A |

32.1.1 UDB_PA0_CFG0

PA Data In Clock Control Register

Address: 0x400F5000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------|---|-----------|--------------|---------------------|---|--------------------|---|
| SW Access | RW | | RW | RW | RW | | RW | |
| HW Access | R | | R | R | R | | R | |
| Name | NC [7:6] | | CLKIN_INV | CLKIN_EN_INV | CLKIN_EN_MODE [3:2] | | CLKIN_EN_SEL [1:0] | |

| Bits | Name | Description |
|-------|---------------|--|
| 7 : 6 | NC | Spare register bits Default Value: 0 |
| 5 | CLKIN_INV | Determines whether the selected clock is inverted or not. Default Value: 0 0x0: NOINV: Not Inverted 0x1: INV: Inverted |
| 4 | CLKIN_EN_INV | Determines whether the selected enable is inverted or not. Default Value: 0 0x0: NOINV: Not Inverted 0x1: INV: Inverted |
| 3 : 2 | CLKIN_EN_MODE | Select one of four operating modes Default Value: 0 0x0: OFF: Always off 0x1: ON: Always on 0x2: POSEDGE: Positive edge - A clock is output on a 0 to 1 transition on the enable input 0x3: LEVEL: Level sensitive - A clock is output when the enable is high. |
| 1 : 0 | CLKIN_EN_SEL | Select one of four choices for clock enable Default Value: 0 0x0: PIN_RC: pin_rc - port pin multiplexer output 0x1: DSI_RC_0: dsi_rc[0] - dsi_xx_out_p[4] |

32.1.1 UDB_PA0_CFG0 (continued)

0x2: DSI_RC_1:

dsi_rc[1] - dsi_xx_out_p[5]

0x3: DSI_RC_2:

dsi_rc{1} - dsi_xx_out_p[6]

32.1.2 UDB_PA0_CFG1

PA Data Out Clock Control Register

Address: 0x400F5001

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------|---|----------------|-------------------|----------------------|---|---------------------|---|
| SW Access | RW | | RW | RW | RW | | RW | |
| HW Access | R | | R | R | R | | R | |
| Name | NC [7:6] | | CLKOUT_I NV | CLKOUT_E N_INV | CLKOUT_EN_MODE [3:2] | | CLKOUT_EN_SEL [1:0] | |

| Bits | Name | Description |
|-------|----------------|--|
| 7 : 6 | NC | Spare register bits Default Value: 0 |
| 5 | CLKOUT_INV | Determines whether the selected clock is inverted or not. Default Value: 0 0x0: NOINV: Not Inverted 0x1: INV: Inverted |
| 4 | CLKOUT_EN_INV | Determines whether the selected enable is inverted or not. Default Value: 0 0x0: NOINV: Not Inverted 0x1: INV: Inverted |
| 3 : 2 | CLKOUT_EN_MODE | Select one of four operating modes Default Value: 0 0x0: OFF: Always off 0x1: ON: Always on 0x2: POSEDGE: Positive edge - A clock is output on a 0 to 1 transition on the enable input 0x3: LEVEL: Level sensitive - A clock is output when the enable is high. |
| 1 : 0 | CLKOUT_EN_SEL | Select one of four choices for clock enable Default Value: 0 0x0: PIN_RC: pin_rc - port pin multiplexer output 0x1: DSI_RC_0: dsi_rc[0] - dsi_xx_out_p[4] |

32.1.2 UDB_PA0_CFG1 (continued)

0x2: DSI_RC_1:

dsi_rc[1] - dsi_xx_out_p[5]

0x3: DSI_RC_2:

dsi_rc{1} - dsi_xx_out_p[6]

32.1.3 UDB_PA0_CFG2

PA Clock Select Register

Address: 0x400F5002

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------------|---|---|---|-----------------|---|---|---|
| SW Access | RW | | | | RW | | | |
| HW Access | R | | | | R | | | |
| Name | CLKOUT_SEL [7:4] | | | | CLKIN_SEL [3:0] | | | |

| Bits | Name | Description |
|-------|------------|---|
| 7 : 4 | CLKOUT_SEL | Select one of four choices for clock enable Default Value: 0 0x0: GCLK0: gclk[0] 0x1: GCLK1: gclk[1] 0x2: GCLK2: gclk[2] 0x3: GCLK3: gclk[3] 0x4: GCLK4: gclk[4] 0x5: GCLK5: gclk[5] 0x6: GCLK6: gclk[6] 0x7: GCLK7: gclk[7] 0x9: BUS_CLK_APP: bus_clk_app 0xc: PIN_RC: pin_rc - port pin multiplexer output 0xd: DSI_RC_0: dsi_rc[0] - dsi_xx_out_p[4] 0xe: DSI_RC_1: dsi_rc[1] - dsi_xx_out_p[5] 0xf: DSI_RC_2: dsi_rc{1} - dsi_xx_out_p[6] |
| 3 : 0 | CLKIN_SEL | Select one of four choices for clock enable Default Value: 0 0x0: GCLK0: gclk[0] |

32.1.3 UDB_PA0_CFG2 (continued)

0x1: GCLK1:
gclk[1]

0x2: GCLK2:
gclk[2]

0x3: GCLK3:
gclk[3]

0x4: GCLK4:
gclk[4]

0x5: GCLK5:
gclk[5]

0x6: GCLK6:
gclk[6]

0x7: GCLK7:
gclk[7]

0x9: BUS_CLK_APP:
bus_clk_app

0xc: PIN_RC:
pin_rc - port pin multiplexer output

0xd: DSI_RC_0:
dsi_rc[0] - dsi_xx_out_p[4]

0xe: DSI_RC_1:
dsi_rc[1] - dsi_xx_out_p[5]

0xf: DSI_RC_2:
dsi_rc{1} - dsi_xx_out_p[6]

32.1.4 UDB_PA0_CFG3

PA Reset Select Register

Address: 0x400F5003

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|-----|-------------|-------------------|---|-----|------------|------------------|---|
| SW Access | RW | RW | RW | | RW | RW | RW | |
| HW Access | R | R | R | | R | R | R | |
| Name | NC7 | RES_OUT_INV | RES_OUT_SEL [5:4] | | NC0 | RES_IN_INV | RES_IN_SEL [1:0] | |

| Bits | Name | Description |
|-------|-------------|--|
| 7 | NC7 | Spare register bit Default Value: 0 |
| 6 | RES_OUT_INV | Select the polarity of the reset control. Default Value: 0 0x0: NOINV: Not Inverted 0x1: INV: Inverted |
| 5 : 4 | RES_OUT_SEL | Select one of four inputs to serve as the reset control to the block. Default Value: 0 0x0: PIN_RC: pin_rc - port pin multiplexer output 0x1: DSI_RC_0: dsi_rc[0] - dsi_xx_out_p[4] 0x2: DSI_RC_1: dsi_rc[1] - dsi_xx_out_p[5] 0x3: DSI_RC_2: dsi_rc{1} - dsi_xx_out_p[6] |
| 3 | NC0 | Spare register bit Default Value: 0 |
| 2 | RES_IN_INV | Select the polarity of the reset control. Default Value: 0 0x0: NOINV: Not Inverted 0x1: INV: Inverted |
| 1 : 0 | RES_IN_SEL | Select one of four inputs to serve as the reset control to the block. Default Value: 0 0x0: PIN_RC: pin_rc - port pin multiplexer output |

32.1.4 UDB_PA0_CFG3 (continued)

0x1: DSI_RC_0:

dsi_rc[0] - dsi_xx_out_p[4]

0x2: DSI_RC_1:

dsi_rc[1] - dsi_xx_out_p[5]

0x3: DSI_RC_2:

dsi_rc{1} - dsi_xx_out_p[6]

32.1.5 UDB_PA0_CFG4

PA Reset Enable Register

Address: 0x400F5004

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|--------------|---|---|---|---|-----------|------------|-----------|
| SW Access | RW | | | | | RW | RW | RW |
| HW Access | R | | | | | R | R | R |
| Name | NC7654 [7:3] | | | | | RES_OE_EN | RES_OUT_EN | RES_IN_EN |

| Bits | Name | Description |
|-------|------------|---|
| 7 : 3 | NC7654 | Spare register bits Default Value: 0 |
| 2 | RES_OE_EN | Enable the selected reset Default Value: 0 0x0: DISABLE: Reset Disabled 0x1: ENABLE: Reset Enabled |
| 1 | RES_OUT_EN | Enable the selected reset Default Value: 0 0x0: DISABLE: Reset Disabled 0x1: ENABLE: Reset Enabled |
| 0 | RES_IN_EN | Enable the selected reset Default Value: 0 0x0: DISABLE: Reset Disabled 0x1: ENABLE: Reset Enabled |

32.1.6 UDB_PA0_CFG5

PA Reset Pin Select Register

Address: 0x400F5005

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|--------------|---|---|---|---|------------|---|---------|
| SW Access | RW | | | | | None | | RW |
| HW Access | R | | | | | None | | R |
| Name | NC7654 [7:3] | | | | | None [2:1] | | PIN_SEL |

| Bits | Name | Description |
|-------|---------|--|
| 7 : 3 | NC7654 | Spare register bits Default Value: 0 |
| 0 | PIN_SEL | Select port input to route to reset multiplexer (ds_i_xx_input_p[7:0]) Default Value: 0 0x0: PIN0: ds_i_from_port_pin[0] 0x1: PIN1: ds_i_from_port_pin[1] 0x2: PIN2: ds_i_from_port_pin[2] 0x3: PIN3: ds_i_from_port_pin[3] 0x4: PIN4: ds_i_from_port_pin[4] 0x5: PIN5: ds_i_from_port_pin[5] 0x6: PIN6: ds_i_from_port_pin[6] 0x7: PIN7: ds_i_from_port_pin[7] |

32.1.7 UDB_PA0_CFG6

PA Input Data Sync Control Register - Low

Address: 0x400F5006

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|----------------|---|----------------|---|----------------|---|----------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | IN_SYNC3 [7:6] | | IN_SYNC2 [5:4] | | IN_SYNC1 [3:2] | | IN_SYNC0 [1:0] | |

| Bits | Name | Description |
|-------|----------|--|
| 7 : 6 | IN_SYNC3 | Synchronization selection for PA input 3 Default Value: 0 0x0: TRANSPARENT: transparent 0x1: SINGLESYNC: single sync 0x2: DOUBLESYNC: double sync 0x3: RSVD: reserved |
| 5 : 4 | IN_SYNC2 | Synchronization selection for PA input 2 Default Value: 0 0x0: TRANSPARENT: transparent 0x1: SINGLESYNC: single sync 0x2: DOUBLESYNC: double sync 0x3: RSVD: reserved |
