

Saving energy with inverterization

Digital inverter or variable speed drive can regulate the motor as needed and gradually adjust the speed (in comparison to conventional control). They save energy in home appliances such as fridges, freezers, washing machines, dryers and air conditioners.

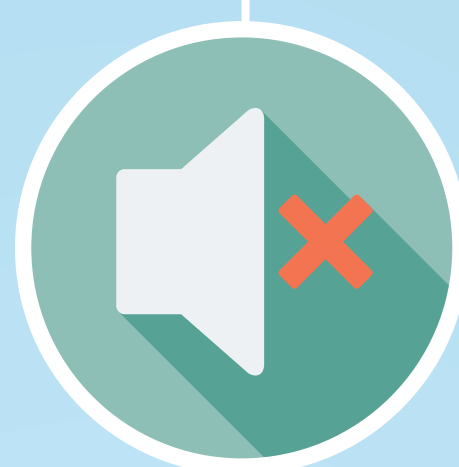

Benefits

Variable speed drive

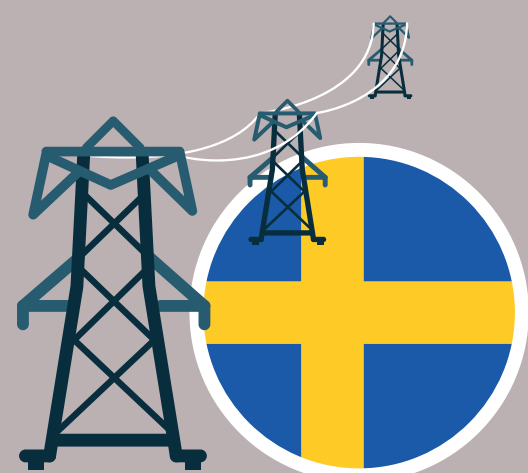

Longer lifetime

Up to 30 % energy savings

Reduction in operating noise

Inverterization in all fridges worldwide would save as much energy as Sweden consumes in a year ...

... and reduce CO₂ emissions by around

80.000.000 tons
