Silicon Errata for the CY8C21x34 PSoC® Programmable System-on-Chip™

This document describes the errata for the PSoC® Programmable System-on-Chip CY8C21x34. Details include errata trigger conditions, scope of impact, available workarounds, and silicon revision applicability. Compare this document to the device's data sheet for a complete functional description.

CY8C21x34 Errata Summary

The following table defines the errata applicability to available CY8C21x34 family devices. An "X" indicates that the errata pertains to the selected device.

Note Errata items, in the table below, are hyperlinked. Click on any item entry to jump to its description.

Items	Part Number	Silicon Revision	Fix Status
[1]. Internal Main Oscillator (IMO) Tolerance Deviation at Temperature Extremes	CY8C21x34	A	No fix is currently planned.
[2]. I2C Errors	CY8C21x34	A	No fix is currently planned.

1. Internal Main Oscillator (IMO) Tolerance Deviation at Temperature Extremes

■ PROBLEM DEFINITION

Asynchronous Digital Communications Interfaces may fail framing beyond 0 °C to 70 °C. This problem does not affect end-product usage between 0 °C and 70 °C.

■ PARAMETERS AFFECTED

The IMO frequency tolerance. The worst case deviation when operated below 0 °C and above +70 °C and within the upper and lower datasheet temperature range is $\pm 5\%$.

■ TRIGGER CONDITION(S)

The asynchronous Rx/Tx clock source IMO frequency tolerance may deviate beyond the datasheet limit of $\pm 2.5\%$ when operated beyond the temperature range of 0 °C to +70 °C.

■ SCOPE OF IMPACT

This problem may affect UART, IrDA, and FSK implementations.

■ WORKAROUND

Implement a quartz crystal stabilized clock source on at least one end of the asynchronous digital communications interface.

■ FIX STATUS

No fix is currently planned.

2. I²C Errors

■ PROBLEM DEFINITION

The I²C block exhibits occasional data and bus corruption errors when the I²C master initiates transactions while the device is transitioning in to or out of sleep mode.

■ PARAMETERS AFFECTED

Affects reliability of I²C communication to device, between I²C master, and third party I²C slaves.

■ TRIGGER CONDITION(S)

Triggered by transitions into and out of the device's sleep mode.

■ SCOPE OF IMPACT

This problem may affect UART, IrDA, and FSK implementations.

■ WORKAROUND

Firmware workarounds are available in firmware. Generally the workaround consists of disconnecting the I²C block from the bus prior to going to sleep modes, I²C transactions during sleep are supported by a protocol in which the master wakes the device prior to the I²C transaction

■ FIX STATUS

Will not be fixed.
