34 UDB 8-bit Working Registers

This section discusses the UDB 8-bit Working registers. It lists all the registers in mapping tables, in address order.

34.1 Register Details

| Register Name | Address |
|---------------|------------|
| UDB_W8_A00 | 0x400F0000 |
| UDB_W8_A01 | 0x400F0001 |
| UDB_W8_A02 | 0x400F0002 |
| UDB_W8_A03 | 0x400F0003 |
| UDB_W8_A04 | 0x400F0004 |
| UDB_W8_A05 | 0x400F0005 |
| UDB_W8_A06 | 0x400F0006 |
| UDB_W8_A07 | 0x400F0007 |
| UDB_W8_A10 | 0x400F0010 |
| UDB_W8_A11 | 0x400F0011 |
| UDB_W8_A12 | 0x400F0012 |
| UDB_W8_A13 | 0x400F0013 |
| UDB_W8_A14 | 0x400F0014 |
| UDB_W8_A15 | 0x400F0015 |
| UDB_W8_A16 | 0x400F0016 |
| UDB_W8_A17 | 0x400F0017 |
| UDB_W8_D00 | 0x400F0020 |
| UDB_W8_D01 | 0x400F0021 |
| UDB_W8_D02 | 0x400F0022 |
| UDB_W8_D03 | 0x400F0023 |
| UDB_W8_D04 | 0x400F0024 |
| UDB_W8_D05 | 0x400F0025 |
| UDB_W8_D06 | 0x400F0026 |
| UDB_W8_D07 | 0x400F0027 |
| UDB_W8_D10 | 0x400F0030 |
| UDB_W8_D11 | 0x400F0031 |
| UDB_W8_D12 | 0x400F0032 |

| Register Name | Address |
|---------------|------------|
| UDB_W8_D13 | 0x400F0033 |
| UDB_W8_D14 | 0x400F0034 |
| UDB_W8_D15 | 0x400F0035 |
| UDB_W8_D16 | 0x400F0036 |
| UDB_W8_D17 | 0x400F0037 |
| UDB_W8_F00 | 0x400F0040 |
| UDB_W8_F01 | 0x400F0041 |
| UDB_W8_F02 | 0x400F0042 |
| UDB_W8_F03 | 0x400F0043 |
| UDB_W8_F04 | 0x400F0044 |
| UDB_W8_F05 | 0x400F0045 |
| UDB_W8_F06 | 0x400F0046 |
| UDB_W8_F07 | 0x400F0047 |
| UDB_W8_F10 | 0x400F0050 |
| UDB_W8_F11 | 0x400F0051 |
| UDB_W8_F12 | 0x400F0052 |
| UDB_W8_F13 | 0x400F0053 |
| UDB_W8_F14 | 0x400F0054 |
| UDB_W8_F15 | 0x400F0055 |
| UDB_W8_F16 | 0x400F0056 |
| UDB_W8_F17 | 0x400F0057 |
| UDB_W8_ST0 | 0x400F0060 |
| UDB_W8_ST1 | 0x400F0061 |

35 UDB 16-bit Concatenated Working Registers

This section discusses the UDB 16-bit Concatenated Working registers. It lists all the registers in mapping tables, in address order.

35.1 Register Details

| Register Name | Address |
|-------------------|------------|
| UDB_CAT16_A0 | 0x400F1000 |
| UDB_CAT16_A1 | 0x400F1002 |
| UDB_CAT16_A2 | 0x400F1004 |
| UDB_CAT16_A3 | 0x400F1006 |
| UDB_CAT16_A4 | 0x400F1008 |
| UDB_CAT16_A5 | 0x400F100A |
| UDB_CAT16_A6 | 0x400F100C |
| UDB_CAT16_A7 | 0x400F100E |
| UDB_CAT16_D0 | 0x400F1040 |
| UDB_CAT16_D1 | 0x400F1042 |
| UDB_CAT16_D2 | 0x400F1044 |
| UDB_CAT16_D3 | 0x400F1046 |
| UDB_CAT16_D4 | 0x400F1048 |
| UDB_CAT16_D5 | 0x400F104A |
| UDB_CAT16_D6 | 0x400F104C |
| UDB_CAT16_D7 | 0x400F104E |
| UDB_CAT16_F0 | 0x400F1080 |
| UDB_CAT16_F1 | 0x400F1082 |
| UDB_CAT16_F2 | 0x400F1084 |
| UDB_CAT16_F3 | 0x400F1086 |
| UDB_CAT16_F4 | 0x400F1088 |
| UDB_CAT16_F5 | 0x400F108A |
| UDB_CAT16_F6 | 0x400F108C |
| UDB_CAT16_F7 | 0x400F108E |
| UDB_CAT16_CTL_ST0 | 0x400F10C0 |
| UDB_CAT16_CTL_ST1 | 0x400F10C2 |
| UDB_CAT16_CTL_ST2 | 0x400F10C4 |

| Register Name | Address |
|---------------------|------------|
| UDB_CAT16_CTL_ST3 | 0x400F10C6 |
| UDB_CAT16_CTL_ST4 | 0x400F10C8 |
| UDB_CAT16_CTL_ST5 | 0x400F10CA |
| UDB_CAT16_CTL_ST6 | 0x400F10CC |
| UDB_CAT16_CTL_ST7 | 0x400F10CE |
| UDB_CAT16_ACTL_MSK0 | 0x400F1100 |
| UDB_CAT16_ACTL_MSK1 | 0x400F1102 |
| UDB_CAT16_ACTL_MSK2 | 0x400F1104 |
| UDB_CAT16_ACTL_MSK3 | 0x400F1106 |
| UDB_CAT16_ACTL_MSK4 | 0x400F1108 |
| UDB_CAT16_ACTL_MSK5 | 0x400F110A |
| UDB_CAT16_ACTL_MSK6 | 0x400F110C |
| UDB_CAT16_ACTL_MSK7 | 0x400F110E |
| UDB_CAT16_MC0 | 0x400F1140 |
| UDB_CAT16_MC1 | 0x400F1142 |
| UDB_CAT16_MC2 | 0x400F1144 |
| UDB_CAT16_MC3 | 0x400F1146 |
| UDB_CAT16_MC4 | 0x400F1148 |
| UDB_CAT16_MC5 | 0x400F114A |
| UDB_CAT16_MC6 | 0x400F114C |
| UDB_CAT16_MC7 | 0x400F114E |

35.1.1 UDB_CAT16_A0

Accumulator Registers {A1,A0}

Address: 0x400F1000

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-----------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A1 [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|------|--|
| 15 : 8 | A1 | Accumulator 1 Register Default Value: 0 |
| 7 : 0 | A0 | Accumulator 0 Register Default Value: 0 |

35.1.2 UDB_CAT16_A1

Accumulator Registers {A1,A0}

Address: 0x400F1002

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-----------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A1 [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|------|--|
| 15 : 8 | A1 | Accumulator 1 Register Default Value: 0 |
| 7 : 0 | A0 | Accumulator 0 Register Default Value: 0 |

35.1.3 UDB_CAT16_A2

Accumulator Registers {A1,A0}

Address: 0x400F1004

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-----------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A1 [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|------|--|
| 15 : 8 | A1 | Accumulator 1 Register Default Value: 0 |
| 7 : 0 | A0 | Accumulator 0 Register Default Value: 0 |

35.1.4 UDB_CAT16_A3

Accumulator Registers {A1,A0}

Address: 0x400F1006

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-----------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A1 [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|------|--|
| 15 : 8 | A1 | Accumulator 1 Register Default Value: 0 |
| 7 : 0 | A0 | Accumulator 0 Register Default Value: 0 |

35.1.5 UDB_CAT16_A4

Accumulator Registers {A1,A0}

Address: 0x400F1008

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|----------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0 [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-----------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A1 [15:8] | | | | | | | |

| Bits | Name | Description |

| 3 : 0 | PLD0_MC | PLD0 Macrocell Read Register Default Value: 0 |

36 UDB 16-bit Working Registers

This section discusses the UDB 16-bit Working registers. It lists all the registers in mapping tables, in address order.

36.1 Register Details

| Register Name | Address |
|---------------|------------|
| UDB_W16_A00 | 0x400F1000 |
| UDB_W16_A01 | 0x400F1002 |
| UDB_W16_A02 | 0x400F1004 |
| UDB_W16_A03 | 0x400F1006 |
| UDB_W16_A04 | 0x400F1008 |
| UDB_W16_A05 | 0x400F100A |
| UDB_W16_A06 | 0x400F100C |
| UDB_W16_A10 | 0x400F1020 |
| UDB_W16_A11 | 0x400F1022 |
| UDB_W16_A12 | 0x400F1024 |
| UDB_W16_A13 | 0x400F1026 |
| UDB_W16_A14 | 0x400F1028 |
| UDB_W16_A15 | 0x400F102A |
| UDB_W16_A16 | 0x400F102C |
| UDB_W16_D00 | 0x400F1040 |
| UDB_W16_D01 | 0x400F1042 |
| UDB_W16_D02 | 0x400F1044 |
| UDB_W16_D03 | 0x400F1046 |
| UDB_W16_D04 | 0x400F1048 |
| UDB_W16_D05 | 0x400F104A |
| UDB_W16_D06 | 0x400F104C |
| UDB_W16_D10 | 0x400F1060 |
| UDB_W16_D11 | 0x400F1062 |
| UDB_W16_D12 | 0x400F1064 |
| UDB_W16_D13 | 0x400F1066 |
| UDB_W16_D14 | 0x400F1068 |
| UDB_W16_D15 | 0x400F106A |

| Register Name | Address |
|---------------|------------|
| UDB_W16_D16 | 0x400F106C |
| UDB_W16_F00 | 0x400F1080 |
| UDB_W16_F01 | 0x400F1082 |
| UDB_W16_F02 | 0x400F1084 |
| UDB_W16_F03 | 0x400F1086 |
| UDB_W16_F04 | 0x400F1088 |
| UDB_W16_F05 | 0x400F108A |
| UDB_W16_F06 | 0x400F108C |
| UDB_W16_F10 | 0x400F10A0 |
| UDB_W16_F11 | 0x400F10A2 |
| UDB_W16_F12 | 0x400F10A4 |
| UDB_W16_F13 | 0x400F10A6 |
| UDB_W16_F14 | 0x400F10A8 |
| UDB_W16_F15 | 0x400F10AA |
| UDB_W16_F16 | 0x400F10AC |
| UDB_W16_ST0 | 0x400F10C0 |
| UDB_W16_ST1 | 0x400F10C2 |
| UDB_W16_ST2 | 0x400F10C4 |
| UDB_W16_ST3 | 0x400F10C6 |
| UDB_W16_ST4 | 0x400F10C8 |
| UDB_W16_ST5 | 0x400F10CA |
| UDB_W16_ST6 | 0x400F10CC |
| UDB_W16_CTL0 | 0x400F10E0 |
| UDB_W16_CTL1 | 0x400F10E2 |
| UDB_W16_CTL2 | 0x400F10E4 |
| UDB_W16_CTL3 | 0x400F10E6 |
| UDB_W16_CTL4 | 0x400F10E8 |
| UDB_W16_CTL5 | 0x400F10EA |
| UDB_W16_CTL6 | 0x400F10EC |
| UDB_W16_MSK0 | 0x400F1100 |
| UDB_W16_MSK1 | 0x400F1102 |
| UDB_W16_MSK2 | 0x400F1104 |
| UDB_W16_MSK3 | 0x400F1106 |
| UDB_W16_MSK4 | 0x400F1108 |
| UDB_W16_MSK5 | 0x400F110A |
| UDB_W16_MSK6 | 0x400F110C |
| UDB_W16_ACTL0 | 0x400F1120 |
| UDB_W16_ACTL1 | 0x400F1122 |
| UDB_W16_ACTL2 | 0x400F1124 |
| UDB_W16_ACTL3 | 0x400F1126 |
| UDB_W16_ACTL4 | 0x400F1128 |
| UDB_W16_ACTL5 | 0x400F112A |

| Register Name | Address |
|---------------|------------|
| UDB_W16_ACTL6 | 0x400F112C |
| UDB_W16_MC0 | 0x400F1140 |
| UDB_W16_MC1 | 0x400F1142 |
| UDB_W16_MC2 | 0x400F1144 |
| UDB_W16_MC3 | 0x400F1146 |
| UDB_W16_MC4 | 0x400F1148 |
| UDB_W16_MC5 | 0x400F114A |
| UDB_W16_MC6 | 0x400F114C |

36.1.1 UDB_W16_A00

Accumulator 0

Address: 0x400F1000

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.2 UDB_W16_A01

Accumulator 0

Address: 0x400F1002

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.3 UDB_W16_A02

Accumulator 0

Address: 0x400F1004

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.4 UDB_W16_A03

Accumulator 0

Address: 0x400F1006

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.5 UDB_W16_A04

Accumulator 0

Address: 0x400F1008

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.6 UDB_W16_A05

Accumulator 0

Address: 0x400F100A

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.7 UDB_W16_A06

Accumulator 0

Address: 0x400F100C

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_LS [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | RW | | | | | | | |
| Name | A0_MS [15:8] | | | | | | | |

| Bits | Name | Description |
|--------|-------|--|
| 15 : 8 | A0_MS | Accumulator 0 for UDB[n+1] Default Value: 0 |
| 7 : 0 | A0_LS | Accumulator 0 for UDB[n] Default Value: 0 |

36.1.8 UDB_W16_A10

Accumulator 1

Address: 0x400F1020

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |

37 UDB 32-bit Working Registers

This section discusses the UDB 32-bit Working registers. It lists all the registers in mapping tables, in address order.

37.1 Register Details

| Register Name | Address |
|---------------|------------|

38 UDB Interface Registers

This section discusses the UDB Interface registers. It lists all the registers in mapping tables, in address order.

38.1 Register Details

| Register Name | Address |
|-------------------------------------|------------|
| UDB_UDB_BANK_CTL | 0x400F7000 |
| UDB_UDB_WAIT_CFG | 0x400F7001 |
| UDB_UDB_INT_CLK_CTL | 0x400F701C |
| UDB_UDB_TR_CLK_CTL | 0x400F7020 |
| UDB_UDB_TR_CFG | 0x400F7100 |

38.1.1 UDB_UDB_BANK_CTL

Bank Control

Address: 0x400F7000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|---------|------------|---|------|------|---------|----------|---------|
| SW Access | RW | None | | RW | RW | RW | RW | RW |
| HW Access | R | None | | R | R | R | R | R |
| Name | GLBL_WR | None [6:5] | | PIPE | LOCK | BANK_EN | ROUTE_EN | DIS_COR |

| Bits | Name | Description |
|------|----------|---|
| 7 | GLBL_WR | UDB Array Global Writing Option Default Value: 0 0x0: DISABLE: Global Writes disabled 0x1: ENABLE: Global Writes enabled |
| 4 | PIPE | Pipelining Control Default Value: 0 0x0: BYPASS: Pipelining bypassed 0x1: PIPELINED: Pipelining enabled |
| 3 | LOCK | DO NOT USE - This bit is deprecated (CDT 223393) Default Value: 0 0x0: MUTABLE: 0x1: LOCKED: |
| 2 | BANK_EN | Enable Bank Default Value: 0 0x0: DISABLE: Bank disabled 0x1: ENABLE: Bank enabled |
| 1 | ROUTE_EN | Enable Routing Default Value: 0 0x0: DISABLE: Routing disabled 0x1: ENABLE: Routing enabled |
| 0 | DIS_COR | Selection of Clear-On-Read Default Value: 0 |

38.1.1 UDB_UDB_BANK_CTL (continued)

0x0: NORMAL:

Clear-On-Read enabled

0x1: DISABLE:

Clear-On-Read disabled

38.1.2 UDB_UDB_WAIT_CFG

Wait States Configuration

Address: 0x400F7001

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|-------------------|---|-------------------|---|-------------------|---|-------------------|---|
| SW Access | RW | | RW | | RW | | RW | |
| HW Access | R | | R | | R | | R | |
| Name | WR_WRK_WAIT [7:6] | | RD_WRK_WAIT [5:4] | | WR_CFG_WAIT [3:2] | | RD_CFG_WAIT [1:0] | |

| Bits | Name | Description |
|-------|-------------|--|
| 7 : 6 | WR_WRK_WAIT | Write Work Wait States Default Value: 0 0x0: TWO_WAITS: 2 wait states 0x1: THREE_WAITS: 3 wait states 0x2: FOUR_WAITS: 4 wait states 0x3: ILLEGAL: Illegal setting |
| 5 : 4 | RD_WRK_WAIT | Read Work Wait States Default Value: 0 0x0: TWO_WAITS: 2 wait states 0x1: THREE_WAITS: 3 wait states 0x2: FOUR_WAITS: 4 wait states 0x3: ILLEGAL: Illegal setting |
| 3 : 2 | WR_CFG_WAIT | Write Configuration Wait States Default Value: 0 0x0: TWO_WAITS: 2 wait states 0x1: THREE_WAITS: 3 wait states 0x2: FOUR_WAITS: 4 wait states 0x3: ILLEGAL: Illegal setting |
| 1 : 0 | RD_CFG_WAIT | Read Configuration Wait States Default Value: 0 |

38.1.2 UDB_UDB_WAIT_CFG (continued)

0x0: SIX_WAITS:

6 wait states

0x1: FIVE_WAITS:

5 wait states

0x2: FOUR_WAITS:

4 wait states

0x3: TWO_WAITS:

2 wait states

38.1.3 UDB_UDB_INT_CLK_CTL

Interrupt Synchronizer Clock Control

Address: 0x400F701C

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|----------------|
| SW Access | None | | | | | | | RW |
| HW Access | None | | | | | | | R |
| Name | None [7:1] | | | | | | | INT_CLK_ENABLE |

| Bits | Name | Description |
|------|----------------|--|
| 0 | INT_CLK_ENABLE | <p>This bit enables the interrupt synchronizer in the UDB interface. It needs to be set whenever UDB/DSI interrupts are used. Disabling the interrupt synchronizer saves power in Active/Sleep mode.</p> <p>Default Value: 0</p> |

38.1.4 UDB_UDB_TR_CLK_CTL

Trigger Clock Control

Address: 0x400F7020

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---|---|---|-----------------|
| SW Access | None | | | | | | | RW |
| HW Access | None | | | | | | | R |
| Name | None [7:1] | | | | | | | TR_CLOCK_ENABLE |

| Bits | Name | Description |
|------|-----------------|---|
| 0 | TR_CLOCK_ENABLE | This bit enables/disables the clock and reset of the DMA request logic. Default Value: 0 |

38.1.5 UDB_UDB_TR_CFG

Trigger Configuration

Address: 0x400F7100

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------------------|---|---|---|---|---|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | TR_MODE_CFG [7:0] | | | | | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------------|----|----|----|----|----|---|---|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | TR_MODE_CFG [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|---------------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | TR_MODE_CFG [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|---------------------|----|----|----|----|----|----|----|
| SW Access | RW | | | | | | | |
| HW Access | R | | | | | | | |
| Name | TR_MODE_CFG [31:24] | | | | | | | |

| Bits | Name | Description |
|--------|-------------|---|
| 31 : 0 | TR_MODE_CFG | Trigger Mode Configuration '0' : dsi_tr[i] is tied to udb_tr_out[i] '1' : dsi_tr[i] is synchornized to clk_tr before being sourced to dsi_tr[i] Default Value: 0 |

39 UDBSNG Registers

This section discusses the UDBSNG registers. It lists all the registers in mapping tables, in address order.

39.1 Register Details

| Register Name | Address |
|--|------------|
| UDB_P0_U0_PLD_IT0 | 0x400F3000 |
| UDB_P0_U0_PLD_IT1 | 0x400F3004 |
| UDB_P0_U0_PLD_IT2 | 0x400F3008 |
| UDB_P0_U0_PLD_IT3 | 0x400F300C |
| UDB_P0_U0_PLD_IT4 | 0x400F3010 |

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|-----------|-----------|----------|-----------|------------|-------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.37 UDB_P0_U0_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |

PLD1 Clock and Reset control

Address: 0x400F3059

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|-------------|---------------------|--------|-----------|------------------|---|-----------------|---|
| SW Access | RW | RW | RW | RW | RW | | RW | |
| HW Access | R | R | R | R | R | | R | |
| Name | RC_RES_SEL1 | RC_RES_SEL0_OR_FRES | RC_INV | RC_EN_INV | RC_EN_MODE [3:2] | | RC_EN_SEL [1:0] | |

| Bits | Name | Description |
|-------|---------------------|---|
| 7 | RC_RES_SEL1 | Configures the routed reset for the associated UDB component block. The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES = '0' - This bit is not used. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 6 | RC_RES_SEL0_OR_FRES | Configures the routed or firmware reset for the associated UDB component block. The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES = '0' - This bit is a firmware reset. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 5 | RC_INV | Optionally inverts the clock selection for the associated UDB component block. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 4 | RC_EN_INV | Optionally inverts the clock enable selection for the associated UDB component blocks. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 3 : 2 | RC_EN_MODE | Selects the operating mode for the clock to the associated UDB component block. Default Value: 0 |

39.1.97 UDB_P0_U1_CFG16

Datapath FIFO and register access configuration control

Address: 0x400F30D0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|-----------|-----------|----------|-----------|------------|-------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.97 UDB_P0_U1_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |
| | | 0x0: DEFAULT: 16-bit default access mode: selects registers in two consecutive UDBs in chaining order |
| | | 0x1: CONCATENATE: 16-bit concat access mode: selects concatenated registers in a single UDB |

39.1.111 UDB_P0_U1_CFG30

Reset control

Address: 0x400F30DE

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|------------|------|---------|---------------|---------|---------------|---|
| SW Access | RW | RW | None | RW | RW | RW | RW | |
| HW Access | R | R | None | R | R | R | R | |
| Name | SC_RES_POL | DP_RES_POL | None | GUDB_WR | EN_RES_CNTCTL | RES_POL | RES_SEL [1:0] | |

| Bits | Name | Description |
|------|---------------|--|
| 7 | SC_RES_POL | <p>Only valid when ALT RES (CFG31) is '1'. This bit controls the polarity of the selected SC routed reset. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Status and Control block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Status and Control block is inverted polarity.</p> |
| 6 | DP_RES_POL | <p>Only valid when ALT RES (CFG31) is '1'. This bit controls the polarity of the selected Datapath routed reset. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Datapath block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Datapath block is inverted polarity.</p> |
| 4 | GUDB_WR | <p>Enable global write operation for the configuration and working registers in this UDB. When this bit is set, the UDB ID select decoding is bypassed. Default Value: 0</p> <p>0x0: DISABLE: Global UDB configuration/working register write is disabled</p> <p>0x1: ENABLE: Global UDB configuration/working register write is enabled</p> |
| 3 | EN_RES_CNTCTL | <p>This bit gates the routed reset to the counter/control register. By default, the operation is compatible, i.e., it only applies to the counter. However, if the updated control register modes are used (sync mode, pulse mode, or the ext res bit) then the routed reset applies to the control register also. Default Value: 0</p> <p>0x0: DISABLE: Routed reset is not applied to counter/control register</p> <p>0x1: ENABLE: Routed reset is applied to the counter/control register</p> |

39.1.111 UDB_P0_U1_CFG30 (continued)

| | | |
|-------|---------|---|
| 2 | RES_POL | <p>The meaning of this bit depends on the value of the ALT RES bit in CFG31. When ALT RES is '0' (compatible mode), this bit sets the polarity of the routed reset. When ALT RES is '1', this bit is unused.</p> <p>Default Value: 0</p> <p>0x0: NEGATED: Polarity of the routed reset is true.</p> <p>0x1: ASSERTED: Polarity of the routed reset is inverted.</p> |
| 1 : 0 | RES_SEL | <p>The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES is '0' (compatible mode), this 2 bit field selects the RC routing input for the compatible reset scheme. When the ALT RES bit is '1', these bits are not used.</p> <p>Default Value: 0</p> <p>0x0: RC_IN0: rc_in[0]</p> <p>0x1: RC_IN1: rc_in[1]</p> <p>0x2: RC_IN2: rc_in[2]</p> <p>0x3: RC_IN3: rc_in[3]</p> |

| Bits | Name | Description |
|-------|--------------|---|
| 7 | PLD1_RES_POL | <p>Not connected. NOTE: There is only one routed reset available to both PLDs in the UDB. When ALT RES is '1', PLD0 RES SEL controls the polarity of the routed reset for both PLDs. Default Value: 0</p> <p>0x0: NOINV: Not Used</p> <p>0x1: INVERT: Not Used</p> |
| 6 | PLD0_RES_POL | <p>The meaning of this bit depends on the value of ALT RES. When ALT RES (CFG31) is '1', this bit controls the polarity of the selected PLD0 routed reset. NOTE: There is only one routed reset available to both PLDs in the UDB. When ALT RES is '1', PLD0 RES SEL controls the polarity of the routed reset for both PLDs. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the PLD0/PLD1 block is true polarity.</p> <p>0x1: INVERT: Routed reset to the PLD0/PLD1 block is inverted polarity.</p> |
| 5 : 4 | EXT_CK_SEL | <p>External clock selection Default Value: 0</p> <p>0x0: RC_IN0: rc_in[0]</p> <p>0x1: RC_IN1: rc_in[1]</p> <p>0x2: RC_IN2: rc_in[2]</p> <p>0x3: RC_IN3: rc_in[3]</p> |
| 3 | EN_RES_DP | <p>Only valid when ALT RES (CFG31) is '1'. This bit gates the routed reset to the Datapath block. Default Value: 0</p> <p>0x0: DISABLE: Routed reset to the Datapath block is gated off.</p> <p>0x1: ENABLE: Routed reset to the Datapath block is on. ALT RES must be '1' and routed reset must be selected in CFG26</p> |

39.1.112 UDB_P0_U1_CFG31 (continued)

| | | |
|---|-------------|--|
| 2 | EN_RES_STAT | <p>Only valid when ALT RES (CFG31) is '1'. This bit gates the routed reset to the status register. Default Value: 0</p> <p>0x0: NEGATED: Status register routed reset is gated off</p> <p>0x1: ASSERTED: Status register routed reset is on</p> |
| 1 | EXT_SYNC | <p>Enable synchronization of selected external clock Default Value: 0</p> <p>0x0: DISABLE: Selected external clock input is not synchronized</p> <p>0x1: ENABLE: Selected external clock input is synchronized</p> |
| 0 | ALT_RES | <p>This bit toggles between two reset configurations. When this bit is '0', one routed reset is shared by all components in this UDB (compatible mode). When this bit is a 1, each block can select a unique routed reset from the available RC inputs. Default Value: 0</p> <p>0x0: COMPATIBLE: All UDB blocks share a common routed reset.</p> <p>0x1: ALTERNATE: Each UDB component block can select and control its individual routed reset.</p> |

| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.157 UDB_P1_U0_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |
| | | 0x0: DEFAULT: 16-bit default access mode: selects registers in two consecutive UDBs in chaining order |
| | | 0x1: CONCATENATE: 16-bit concat access mode: selects concatenated registers in a single UDB |

PLD0 Clock and Reset control

Address: 0x400F3258

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|-------------|---------------------|--------|-----------|------------------|---|-----------------|---|
| SW Access | RW | RW | RW | RW | RW | | RW | |
| HW Access | R | R | R | R | R | | R | |
| Name | RC_RES_SEL1 | RC_RES_SEL0_OR_FRES | RC_INV | RC_EN_INV | RC_EN_MODE [3:2] | | RC_EN_SEL [1:0] | |

| Bits | Name | Description |
|-------|---------------------|---|
| 7 | RC_RES_SEL1 | Configures the routed reset for the associated UDB component block. The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES = '0' - This bit is not used. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 6 | RC_RES_SEL0_OR_FRES | Configures the routed or firmware reset for the associated UDB component block. The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES = '0' - This bit is a firmware reset. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 5 | RC_INV | Optionally inverts the clock selection for the associated UDB component block. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 4 | RC_EN_INV | Optionally inverts the clock enable selection for the associated UDB component blocks. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 3 : 2 | RC_EN_MODE | Selects the operating mode for the clock to the associated UDB component block. Default Value: 0 |

Datapath FIFO and register access configuration control

Address: 0x400F32D0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|-----------|-----------|----------|-----------|------------|-------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.217 UDB_P1_U1_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |
| | | 0x0: DEFAULT: 16-bit default access mode: selects registers in two consecutive UDBs in chaining order |
| | | 0x1: CONCATENATE: 16-bit concat access mode: selects concatenated registers in a single UDB |

When ALT RES = '0' - This bit is a firmware reset. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 5 | RC_INV | Optionally inverts the clock selection for the associated UDB component block. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 4 | RC_EN_INV | Optionally inverts the clock enable selection for the associated UDB component blocks. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 3 : 2 | RC_EN_MODE | Selects the operating mode for the clock to the associated UDB component block. Default Value: 0 |

Reset control

Address: 0x400F32DE

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|------------|------------|------|---------|---------------|---------|---------------|---|
| SW Access | RW | RW | None | RW | RW | RW | RW | |
| HW Access | R | R | None | R | R | R | R | |
| Name | SC_RES_POL | DP_RES_POL | None | GUDB_WR | EN_RES_CNTCTL | RES_POL | RES_SEL [1:0] | |

| Bits | Name | Description |
|------|---------------|--|
| 7 | SC_RES_POL | <p>Only valid when ALT RES (CFG31) is '1'. This bit controls the polarity of the selected SC routed reset. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Status and Control block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Status and Control block is inverted polarity.</p> |
| 6 | DP_RES_POL | <p>Only valid when ALT RES (CFG31) is '1'. This bit controls the polarity of the selected Datapath routed reset. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Datapath block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Datapath block is inverted polarity.</p> |
| 4 | GUDB_WR | <p>Enable global write operation for the configuration and working registers in this UDB. When this bit is set, the UDB ID select decoding is bypassed. Default Value: 0</p> <p>0x0: DISABLE: Global UDB configuration/working register write is disabled</p> <p>0x1: ENABLE: Global UDB configuration/working register write is enabled</p> |
| 3 | EN_RES_CNTCTL | <p>This bit gates the routed reset to the counter/control register. By default, the operation is compatible, i.e., it only applies to the counter. However, if the updated control register modes are used (sync mode, pulse mode, or the ext res bit) then the routed reset applies to the control register also. Default Value: 0</p> <p>0x0: DISABLE: Routed reset is not applied to counter/control register</p> <p>0x1: ENABLE: Routed reset is applied to the counter/control register</p> |

39.1.231 UDB_P1_U1_CFG30 (continued)

| | | |
|-------|---------|---|
| 2 | RES_POL | <p>The meaning of this bit depends on the value of the ALT RES bit in CFG31. When ALT RES is '0' (compatible mode), this bit sets the polarity of the routed reset. When ALT RES is '1', this bit is unused.</p> <p>Default Value: 0</p> <p>0x0: NEGATED: Polarity of the routed reset is true.</p> <p>0x1: ASSERTED: Polarity of the routed reset is inverted.</p> |
| 1 : 0 | RES_SEL | <p>The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES is '0' (compatible mode), this 2 bit field selects the RC routing input for the compatible reset scheme. When the ALT RES bit is '1', these bits are not used.</p> <p>Default Value: 0</p> <p>0x0: RC_IN0: rc_in[0]</p> <p>0x1: RC_IN1: rc_in[1]</p> <p>0x2: RC_IN2: rc_in[2]</p> <p>0x3: RC_IN3: rc_in[3]</p> |

39.1.277 UDB_P2_U0_CFG16

Datapath FIFO and register access configuration control

Address: 0x400F3450

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|-----------|-----------|----------|-----------|------------|-------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.277 UDB_P2_U0_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |

| 2 | EN_RES_STAT | <p>Only valid when ALT RES (CFG31) is '1'. This bit gates the routed reset to the status register. Default Value: 0</p> <p>0x0: NEGATED: Status register routed reset is gated off</p> <p>0x1: ASSERTED: Status register routed reset is on</p> |
| 1 | EXT_SYNC | <p>Enable synchronization of selected external clock Default Value: 0</p> <p>0x0: DISABLE: Selected external clock input is not synchronized</p> <p>0x1: ENABLE: Selected external clock input is synchronized</p> |
| 0 | ALT_RES | <p>This bit toggles between two reset configurations. When this bit is '0', one routed reset is shared by all components in this UDB (compatible mode). When this bit is a 1, each block can select a unique routed reset from the available RC inputs. Default Value: 0</p> <p>0x0: COMPATIBLE: All UDB blocks share a common routed reset.</p> <p>0x1: ALTERNATE: Each UDB component block can select and control its individual routed reset.</p> |

| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.337 UDB_P2_U1_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |

| Name | RC_RES_SEL1 | RC_RES_SEL0_OR_FRES | RC_INV | RC_EN_INV | RC_EN_MODE [3:2] | | RC_EN_SEL [1:0] | |

| Bits | Name | Description |
|-------|---------------------|---|
| 7 | RC_RES_SEL1 | Configures the routed reset for the associated UDB component block. The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES = '0' - This bit is not used. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 6 | RC_RES_SEL0_OR_FRES | Configures the routed or firmware reset for the associated UDB component block. The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES = '0' - This bit is a firmware reset. When ALT RES = '1' - The bits {RC_SEL1, RC_SEL0_OR_FRES} select the RC routing for routed reset control according to the following: 00 : rc_in [0] 01 : rc_in [1] 10 : rc_in [2] 11 : rc_in [3] Default Value: 0 |
| 5 | RC_INV | Optionally inverts the clock selection for the associated UDB component block. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 4 | RC_EN_INV | Optionally inverts the clock enable selection for the associated UDB component blocks. Default Value: 0 0x0: NOINV: Non-inverted 0x1: INVERT: Inverted |
| 3 : 2 | RC_EN_MODE | Selects the operating mode for the clock to the associated UDB component block. Default Value: 0 |

Reset control

Address: 0x400F34DE

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------|------------|------------|------|---------|---------------|---------|---------------|---|
| SW Access | RW | RW | None | RW | RW | RW | RW | |
| HW Access | R | R | None | R | R | R | R | |
| Name | SC_RES_POL | DP_RES_POL | None | GUDB_WR | EN_RES_CNTCTL | RES_POL | RES_SEL [1:0] | |

| Bits | Name | Description |
|------|---------------|--|
| 7 | SC_RES_POL | <p>Only valid when ALT RES (CFG31) is '1'. This bit controls the polarity of the selected SC routed reset. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Status and Control block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Status and Control block is inverted polarity.</p> |
| 6 | DP_RES_POL | <p>Only valid when ALT RES (CFG31) is '1'. This bit controls the polarity of the selected Datapath routed reset. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Datapath block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Datapath block is inverted polarity.</p> |
| 4 | GUDB_WR | <p>Enable global write operation for the configuration and working registers in this UDB. When this bit is set, the UDB ID select decoding is bypassed. Default Value: 0</p> <p>0x0: DISABLE: Global UDB configuration/working register write is disabled</p> <p>0x1: ENABLE: Global UDB configuration/working register write is enabled</p> |
| 3 | EN_RES_CNTCTL | <p>This bit gates the routed reset to the counter/control register. By default, the operation is compatible, i.e., it only applies to the counter. However, if the updated control register modes are used (sync mode, pulse mode, or the ext res bit) then the routed reset applies to the control register also. Default Value: 0</p> <p>0x0: DISABLE: Routed reset is not applied to counter/control register</p> <p>0x1: ENABLE: Routed reset is applied to the counter/control register</p> |

39.1.351 UDB_P2_U1_CFG30 (continued)

| | | |
|-------|---------|---|
| 2 | RES_POL | <p>The meaning of this bit depends on the value of the ALT RES bit in CFG31. When ALT RES is '0' (compatible mode), this bit sets the polarity of the routed reset. When ALT RES is '1', this bit is unused.</p> <p>Default Value: 0</p> <p>0x0: NEGATED: Polarity of the routed reset is true.</p> <p>0x1: ASSERTED: Polarity of the routed reset is inverted.</p> |
| 1 : 0 | RES_SEL | <p>The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES is '0' (compatible mode), this 2 bit field selects the RC routing input for the compatible reset scheme. When the ALT RES bit is '1', these bits are not used.</p> <p>Default Value: 0</p> <p>0x0: RC_IN0: rc_in[0]</p> <p>0x1: RC_IN1: rc_in[1]</p> <p>0x2: RC_IN2: rc_in[2]</p> <p>0x3: RC_IN3: rc_in[3]</p> |

| Bits | Name | Description |
|------|-------------|---|
| 31 | PLD1_ITxT_7 | (ITx denotes input number of the PLD, where "x" varies from 0 to 12) True input term. Bit position corresponds to product term. Default Value: X |
| 30 | PLD1_ITxT_6 | True input term. Bit position corresponds to product term. Default Value: X |
| 29 | PLD1_ITxT_5 | True input term. Bit position corresponds to product term. Default Value: X |
| 28 | PLD1_ITxT_4 | True input term. Bit position corresponds to product term. Default Value: X |
| 27 | PLD1_ITxT_3 | True input term. Bit position corresponds to product term. Default Value: X |
| 26 | PLD1_ITxT_2 | True input term. Bit position corresponds to product term. Default Value: X |

39.1.366 UDB_P3_U0_PLD_IT5 (continued)

| | | |
|----|-------------|---|
| 25 | PLD1_ITxT_1 | True input term. Bit position corresponds to product term. Default Value: X |
| 24 | PLD1_ITxT_0 | True input term. Bit position corresponds to product term. Default Value: X |
| 23 | PLD0_ITxT_7 | True input term. Bit position corresponds to product term. Default Value: X |
| 22 | PLD0_ITxT_6 | True input term. Bit position corresponds to product term. Default Value: X |
| 21 | PLD0_ITxT_5 | True input term. Bit position corresponds to product term. Default Value: X |
| 20 | PLD0_ITxT_4 | True input term. Bit position corresponds to product term. Default Value: X |
| 19 | PLD0_ITxT_3 | True input term. Bit position corresponds to product term. Default Value: X |
| 18 | PLD0_ITxT_2 | True input term. Bit position corresponds to product term. Default Value: X |
| 17 | PLD0_ITxT_1 | True input term. Bit position corresponds to product term. Default Value: X |
| 16 | PLD0_ITxT_0 | True input term. Bit position corresponds to product term. Default Value: X |
| 15 | PLD1_ITxC_7 | Complement input term. Bit position corresponds to product term Default Value: X |
| 14 | PLD1_ITxC_6 | Complement input term. Bit position corresponds to product term Default Value: X |
| 13 | PLD1_ITxC_5 | Complement input term. Bit position corresponds to product term Default Value: X |
| 12 | PLD1_ITxC_4 | Complement input term. Bit position corresponds to product term Default Value: X |
| 11 | PLD1_ITxC_3 | Complement input term. Bit position corresponds to product term Default Value: X |
| 10 | PLD1_ITxC_2 | Complement input term. Bit position corresponds to product term Default Value: X |
| 9 | PLD1_ITxC_1 | Complement input term. Bit position corresponds to product term Default Value: X |
| 8 | PLD1_ITxC_0 | Complement input term. Bit position corresponds to product term Default Value: X |
| 7 | PLD0_ITxC_7 | Complement input term. Bit position corresponds to product term Default Value: X |
| 6 | PLD0_ITxC_6 | Complement input term. Bit position corresponds to product term Default Value: X |
| 5 | PLD0_ITxC_5 | Complement input term. Bit position corresponds to product term Default Value: X |
| 4 | PLD0_ITxC_4 | Complement input term. Bit position corresponds to product term Default Value: X |

Datapath FIFO and register access configuration control

Address: 0x400F3650

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|-----------|-----------|----------|-----------|------------|-------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.397 UDB_P3_U0_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |
| | | 0x0: DEFAULT: 16-bit default access mode: selects registers in two consecutive UDBs in chaining order |
| | | 0x1: CONCATENATE: 16-bit concat access mode: selects concatenated registers in a single UDB |

Default Value: 0</p> <p>0x0: NOINV: Routed reset to the Datapath block is true polarity.</p> <p>0x1: INVERT: Routed reset to the Datapath block is inverted polarity.</p> |
| 4 | GUDB_WR | <p>Enable global write operation for the configuration and working registers in this UDB. When this bit is set, the UDB ID select decoding is bypassed. Default Value: 0</p> <p>0x0: DISABLE: Global UDB configuration/working register write is disabled</p> <p>0x1: ENABLE: Global UDB configuration/working register write is enabled</p> |
| 3 | EN_RES_CNTCTL | <p>This bit gates the routed reset to the counter/control register. By default, the operation is compatible, i.e., it only applies to the counter. However, if the updated control register modes are used (sync mode, pulse mode, or the ext res bit) then the routed reset applies to the control register also. Default Value: 0</p> <p>0x0: DISABLE: Routed reset is not applied to counter/control register</p> <p>0x1: ENABLE: Routed reset is applied to the counter/control register</p> |

39.1.411 UDB_P3_U0_CFG30 (continued)

| | | |
|-------|---------|---|
| 2 | RES_POL | <p>The meaning of this bit depends on the value of the ALT RES bit in CFG31. When ALT RES is '0' (compatible mode), this bit sets the polarity of the routed reset. When ALT RES is '1', this bit is unused.</p> <p>Default Value: 0</p> <p>0x0: NEGATED: Polarity of the routed reset is true.</p> <p>0x1: ASSERTED: Polarity of the routed reset is inverted.</p> |
| 1 : 0 | RES_SEL | <p>The meaning of this bit depends on the value of ALT RES (CFG31). When ALT RES is '0' (compatible mode), this 2 bit field selects the RC routing input for the compatible reset scheme. When the ALT RES bit is '1', these bits are not used.</p> <p>Default Value: 0</p> <p>0x0: RC_IN0: rc_in[0]</p> <p>0x1: RC_IN1: rc_in[1]</p> <p>0x2: RC_IN2: rc_in[2]</p> <p>0x3: RC_IN3: rc_in[3]</p> |

| Name | PLD1_RES_POL | PLD0_RES_POL | EXT_CK_SEL [5:4] | | EN_RES_DP | EN_RES_STAT | EXT_SYNC | ALT_RES |

| Bits | Name | Description |
|-------|--------------|---|
| 7 | PLD1_RES_POL | <p>Not connected. NOTE: There is only one routed reset available to both PLDs in the UDB. When ALT RES is '1', PLD0 RES SEL controls the polarity of the routed reset for both PLDs. Default Value: 0</p> <p>0x0: NOINV: Not Used</p> <p>0x1: INVERT: Not Used</p> |
| 6 | PLD0_RES_POL | <p>The meaning of this bit depends on the value of ALT RES. When ALT RES (CFG31) is '1', this bit controls the polarity of the selected PLD0 routed reset. NOTE: There is only one routed reset available to both PLDs in the UDB. When ALT RES is '1', PLD0 RES SEL controls the polarity of the routed reset for both PLDs. Default Value: 0</p> <p>0x0: NOINV: Routed reset to the PLD0/PLD1 block is true polarity.</p> <p>0x1: INVERT: Routed reset to the PLD0/PLD1 block is inverted polarity.</p> |
| 5 : 4 | EXT_CK_SEL | <p>External clock selection Default Value: 0</p> <p>0x0: RC_IN0: rc_in[0]</p> <p>0x1: RC_IN1: rc_in[1]</p> <p>0x2: RC_IN2: rc_in[2]</p> <p>0x3: RC_IN3: rc_in[3]</p> |
| 3 | EN_RES_DP | <p>Only valid when ALT RES (CFG31) is '1'. This bit gates the routed reset to the Datapath block. Default Value: 0</p> <p>0x0: DISABLE: Routed reset to the Datapath block is gated off.</p> <p>0x1: ENABLE: Routed reset to the Datapath block is on. ALT RES must be '1' and routed reset must be selected in CFG26</p> |

39.1.412 UDB_P3_U0_CFG31 (continued)

| | | |
|---|-------------|--|
| 2 | EN_RES_STAT | <p>Only valid when ALT RES (CFG31) is '1'. This bit gates the routed reset to the status register. Default Value: 0</p> <p>0x0: NEGATED: Status register routed reset is gated off</p> <p>0x1: ASSERTED: Status register routed reset is on</p> |
| 1 | EXT_SYNC | <p>Enable synchronization of selected external clock Default Value: 0</p> <p>0x0: DISABLE: Selected external clock input is not synchronized</p> <p>0x1: ENABLE: Selected external clock input is synchronized</p> |
| 0 | ALT_RES | <p>This bit toggles between two reset configurations. When this bit is '0', one routed reset is shared by all components in this UDB (compatible mode). When this bit is a 1, each block can select a unique routed reset from the available RC inputs. Default Value: 0</p> <p>0x0: COMPATIBLE: All UDB blocks share a common routed reset.</p> <p>0x1: ALTERNATE: Each UDB component block can select and control its individual routed reset.</p> |

39.1.457 UDB_P3_U1_CFG16

Datapath FIFO and register access configuration control

Address: 0x400F36D0

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-----------|-----------|-----------|----------|-----------|------------|-------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | F1_CK_INV | F0_CK_INV | FIFO_FAST | FIFO_CAP | FIFO_EDGE | FIFO_ASYNC | EXT_CRCP_RS | WRK16_CONCAT |

| Bits | Name | Description |
|------|-----------|--|
| 7 | F1_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 6 | F0_CK_INV | <p>FIFO Clock Invert. When this bit is set, the polarity of the clock for the given FIFO will be inverted, with respect to the polarity of the selected Datapath clock. Default Value: 0</p> <p>0x0: NORMAL: FIFO clock is the same polarity as the Datapath clock.</p> <p>0x1: INVERT: FIFO clock is inverted with respect to the Datapath clock.</p> |
| 5 | FIFO_FAST | <p>FIFO Fast Mode. When this bit is set, the FIFO write logic is clocked by the application bus clock. Lowers the latency of capture timing, at the expense of additional power. Default Value: 0</p> <p>0x0: DISABLE: FIFO is clocked with selected Datapath clock.</p> <p>0x1: ENABLE: FIFO is clocked with application bus clock. Master and quadrant bus clock gating must be enabled.</p> |
| 4 | FIFO_CAP | <p>FIFO Software Capture Mode. When this bit is set, a read of A0 or A1 triggers a capture into F0 or F1 respectively. This function follows the chaining configuration. All accumulators in the chain from a given block to the MS block in the chain are capture Default Value: 0</p> <p>0x0: DISABLE: FIFO capture is disabled.</p> <p>0x1: ENABLE: FIFO capture is enabled (FIFO must be in output mode). A read of A0 or A1 will write into F0 or F1.</p> |
| 3 | FIFO_EDGE | <p>Edge/level sensitive FIFO write control (Fx_LD). Only applies to FIFO configured in output mode Default Value: 0</p> |

39.1.457 UDB_P3_U1_CFG16 (continued)

| | | |
|---|--------------|--|
| | | 0x0: LEVEL: FIFO write from accumulators/ALU is level sensitive. FIFO write occurs on a clock edge whenever the write control is sampled high on that edge. |
| | | 0x1: EDGE: FIFO write from accumulators/ALU is edge sensitive. FIFO write occurs on a clock edge following a 0 to 1 transition on the write control. The write control must be negated for at least one full cycle of the FIFO clock for a subsequent transition to be detected. |
| 2 | FIFO_ASYNC | Asynchronous FIFO clocking support Default Value: 0 |
| | | 0x0: DISABLE: FIFO clocks are synchronous |
| | | 0x1: ENABLE: FIFO clocks are asynchronous |
| 1 | EXT_CRCPRS | External CRC/PRS mode Default Value: 0 |
| | | 0x0: INTERNAL: Internal CRC/PRS routing |
| | | 0x1: EXTERNAL: External CRC/PRS routing |
| 0 | WRK16_CONCAT | Datapath register access mode Default Value: 0 |
| | | 0x0: DEFAULT: 16-bit default access mode: selects registers in two consecutive UDBs in chaining order |
| | | 0x1: CONCATENATE: 16-bit concat access mode: selects concatenated registers in a single UDB |

40 USB Registers

This section discusses the USB registers. It lists all the registers in mapping tables, in address order.

40.1 Register Details

| Register Name | Address |
|------------------------|------------|
| USBDEVV2_EP0_DR0 | 0x402C0000 |
| USBDEVV2_EP0_DR1 | 0x402C0004 |
| USBDEVV2_EP0_DR2 | 0x402C0008 |
| USBDEVV2_EP0_DR3 | 0x402C000C |
| USBDEVV2_EP0_DR4 | 0x402C0010 |
| USBDEVV2_EP0_DR5 | 0x402C0014 |
| USBDEVV2_EP0_DR6 | 0x402C0018 |
| USBDEVV2_EP0_DR7 | 0x402C001C |
| USBDEVV2_CR0 | 0x402C0020 |
| USBDEVV2_CR1 | 0x402C0024 |
| USBDEVV2_SIE_EP_INT_EN | 0x402C0028 |
| USBDEVV2_SIE_EP_INT_SR | 0x402C002C |
| USBDEVV2_SIE_EP1_CNT0 | 0x402C0030 |
| USBDEVV2_SIE_EP1_CNT1 | 0x402C0034 |
| USBDEVV2_SIE_EP1_CR0 | 0x402C0038 |
| USBDEVV2_USBIO_CR0 | 0x402C0040 |
| USBDEVV2_USBIO_CR2 | 0x402C0044 |
| USBDEVV2_USBIO_CR1 | 0x402C0048 |
| USBDEVV2_DYN_RECONFIG | 0x402C0050 |

| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 7 | USB_ENABLE | This bit enables the device to respond to USB traffic. Default Value: 0 |
| 6 : 0 | DEVICE_ADDRESS | These bits specify the USB device address to which the SIE will respond. This address must be set by firmware and is specified by the USB Host with a SET ADDRESS command during USB enumeration. This value must be programmed by firmware when assigned during enumeration. It is not set automatically by the hardware. Default Value: 0 |

40.1.10 USBDEVv2_CR1

USB control 1 Register

Address: 0x402C0024

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|---|---------------------|------------------|-----------------|----------------|

| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|-----------------|--|
| 3 | TRIM_OFFSET_MSB | This bit enables trim bit[7]. Default Value: 0 |
| 2 | BUS_ACTIVITY | The Bus Activity bit is a stickybit that detects any non-idle USB event that has occurred on the USB bus. Once set to High by the SIE to indicate the bus activity this bit retains its logical High value until firmware clears it. Default Value: 0 |
| 1 | ENABLE_LOCK | This bit is set to turn on the automatic frequency locking of the internal oscillator to USB traffic. Unless an external clock is being provided this bit should remain set for proper USB operation. Default Value: 0 |
| 0 | REG_ENABLE | This bit controls the operation of the internal USB regulator. For applications with supply voltages in the 5V range this bit is set high to enable the internal regulator. For device supply voltage in the 3.3V range this bit is cleared to connect the transceiver directly to the supply. Default Value: 0 |

| Bits | Name | Description |
|------|------------|--|
| 7 | SETUP_RCVD | When set this bit indicates a valid SETUP packet was received and ACKed. This bit is forced HIGH from the start of the data packet phase of the SETUP transaction until the start of the ACK packet returned by the SIE. The CPU is prevented from clearing this bit during this interval. After this interval the bit will remain set until cleared by firmware. While this bit is set to '1' the CPU cannot write to the EP0_DRx registers. This prevents firmware from overwriting an incoming SETUP transaction before firmware has a chance to read the SETUP data. This bit is cleared by any non-locked writes to the register. Default Value: 0 |
| 6 | IN_RCVD | When set this bit indicates a valid IN packet has been received. This bit is updated to '1' after the host acknowledges an IN data packet. When clear this bit indicates either no IN has been received or that the host did not acknowledge the IN data by sending ACK handshake. It is cleared by any writes to the register. Default Value: 0 |
| 5 | OUT_RCVD | When set this bit indicates a valid OUT packet has been received and ACKed. This bit is updated to '1' after the last received packet in an OUT transaction. When clear this bit indicates no OUT received. It is cleared by any writes to the register. Default Value: 0 |

40.1.27 USBDEVv2_EP0_CR (continued)

| | | |
|-------|-----------|--|
| 4 | ACKED_TXN | <p>The ACK'd transaction bit is set whenever the SIE engages in a transaction to the register's endpoint that completes with an ACK packet. This bit is cleared by any writes to the register. Default Value: 0</p> <p>0x0: ACKED_NO: No ACK'd transactions since bit was last cleared.</p> <p>0x1: ACKED_YES: Indicates a transaction ended with an ACK.</p> |
| 3 : 0 | MODE | <p>The mode controls how the USB SIE responds to traffic and how the USB SIE changes the mode of that endpoint as a result of host packets to the endpoint. | Bits | Name | Description |
|-------|-------------|---|
| 7 | DATA_TOGGLE | This bit selects the DATA packet's toggle state. For IN transactions firmware must set this bit to the expected state. For OUT transactions the hardware sets this bit to the state of the received Data Toggle bit. Default Value: 0 |
| 6 | DATA_VALID | This bit is used for OUT/SETUP transactions only and is read only. It is cleared to '0' if CRC bit stuffing errors or PID errors occur. This bit does not update for some endpoint mode settings. Default Value: 0 0x0: DATA_ERROR: No ACK'd transactions since bit was last cleared. 0x1: DATA_VALID: Indicates a transaction ended with an ACK. |
| 3 : 0 | BYTE_COUNT | These bits indicate the number of data bytes in a transaction. For IN transactions firmware loads the count with the number of bytes to be transmitted to the host from the endpoint FIFO. Valid values are 0 to 8. For OUT or SETUP transactions the count is updated by hardware to the number of data bytes received plus two for the CRC bytes. Valid values are 2 to 10. Default Value: 0 |

For an OUT transaction, this represents an RxErr (PID error/ CRC error/ bit-stuff error scenario). This bit is cleared by any writes to the register. Default Value: 0 |
| 5 | NAK_INT_EN | When set this bit causes an endpoint interrupt to be generated even when a transfer completes with a NAK. Default Value: 0 |
| 4 | ACKED_TXN | The ACK'd transaction bit is set whenever the SIE engages in a transaction to the register's endpoint that completes with an ACK packet. This bit is cleared by any writes to the register. Default Value: 0 0x0: ACKED_NO: No ACK'd transactions since bit was last cleared. |

| Bits | Name | Description |
|-------|----------------|--|
| 7 | DATA_TOGGLE | This bit selects the DATA packet's toggle state. For IN transactions firmware must set this bit to the expected state. For OUT transactions the hardware sets this bit to the state of the received Data Toggle bit. Default Value: 0 |
| 6 | DATA_VALID | This bit is used for OUT transactions only and is read only. It is cleared to '0' if CRC bit stuffing errors or PID errors occur. This bit does not update for some endpoint mode settings. Default Value: 0 0x0: DATA_ERROR: No ACK'd transactions since bit was last cleared. 0x1: DATA_VALID: Indicates a transaction ended with an ACK. |
| 2 : 0 | DATA_COUNT_MSB | These bits are the 3 MSb bits of an 11-bit counter. The LSb are the Data Count[7:0] bits of the CNT1 register. Refer to the CNT1 register for more information. Default Value: 0 |

| Bits | Name | Description |
|------|------------|--|
| 7 | STALL | When this bit is set the SIE stalls an OUT packet if the Mode bits are set to ACK-OUT. The SIE stalls an IN packet if the mode bits are set to ACK-IN. This bit must be clear for all other modes. Default Value: 0 |
| 6 | ERR_IN_TXN | The Error in transaction bit is set whenever an error is detected. For an IN transaction, this indicates a no response from HOST scenario. For an OUT transaction, this represents an RxErr (PID error/ CRC error/ bit-stuff error scenario). This bit is cleared by any writes to the register. Default Value: 0 |
| 5 | NAK_INT_EN | When set this bit causes an endpoint interrupt to be generated even when a transfer completes with a NAK. Default Value: 0 |
| 4 | ACKED_TXN | The ACK'd transaction bit is set whenever the SIE engages in a transaction to the register's endpoint that completes with an ACK packet. This bit is cleared by any writes to the register. Default Value: 0 0x0: ACKED_NO: No ACK'd transactions since bit was last cleared. |

| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|------------|---|
| 3 | RESET_PTR | Configuration Setting to Reset the RA and WA Pointers to their start values at the End of Packet transaction. Default Value: 0 0x0: RESET_KRYPTON: Do not Reset Pointer; Krypton Backward compatibility mode 0x1: RESET_NORMAL: Reset Pointer; recommended value for reduction of CPU Configuration Writes. |
| 2 | CRC_BYPASS | Configuration Setting to prevent CRC bytes from being written to memory and being read by firmware Default Value: 0 0x0: CRC_NORMAL: No CRC bypass; CRC bytes will be written to memory and Termin will be generated for the CRC byte/s 0x1: CRC_BYPASS: CRC Bypass Set; CRC bytes will not be written into memory and Termin will be generated for the last data byte/s |

40.1.115 USBDEVv2_ARB_EP8_CFG (continued)

| | | |
|---|-------------|--|
| 1 | DMA_REQ | Manual DMA Request for a particular (1 to 8) endpoint; changing this field from 0 to 1 causes a DMA request to be generated. Default Value: 0 |
| 0 | IN_DATA_RDY | Indication that Endpoint Packet Data is Ready in Main memory Default Value: 0 |

40.1.116 USBDEVv2_ARB_EP8_INT_EN

Endpoint Interrupt Enable Register

| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|--------|------|--|
| 15 : 0 | DR16 | Data Register for EP ; This register is linked to the memory, hence reset value is undefined Default Value: X |

41 USB Control Registers

This section discusses the USB Control registers. It lists all the registers in mapping tables, in address order.

41.1 Register Details

| Register Name | Address |
|------------------------------|------------|
| USBDEVV2_USB_POWER_CTRL | 0x402C2000 |
| USBDEVV2_USB_CHGDET_CTRL | 0x402C2004 |
| USBDEVV2_USB_USBIO_CTRL | 0x402C2008 |
| USBDEVV2_USB_FLOW_CTRL | 0x402C200C |
| USBDEVV2_USB_LPM_CTRL | 0x402C2010 |
| USBDEVV2_USB_LPM_STAT | 0x402C2014 |
| USBDEVV2_USB_INTR_SIE | 0x402C2020 |
| USBDEVV2_USB_INTR_SIE_SET | 0x402C2024 |
| USBDEVV2_USB_INTR_SIE_MASK | 0x402C2028 |
| USBDEVV2_USB_INTR_SIE_MASKED | 0x402C202C |
| USBDEVV2_USB_INTR_LVL_SEL | 0x402C2030 |
| USBDEVV2_USB_INTR_CAUSE_HI | 0x402C2034 |
| USBDEVV2_USB_INTR_CAUSE_MED | 0x402C2038 |
| USBDEVV2_USB_INTR_CAUSE_LO | 0x402C203C |
| USBDEVV2_USB_PHY_TRIM0 | 0x402C2F00 |
| USBDEVV2_USB_PHY_TRIM1 | 0x402C2F04 |
| USBDEVV2_USB_PHY_TRIM2 | 0x402C2F08 |
| USBDEVV2_USB_PHY_TRIM3 | 0x402C2F0C |
| USBDEVV2_USB_CHGDET_TRIM | 0x402C2F10 |
| USBDEVV2_USB_TRIM | 0x402C2F14 |
| USBDEVV2_USB_USBIO_TRIM | 0x402C2F18 |
| USBDEVV2_USB_POWER_CTRL | 0x402CF000 |
| USBDEVV2_USB_CHGDET_CTRL | 0x402CF004 |
| USBDEVV2_USB_USBIO_CTRL | 0x402CF008 |
| USBDEVV2_USB_FLOW_CTRL | 0x402CF00C |
| USBDEVV2_USB_LPM_CTRL | 0x402CF010 |
| USBDEVV2_USB_LPM_STAT | 0x402CF014 |

| Register Name | Address |
|------------------------------|------------|
| USBDEVv2_USB_INTR_SIE | 0x402CF020 |
| USBDEVv2_USB_INTR_SIE_SET | 0x402CF024 |
| USBDEVv2_USB_INTR_SIE_MASK | 0x402CF028 |
| USBDEVv2_USB_INTR_SIE_MASKED | 0x402CF02C |
| USBDEVv2_USB_INTR_LVL_SEL | 0x402CF030 |
| USBDEVv2_USB_INTR_CAUSE_HI | 0x402CF034 |
| USBDEVv2_USB_INTR_CAUSE_MED | 0x402CF038 |
| USBDEVv2_USB_INTR_CAUSE_LO | 0x402CF03C |
| USBDEVv2_USB_PHY_TRIM0 | 0x402CFF00 |
| USBDEVv2_USB_PHY_TRIM1 | 0x402CFF04 |
| USBDEVv2_USB_PHY_TRIM2 | 0x402CFF08 |
| USBDEVv2_USB_PHY_TRIM3 | 0x402CFF0C |
| USBDEVv2_USB_CHGDET_TRIM | 0x402CFF10 |
| USBDEVv2_USB_TRIM | 0x402CFF14 |
| USBDEVv2_USB_USBIO_TRIM | 0x402CFF18 |

41.1.1 USBDEVv2_USB_POWER_CTRL

Power Control Register

Address: 0x402C2000

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------|---------------------|---|---------|-------------|---------|----------------------|---|
| SW Access | None | RW | | RW | RW | RW | RW | |
| HW Access | None | R | | R | R | R | R | |
| Name | None | CHDET_PWR_CTL [6:5] | | ISOLATE | SUSPEND_DEL | SUSPEND | VBUS_VALID_OVR [1:0] | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------|----------------|-------------|-------------|--------------|------------------------|---------------------|------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | None |
| HW Access | R | R | R | R | R | R | R | None |
| Name | ENABLE | ENABLE_C HGDET | ENABLE_D MO | ENABLE_D PO | ENABLE_R CVR | ENABLE_V BUS_PULL DOWN | ENABLE_D M_PULLDOWN | None |

| Bits | Name | Description |
|------|----------------------|---|
| 31 | ENABLE | Master enable of PHY and Charger Detector. Nothing will work until this bit is set. Default Value: 0 |
| 30 | ENABLE_CHGDET | Enables the charger detection circuitry. After USB has connected, this circuitry can be disabled to save power. Default Value: 0 |
| 29 | ENABLE_DMO | Enables the single ended receiver on D-. Default Value: 0 |
| 28 | ENABLE_DPO | Enables the single ended receiver on D+. Default Value: 0 |
| 27 | ENABLE_RCVR | Enables the differential USB receiver. Default Value: 0 |
| 26 | ENABLE_VBUS_PULLDOWN | Enables the weak pull down on the VBUS, default on, to prevent floating node crow bar currents. Default Value: 1 |

41.1.1 USBDEVv2_USB_POWER_CTRL (continued)

| | | |
|-------|--------------------|--|
| 25 | ENABLE_DM_PULLDOWN | Enables the ~15k pull down on the DM, default off. The 15k pull down is needed for Data Contact Detection (DCD). Default Value: 0 |
| 6 : 5 | CHDET_PWR_CTL | Power programmability for bandgap voltage buffer in the charger detect block. Default '0' is low power mode. Default Value: 0 |
| 4 | ISOLATE | Isolates the PHY outputs. Clear this bit at least 2us after vbus is known to be valid (vbus_valid=1). Isolation will be forced when vbus_valid goes low (see VBUS_VALID_OVR). Default Value: 1 |
| 3 | SUSPEND_DEL | Delayed version of SUSPEND. Always set SUSPEND and SUSPEND_DEL together in a single register write. When taking PHY out of suspend mode, first clear SUSPEND, then clear SUSPEND_DEL at least 2us later. Default Value: 0 |
| 2 | SUSPEND | Put PHY into Suspend mode. If the PHY is enabled, this bit MUST be set before entering a low power mode (DeepSleep/Hibernate). Default Value: 0 |
| 1 : 0 | VBUS_VALID_OVR | Overrides the value received from the GPIO input buffer connected to VBUS: 0: Force vbus_valid=0 1: Force vbus_valid=1 2: Use vbus_valid signal from GPIO input 3: Use vbus_valid signal from PHY detector Default Value: 0 |

41.1.2 USBDEVv2_USB_CHGDET_CTRL

Charger Detection Control Register

Address: 0x402C2004

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------|------------|--------|--------|--------|---------|---------|---------|
| SW Access | None | RW | RW | RW | RW | RW | RW | RW |
| HW Access | None | R | R | R | R | R | R | R |
| Name | None | DCD_SRC_EN | REF_EN | REF_DM | REF_DP | COMP_EN | COMP_DM | COMP_DP |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|--------------|----|-------------------|----|-------------|----|---|---|
| SW Access | None | | RW | | None | | | |
| HW Access | None | | R | | None | | | |
| Name | None [15:14] | | ADFT_CTRL [13:12] | | None [11:8] | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|----------|--------------|----|----|----|----|----|----|
| SW Access | R | None | | | | | | |
| HW Access | RW | None | | | | | | |
| Name | COMP_OUT | None [30:24] | | | | | | |

| Bits | Name | Description |
|---------|------------|--|
| 31 | COMP_OUT | Output of the primary/secondary detection comparator. This output is not filtered or debounced and must be polled in software. Default Value: X |
| 13 : 12 | ADFT_CTRL | Reserved. Keep this field at default value Default Value: 0 |
| 6 | DCD_SRC_EN | Enable the Data Contact Detect current source on D+ Default Value: 0 |
| 5 | REF_EN | Enable the primary/secondary reference driver. This bit can be written concurrently with REF_DP/REF_DM. Default Value: 0 |
| 4 | REF_DM | Connect the primary/secondary detection reference driver to D- Default Value: 0 |
| 3 | REF_DP | Connect the primary/secondary detection reference driver to D+ Default Value: 0 |

41.1.2 USBDEVv2_USB_CHGDET_CTRL (continued)

| | | |
|---|---------|--|
| 2 | COMP_EN | Enable the primary/secondary detection comparator and current sink. This bit can be written concurrently with COMP_DP/COMP_DM. Note that REF_EN must also be 1 for the comparator to work (because it receives a reference from it). Default Value: 0 |
| 1 | COMP_DM | Connect the primary/secondary detection comparator and current sink to D- Default Value: 0 |
| 0 | COMP_DP | Connect the primary/secondary detection comparator and current sink to D+ Default Value: 0 |

41.1.3 USBDEVv2_USB_USBIO_CTRL

USB IO Control Register

Address: 0x402C2008

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|------------|---|---|------------|---|---|
| SW Access | None | | RW | | | RW | | |
| HW Access | None | | R | | | R | | |
| Name | None [7:6] | | DM_M [5:3] | | | DM_P [2:0] | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|------|--|
| 5 : 3 | DM_M | The GPIO Drive Mode for DM IO pad. Default Value: 0 |
| 2 : 0 | DM_P | The GPIO Drive Mode for DP IO pad. This field only applies if USBIO_CR1.IOMODE =1. Data comes from the corresponding GPIO.DR register. Default Value: 0 0x0: OFF: Mode 0: Output buffer off (high Z). Input buffer off. 0x1: INPUT: Mode 1: Output buffer off (high Z). Input buffer on. 0x2: 0_PU: Mode 2: Strong pull down ('0'), weak/resistive pull up (PU). Input buffer on. 0x4: 0_Z: Mode 4: Strong pull down ('0'), open drain (pull up off) ('1'). Input buffer on. 0x6: 0_1: Mode 6: Strong pull down ('0'), strong pull up ('1'). Input buffer on. Other values, not supported |

41.1.4 USBDEVv2_USB_FLOW_CTRL

Flow Control Register

Address: 0x402C200C

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
| SW Access | RW | RW | RW | RW | RW | RW | RW | RW |
| HW Access | R | R | R | R | R | R | R | R |
| Name | EP8_ERR_RESP | EP7_ERR_RESP | EP6_ERR_RESP | EP5_ERR_RESP | EP4_ERR_RESP | EP3_ERR_RESP | EP2_ERR_RESP | EP1_ERR_RESP |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|--------------|--|
| 7 | EP8_ERR_RESP | End Point 8 error response Default Value: 0 |
| 6 | EP7_ERR_RESP | End Point 7 error response Default Value: 0 |
| 5 | EP6_ERR_RESP | End Point 6 error response Default Value: 0 |
| 4 | EP5_ERR_RESP | End Point 5 error response Default Value: 0 |
| 3 | EP4_ERR_RESP | End Point 4 error response Default Value: 0 |
| 2 | EP3_ERR_RESP | End Point 3 error response Default Value: 0 |
| 1 | EP2_ERR_RESP | End Point 2 error response Default Value: 0 |

41.1.4 USBDEVv2_USB_FLOW_CTRL (continued)

| | | |
|---|--------------|---|
| 0 | EP1_ERR_RESP | End Point 1 error response 0: do nothing (backward compatibility mode) 1: if this is an IN EP and an underflow occurs then cause a CRC error, if this is an OUT EP and an overflow occurs then send a NAK Default Value: 0 |
|---|--------------|---|

41.1.5 USBDEVv2_USB_LPM_CTRL

LPM Control Register

Address: 0x402C2010

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|----------|------|---------|--------------|--------|
| SW Access | None | | | RW | None | RW | RW | RW |
| HW Access | None | | | R | None | R | R | R |
| Name | None [7:5] | | | SUB_RESP | None | NYET_EN | LPM_ACK_RESP | LPM_EN |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|--------------|---|
| 4 | SUB_RESP | Enable a STALL response for all undefined SubPIDs, i.e. other than LPM (0011b). If not enabled then there will be no response (Error) for the undefined SubPIDs. Default Value: 0 |
| 2 | NYET_EN | Allow firmware to choose which response to use for an LPM token (LPM_EN=1) when the device is NOT ready to go to the requested low power mode (LPM_ACK_RESP=0). 0: a LPM token will get an NAK response (indicating a CRC error), the host is expected to repeat the LPM token. 1: a LPM token will get a NYET response Default Value: 0 |
| 1 | LPM_ACK_RESP | LPM ACK response enable (if LPM_EN=1), to allow firmware to refuse a low power request 0: a LPM token will get a NYET or NAK (depending on NYET_EN bit below) response and the device will NOT go to a low power mode 1: a LPM token will get an ACK response and the device will go to the requested low power mode Default Value: 0 |

41.1.5 USBDEVv2_USB_LPM_CTRL (continued)

| | | |
|---|--------|---|
| 0 | LPM_EN | <p>LPM enable</p> <p>0: Disabled, LPM token will not get a response (backward compatibility mode)</p> <p>1: Enable, LPM token will get a handshake response (ACK, STALL, NYET or NAK)</p> <p> A STALL will be sent if the bLinkState is not 0001b</p> <p> A NYET, NAK or ACK response will be sent depending on the NYET_EN and LPM_ACK_RESP bits below</p> <p>Default Value: 0</p> |
|---|--------|---|

41.1.6 USBDEVv2_USB_LPM_STAT

LPM Status register

Address: 0x402C2014

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|--------------------|----------------|---|---|---|
| SW Access | None | | | R | R | | | |
| HW Access | None | | | RW | RW | | | |
| Name | None [7:5] | | | LPM_REM OTEWAKE | LPM_BESL [3:0] | | | |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|-------|----------------|--|
| 4 | LPM_REMOTEWAKE | 0: Device is prohibited from initiating a remote wake 1: Device is allow to wake the host Default Value: 0 |
| 3 : 0 | LPM_BESL | Best Effort Service Latency This value should match either the Baseline (DeepSleep) or Deep (Hibernate) BESL in the BOS descriptor. Default Value: 0 |

41.1.7 USBDEVv2_USB_INTR_SIE

USB SOF, BUS RESET and EP0 Interrupt Status

Address: 0x402C2020

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|-----------------|----------|----------|--------------------|----------|
| SW Access | None | | | RW1C | RW1C | RW1C | RW1C | RW1C |
| HW Access | None | | | RW1S | RW1S | RW1S | RW1S | RW1S |
| Name | None [7:5] | | | RESUME_I NTR | LPM_INTR | EP0_INTR | BUS_RESE T_INTR | SOF_INTR |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|----------------|--|
| 4 | RESUME_INTR | Interrupt status for Resume Default Value: 0 |
| 3 | LPM_INTR | Interrupt status for LPM (Link Power Management, L1 entry) Default Value: 0 |
| 2 | EP0_INTR | Interrupt status for EP0 Default Value: 0 |
| 1 | BUS_RESET_INTR | Interrupt status for BUS RESET Default Value: 0 |
| 0 | SOF_INTR | Interrupt status for USB SOF Default Value: 0 |

41.1.8 USBDEVv2_USB_INTR_SIE_SET

USB SOF, BUS RESET and EP0 Interrupt Set

Address: 0x402C2024

Retention: Not Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|-----------------|--------------|--------------|--------------------|--------------|
| SW Access | None | | | RW1S | RW1S | RW1S | RW1S | RW1S |
| HW Access | None | | | A | A | A | A | A |
| Name | None [7:5] | | | RESUME_INTR_SET | LPM_INTR_SET | EP0_INTR_SET | BUS_RESET_INTR_SET | SOF_INTR_SET |

| Bits | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
|-----------|-------------|----|----|----|----|----|---|---|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [15:8] | | | | | | | |

| Bits | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [23:16] | | | | | | | |

| Bits | 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
|-----------|--------------|----|----|----|----|----|----|----|
| SW Access | None | | | | | | | |
| HW Access | None | | | | | | | |
| Name | None [31:24] | | | | | | | |

| Bits | Name | Description |
|------|--------------------|--|
| 4 | RESUME_INTR_SET | Write with '1' to set corresponding bit in interrupt request register. Default Value: 0 |
| 3 | LPM_INTR_SET | Write with '1' to set corresponding bit in interrupt request register. Default Value: 0 |
| 2 | EP0_INTR_SET | Write with '1' to set corresponding bit in interrupt request register. Default Value: 0 |
| 1 | BUS_RESET_INTR_SET | Write with '1' to set corresponding bit in interrupt request register. Default Value: 0 |
| 0 | SOF_INTR_SET | Write with '1' to set corresponding bit in interrupt request register. Default Value: 0 |

41.1.9 USBDEVv2_USB_INTR_SIE_MASK

USB SOF, BUS RESET and EP0 Interrupt Mask

Address: 0x402C2028

Retention: Retained

| Bits | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|------------|---|---|------------------|---------------|---------------|---------------------|---------------|

| Bits | Name | Description |
|-------|-------|---|
| 5 | X_DEC | This bit enables a decrease of the USB crossover voltage. Default Value: 0 |
| 4 | X_INC | This bit enables a increase of the USB crossover voltage. Default Value: 0 |
| 3 | MINC | When set this bit increases the USB edge matching ratio Default Value: 0 |
| 2 | MDEC | When set this bit decreases the USB edge matching ratio. Default Value: 0 |
| 1 : 0 | TRIM | These two bits of trim are for the suspend mode resistor. Default Value: 0 0x0: TRIM_NO: No effect. 0x1: TRIM_LOWER: Lower idle voltage 0x2: TRIM_HIGHER: Higher idle voltage |

41.1.21 USBDEVv2_USB_USBIO_TRIM (continued)

0x3: TRIM_DONT_USE:
Do not use

| Name | ENABLE | ENABLE_C HGDET | ENABLE_D MO | ENABLE_D PO | ENABLE_R CVR | ENABLE_V BUS_PULL DOWN | ENABLE_D M_PULLDO WN | None |

| Bits | Name | Description |
|------|----------------------|---|
| 31 | ENABLE | Master enable of PHY and Charger Detector. Nothing will work until this bit is set. Default Value: 0 |
| 30 | ENABLE_CHGDET | Enables the charger detection circuitry. After USB has connected, this circuitry can be disabled to save power. Default Value: 0 |
| 29 | ENABLE_DMO | Enables the single ended receiver on D-. Default Value: 0 |
| 28 | ENABLE_DPO | Enables the single ended receiver on D+. Default Value: 0 |
| 27 | ENABLE_RCVR | Enables the differential USB receiver. Default Value: 0 |
| 26 | ENABLE_VBUS_PULLDOWN | Enables the weak pull down on the VBUS, default on, to prevent floating node crow bar currents. Default Value: 1 |

41.1.22 USBDEVv2_USB_POWER_CTRL (continued)

| | | |
|-------|--------------------|--|
| 25 | ENABLE_DM_PULLDOWN | Enables the ~15k pull down on the DM, default off. The 15k pull down is needed for Data Contact Detection (DCD). Default Value: 0 |
| 6 : 5 | CHDET_PWR_CTL | Power programmability for bandgap voltage buffer in the charger detect block. Default '0' is low power mode. Default Value: 0 |
| 4 | ISOLATE | Isolates the PHY outputs. Clear this bit at least 2us after vbus is known to be valid (vbus_valid=1). Isolation will be forced when vbus_valid goes low (see VBUS_VALID_OVR). Default Value: 1 |
| 3 | SUSPEND_DEL | Delayed version of SUSPEND. Always set SUSPEND and SUSPEND_DEL together in a single register write. When taking PHY out of suspend mode, first clear SUSPEND, then clear SUSPEND_DEL at least 2us later. Default Value: 0 |
| 2 | SUSPEND | Put PHY into Suspend mode. If the PHY is enabled, this bit MUST be set before entering a low power mode (DeepSleep/Hibernate). Default Value: 0 |
| 1 : 0 | VBUS_VALID_OVR | Overrides the value received from the GPIO input buffer connected to VBUS: 0: Force vbus_valid=0 1: Force vbus_valid=1 2: Use vbus_valid signal from GPIO input 3: Use vbus_valid signal from PHY detector Default Value: 0 |

| Bits | Name | Description |
|---------|------------|--|
| 31 | COMP_OUT | Output of the primary/secondary detection comparator. This output is not filtered or debounced and must be polled in software. Default Value: X |
| 13 : 12 | ADFT_CTRL | Reserved. Keep this field at default value Default Value: 0 |
| 6 | DCD_SRC_EN | Enable the Data Contact Detect current source on D+ Default Value: 0 |
| 5 | REF_EN | Enable the primary/secondary reference driver. This bit can be written concurrently with REF_DP/REF_DM. Default Value: 0 |
| 4 | REF_DM | Connect the primary/secondary detection reference driver to D- Default Value: 0 |
| 3 | REF_DP | Connect the primary/secondary detection reference driver to D+ Default Value: 0 |

41.1.23 USBDEVv2_USB_CHGDET_CTRL (continued)

| | | |
|---|---------|--|
| 2 | COMP_EN | Enable the primary/secondary detection comparator and current sink. This bit can be written concurrently with COMP_DP/COMP_DM. Note that REF_EN must also be 1 for the comparator to work (because it receives a reference from it). Default Value: 0 |
| 1 | COMP_DM | Connect the primary/secondary detection comparator and current sink to D- Default Value: 0 |
| 0 | COMP_DP | Connect the primary/secondary detection comparator and current sink to D+ Default Value: 0 |
